contains 288 pages, four color and four duotone plates, besides numberless photographic true-to-life reproductions. It lists all the standard varieties of flowers and vegetables, as well as the best of the season's novelties.

The newest Roses, the best Dahlias, and Dreer's Improved Hardy Perennials are given special prominence.

Send 10¢ for the illustrated booklet.

Dreer's Old Garden Book is the most complete and authoritative work on the subject of gardening ever published. It contains all the information you need to know about the best varieties of flowers and vegetables, and the best methods of growing them. It is a must for every gardener.

A Number of Things by Edwin E. Slosson

DEFEAT OF THE TEN COMMANDMENTS!

Mosaic Laws Voted Down on Referendum by
Decisive Majorities.

SINAI, 2000 B. C.—Some surprise has been expressed in political circles that every article of the Decalog recently submitted to popular referendum was defeated, altho each was voted upon independently and several had a considerable measure of influential support during the recent campaign. The first two commandments had against them a strong body of opinion among persons who feared that they might lead to an alliance between church and state. The first, however, ran far ahead of the second, which had against it the Sculptors' Union and all the artists, with the single exception of the Futurists, who supported the commandment on the ground that they were guiltless of making anything in the likeness of anything that is in Heaven above, or that is in the earth beneath, or that is in the waters under the earth. The third commandment was doomed from the start by the cry that it was an interference with freedom of speech. In the precinct of Billingsgate it did not receive a single vote. The fourth commandment was downed by the untiring efforts of the Anti-Blue Law League. Like the fifth, it received a certain amount of support in the rural districts, but not enough to overcome the negative majority returned by the great centers of population.

The defeat of the sixth amendment had not been anticipated. Of course, much of the majority against it is to be ascribed to fraud and intimidation in the so-called "gunmen" districts, but there seems to have been a feeling also even in the most conservative circles, that a commandment which was all very well in time of peace might weaken the nation in case of war. The seventh commandment, loudly denounced as "Comstockery" and "Puritanism," lost out by a three to one vote. Sodom and Gomorrah reported less than ten votes in its favor, altho a prominent man had expressed the hope that peradventure fifty might be found in the Twin Cities. The eighth commandment had been expected to carry in spite of the powerful opposition of the Burglar Amalgamation. What seems to have killed it was the fear lest the Supreme Court might construe the law in a sense broad enough to include the operations of high finance.

The defeat of the eighth commandment involved the defeat of the tenth, which also had against it the organized opposition of the Socialist party. The ninth commandment seems to have been beaten on the face of the returns, probably owing to the campaign conducted against it by a large section of the press. The professional politicians gave it no support and are said to have secretly instructed their henchmen to vote it down on the ground that it would take the life out of politics.

It is not thought that the precincts still to hear from will make a great change in the result. The electorate is in a very conservative mood and is not disposed to welcome changes. As Rameses, boss of Upper and Lower Egypt, told our reporter last evening: "The present is not the time for tinkering with the constitution."

"Kubla Khan" is no dream. I mean to say, the incident was not fictitious, or at least not impossible. I once dreamed of reading a new play in a volume of Shakespeare, "The Man from Araucania"; not equal, I confess, to the best in the book, but ranking somewhere between "Titus Andronicus" and "Hamlet."

And the other day I took home Master's "Spoon River Anthology" for my wife to read. She read it—all the evening, and dreamed about it all night, her thoughts naturally falling into that infectious rhythm—if rhythm it may be called. In the morning she wrote down what she could remember of her dream critique and here it is:

ANTHOLOGY IN A COUNTRY CHURCHYARD
No, I don't like your Spoon River Anthology,
Lee Master's long line of too loquacious corpses
Lying at length in a quiet country churchyard
Who lift their hideous heads from their decaying pillows
And address a few remarks to the world in general.
I tell you those people aren't dead to begin with!
They haven't the pulseless calm of immortality.
Then, I don't like the way they talk to each other;
When they talk to me I bitterly resent it.
To be frank, I don't like their society;
Dead or alive they are equally detestable.
Where are the good people buried in that graveyard?
There must a lot of them live in Spoon River—
Grey warriors of the Lord—
Children like flowers—
Boys and girls with their eyes full of visions—
Mothers who were sweet and calm and sensible.
Perhaps they are in heaven; and these earth-bound spirits,
Lingering around and watching their own corruption,
Coiling like rattlesnakes around their own headstones,
Are all that are left in Spoon River graveyard.
Then I don't like it because it isn't poetry
Nor metrical prose nor anything musical.
All of its cadences are humpy—like the graveyard!
He tried to be a Whitman with a touch of Rabelais;
But Whitman sometimes has a mighty music
Like the roar of the sea
(Or the thunder of the elevated),

Reminding us at times of his own Wild Trumpeter.

Oh, how I dread a set of Spoon Rivers,
A lot of little Whitmans without any music,
A herd of Rabelais without any genius,
Spoiling white paper and mussing up the universe
It gives one a taste for annihilation!

Our prayers and pious injunctions will need some verbal modifications to fit the conditions of modern warfare. The Gallipoli correspondent of the London Times, Ashmead Bartlett, quotes what the censor found in the letter of a young bluejacket:

Mother, it is sometimes very hot out here when the shells are dropping all about you and the submarines are hovering round, and you may strike a mine at any minute. At first I was a bit scared, but I remembered the words of the padre last Sunday, when he said:—"Men, men, in times of trial and danger look upwards." I did look upwards, mother, and if there wasn't a blooming aeroplane dropping bombs on us!

Now that the season of the Tercenary approaches we set ourselves sternly to the duty of remembering Shakespeare or recollecting him as the case may be. We write about him or read about him; in his honor we recite, we sing, we dance, we act, we paint, we pageant, each according to his own talents or ambition. The whole country has become one great Shakespeare Memorial Society such as Chesterton wrote about:

While the vain world careless sped
Unheeding the heroic name—
The souls most fed with Shakespeare's flame
Still sat unconquered in a ring.
Remembering him like anything . . .
They stuck like limpets to the spot,
Lest they forgot, lest they forgot.

I don't want to be unjust to the Germans, but I must say that it sometimes seems to me, tho I may be mistaken, that they—of course I don't mean all of them—are a trifle wanting in tact, or perhaps I should put it, somewhat deficient in the comprehension of the psychology of foreigners. One of the things which leads me to this conclusion is that *The Continental Times*, which is published in Berlin for the purpose of enlisting American sympathy for the German cause, brings forward as one of the evidences of Germany's unerring uprightness the fact that she took the side of Spain in the Spanish-American war.

In Gladstone's time the English used to talk about the "Bulgarian atrocities." In Asquith's time they talk about the "atrocious Bulgarians."

More and more the members of the British cabinet are coming to say: "Let George do it," referring, of course, not to George V of England, but to George I of Wales.

With most audiences a thing needs to be said twice; once to open their heads and once to fill them.

All debts are divided into two classes; "honest debts" and "debts of honor."

ASSISTED PLAGIARISM

In The Independent for February 21 was published a splendid poem entitled "My Battle Prayer." It was credited to F. F. V. We have since discovered that the poem was actually written by Theodosia Garrison and published in a volume of verse from her pen entitled "The Earth Cry and Other Poems."

This all looks like a flagrant piece of plagiarism.

But we are glad to record that it was unconscious plagiarism—perhaps assisted plagiarism would be the better phrase. The poem was sent to The Independent by an old and valued contributor, with the statement that it was the work of a protégé of hers, and was sent without his knowledge. It now appears that this fairy godmother found the verses among the papers of her protégé and in his handwriting, liked it, and sent it off to the editor forthwith in the hope of springing a pleasant surprise upon the young and bashful poet. It is probable that he will be surprized when he sees the poem in print, with his initials attached, tho perhaps not quite pleasantly.

The Independent and the fairy godmother deeply regret the injustice that has been done to Mrs. Garrison by this absurd bit of plagiarism. The moral seems to be that poets ought not to copy other poets' work and leave it around unsigned; that fairy godmothers can be too cleverly benevolent; and that editors ought to be omniscient.—The Editor.

REMARKABLE REMARKS

WOODROW WILSON—I love peace.
ED. HOWE—Millions of women are too "churchy."

HON. WILLIAM BARNES—Never give a bully a stick.

LORD BERESFORD—Brilliant retreats will not win the war.

LILLIAN RUSSELL—More women than men suffer from cold feet.

VERNON CASTLE—It was Broadway that made an American out of me.

WILLIAM ALLEN WHITE—The reformer with a past never gets beyond second base.

CONGRESSMAN FREAR—Congress is constantly straining at gnats and swallowing camels.

JUSTICE HUGHES—I do not feel that I have any right to take part in political discussion.

GRAND DUKE NICHOLAS—God has granted to the brave troops such great help that Erzerum has fallen.

VICTOR MURDOCK—Before July, maybe by April, half of London will be destroyed by a great Zeppelin attack.

YUAN SHI-KAI—To perform the ceremony of enthronement at this juncture would set our heart on thorns.

TUDOR JENKS—What is the use in filling a boy's head with geographical knowledge when he can buy an atlas for a quarter?

ADELINE E. BROWNING—The day when women looked up to men and thought them infallible has passed away never to return.

SENATOR CHAMBERLAIN—There is not in the diplomatic history of the United States a single instance in which we did not get the worst of it.

HELEN KELLER—A dollar that is not being used to exploit some human being is not fulfilling its purpose in the capitalist's scheme of things.

W. J. BRYAN—If we had been as well prepared as some now ask us to be we would be in the war today shouting for blood as lustily as any of them.

BILLY SUNDAY—We want to fight like old Michiah, not like hog-joweled, weasel-eyed, sponge-columned, mushy-fisted, jelly-spined, pussy-footed, charlotte-russed Christians.

GENERAL NELSON A. MILES—If 500,000 men were landed on either of our coasts and we were not able to raise enough men to drive them out, I would want to move to another country.

CHARLES RANN KENNEDY—We don't want literature used as a sugar coating around the illuminating lesson that God loves little Willie because he fed the dickie birds and didn't say "damn."

H. G. WELLS—All the belligerent countries of the world are at the present moment quietly, steadily and progressively going bankrupt and the mass of people are not even aware of this process of insolvency.

THE NEW PLAYS

Erstwhile Susan. Mrs. Fiske, with a background of Dutch Pennsylvania and the rest of the cast. An odd little comedy, very well played. (Gaiety.)

Maude Adams is at her best in The Little Minister—an excellent revival of a popular play. Probably the most enjoyable production in New York. (Empire.)

The Cinderella Man. Fairy-story love-comedy in situations of one syllable. Some amusing lines and, in the minor rôle of a decayed gentleman's gentleman, a capital bit of acting. (Hudson.)

Margaret Schiller. A war tragedy in which Elsie Ferguson, in the title rôle, plays the part of a German spy in the English Prime Minister's home. Morbid, lugubrious, but excellent cast. (New Amsterdam.)

The Melody of Youth. A delightful comedy of Irish romance—with harp accompaniment. The usual love story is enlivened by really funny character parts. Brandon Tynan is both author and hero. (Fulton.)

Yellow journalism is rampant in The Earth, a play of interesting character development, tho somewhat hackneyed plot. Aply acted by Grace George and her company. Thoroly entertaining. (The Playhouse.)

Just a Woman, by Eugene Walter, proves it still possible to construct a trial scene that will surprize even the blasé New York audience. Drama of Pittsburgh mines and millionaires with anti-divorce moral. (Forty-eighth Street.)

The Fear Market. Dramatization of a celebrated case of society blackmail by Amélie Rives, Princess Troubetzkoy—and obviously others. A queer mixture. Conventional plot and unconventional people. Good acting and poor. (Booth.)

THE GORHAM TRADE-MARK

is the Author's Name

A name may be one of two kinds - it may be the name of the maker, or it may be the name of a sponsor for the maker.

The Gorham Company always uses its own trade-mark on its own productions and that trade-mark is no more in need of a sponsor than Shakespeare is.

The famous Gorham Trade-mark
on Sterling Silverware

is the name of the author, and is an inviolable guarantee that it is a Gorham production. To this rule there are no exceptions, for we affix our trade-mark to nothing which is not the work of our hands nor produce anything whose authorship we are not proud to acknowledge.

In silverware for service, for sentiment, and for ornament, there is both added lustre and added value in the classic indentation of the Gorham insignia.

GORHAM STERLING SILVERWARE is for sale by leading jewelers everywhere.

NUMBER 3509

OUR DUTY IS CLEAR

THE letter of President Wilson to Senator Stone should be read by the German Government with grave attention. It will do much to remove any doubt—or hope—that may have been cherished in Berlin as to the purpose of the United States to uphold in full measure American rights upon the sea.

The letter should be read with approval and gratification by the American people. It will assure them again that their President is steadfast in seeking the difficult middle course between war on the one hand and national dishonor on the other.

The President does not use the word "honor" in any careless or distorted sense. It has been well said that "all honor's wounds are self-inflicted." A man's enemy cannot dishonor him, nor can anything outside himself. But often the act of his neighbor confronts him with a situation in which he must choose between the honorable course and the dishonorable. It is his choice that protects his honor or tarnishes it. But it is the act of his neighbor that has forced him to the choice.

For Germany to kill American citizens wantonly is in itself no stain upon our honor. But for the United States to acquiesce in the continuance of such wanton killing would smirch our honor beyond cleansing.

This fact the President recognizes to the full. He has no intention of permitting such dishonor to come to the American people thru any act or omission of his.

Mr. Wilson in his letter reiterates with emphasis two fundamentals upon which he is determined. On the one

hand he says: "I shall do everything in my power to keep the United States out of war." In so saying he is correctly interpreting the earnest desire of the American people.

On the other hand he says: "I cannot consent to any abridgment of the rights of American citizens in any respect." The American people will uphold him no less definitely in this position.

The latest cloud upon our international horizon comes from the announced intention of Germany and Austria to treat armed merchantmen as vessels of war, subject to destruction on sight. We comment on this subject on another page. The President's statement of the underlying principle is unescapable. He says: "No nation, no group of nations, has the right while war is in progress to alter or disregard the principles which all nations have agreed upon in mitigation of the horrors and sufferings of war; and if the clear rights of American citizens should ever unhappily be abridged or denied by any such action, we should, it seems to me, have in honor no choice as to what our own course should be."

President Wilson has rightly adjudged the two great responsibilities that are his so long as the Great War continues to rage. He must keep the United States out of the war just as long as it is possible to do so without dishonor. He must maintain the rights of American citizens against every assault from without. In so doing he will be serving not only the American people but the cause of humanity and the world.

THE GERMAN WAY

THE chief thing that has been disclosed about German strategy is that it is *German* strategy, not anybody else's. Altho the military experts of their adversaries have repeatedly pointed out that their methods are unsound, the Germans continue to use them, and, on the whole, continue to win. We learn from British studies of the campaign of 1914 that if General von Kluck had not got cold feet he might have taken Calais or even Paris, that the French army in Alsace and the British army at Mons might have been annihilated if the Germans had only followed up their advantage. Our own Richard Harding Davis tells us that they missed the chance of their lives in stopping at the Serbo-Greek frontier when by pushing on they might have captured Salonica before the Allies could fortify and be reinforced.

All this may be quite true, but anyhow it is not the German way. They lay their plans, arrange their train dispatcher's chart, mass their men and munitions, then they strike where and when they choose without much regard to what the enemy is doing. If they fail they try

again, at the same point or some other, whenever they get good and ready, not before. They stick to their maxim, "the best defensive is an offensive," and so far have usually succeeded in keeping the initiative in their own hands on all fronts, and forcing their adversaries to meet their moves.

Also to meet their feints. Somehow, in spite of the censorship, the German papers a few months ago were saying a lot about the preparations which were being made for an attack on Salonica. Accordingly, some 350,000 French and British troops were sent to Salonica, where the Bulgars are keeping watch over them. Next we heard much of a combined Turkish and German army which was being assembled in Palestine for a drive at Suez. Consequently the British have sent, say, 500,000 troops to Egypt. Then the British armies on the Tigris were attacked and reinforcements had to be sent to the Persian Gulf.

Having then got the French and British troops scattered as widely as possible over Europe, Asia and Africa, the Germans began their offensive in France and

Belgium by attacks near Lens, next south of the Somme, later at Ypres, then in the Champagne, and finally what seems to be their most serious and certainly is their most successful effort, the attack on Verdun.

We do not mean to imply that the Allied generals are stupid and have been outwitted by a common trick. They could hardly have done otherwise than scatter their forces, for they had to meet each threatened attack, or it might have become more than a threat. This is simply the advantage which the attacking party always has in forcing the game, and that is why the Germans prefer to attack, notwithstanding the fact that the newspaper strategists of England and America demonstrated—to their own satisfaction—that the Germans were getting so short of men that their best plan was to keep to the shelter of their trenches and prepare, as best they might, to meet the spring drive of the French and British armies. The argument certainly sounded reasonable, but the Germans evidently reasoned otherwise. Instead of saving their men they have thrown them in the old mass formation against one of the strongest of the barrier fortresses on the French frontier, Verdun. We are told from the French reports that the Germans are losing frightfully, and we may well believe it. But when they attempt to estimate the German losses—175,000 is the latest figure—we should be skeptical. We have not forgotten that in August, 1914, the Allies were similarly shocked at German callousness in sacrificing 25,000, even 40,000, men in the attack on Liège. Their sympathetic feelings must have been relieved later when they learned that the German forces actually engaged in that forty-hour fight were not so great as the number supposed to be killed, and that enough of them were left alive to go on to the next town.

It seems indeed a desperate venture at this late day to assault Verdun, a fortress of the first class, on which the French military engineers had labored for forty years, and which they have had a year and a half to strengthen in accordance with the lessons of the Great War. It stands in the midst of a tangle of hills and woods astride the River Meuse, a river that has often run with blood from Cæsar's to the Kaiser's time. The names of the towns along its banks in its course from the hills of France thru the valleys of Belgium to the sea of Holland read like a battle roll: St. Mihiel, Verdun, Sedan, Mezières, Dinant, Namur, Liège. The Meuse is the moat of France. If the Germans should cross it—well, there are still the Aisne and the Marne between them and Paris.

A LESSON FROM CANADA

CANADA, being the nearest country to ours both geographically and psychologically, is the one from which we can derive most instruction on such questions as preparedness. In 1911 England found it necessary for the first time in her history to call upon her overseas dominions to aid her in preparing for an anticipated war. The British navy during the ten years preceding had been gradually withdrawn from all parts of the world, even from the Mediterranean, and concentrated in the North Sea to meet the German menace. This left the dominions unprotected, and besides it was questionable whether the British Navy would be adequate to fulfill the task assigned to it in the Entente plan of campaign. According to the understanding with France,

Great Britain was not expected to do more on land at the outset than to send an expeditionary force of 160,000 men to the continent. This was to be under the command of Sir John French, who had for several years been making a thoro study of his future battlefields in France and Belgium. Aside from this moderate participation in the military operations, England's part was to defend herself and the north coast of France and to police all the seas outside the Mediterranean, which was entrusted to the French Navy, and the North Pacific, which was entrusted to the Japanese. For this stupendous task England increased her naval expenditure by fifty per cent, but still found herself unable to keep up her rate of naval increase to what she had determined was the essential margin of safety, that is, twice the strength of the German. Accordingly a strong hint was given to the dominions that their aid was needed.

But the dominions were far from Europe and did not realize the international complications and obligations in which the mother country had become involved. So the British Government took the unprecedented step of inviting the colonial premiers and defense ministers to London in order that Mr. Asquith and Sir Edward Grey might explain to them personally and privately the foreign policy of England and her treaties and international understandings. What was revealed to the colonial representatives at the Imperial conference of 1911 will not be known to the world until the passage of years removes the ban of secrecy. But whatever it was we know that the premiers, one and all, without regard to party or previous opinion, went back home convinced that the Empire was threatened with imminent danger of war with Germany, and, one and all, they used their best efforts to induce their people to prepare for it.

The Premier of Canada was perhaps most outspoken. In his historic speech of December 5, 1912, asking Parliament for an "emergency contribution" of \$35,000,000 for the construction of three dreadnoughts, he said:

These ships are urgently required *within two or three years at the outside* for rendering aid upon which may depend the Empire's future existence. . . . If we should neglect the duty which I conceive we owe to ourselves and if irreparable disaster should ensue, what will be our future destiny? Obviously as an independent nation or as an important part of the great neighboring republic.

And he went on to explain that as a part of the United States the Canadians would have to pay three times as much per capita for a navy that afforded vastly inferior protection.

But the Canadian people refused to accept Mr. Borden's word that the danger was imminent and he could not convince them without betraying the confidence of the British Government and revealing to the enemy the secret policy not only of Great Britain, but of her Allies. So the Canadian parliament refused the appropriation for the dreadnoughts.

How their refusal disappointed the mother country may be seen from what that most witty of Canadians, Stephen Leacock, wrote in the *National Review* in 1913:

The patriotic Canadian hangs his head to blush. He recalls with shame the plaudits of the British press six months ago. He remembers Canada enthusiastically depicted as a Viking's daughter, a sea-lion, as a sea-horse, as a sea-animal. Now it turns out that the Dominion is not a sea-lion, but a mud turtle and has crawled back on its back. The sea-lion has a cub that can't swim. The Viking's daughter is sea-sick. It appears that she came from Alberta and had never been off the ranch in her life. The trident of Britannia is exchanged for the pitchfork of the Albertan agriculturist.

Now a number of lessons may be drawn from this. The preparedness people may point out that because the Canadians declined to contribute \$35,000,000 for defense in 1913, they had to pay \$150,000,000 for war in 1915 and more to follow. The anti-preparedness people may argue that you never can tell what sort of preparation is going to be needed; that the British navy, which the Canadians were asked to aid, has proved more than adequate while they have had to raise an army which England did not expect to want.

But the lesson which seems to us most clear and significant is that in a democracy you have to explain what you want a thing for before you can get it. Now that the Canadians know why their help is needed no part of the empire is more generous with money and men. Professor Leacock no longer has to blush for his countrymen. The man from Alberta is like the man from Missouri; he has to be shown. Every cross-roads politician will admit that the President has access to information which he knows not of, but yet he will not vote money on such unrevealed evidence. Because the American people have not responded enthusiastically to Mr. Wilson's appeal for the biggest navy in the world and an army to match, there are some Americans who, like Leacock, blush with shame. Now we believe that the people of these states are no more cowardly than the Canadians, but, like the Canadians, it will never be possible for the President to get them to respond to his appeals for any very great increase in military power unless he is at liberty to make public the reasons for his opinion.

DRAMATIC COMMENDATION

THE theatrical managers of New York, by excluding the critics who found fault with their plays, have destroyed the last vestige of faith which the public has placed in dramatic criticism. It has long been known that the managers held a whip over the newspapers thru their advertising and they are suspected of having caused the dismissal of more than one New York critic because of adverse opinions. But still some newspaper publishers had the nerve to stand by their critics, so the managers went further and refused to allow the men who had attacked their productions from entering their theaters even when presenting purchased tickets at the door. Their right to exclude persons on this ground was contested in the courts, but has just been confirmed by the New York Court of Appeals, which holds that so long as it was not discrimination because of race, creed or color, the theater owner could shut out whomsoever he pleased.

To the non-legal mind it would seem that excluding a man from a theater because it was feared that he would not like the play was as much an infringement on personal rights as excluding him because he was a Baptist or a negro. And if it is illegal to discriminate on racial grounds, why is it that the orchestra seats are all sold out when a gentleman of color wants to buy one?

The decision that a theater may exclude an unappreciative critic may be good law, but it is not so surely good policy. Theatrical managers have been complaining that many of their best plays failed because people would not turn out during the first week or two. Now it will be worse than ever because nobody will want to risk his money on a new play from what the news-

paper says of it. If the reviewer calls it a good play, that may indeed be his opinion, but we shall doubt it because we know that if he called it a bad play he might never get a chance to see another. Henceforth we shall have not independent criticism but compulsory commendation.

THE FAT IN THE FIRE

AN interesting story comes to us thru private channels from Holland. There have been destructive floods in that submarine country. Great numbers of fine cattle have been drowned.

Forthwith government agents swarmed over the border from Germany, bought up the carcasses by wholesale and lugged them off home.

Now this may show that the German people were starving. Or it may merely show that the German army was getting ready for the drive on Verdun. For cattle yield fats, and fats give up glycerine, and out of glycerine come modern explosives.

In any case, it shows that the German Government is still wide awake.

GERMANY COUNTERS

THE United States insists that if Germany attacks an enemy's merchant or passenger vessel on which there is any American citizen, she must allow time for those on board to escape with their lives. Germany replies that she will yield and then announces that if any such vessel has guns mounted for defense it will be held to be a ship of war, to be attacked and destroyed without notice.

Of course the United States can never assent to this doctrine. A ship of war is made for offense; its purpose is to destroy. A merchant vessel has no purpose of offense. Its aim is to get away, to keep out of danger; if it has a gun on deck it can use it only for its own protection, and when it cannot escape. The submarine is the hunter, nothing else, while the merchant vessel is the prey, and to deny it the right of self-defense in extremity contradicts all honorable warfare.

Let us suppose that a submarine steals up to a merchant vessel unseen in the open ocean and sinks it in ten minutes with all on board. That is what it was built for and under orders has done. When called to account its officer and the government behind him say the vessel was armed. Who knows whether it was true? It may have been unarmed. There is every opportunity for error, intentional or unintentional. It is the easiest thing in the world to say that it was armed and thus evade all responsibility for its destruction.

Of course, under the accepted rules of international law, if a merchantman, when hailed by a belligerent warship and ordered to stop, either flees or resists, it may be sunk without further ado. But the mere presence on board the merchantman of a gun or guns suitable for defense does not subject it to this peril provided it does not actually offer resistance.

This announcement on the part of Germany of an intention to sink armed merchantmen without warning is only the old contention in a new guise. In the correspondence over the "Lusitania" case, Germany originally maintained that the submarine, because it is vulnerable and small in capacity, was not to be bound by the ordi-

narily accepted rules of international law. From this contention Germany has been obliged to recede. She will be equally obliged to recede from the present contention. A merchant vessel with a small gun mounted on her stern for defense is only dangerous to the submarine because the submarine is an especially vulnerable type of ship. This limitation on the part of the submarine cannot be advanced with success by Germany as a reason why this particular boat should be granted especial license of action.

THE COLLEGE GIRL'S BUDGET

FROM the statistics of student expenditures, recently collected by the dean of Smith College, come two somewhat unexpected and thoroly praiseworthy conclusions: the average student spends in all \$765.55 during the college year; fifty-six per cent of the students spend less than that.

Such an allowance would hardly buy hats for the debutante, even the wage-earner would find that it necessitated strict economy, and at many a boarding school it might just about cover the cost of board and tuition. College—the girl's college, that is—seems to have monopolized the low cost of living happily; and never to have had due credit for its achievement.

Moreover, 87.6 per cent of the average Smith girl's money is spent for necessities, while 8.2 per cent goes for pleasure (in which category the dean, not the student, puts dues for clubs and societies and contributions to church and charity), and 4.2 per cent for books and stationery.

The popular theory that college girls spend most of their time and money on pleasure is put out of commission by the announcement that "recreation, hospitality and extra food" cost the average girl \$35.09 a year—no one can ever again accuse her of undue emphasis on frivolity and fudge.

In the face of ever-increasing alarms at the extravagance of American women it is reassuring to find the students of our largest woman's college spending so sanely.

NOAH DID NOT EAT THE APPLE

A TABLET in the Museum of the University of Pennsylvania, lately published by Professor Langdon of Oxford University, is creating a lively discussion among oriental scholars. It is written in the older of the two languages found on the inscriptions, the Sumerian, and is not easy to translate. Professor Langdon announced it as containing a story of the Babylonian Paradise, Noah and the Flood—Noah, according to him, being also the first man who disobeyed the command of the god in eating of the forbidden plant, which he identified as cassia. In England, Professor Sayce and Dr. T. G. Pincher, both competent scholars, have published comments and criticisms of Professor Langdon's work, recognizing the bearing of this very ancient inscription upon the account of the Creation and Flood as given in Genesis. When Professor Langdon's translation and commentary were published, the newspapers made much of it, and told their readers how Moses was mistaken in supposing Adam to have eaten the forbidden fruit, for this record, much older than Moses, made it out to be Noah.

Now Professor Morris Jastrow, Jr., of the University

of Pennsylvania, a most competent scholar, having the tablet in his own hands, publishes a preliminary paper on the subject in which he seems to prove that Professor Langdon was very hasty in drawing his conclusions. He does not find any flood on the tablet, nor any forbidden fruit, altho the cassia plant is there mentioned with other plants allowed for man's use. Really the tablet is of more importance in the history of early religion than Professor Langdon had supposed. Two years ago Dr. Poebel found in the same museum collection another tablet which gave a definite account of the Flood, and it now appears that that was number two in a series of which Professor Langdon's tablet is number one.

According to Professor Jastrow the new tablet begins with the organization of Nature to fit it for the habitation of man by the provision of rivers and canals and even cities created by Anu-Enlil, who represents the combined god of Heaven and god of Earth. Very much as in the second account of the Creation as given in Genesis beginning Chap. 2:5, Yahveh Elohim, the Lord God, is said to have prepared the earth for vegetation by causing a mist to water the earth, so in the new tablet Ea, the god of waters, irrigates the land copiously and abundant vegetation results. Then follows the appearance of man and the god presents him with all useful plants and fruits and gives them names, among them the cassia. What Professor Langdon took to be a peaceful condition in Eden before the Flood, Professor Jastrow finds to be a description of the state of absolute quietude before birds and beasts of prey had been created; and what Professor Langdon took to be the account of the Flood, he interprets as the beginning of irrigation with the resulting fertility.

As there is on this tablet no account of the Flood, there is equally no Babylonian Noah; for the second tablet, previously published by Dr. Poebel, continues the story with the subsequent flood, and the escape in a boat and the sacrifice of offerings to the gods exactly as in the Biblical order. It is hoped that other fragments of the same series will add further details of this very interesting myth which represents one, called the Sumerian, of the two versions current in ancient Babylonia, while the other, the Semitic or Accadian version, represented nature beginning with a chaos of water and watery monsters reduced to order by the god, as in the first chapter in Genesis. The two tablets here described were written about 2000 B. C., but the myth must have been much older.

The interpretation which made cassia the forbidden plant was seductive, but must be given up. Under the modern name of senna, it is the oldest of all known medicines, and its leaves are kept in every drug store, being administered as a cathartic. It is prescribed in Babylonian medical documents, among other things, for intoxication; indeed, the name cassia has come down to us thru the Greek from the Babylonian *kasu*.

It is forty years since the lamented George Smith startled the religious world with the discovery on Assyrian tablets of a detailed poetical story of the Flood wonderfully like that in Genesis, but those tablets were comparatively late, not much more than 600 B. C. We are now able to trace back the legends of the Creation and the Flood to a period long before the composition of the book of Genesis. It is a matter for congratulation that American research is filling out the ancient story, but there is much more yet to be discovered.

THE STORY OF THE WEEK

The Gateway to Paris The significance of the German attack upon Verdun may be seen from any map or history of France. A straight line is the shortest distance between two points. On the line between Metz and Paris stands the fortress of Verdun. The reason why the Germans did not go straight from Metz to Paris is because Verdun was in the way. They went to the north of it instead, thru Belgium, tho that act made it certain that England would be counted among their enemies and that neutral nations would be alienated.

This was bad policy from a political point of view and it may now be questioned whether it was good policy from a military point of view. To be sure the Germans cut thru the defenses of Belgium and the northern French frontier with surprising ease, but they failed to reach their goal; and one must wonder whether they would not have broken thru the Verdun gateway in August, 1914, if they had expended on the Meuse the million lives they have sacrificed since on the Marne, the Aisne, the Somme and the Yser. If they can come anywhere near taking Verdun now they could certainly have taken it then, for its defenses have been enormously strengthened and the French artillery become more efficient in the eighteen months since.

But the Germans took what they regarded as the easiest way, and they forced the Belgian Meuse at Liège and Namur instead of the French Meuse at Verdun. While General von Kluck was making his grand sweep with the German right the Crown Prince with the central army was expected to come down between Verdun and Rheims and enter Paris by a triumphal march along the Champs Elysées. But the Crown Prince failed to arrive in time to fit his army as the keystone into the German

THE GREAT WAR

February 21—Germans advance upon Verdun. Turks evacuate Bitlis, Armenia.

February 22—Czar opens Duma in person for the first time. British steamer "Westburn" brought to Teneriffe as German prize.

February 23—Germans take Brabant and Ornes. Portugal seizes German ships.

February 24—Germans take Fort de Douaumont, five miles north of Verdun. Russians bombard Black Sea coast near Sinope.

February 25—Russians take Kerman-shah, Persia. Kuropatkin made commander-in-chief of Russian armies in the north.

February 26—Italians evacuate Durazzo, Albania. Germans take Champneuville.

February 27—P. & O. liner "Maloja" sunk by mine near Dover. Germany again warns public that armed vessels will be attacked by submarines after March 1.

arch. General de Castelnau met him on September 6 with a curtain of fire from the French 75's, and the German troops instead of advancing, fell back twenty-five miles over night. This threw out the German plan of campaign and von Kluck had to let Paris go and swing around to the left to close up the gap in the line caused by the retreat of the Crown Prince.

There were rumors at the time that the Crown Prince had been scolded by the Kaiser for incapacity, that he had been dismissed in disgrace, that he had been shot, that he had committed suicide, but whatever the trouble, whether he was blamed or was not to blame, he has now a chance to retrieve his reputation, for he is nominally leader of the army again attacking Verdun.

The Verdun Fortress

The Franco-German war of 1870 revolved about Verdun. At Sedan, a little further down the Meuse River, Napoleon III and his army were captured. At Metz, to east, Marshal Bazaine and his army were captured. And Verdun itself succumbed to a three weeks' siege and a bombardment from the nearby hills which the French are now defending against the Germans.

Five years after the war the French set about the task of fortifying their eastern frontier to prevent a recurrence of the debacle. A chain of fortresses was constructed along the ridge of the Meuse and Moselle from Verdun to Toul and from Epinal to Belfort. This fortified wall was supposed to be impregnable and so far has proved to be. At St. Mihiel, twenty miles south of Verdun, the Germans have succeeded in taking one of the minor forts of the barrier chain, Fort du Camp des Romains, but even here they have not been able to maintain a hold on the western bank of the Meuse.

Verdun is protected on the western side by the forest of Argonne, which the French have held against furious and oft-repeated attacks from the first of September, 1914, to the present. Between these two points, St. Mihiel on the south and Varennes on the west, there is a gap of some twenty-five miles which the Germans have not been able to close. Verdun has, therefore, never been completely invested, but has remained in easy reach by rail from Paris, 150 miles west. It has always been possible to supply the garrison with everything needed in the way of provisions, ammunition and reinforcements and the fortifications have been thoroly reconstructed during the past year and a half.

Verdun was before the war ranked

SHAM FIGHTING IN REAL WAR

A dummy battery arranged by the Russians on a snow-covered raft to draw the German fire and thus waste German ammunition. Such a ruse is often used, also, to get the range of enemy batteries.

as a "fortress of the first class," that is to say, it constituted an "entrenched camp" within which a large army could find protection. The town itself is of no great importance. Its population in peace time is only 20,000 and these mostly military. But within a radius of five miles there are some forty distinct forts so placed as to protect one another and connected by sunken railways. Of course the exact number, strength and location of these fortifications are known only to the French military authorities.

The Verdun forts before the war were constructed on the same general plans as those of Liège and Namur. The guns were placed in movable steel cupolas, shaped like an inverted saucer, and protected by a ring of concrete so heavy as to be invulnerable to the artillery of the time. But a shell filled with a modern high explosive dropt on one of these cupolas does not glance off, but explodes. The concrete and steel structure is blasted to pieces and the gunners crushed or suffocated by the gas evolved. This is why Liège and Namur were taken within two days after the twenty-eight-centimeter guns had been brought to bear upon them. The cupola is so low and so tinted as to be invisible at a distance, but the aeroplane can locate it by photographing it from above and once its range is found it is sure in time to be shattered by a shell. A gun on caterpillar wheels behind a simple sand pile is safer than in the best fortress Vauban designed.

It is understood that General Sarrail, when he was in command at Verdun, took many of the big guns from the cupolas and hid them in the ravines and among the trees and behind the rocks of the hills round about. The artillery mounted on trucks can be moved back and forth along a track whenever the enemy gets their range and, on the other hand, they can drop their shells on any point of the accurately mapped area thru which the enemy must advance.

The Battle of Verdun It seems that the recent attacks upon the French and British positions in the west were intended to divert attention from the eastern end of the line toward which the German drive was to be directed. The bombardment of the French lines north of Verdun began on Monday, February 21, but the work of preparation had been actively going on ever since December. Railroad lines had been run to the front, munition factories established close by and artillery brought from Serbia and Russia. Seven army corps were assembled there, probably brought up the number to four or five hundred thousand.

The Kaiser came to inspire his troops with his presence and superintended a dress rehearsal of the attack in which each division took the position assigned to it and was lectured on the part it was to play. A map of the Verdun fortifications, on a scale of 1 to 2000, pre-

pared from photographs taken by aeroplanes, was distributed to every soldier. Field Marshal Count von Häseler, former commandant at Metz, is now acting as adviser to the Crown Prince.

The Germans' line of attack extended from west of the Meuse to the Orne on the east, a distance of twenty-five miles, but as the French drew in their wings the front narrowed to seven miles. The Germans adhered to their old tactics of mass formation and assigned ten men to every yard of front. The machine guns mowed them down like grass but could not fire fast enough to stop the charge. According to the French report the Germans have lost 175,000 men, but such estimates are notoriously unreliable. The German reports state that their losses were "normal" and the French losses much greater. The Germans claim the capture of 10,000 prisoners and many guns.

The main drive came straight south toward Verdun and was successful all along the front. By the end of the week the Germans had gained about four miles, a greater shift in the line than has been made by either side for a year. The German right first advanced up the eastern bank of the Meuse from Consenvoye to Brabant and later on to Champneuville. The center carried the Forest of Caures and advanced beyond Beaumont; the left advanced from Gremilly to Ornes and attacked the fortifications on the Côte de Poivre (Pepper Ridge).

After fighting their way thru the

THE NEW GERMAN DRIVE

The spring campaign has opened with a furious attack on Verdun, the corner fortress of the French defenses on the German frontier. During the past year and a half the Germans have made many efforts to surround Verdun by advances from the west and south. Now they have struck a blow directly at the fortress from the north and have penetrated several miles inside the French lines. Verdun is protected by a dozen strong forts and innumerable batteries entrenched among the woods and hills. The Germans have taken Brabant and Champneuville on the Meuse, Caures Forest in the center and the Fort of Douaumont on the high ridge to the east.

outer zone the Germans encountered the most northerly of the permanent forts, Donaumont. This was of the concrete and cupola type and stands upon a high overlooking the eastern frontier for a distance of twenty miles. In front of it the land had been graded to a slope of five degrees and smoothed and sodded like a putting green for 3000 yards so that an advancing foe would not find the least shelter. The Germans smashed the fort with four shells from their long range howitzers and then took it by storm. The French are striving to regain this dominating point by furious counter-attacks.

Since the Germans are now within four or five miles of Verdun they could bombard the town at any time. But that alone would be of little use, for their object is not to take Verdun but to dislodge the French army from this region. A heavy fall of snow has added to the difficulty and discomfort of the campaign.

The Mysterious "Möwe" On the Sea which sent the "Appam" to Norfolk has sent another prize to the Canaries. The British steamer "Westburn" appeared at the port of Santa Cruz de Teneriffe flying a German naval ensign and in charge of a German prize crew of eight. The "Westburn" had left Liverpool on January 21 for Buenos Aires. On the vessel were 206 prisoners taken from seven vessels, six of them British and one Belgian, all of which had presumably been captured by the German raider "Möwe." The crew of the "Clan MacTavish," part of whom were on the "Appam," was also represented on the "Westburn." The other vessels were the "Flamenco," "Horace," "Cambridge" ("Corbridge?"), "Edinburgh," "Belgian" and "Luxembourg." These are mostly freight steamers of two to three thousand tons. After landing his prisoners the German captain took the vessel out to the three mile limit and there sunk her to prevent her from falling into the hands of the British cruiser waiting there for that purpose. Then he returned with his crew in a boat to Santa Cruz where they will be interned by the Spanish authorities.

The Portuguese Government has seized all of the German and Austrian ships which have been lying in the Tagus River at Lisbon since the war began. There were thirty-six of these vessels, some of them of over 8000 tons. The Portuguese warships trained their guns upon the ships and the crews were ordered to leave the vessel within three hours, when the Portuguese flag was raised and saluted with twenty-one guns. The Portuguese Government explains that this seizure is not to be regarded as an act of war and that the owners' rights will be respected. It remains to be seen how Germany will regard it. The position of Portugal is peculiar. She is allied to England and under obligation to send her 10,000 troops on demand. The Portuguese Congress has voted to cooperate with the Allies and in the Portuguese African colony of Angola the Germans have

AN OBJECT LESSON IN CITY DEFAACEMENT

The balloon shows the location and height of the smokestacks of the proposed power plant, which will permanently disfigure Washington if it is built. It would block the parkway along Washington Channel, which is an integral part of the Washington city plan. The Senate has adopted the conference report authorizing its construction, but a stiff fight is being waged by the American Civic Association and national bodies of architects and artists against this stupid attack on the beauty of the Capital City

come into conflict with the Portuguese yet war has never been declared.

The British steamship "Maloja" of the Peninsular and Oriental Line struck a mine two miles from Dover and sank in half an hour. The loss of life is said to be 150. It is not known whether the mines were British or German.

War Crisis in Congress There was evidence, on the 23d, of a serious and menacing revolt in Congress, especially in the House, against the President with respect to his policy concerning the proclaimed determination to sink armed merchantmen without warning, even if the armament were only for defense. Germany was to take this course on and after March 1. Secretary Lansing had suggested to the Allies an agreement which might cause a modification of the German purpose, but they had not replied. There was danger, at the beginning of the week, that the subject would be discussed in Congress. At that time, however, the danger seemed imminent in the Senate, rather than in the House, because a group of Senators, including Mr. Gore and Mr. Hoke Smith, were inclined to support resolutions designed to prevent Americans from taking passage on steamships owned by the belligerent nations. On the 21st Mr. Wilson had a conference with Senator Stone, chairman of the Senate committee; Senator Kern, Democratic leader, and Representative Flood, chairman of the House committee. The situation in the Senate was considered. Mr. Wilson was firm in opposition to resolutions of warning or exclusion, and rejected any proposition to relieve him of responsibility.

Two days later there was a panicky revolt in the House, where many feared that the President's attitude and policy would compel a severance of diplomatic relations with Germany and draw us into the war. Democratic leaders told Mr. Wilson that if he did not agree to warn Americans to avoid belligerents' ships the House would pass a resolu-

tion of warning by a great majority. Mr. McLemore, of Texas, had introduced a resolution directing that such warning be issued by the Government, and all the members of the House Committee on Foreign Affairs were said to be in favor of it. The President was to have forty-eight hours to consider the crisis, but it was thought that action could not be deferred after that allowance of time. While it was asserted that a resolution like Mr. McLemore's would be passed by a vote of four to one in the House, there were indications that it would not have a majority in the Senate, where Mr. Stone and others, altho in favor of excluding Americans from the ships, were unwilling to interfere with the President and were seeking to restrain others who objected to his policy. It was decided by the Democrats in the House that Speaker Clark, Floor Leader Kitchin and Chairman Flood should go to the President on the 25th, and give him information as to the attitude of the House.

The President's Letter Mr. Wilson did not wait for them, but on the night of the 24th gave to the press a letter sent to him that day by Senator Stone, with his reply. The Senator had undertaken in his letter to set forth the President's position. In brief it was that the Allies would be within their rights under international law if they should insist upon arming their merchant ships for defense; that he would allow such ships to be cleared from our ports; that he opposed the taking by our Government of definite steps to prevent American citizens from going on armed merchant vessels; and that he would hold Germany to strict account if a German warship should fire upon an armed merchant ship bearing American passengers. Members of both Houses, he said, felt deeply concerned and disturbed. He had urged them to keep cool and not to affect the diplomatic situation by hasty action. He intended to stand by

No Abridgment of American Rights

President Wilson's Letter to Senator Stone

THE WHITE HOUSE,
Washington, February 24, 1916.

My Dear Senator—I very warmly appreciate your kind and frank letter of today and feel that it calls for an equally frank reply.

You are right in assuming that I shall do everything in my power to keep the United States out of war. I think the country will feel no uneasiness about my course in that respect. Thru many anxious months I have striven for that object, amidst difficulties more manifold than can have been apparent upon the surface, and so far I have succeeded. I do not doubt that I shall continue to succeed. The course which the Central European Powers have announced their intention of following in the future with regard to undersea warfare seems for the moment to threaten insuperable obstacles, but its apparent meaning is so manifestly inconsistent with explicit assurances recently given us by those powers with regard to their treatment of merchant vessels on the high seas that I must believe that explanations will presently ensue which will put a different aspect upon it. We have had no reason to question their good faith or their fidelity to their promises in the past, and I for one feel confident that we shall have none in the future.

But in any event our duty is clear. No nation, no group of nations, has the right while war is in progress to alter or disregard the principles which all nations have agreed upon in mitigation of the horrors and sufferings of war; and if the clear rights of American citizens should ever unhappily be abridged or denied by any such action we should, it seems to me, have in honor no choice as to what our own course should be.

For my own part, I cannot consent to any abridgment of the rights of American citizens in any respect. The honor and self-respect of the nation are involved. We covet peace, and shall preserve it at any cost but the loss of honor. To forbid our people to exercise their rights for fear we might be called upon to vindicate them would be a deep humiliation indeed. It would be an implicit, all but an explicit, acquiescence in the violation of the rights of mankind everywhere, and of whatever nation or allegiance. It would be a deliberate abdication of our hitherto proud position as spokesmen, even amidst the turmoil of war, for the law and the right. It would make everything this Government has attempted, and everything that it has achieved during this terrible struggle of nations, meaningless and futile.

It is important to reflect that if in this instance we allowed expediency to take the place of principle the door would inevitably be opened to still further concessions. Once accept a single abatement of right, and many other humiliations would certainly follow, and the whole fine fabric of international law might crumble under our hands piece by piece. What we are contending for in this matter is of the very essence of the things that have made America a sovereign nation. She cannot yield them without conceding her own impotency as a nation, and making virtual surrender of her independent position among the nations of the world.

I am speaking, my dear Senator, in deep solemnity, without heat, with a clear consciousness of the high responsibilities of my office, and as your sincere and devoted friend. If we should unhappily differ, we shall differ as friends; but where issues so momentous as these are involved we must, just because we are friends, speak our minds without reservation. Faithfully yours,

WOODROW WILSON.

To Hon. William J. Stone,
United States Senate.

the President, and was unwilling to disagree with him, but he found it difficult to consent to plunge the nation into war because of the unreasonable obstinacy of any of the Powers, or the foolhardiness and moral treason of Americans who risked their lives on armed belligerent ships.

The President replying, defined his position emphatically and clearly, pointing out his reasons for refusing to warn American citizens against a course that was manifestly within their rights, or to countenance such a warning. The letter is printed above.

The Effect of It

Speaker Clark, Mr. Kitchin and Mr. Flood talked with the President on the 25th, but there had been a change in the temper of the House, owing to his letter. Mr. McLemore said that, on the advice of friends, he had decided not to ask the committee for action on his resolution. The President should have ample time, he thought, to complete his negotiations. Mr. Foster, who had intended to introduce a similar resolution, withheld it, for reasons like those given by Mr. McLemore. The revolt was under control, but the Speaker assured Mr. Wilson that a resolution of warning or exclusion would be passed by a

vote of two to one if a change for the worse in the attitude of Germany should bring it before the House. At present, however, no such resolution will be reported from the House committee. Nor is the Senate committee disposed to vote for any warning. Mr. Gore has introduced two resolutions with long preambles, and has published statements about them, but the resolutions will not receive committee approval.

Mr. Bryan exerted his influence in support of the proposed legislative action which the President opposed. In a telegram to Representative Bailey, of Pennsylvania, on the 24th, he expressed an earnest hope that Congress would forbid the granting of passports "to Americans traveling on belligerent ships," and withhold "clearance from belligerent ships carrying American passengers." No citizen, he added, should be permitted to endanger the peace of our nation, which would probably be the mediator "when the time for mediation comes." It would be a crime against civilization to become involved in this war and "thus to loan our army and navy to a European monarch to use in settling his quarrels." At the end of the week there was no indication of a renewal of excitement in Congress.

The Action upon the pending treaty with Colombia has been delayed not only by the express objection of Colombia to the changes made by the Senate committee, but also by consideration in the House of the constitutional power of that branch of Congress to participate in the action. This question has been raised by Representative Moore, of Pennsylvania, and a resolution introduced by him, providing for an inquiry as to this power, has been sent to the Ways and Means Committee. As the Constitution says that revenue legislation shall originate in the House, Mr. Moore points out that the treaty remits import duties on Colombian products brought into the Panama Canal Zone, and also the canal tolls on Colombian ships. James T. Du Bois, formerly Minister to Colombia, has published an attack upon the treaty in its present form. The greater part of his statement relates to the connection of our Government with the secession of Panama. He urges that the treaty as originally negotiated should be ratified. "To amend it as now proposed," he says, "will be disastrous to the cause of justice and the hope of an enduring and uplifting Pan-Americanism, leaving the only real injustice we have ever perpetrated against the Latin-American race as a festering wound." Ratification of the treaty as it stands is not expected.

A public meeting, to express a protest against the treaty of Nicaragua, recently ratified by a vote of 55 to 18, was held last week in the capital of Salvador. Dr. Castrillo, who, as Minister to the United States, participated in the treaty negotiations, was present, and there were such manifestations of hostility toward him that it was necessary to give him police protection. Salvador Diaz, formerly judge of Nicaragua's Supreme Court and Minister of the Interior, has published an attack upon the treaty. He calls it "a disreputable and dishonorable transaction" and "a blow against the rights of Costa Rica, Salvador and Honduras." "Our people," he says, "are deceiving themselves. You have only two courses to follow—to conquer us frankly, ruthlessly, Germany-like, crushing the national spirit and natural pride of our race—or you must treat us squarely on equal footing, without hurting our patriotic feelings, as good and honest friends ought to do. But this cowardly and treacherous conquest, by buying with your dollars miserable politicians accidentally in power, will give you only a temporary success."

Labor Questions

Negotiations for a settlement of the wage controversies in the coal mining industry were continued last week. The bituminous miners ask for an eight-hour day and an increase averaging about 10 per cent. Their agreement with the operators, or mine-owners, will expire on March 31. The anthracite miners also seek a new agreement, beginning on that date. They ask for an eight-hour day, an increase of 20 per

cent, and recognition of their union. Such changes, the operators say, would largely increase the selling price of coal. After a conference, in which about twenty-five representatives of each side took part, committees were appointed. Four operators and four union men undertook to consider the question, and to report at another conference. The meeting was a quiet and peaceful one, and the president of the union expressed his appreciation of the manner in which the demands were received.

About 50,000 ballots have been sent to headquarters by the 400,000 members of the four great railroad unions. They indicate practically unanimous approval of the demands which are to be made. These include an eight-hour day, with time and a half for overtime.

A menacing strike of the employees of the American Brass Company, in Ansonia, Connecticut, and of the employees of other manufacturers there and in neighboring towns, was settled at the end of last week. There was danger that all the factories in that part of the state would be closed. The strikers demanded a reduction of hours, an increase of 5 cents an hour, and time and a half for overtime. Eight nationalities were represented in the strikers' ranks, and their leader was a youth named Grotol, a pupil in the high school, who, it is said, can speak seven languages. The factories have been at work on war orders. An offer of 10 per cent, with full pay for a half holiday on Saturday, was rejected. A settlement was reached by giving an increase of 15 per cent, with time and a half for all overtime and full pay for the half holiday. Thousands of rejoicing workmen took part in a parade.

The Danish Islands Owing to a strike of the native agricultural laborers on the island of St. Croix, Danish West Indies, the question of the sale of the Danish islands has been raised again in Copenhagen. By this strike, in which about 10,000 men demand an increase of wages, the sugar industry has been paralyzed. Owners of plantations have taken their families to the towns for safety. Martial law has been declared in the cities. M. Hageman, the wealthiest of the planters, has published in Denmark a pamphlet in which he favors a sale of the islands, taking a pessimistic view of their future under Danish rule. The population is decreasing, he says, and the infant mortality, due to bad sanitary conditions, has risen to 63½ per cent.

The prevailing belief in Copenhagen, it is said, is that the Danish Parliament will vote for a sale of the islands if the question comes before it, but will ask more than the sum named, about \$4,300,000, in the agreement of 1902, ratified here but rejected by the upper House in Copenhagen.

Mexico The nomination of Henry Prather Fletcher to be Ambassador to Mexico was reported from the Senate Committee last week, two of the fourteen members opposing it, and was confirmed by a vote

of 49 to 16. Mr. Fletcher is now Minister to Chile. Carranza's army has not yet captured Villa, whose forces are said to be increasing. Owing to the record of failures, Carranza has sent new leaders to the north and ordered a new campaign under their direction. In the south, General Gonzales is at the head of a new movement against Zapata in the state of Morelos, and it is reported that one of Zapata's officers, General Pacheco, with 10,000 men, has offered to surrender. Carranza proposes to reduce his army, saying that he now has 100,000 men, and to increase the salaries of all employees in the civil service. He is planning a new currency system and proposes to establish a national bank in which the Government shall have an interest of one-third, while existing banks shall have the remainder.

On the anniversary of the arrest of President Madero, Carranza opened a public library and night school in Colima, for the working men. The library and school are in the Church of Santa Maria. In the course of the exercises,

Luis Cabrera, Minister of the Interior, defined the Government's attitude toward the Catholic Church. There were in Colima, he said, many more churches than were needed, and to use one of them in this way was only an act of justice. There were not enough schools, and to avoid loss of time in erecting a building the Government took this church structure and turned it into a school. The Catholics had been so busy building churches that they had found no time to build school houses. There was to be religious liberty, and the Protestant religion would be encouraged. The Government was against the abuses committed by churches and priests, and the priests must not interfere with politics. The Spanish Consul at Monterey protested against the deportation of a priest, and was ordered to leave the country within twenty-four hours. He is now in Texas. Senator Fall asserts that he has the names of sixty-seven Americans killed in Mexico who were not included in the list sent to the Senate by Secretary Lansing.

RESULTING IN — MORE INVESTIGATIONS

Ten persons were killed when a local train crashed into a stalled express on the New York, New Haven and Hartford Railroad near Milford, Connecticut, on February 22. It is thought that the engineer of the local, who passed a precautionary and a danger signal at high speed, may have been talking with a companion, who was riding in the cab contrary to railroad regulations.

COUNTRY LIVING IN THE NEXT GENERATION

BY LIBERTY HYDE BAILEY

WE have had much prophecy of the new country life, perhaps most of it of things hoped for rather than of things foreseen. We are not dealing with a trade or an occupation, but with a human situation under thousands of conditions and over thousands of miles of differently developed regions. It is not a simple matter, therefore, to meet the editor's demand for a forecast of country life in the coming generation. One cannot be too confident; and yet there are certain considerations that lead one to rather definite conclusions, for the fundamental principles in the reshaping of country life have now been formulated.

We are confronted by any number of movements and new developments, varied, apparently disconnected, sometimes disconcerting; we are not able to judge them unless we are aware that all of them (at least all that promise very much) are applications and outcomes of the principles of action that the prophets have stated with clearness; and out of these underlying formulations other applications will come.

The teaching in the colleges of agriculture has taken hold and has found a hearing. The students have become numerous enough to have a voice among the people, and to influence public opinion. The constant precept upon precept, with many thousands of examples upon examples, have had their cumulative effect. More knowledge was demanded and the experiment stations were established. The press has disseminated the new teaching. Political ideas have turned countryward after long concentration on urban and consolidated affairs. The economic world has recognized its dependence on its agricultural basis. Lately the demand for dissemination of knowledge has taken shape in the national and state coöperative extension system, which is a new application in politics as well as in agriculture and its kindred subjects.

In this span of fifty years, there have been a good number of prophets. For the moment, all we can do is to mention a half dozen and more lines of development that one may

Whenever one thinks of country life betterment he thinks of Liberty H. Bailey. Brought up on a farm, a graduate of the Michigan Agricultural College, an apprentice to the botanist Asa Gray, a teacher in the Michigan and Cornell Agricultural Colleges, for ten years director of the New York State College of Agriculture (Cornell), head of the Roosevelt Commission on Country Life, and author of so many books and other writings on agriculture and country life that if we should list them all here there would be little room left for the article—Liberty H. Bailey was the logical man to write about the farmers of the next generation, and here he has done it.—THE EDITOR.

project with little hazard. Even when these lines deal with rather special problems of agriculture, they are nevertheless all movements in the large, because they affect profoundly the welfare of the vast range of people producing the initial supplies and touch so quickly our occupancy of the planet; they all have their direct bearing on our political system, for there can be no real democracy without free and useful access to the earth.

Let us hope that the next generation will have passed the epoch of land exploitation, of fantastic back-to-the-farm movements, of the reporter's write-up, of the exaggeration of the results of science-work, and of the general foolishness that follows a new kind of development.

THE FARMER HAS BEGUN TO MOVE FORWARD

WITH the ground thus cleared, we may proceed with our forecast. It will not be necessary to speak specially of many agitations now before the country, not even of rural credits or of schemes of distribution; these are but processes. Nor will it profit us here to discuss the necessary increase in production, as the country grows, for this will be met by the working out of plain economic laws if their operation is not retarded by extraneous factors beyond the control of the farmer.

It requires no foresight to note the inevitable tendency, in the business of farming, to incorporate the findings of patient enquiry into it and to make it meet the commercial and ed-

ucational conditions of its time. It is no longer stationary: this itself is a great gain and makes other developments possible. This development is not the direct application of discoveries of science to existing methods, as the outsider thinks, but a making over of the business, in the way of a new organization of it, a rational approach to the subject, a more effective way of attacking the problem, a better relationship of the farm to the community. The farmer rapidly becomes a more resourceful man. This gives him a better place in society, increases his responsibility and his influence. The next generation will find the farmer occupying a still more important position in reference to other pursuits and affairs, as a necessary result of his increasing mastery of his occupation. On this possibility all other developments rest.

THE CONSERVATION OF TIME

EVERY part of the occupation of farming will be better performed. This will mean better care of the land, better cropping schemes, better crops and animals, more improved methods in every direction, more careful attention to upkeep, a bigger grasp of the business.

It has been necessary to eliminate much of the old farm method in order to clear the way for the new. We have also been undergoing a process of assorting the people, to determine who will make the farmers that we need; this process is not yet completed. Some of the redirections will be striking. I look for a very marked change of attitude in the man toward the use of his own time. To save time is more important than to save coal or to conserve water-power. It releases energy for much good work. The farmer has not thought of his time as valuable, in the sense in which the investigator or the business man or the professional man conceives it. Bear in mind that I am not thinking of an eight-hour day or any formal time-serving. The sun does not work on an eight-hour basis. The farmer will save his minutes, that he may use them intellectually. He must do this if he is to make use of the new literature that is made for him and of which much more is yet to come. He will find increasing satisfactions in the intellectual concept

of his business. The number of well-trained young folk now establishing themselves on farms insures this result. This mastery will make him a more efficient man in all public and community work, and it will give him more time for service. This will be an outstanding mark of the time just ahead of us.

Much of this energy will be expended in local betterment as well as in better practise on the farm itself. Another generation should find us with few highways of the old kind; the highway advertising has already mostly gone and the remainder will go; a new building construction will develop, and it is to be hoped that house architecture will improve and that the present hideous milk-station and creamery and similar construction will perish; scenic and landscape effects will receive new attention; mechanical and physical aids to the business will be extended. Inside the home, the development of labor-saving devices and machines will necessarily be marked, and we are to expect as radical a redirection of activities therein as has taken place in the past generation in the fields and barns. The woman of the farm, as well as the man, is to organize and economize her time; this is her most essential emancipation.

The physical and outward improvement of the farming regions will necessarily come slowly, so slowly and gradually that some of us may not recognize it, but it is already well under way. The first necessity is to stimulate a new ambition for excellence in agricultural operations, to arouse a new purpose on the part of the countryman as affecting his own life, to discover local potential leadership. All permanent movements begin with folks; the change in attitude in most country districts is even now very marked and significant. The human reactions are to be more important than the physical improvements.

Many marked discoveries will be made and many new inventions; but the great problem before the farmer of the next generation is to incorporate the accumulating knowledge into a scheme of life.

THE BASIS OF OCCUPANCY—NO PEASANTRY HERE

FOR all that we can see, and certainly in the immediate future, the farmer will live separately on his land as an individual owner. The tendency of affairs and of events is against the socialization of agriculture, if by that we mean the common ownership of land and of tools of production. Of coöperation we are to see a great extension, and the social

instinct is growing in rural districts; but I see no sign of any fundamental change in the basis of land occupancy. The dispersive and separatist movements are, in fact, the significant marks of our day so far as agriculture is concerned, and I think that in the nature of the case these movements must continue. The farm is too directly controlled by the processes of nature to make a theoretic socialistic scheme applicable. The attempts at partitioned social rural life have been failures either socially or agriculturally. The dispersive movements to which I refer are the extension of improved highways, of delivery of mails, of telephones and telegraphs, of farm bureau enterprises, of demonstration tests, of rural societies, of the general application of intelligence to localities and to the separate farmer. These all make for the establishing of a man independently on his land, keeping him there, making him master of his individual problem for which he himself must be responsible. This is essential to good farming, to the economy of time and energy, to the meeting of the problems set by nature.

It is here that those persons who fear the coming of a peasantry in American agriculture are in error. That a man is poor and a hard handworker on a small area does not indicate that he is a peasant or in danger of becoming a peasant. The notion that every farmer shall live by his own labor on a little piece of land highly tilled, has produced much harm and ought to be combatted; but peasantry is of a very different order. The tenancy problem is indeed a difficult one for the moment, but in the United States it is not a peasantry problem.

Peasantry is historically a question of social rank and of civil subjugation. It is founded on the assumption that there are necessary class strata. Peasants have been much restricted in their privileges and even in their political and civic rights. These rights they have been acquiring, laboriously; and even when they acquire them they may not be able to turn them to much account because of the social sentiment against them. Now, in a democracy like the United States, the people are guaranteed all their civil, judicial and political rights by the law of the land and by the very constitution of the state. The wide extension of education preserves these rights, which are in themselves inalienable, against encroachment and always stimulates the people to self-assertion.

The American political movement is naturally away from peasantry. It has been so from the first, except as

regards slavery. The question of the small farm, worked by the family, is quite another problem. We are not to look, in the next generation, for a community of small land-owners. The present general basis of occupancy is likely to stand, with necessary adaptation, for a long time to come; and, in fact, I can not clearly foresee a different or a better basis than will develop naturally from the present situation.

The position of the American working farmer is unusually good, in these regards. I find it difficult to make my friends and correspondents in other countries understand what I mean when I speak of the place that he may occupy. The restricted lot of the peasant, grounded in centuries of repression, is foreign to our whole philosophy. Therefore do we bear extra and special responsibility to develop our entire self-governing system, extending even to the range that rests on the earth. One is liable to over-stress the promise of one's own situation; but I think it not too much to say that here in North America do we have the opportunity to develop the best land occupancy yet known: this, at all events, is essential if we are to have a real democracy.

THE BUSINESS AND COMMERCIAL SITUATION

THE separate man is always at a disadvantage in dealing with organized men. This has been specially marked in the case of the farmer. His investment is tied up in land and its improvements, and in a kind of personal property that cannot be easily transferred to other business. He has been obliged to stand while others have moved. He has suffered from the vampirism of intrenched and interlocked interests. His traditions are also conservative. His terms of buying and of selling are not comparable. He takes not only the risk of production, but also to a large extent the risk in the selling even when the selling is the business and ought to be the risk of others.

It is desirable for many reasons that the farmer remain separate. Government ought so to protect him as to allow him to maintain his detachment. The general regulation of markets and distribution, of facilities for credit, and of commercial situations, should safeguard him and obviate the necessity of organizing producers as against distributors and consumers. The marketing problem must be solved on the basis of a public utility and in the interest of all men. Class organization for protection is a very dangerous thing in a democracy.

Nevertheless, the coming generation will undoubtedly see a very marked defensive movement on the part of farmers. This will have the immediate effect of bringing the farmer directly into the general business or commercial sphere, making him a personal factor to be reckoned with. Even if for protection, this organization will have great effect in broadening his interests and also in introducing public policies that are founded on the underlying moralities of nature.

The commercial or trading enterprises will extend far and wide into the open country. There is indication that small manufacturing units will again prosper for certain products. Certainly many of the industrial pursuits will continue to seek small and open settlements and we shall see an increasing industrializing of the open country. With the extension of invention and the installation of power, the farmer will himself introduce more mechanical processes and probably he will even manufacture some of his supplies again. The latter field is now essentially untouched.

These industrial and other movements will increase the importance of the country village and will also make considerable shift in villages. We are coming to the day of the country town—not to the European peasant hamlet,—but that is quite another matter.

NEW INFORMATION—THE RURAL PERIODICAL

FOR ages the basis of information in the farming occupations has been almost invariable: the slowly accumulating results of hard experience, the sense of the barriers imposed by society, the climate and the weather, the neighborhood gossip, the recurring work, the state of the crops told as a matter of news.

Suddenly a new range of fact and outlook is presented, as if the curtains were rolled back before a strange world. To absorb any part of this information means a new way of thinking. The old ways begin to break down, and another generation, with a folk in large part differently trained, will find new intellectual interests well established in every countryside.

The crops and animals take on a novel and large significance. Witness the wholesome competition in corn-growing, potato-growing, in boys' and girls' clubs for the growing of crops, in the rising standards of excellence in agricultural products, in the organizing of societies of growers of the different crops and animals.

These intellectual interests extend

THIS series was begun with William Allen White's article, "Government of the People, by the People, for the People," in our issue of February 7. The next article, THE NEXT GENERATION IN AMERICAN BUSINESS, by Elbert H. Gary, president of the United States Steel Corporation, is to be published on March 27.

to the situations and also to the human materials. Witness the revival of interest in the rural school, in church extension, in farm bureau movements, in demonstrations and tests, fairs, recreation, lectures, community service. The rural community begins not only to see itself but to evaluate its enterprises in relation to society as a whole.

The accumulating information on every kind of rural subject will, of course, make the new farmer. He will want new intellectual aids. The technical bulletins have come, for such as want them. The books are coming, altho we still lack a truthful artistic literature of the farm situation.

Immediately before us is the need of a new or an improved periodical agency for the dissemination of information. The prevailing type of local country newspaper will not do. Its content is largely imported or inapplicable. It lacks inspiration. It lives too much on outside advertisement—sometimes of very doubtful character—and on political and exotic means of support. It may not really represent its region, or live on it. In a region in which there is apparently no advertising support, a local breeder's society will organize, for example, and establish a journal; and it will find advertising patronage from those who have animals to sell or to exchange. A grange periodical may develop a good support, for every progressive farmer has something to sell. We already begin to see a new periodical literature in the journals published regularly by farm bureaus, clubs, and also in the monthly periodicals issued by students in the colleges of agriculture and which have now become a class by themselves. The "news" is to be less a printing of personal gossip than a record of the real progress of the region: who has built a new barn, and the plans that went into it; who has purchased a pure-bred animal, and why; who has tried a new method, and the results; who has given a lecture or demonstration, and what was said; who has installed a system of drainage, and how; the year's crop movements, and the reasons.

Whether this type of information is to be combined in fair proportion and with understanding in the usual local country newspaper or whether a different kind of publication is to arise, we cannot foresee; but a new periodical local literature is coming.

LEADERSHIP—THE COUNTRY CAREER

WE begin to rejoice that such of the old political leadership as is founded on favoritism, self-interest, agreements and deals, is doomed. We know that the handwriting is on the wall. Never do I see a farm bureau agent going directly about his work and founding it on merit and fact, but I am conscious of the shift of the old initiative to new shoulders. The new district or county superintendent of schools is a vitalizing force, and his freedom from political control constantly becomes more secure. Many other agents, so far as they are based on the needs of the community and are not serving for personal ends, represent leadership forces now working in town and country alike. The new information cannot be applied to rural conditions without this kind of guidance. Undoubtedly we shall find the political leadership taking on new intentions and using the essential facts of the region for its basis.

The problem of the centuries has been to cause the people on the land to act and to express themselves. Under the stimulus of new knowledge and of many changed conditions this free action will come about, and it will make itself felt in the nation in the coming half century. This will not only bring a reaction directly on public policies, but will develop policies and institutions of its own. The farmers will take their particular problems in their own hands and will organize their own forces. There is every indication that the partizan politician cannot long hold the rural people for his ends: these people now have too many examples of other kinds of leadership.

Careers are now possible and even inviting for young men and women in the open country. These are not so much commercial careers, in the big sense in which we now measure them, as opportunities to establish a well-rounded occupation and business, to develop a high type of home life, and to render a useful service. The open country is to have more affairs and more interests. There will be greater diversity in its life. There will also be better rewards for the labor expended. The intellectual standards of excellence will very definitely include rural attainments as well as urban attainments.

Ithaca, New York

WHERE THEY ACTUALLY HAVE PREPAREDNESS—THE REMINGTON ARMS PLANT AT BRIDGEPORT, CONNECTICUT

AMERICA ARMING THE ALLIES

BY SYDNEY BROOKS

HARNESS Aladdin in the service of Mars and you get Remington's. By Remington's I mean the Remington Arms and Ammunition Company and the Union Metallic Cartridge Company. They are both under a single proprietorship; they are both situated at Bridgeport, Connecticut, and both within the last year have enormously expanded to meet the demands of the struggle in Europe. Who could have foreseen that a policy initiated in Potsdam would dislocate the life and industries of a New England townlet three thousand miles and more away, perhaps treble its population, and convert one of its factories into the largest small arms and ammunition plant in the world? That is what has actually happened; and if it isn't romance, then I for one don't know what romance is.

But such things do not happen by themselves. This is no affair of impersonal causes at one end of the scale and automatic consequences at the other. Somewhere in between you may be sure there is a man. Even in tales of magic you cannot dispense with the human agency. There must always be someone to wave the wand and rub the lamp. Remington's, I dare say, might even now be turning out nothing but its famous sporting weapons, might have no industrial interest whatever in the European war, were it not for one man. That man, of course, is Mr. Marcellus Hartley Dodge, the owner of the concern. Mr. Dodge was in Germany when the war broke out. He made his way to Paris and thence to London. He talked with his agents; he learned from them, probably long before we in England realized it ourselves, the deficiencies of the Allies in small

Independent readers have long been familiar with the illuminating articles on English and Continental affairs which Mr. Brooks has sent us from London. He has been a frequent visitor to America and is now again in this country for a few weeks renewing acquaintances and observing the reactions of the United States to the Great War.—THE EDITOR.

arms and ammunition; he saw his prodigious, his positively staggering, chance, and he seized it with both hands.

On the spot and with no specific contract that would justify any such enterprise, he made up his mind to build as an adjunct to the old Remington foundation an entirely new plant for supplying rifles, bayonets, shell cases and cartridges, to make it the largest and best of its kind and to have it working in record time. Nothing less than that would content him or meet the emergency which he was one of the first to foresee. In little more than a month after his return to America the contracts were all signed; the first sod was turned in December, 1914; in the following March work began on the main buildings, and in less than eight months, that is to say by the middle of last November, they were all completed and seventy-five per cent of the machinery was installed and in operation. But Mr. Dodge had not spent some \$12,000,000 in less than a year to receive in return makeshift, jerry-built works. This new plant of his is meant to last. It is the product of the war only in the sense that the war furnished the occasion for its construction and the means where-

with to run it. But it will long outlive the immediate chance and need that brought it into being, and when the war orders cease, and if nothing from the United States Government is forthcoming to take their place, only a very slight adaptation will be necessary to convert its machinery to ordinary commercial uses.

To put up a plant with a floor area of about 1,500,000 square feet is one thing, tho I think a very big thing. To get the men to manage, superintend and work is another and a much more difficult thing. And in this case it was peculiarly difficult because the industry was a strange one. Until Mr. Dodge launched out, there was practically no private firm in the country that manufactured military arms and ammunition; most of the men who understood the business were in the Government arsenals; there was only a limited amount of the right sort of machinery; and side by side with the erection of the plant had to go the collection and training of a small army of skilled mechanics. Mr. Dodge has done more than set up a new factory; he has enriched the United States with a new industry; and he has furnished in addition a model example of how it should be carried on.

I will not attempt anything more than the purest description of the plant. It consists of thirteen main buildings, each five stories high, over sixty feet wide and over 270 in length, connected thru their centers—much as a skewer impales a row of kidneys—by a dozen service buildings of equal height, but some eighty feet long by fifty in breadth. Standing on any floor in any of the service buildings one can thus look backwards or forwards, from one end of

the plant to the other, down a vista of a third of a mile. It seemed to me a scheme of construction admirable alike for its efficiency and its healthfulness. The service buildings are real service buildings, consisting as they do, on each floor and immediately adjacent to the workshops, of locker rooms, toilets, hot and cold lavatories and notice-boards whose contents are a standing testimony to the thought and care the management has taken for the health and comfort and amusements of the employees. The hospital with its scientific equipment, the elaborate machinery for gathering up dust, the restaurant where over 800 employees can be seated at once, the portable kitchens, the power house that at a pinch could supply a city of over 150,000 people with light and heat, the employment office where some 500 applicants are examined and sifted every day, the force of 300 guards keeping watch over every entrance, the welfare work which is under the direction of a man who for four years had charge of similar duties at Panama, the building and housing schemes which the company has undertaken to provide homes for the 18,000 employees that are already on the Bridgeport payrolls and for the other 16,000 or 18,000 that it expects to take on, the whole clean and spacious atmosphere of the works and the skill and contented busyness of the workers—all this made a deep and something more than a favorable impression upon me. I am not thinking so much of prodigious and unprecedented output, of the speed with which it is working up to a production of 5000 rifles, over 10,000 shell cases and nearly 4,000,000 cartridges a day, but of the liberal and enlightened spirit which informs the efficiency of the entire enterprise.

There are some reflections that an Englishman who is more than merely interested in America cannot banish from his mind as he goes the

rounds of such an establishment. One of them is the fact that while Congress debates preparedness and the press argues it to and fro there in Bridgeport they actually have it. And it is the sort of preparedness of which, if British experience in this war goes for anything, neither you in America nor any other country can have too much. The plant that Mr. Dodge has erected is a national asset and a national safeguard. What do you imagine we in England would not have given when the war burst upon us to have possessed a factory on such a scale and with such an equipment? What would not Russia give even today to possess anything like it? One of the most obvious lessons of the war is that while men will always be forthcoming in abundance it takes an immense effort and wastes many crucial months to arm them.

You cannot turn out arms and ammunition in a day. It is a highly skilled and extremely delicate form of manufacture. There are anywhere from eighty to a hundred and thirty separate parts in a modern rifle; it takes over sixty different operations to make even a gunstock; you have to work down to a thousandth of an inch; and I do not suppose that any plant could be erected and could produce 5000 rifles a day in less than eighteen months. I do not know how it may be with you in America, but certainly any other country in which such a factory as Remington's existed would make it a point of public policy to conserve it, to feed it, to keep it instantly ready against the hour of need. When your time comes, and one must be blind indeed not to see that it is fast approaching, you will be grateful for what is now being done at Bridgeport.

Yet so far from being appreciative the general attitude of the American people toward this new munitions industry seems to be suspicious, reserved, and even hostile. I hear talk of an embargo and talk of a special

tax on the manufacture of arms. There seems positively to be an idea that a plant such as Remington's draws its strength from within and is independent of other industries and other sections of the country. The truth is, of course, that pretty nearly all parts of the Union have contributed to its upbuilding and share in and profit by its success. At Remington's they draw their steel from Pennsylvania, New York and New England; their walnut for the gunstocks from the Middle West and South; their ordinary lumber from the North; their copper from Montana, Utah and Arizona; their spelter from Pennsylvania, Illinois and Missouri; their machinery from New England, the south as far as Delaware, the northern states and the Middle West; their lead from Missouri and Illinois; their oils and greases from Oklahoma and Texas; their coal from Pennsylvania; their paper from the states between New England and Wisconsin; their chemicals from all over the Union wherever they are to be bought; their cement and bricks from Pennsylvania and New York; their hardware and leather from the regions lying between New England on the one hand and Chicago on the other. All these states and all these industries would be directly and immediately affected were any policy to be aimed at Bridgeport on the supposition that its consequences could be confined to Bridgeport. It is, I admit, no concern of mine, but I could not help wishing that all Americans might have enjoyed my privilege of going thru the Remington plant, observing with their own eyes its extraordinary efficiency, and realizing by visible demonstration the breadth and closeness of its connections with other industries and other states. Such an experience, I conceive, would make them proud. And it would also make them hesitate.

New York City

THE SEEING EYE

BY MARGARET L. FARRAND

A curve in the road and a hillside
Clear cut against the sky;
A tall tree tossed by the autumn wind,
And a white cloud riding high;
Ten men went along that road;
And all but one passed by.

He saw the hill and the tree and the cloud
With an artist's mind and eye;
And he put them down on canvas—
For the other nine men to buy.

M. William Shak-speare:

EIGHT PAPERS BY FREDERICK HOUK LAW
IN OBSERVANCE OF THE THREE HUNDREDTH
ANNIVERSARY OF SHAKESPEARE'S DEATH

The Comedies: Plays of Joy and Contemplation

WELVE of Shakespeare's plays, delighting in life's humors, and dealing meditatively with life's problems, are at once joyous and inspiring. Boisterous action and brilliant wit yield place to more thoughtful characteristics. There is a greater mastery over word and phrase, a finer poetry, and a richer content. In these plays the characters are so lovingly drawn that they appeal to us as intrinsically human. What they do is of small importance compared with what they are. Portia, Rosalind, Viola, Imogen—these are so real that in thinking of their charm we forget the events through which they move. Nor is it reality alone that marks the characters of these great comedies. Spirit, atmosphere, attitude toward life—call it what we will—something intangible draws us toward these plays as toward a revelation of life. Shakespeare was between thirty-two and forty when he wrote "The Merchant of Venice," "Much Ado About Nothing," "As You Like It," "Twelfth Night," "Henry V," "All's Well That Ends Well," "Measure for Measure" and "Troilus and Cressida." He was within a few years of his death when he wrote "Pericles," "Cymbeline," "The Tempest" and "The Winter's Tale." In this group of twelve plays we feel sure we have the great writer's happiest thoughts concerning life.

"The web of our life is of a mingled yarn, good and ill together," says the First Lord in "All's Well That Ends Well," and such, in fact, is the message of Shakespeare's comedies, for all touch upon serious events, and some closely approach tragedy. But this message is less important than that conveyed by the Duke in "Measure for Measure," when he says:

Spirits are not finely touch'd,
But to fine issues.
Shakespeare's view of life, when con-

sidered as a whole, is altogether noble. His interest lay in man's mastery of event, that is, in the development of lofty manhood. In his comedies, therefore, we find spirits rising "to fine issues"—and this it is, combined with convincing reality and beauty of expression, that makes Shakespeare's comedies great.

"The Merchant of Venice" is admirable as an introduction to the greater comedies. The reader delights in the romantic story of Portia, the rich heiress, who must marry the man who chooses a certain casket. He finds interest in the story of wayward Jessica, who, putting on boy's apparel, elopes with her favored lover. He laughs at the story of how disguised wives obtain rings from their husbands, whom they afterward taunt for weakness. But these interests are slight compared with the surpassing interest in the story of the money-lender who made a hard bond in order to gain revenge, and found himself caught in his own wickedness.

"Much Ado About Nothing" likewise approaches tragedy. On the one side is the story of how Benedick, having sworn never to marry, is tricked into love. On the other is the story of how the villainous Don John so inspires Claudio with jealousy that he rejects the gentle Hero and apparently drives her to death. The absurd constable Dogberry, who is almost as laughable as Falstaff, finds out the rascality of Don John, and all ends happily, "much ado" having been made "about nothing." The irrepressible liveliness, mischief, wit, sauciness and good heart of Beatrice, whom Benedick is led to love, make her the most delightful person in the play. In her charming pertness we forget wickedness, jealousy and rage, and gain something of her gladness in being alive.

"As You Like It" is another play sparkling with joy in life, but with serious thought underlying its good spirit. A banished duke and his followers, two court ladies and a jester, and a young man with a faithful old servant, all fleeing from ill-treatment

in the great world, come together in the Forest of Arden. There, with rustics whom they meet, they live a care-free life, hunting, jesting, playing at love, philosophizing, and learning that life, whether in court or forest, is "as you like it." A flood of sunshine comes to us with the utterly charming personality of Rosalind.

"Twelfth Night," taking its name from the joyful twelfth night after Christmas, is another play of mingled poetry and laughter, and is set in the no-man's land of Illyria. The quick-minded Viola is one of Shakespeare's most charming women. The play is charmingly romantic, sparkling with humor, filled with a kindly satire, full of delightful characterization, and touched with beautiful poetry, as is shown by the Duke's speech in the first scene:

If music be the food of love, play on:
Give me excess of it, that, surfeiting,
The appetite may sicken and so die.
That strain again! it had a dying fall:
O, it came o'er my ear like the sweet
sound,
That breathes upon a bank of violets,
Stealing and giving odor!

"Henry V," like "Henry IV," is a combination of heroic chronicle and ludicrous comedy. At one time we follow the fortunes of the heroic, patriotic English king, who leads a weakened army against tremendous odds to a noble victory. The play shows us the king's agony of soul, when, moved by the great responsibility of his position, he prays for his men just before the battle. He is an ideal of strength and manly leadership, saying in the face of what might have been fear:

We are in great danger;
The greater therefore should our courage be.

The play has two divisions of comedy, one centering around a group of low-comedy characters, some of whom speak in dialect; and the other centering around the king. The scene in which he courts the Princess Katharine of France is as humorous and as charming a scene as Shakespeare ever wrote.

Take me by the hand, and say,
"Harry of England, I am thine;" which

Sarony

PORTIA

HELENA MODJESKA. THE POLISH ACTRESS, WHO CAME TO AMERICA AFTER WINNING HIGH DISTINCTION IN WARSAW, AND ACTED SHAKESPEARE HERE IN THE LATE SEVENTIES, EIGHTIES AND NINETIES. WILLIAM WINTER SAYS THAT SHE "GAVE A DELICIOUS IMPERSONATION OF PORTIA. . . . SHE SPECIALLY REVEALED, AND EXULTED IN, THE TENDER, ARDENT, INTRINSIC WOMANHOOD OF THAT GOLDEN GIRL OF ITALY"

word thou shalt no sooner bless mine ear withal, but I will tell thee aloud, "England is thine, Ireland is thine, France is thine, and Henry Plantagenet is thine." . . . Come, your answer in broken music; for thy voice is music and thy English broken.

"All's Well That Ends Well" creates strong character interest in its resolute young heroine, Helena, a woman who is not only mistress of herself, but also of all events and conditions that confront her. By her cleverness she wins the husband she desires; when he flouts her and leaves for a distant land she follows, and, in a series of events, masters circumstance and gains his regard. The personality of this charmingly strong woman is so well presented that Coleridge has called her "Shakespeare's loveliest character." The play "ends well" because Helena had force to master events. As she says:

Our remedies oft in ourselves do lie,
Which we ascribe to heaven: the fated
sky
Gives us free scope, only doth backward
pull
Our slow designs when we ourselves are
dull.

"Measure for Measure," like "The Merchant of Venice," concerns the thought of mercy, the events of the play leading one to see that "measure" should not be given for "measure," but that mercy should temper justice. With such a theme it is natural that the play should approach the tragic, and should have much depth of thought. Dealing as it does with man's wrong doing and lack of mercy it is sometimes satirical:

Man, proud man,
Drest in a little brief authority,
Most ignorant of what he's most as-
sured,
His glassy essence, like an angry ape,
Plays such fantastic tricks before high
heaven
As make the angels weep.

In the pure-minded Isabella, who, rather than sacrifice honor, would let her brother die, we have another of Shakespeare's noblest women.

"Troilus and Cressida," telling the story of how the Trojan warrior, Troilus, gave his love to the unworthy Cressida, is even more satirical. Its interest is so little in story and so much in thought that some have called it "Shakespeare's wisest play." The thought that life fails to fulfil all its promises is not pleasant, but the play has other themes as well.

The remaining plays, "Pericles," "Cymbeline," "The Tempest," and "The Winter's Tale," are as bright and kindly as "All's Well That Ends Well," "Measure for Measure" and "Troilus and Cressida" are dark and satirical. Before he wrote these last

comedies Shakespeare had lived himself into the souls of the powerfully drawn characters of the great tragedies—Hamlet, Othello, Lear, and Macbeth. Now, as tho the time of satire, bitterness and tragic struggle had passed, he turned to joyful romance made wise by experience.

In "Pericles, Prince of Tyre," he tells the imaginative story of how Pericles surprisingly found his long-lost wife and daughter. Interest in event once more comes to the front, tempered by beautifully poetic meditations. It is supposed that Shakespeare wrote only a part of the play, his work beginning in the opening scene of the third act with the powerful description of a storm at sea:

Thou god of this great vast, rebuke
these surges,
Which wash both heaven and hell . . .
O, still
Thy deafening, dreadful thunders . . .
The seaman's whistle
Is as a whisper in the ears of death,
Unheard.

There is an especial charm in that part of the play ascribed to Shakespeare, for it deals almost entirely with the tender story of the sea-born Marina and her meeting with the father from whom she had been separated.

"Cymbeline" is another romance that tells of restoration from seeming death. Imogen's pitiable adventures, her meeting with her lost brothers, and her recovery of her husband's love, make excellent story material. A charming, beautiful and noble woman, she is a high example of faithfulness and purity. It is this play that contains the famous song:

Fear no more the heat o' the sun,
Nor the furious winter's rages;
Thou thy worldly task hast done,
Home art gone and ta'en thy wages:
Golden lads and girls all must,
As chimney-sweepers, come to dust.

"The Tempest," a play combining dramatic power, poetry and wisdom, is like "A Midsummer Night's Dream" in dealing with magic, but it has a deeper purpose. In its story of Prospero, the magician, living on a mysterious island where he has at

his command a bright spirit named Ariel, and a lumpish being called Caliban, some have seen Shakespeare, the magician of the drama, whose intention to abandon play writing may be set forth in the lines:

I'll break my staff,
Bury it certain fathoms in the earth,
And deeper than did ever plummet
sound
I'll drown my book.

Full of wisely beautiful poetry and fascinating in its imaginative story, "The Tempest" is thoroly delightful. Its thought centers around the conception that true freedom is neither license nor stern restraint, but sympathetic adaptation. Prospero, free to torment those who had kept him from his dukedom, finds a higher freedom in mercy, saying to Ariel:

Hast thou, which art but air, a touch,
a feeling,
Of their afflictions, and shall not my-
self,
One of their kind, that relish all as
sharply,
Passion as they, be kindlier moved than
thou art?
Though with their high wrongs I am
struck to the quick,
Yet with my nobler reason 'gainst my
fury
Do I take part: the rarer action is
In virtue than in vengeance.

His best self demands a noble life in the world rather than supremacy on a lonely island.

In "The Winter's Tale," Shakespeare's last play, there is also a wealth of wisdom, poetry and characterization. Its story of how Leontes' wife and daughter are restored to his love is interestingly romantic. Best of all is its delightful spirit of outdoor life—strong-limbed youth, charming girlhood, shepherds shearing their sheep, and country festivities, all entering into the play. No one who reads it will forget the surprize that ends the play, nor will he forget Perdita's charm, nor Autolycus' lovable rascality. The play has the happy spirit of the jolly rogue in his song:

When daffodils begin to peer,
With heigh! the doxy over the dale,
Why, then comes in the sweet o' the
year;
For the red blood reigns in the win-
ter's pale.

Shakespeare's comedies, taken as a whole, form a complete round of humor, beginning with boisterous plays of event and ready dialogue; proceeding thru plays in which rich imagination finds expression in suggestive verse; dropping for a time into satire that takes full cognizance of the ills of life; and ending at last in mellow romance, as tho the good, sweet breath of the Stratford fields had driven away all the somber thoughts that London life may have created.

BOTH SIDES

INDEPENDENCE OF THE PHILIPPINES

A DEBATE

RESOLVED, That the United States should within the next four years grant the Philippines their independence.

SINCE the United States gained possession of the Philippines in 1898 four ways of treating them have been suggested: to sell the Islands, to establish a protectorate, to retain them permanently, and to grant them independence. The Clark amendment directing the President to withdraw American sovereignty within four years was approved by the Senate, February 2, 1916. This brief was prepared by R. S. Fulton.

BRIEF FOR THE AFFIRMATIVE

I. The Philippines should be granted independence in four years for moral reasons.

A. The United States had no right to establish sovereignty.

1. A mandate of international law declares that "No nation has a right to obtain by purchase or acquisition sovereignty over a people which is not actually exercised by the country which undertakes to convey or yield it."

2. Spain had no right to give us a title to the Philippines. (a) She was not exercising sovereignty over them. (1) The natives, except in Manila, had overthrown the power of Spain.

B. Our indefinite policy is destroying the confidence of the Filipinos.

1. Our Government is expected to give them independence (a) Preparation of the Filipinos for self-government was the policy of President McKinley, President Roosevelt, Governor Taft, Governor General Wright, Governor General Ide, and all their successors. (b) Democrats have advocated independence for the Islands.

C. They desire independence.

1. Petitions for independence repeatedly presented to Congress by them.

2. In 1907, the National Party, standing for immediate independence, at the first election for assemblymen elected sixty-six out of eighty-one members.

D. Possession unjust to Filipinos.

1. Deprives them of self-government.

2. Keeps them in servitude. (a) Destroys incentive to self-government.

E. We cannot govern them well.

1. The natives distrust us.

II. They will be competent to maintain a stable government in four years.

A. They are now homogeneous.

1. A unit in temperament. (a) Report of fourteen governors in 1903. (b) They are peaceable, law-abiding people.

2. A unit ethnographically. (a) The same characteristics and customs due to same civilization for three centuries.

3. They have made a united effort for freedom. (a) In the wars against Spain and the United States.

4. A unit politically. (a) They vote for party rather than tribe.

5. More homogeneous in race and religion than Americans. (a) All Malay stock. (b) Ninety-four per cent Catholics.

6. A unit geographically. (a) Drawn together by communication and transportation. (1) Under American control wagon roads extended from 300 to 500 miles by Philippine capital and labor. (2) Railroads extended from 128 to 611 miles. (3) Seven thousand five hundred miles of telegraph and cable lines with a forty per cent annual increase.

B. English is becoming the language.

C. They have few criminals.

D. Their material progress is satisfactory. (a) They now produce \$23,000,000 worth of exports. (b) They use modern

methods of production. (c) Their municipalities provide improvements.

E. Social progress.

1. Sanitation.

F. Education.

1. The Filipinos intensely desire education. (a) Without legal compulsion 500,000 children attend public schools. (b) Cost of education paid by taxes.

2. 4404 schools in the Islands.

G. They can establish law and order.

1. Natives have shown ability in government. (a) Seven thousand three hundred and ninety-four Filipino officers in government service. (b) Three justices of Supreme Court are natives. (c) For many years people have elected good governors. (d) Out of 12,340 officials in the Islands 12,190 are natives.

III. Independence should be granted for military reasons.

A. Islands a burden in time of peace.

1. A large army necessary.

2. A strong Pacific fleet.

3. Expensive military stations.

B. Retention dangerous in war.

1. Opinion of military authorities.

2. Not easily defended. (a) An extensive seacoast. (b) Seven thousand miles from our base of supplies.

IV. Economic reasons.

A. They can bear economic burden of independence

1. Now maintaining their government.

2. Financial condition easily strengthened. (a) Lowest tax rate in the world. (b) Indebtedness per capita is low.

B. Retention an economic burden to U. S.

1. U. S. military and naval expenditures there \$26,000,000.

BRIEF FOR THE NEGATIVE

I. Philippines should not be granted independence in four years for moral reasons.

A. We have not deprived Filipinos of their rights.

1. Our Government better than they would have otherwise had.

B. Majority of Filipinos do not desire immediate independence.

1. They realize progress is faster under American rule.

C. Our promise not binding. Freeing of Philippines a matter for Congress.

D. Independence in four years unjust.

1. We owe them a stable government.

2. To retain the Islands the only way. (a) They cannot be given to foreign power. (b) Protectorate not advisable.

II. Filipinos cannot within four years maintain stable government.

A. They lack power of initiative.

1. No great leaders.

(a) Rizal, their writer, and Aguinaldo, their warrior, not pure Filipinos. (b) Ninety-eight per cent of pure Filipinos have accomplished little.

B. They cannot be unified so soon.

1. Many different tribes.

2. Tribes living together for centuries never intermixed.

3. No common language.

4. Cannot be assimilated. (a) Limited transportation. (b) Press reaches few.

C. Too illiterate.

1. A half million wild savages.

2. Only twenty per cent literate.

3. Only three per cent read English.

4. Not enough competent voters can be produced. (a) One child in four attends school. (b) Ninety-five per cent in primary grades. (c) One out of two hundred enters high school.

D. Natives have shown incapacity in government.

1. Municipal and national politics. (a) Candidates make appeals for votes which would insult American voter. (b) Radical parties defeated conservative. (c) Ignorant or corrupt officials elected.

2. Masses may be exploited by rich.

3. Natives untrustworthy. (a) Think public office private property of holder.

4. Good government in Philippines result of American control. (a) Protected the ignorant. (b) Prevented revolution. (c) Furnished the initiative.

III. Independence should not be granted for military and naval reasons.

A. Islands beneficial to us in peace. Permanent Eastern base for our fleet.

B. Islands advantageous in war.

1. Coaling and supply station.

2. Place to mobilize an army. (a) The natives a strong fighting force. (b) Rich natural resources.

C. Permanent possession advantageous to Islands.

1. Domestic tranquillity.

2. Protection from foreign foes.

V. Economic reasons.

A. Economic burden too great.

1. Insular government lately has not met expenses. (a) In 1913 many schools closed for lack of funds.

2. Present financial stringency.

3. Additional expenditures necessary for internal improvements. (a) School system should be extended. (b) More roads and railroads needed.

4. Expenditures necessary for army and navy.

B. Retention of the Islands will not be great expense to us.

1. Only expense is for soldiers.

2. Military expense can be reduced by substituting more native soldiers.

LITTLE GARDENS

THREE BRIEF PRACTICAL TALKS TO PEOPLE WHO HAVE BACKYARDS AND WANT TO USE THEM

A SIMPLE HARDY BORDER

A GARDEN OF ANNUALS THE BACKYARD VEGETABLE GARDEN

Flowers are not luxuries—they are as essential to a house as dress is to a woman. They belong to the category of necessities such as bath and breakfast, rather than to that of superfluities like clubs and candy—and they cost less. To live up in the country, or even the half-country, and not be surrounded with flowers is an anomaly. Every suburban house should have, if not a garden, then blooms and greenery, color and background.

There is a great deal of flat green in our suburbs and of uniformity in the neat, cold grass plots, but not enough warmth, lights and shadows, and variety.

The size of our place and of our pocketbook are the first points to consider in laying out our lot or back yard. But even if the start must be small we know that year by year we can add a few plants or a new shrub, and have the delight of watching the growth of our garden.

A SIMPLE HARDY BORDER

Cost of Plants, Ten to Fifteen Dollars

A BORDER of hardy perennials is the most satisfactory start to make in laying out a small lot, for, while we need never add to it, we can at any time build a garden around it. First look for a background. Flowers need to be thrown into relief. The house makes a good one, or a fence or wall; a green hedge or row of shrubs is even better. Do not make beds of flowers in the middle of the lawn, or stiffly bordering the sides of the entrance road. Choose, rather, the south or east side of the house, or one side of the boundary line, especially if there is a hedge or fence.

We will make a border of ninety square feet, arranging it according to our taste and needs. It may be four feet wide and twenty-two feet long, or if we want more length we can make it three feet wide and thirty feet long. The last would make the best looking border. Place stakes at the corners, and draw a line of twine taut from stake to stake. Cut the sod close to the twine with a square spade, lift the sod in sections and lay to one side, then dig down eighteen inches or two feet. As some plants need a deep bed it is as well to make it two feet. Put a layer of pebbles or broken stone at the bottom for drainage, and the sods next. If the soil is clayey mix it with one-fourth sand. About one-fourth of well-rotted manure (\$2.00 a ton) should be mixt with the earth and thoroly pulverized so that there will be no lumps. Fill in the ditch and pile the earth several inches higher than the surrounding ground, to allow for

shrinkage. The top layer should be a rich garden soil or top soil. This border should be made as early in the spring as it is possible to work the soil, and allowed to stand and settle before planting. All the plants will not be put in at the same time, as some should be set out in the spring and others in the fall. It would be an advantage to prepare the bed six months before the planting is to be done.

By using entirely small plants one can get the quickest results with a minimum of work.

The accompanying diagram shows a border thirty feet long and three feet wide. At the back of the border, plant at each end three Oriental poppies of the Mammoth or Goliath variety, a gorgeous splash of scarlet with black center. Start six inches from the outer edge of the bed and set the plants one foot apart. These perennial poppies will self-sow and increase in numbers until in a few years it will be necessary to transplant them. In three years they may also be taken up and divided, so that the original six will soon grow to a hundred.

Next to the poppies plant a group of three phloxes at each end of the border and on the back line. Select the clear and pure colored varieties of phloxes, the white and salmon pink, and have each group of one variety. The Frau Anton Buchner, Amazone and Anna Crozy are large pure white varieties, the Pantheon is carmine rose, and the Molière a clear salmon pink.

Having planted the poppies and phloxes at the two ends, this will leave

about seventeen feet in the center of the back line for a dozen hardy Pompon chrysanthemums, set about a foot and a half apart or a little less. The "aster" flowered type is more picturesque than the button varieties. The Fairy Queen, pink, and the Julia Lagravere, garnet, make good fall colorings, and the Sunshine is good for a yellow.

In front of the back row, with a foot between, plant at each end a group of six Anemone Japonica, the loveliest of the fall perennials. Select the Whirlwind, which is a charming white variety, and either the Queen Charlotte or Rosea Superba for a pink, and set them about fifteen inches apart. In the center of this line plant one dozen delphiniums, one foot apart—six of the light blue Belladonna, and six of the dark blue Formosum varieties. They will grow three or four feet high, and if the first stalks are cut off while still in bloom, they will make a second blooming, and stretch the flowering season from June to September. When the flower stalks are cut down, stir in a handful of bone meal at the roots.

The front line will be divided into three sections. At each end have a group of six Aquilegia (columbines), planted one foot apart. This graceful and spirited flower grows freely to a height of about two and a half feet, and its delicate colorings blend with almost any flower. The Canadensis is an early blooming variety and the Californica a later flowering kind.

The center of the front line may be filled with spring flowering bulbs, and

PERENNIAL BORDER, 30 FEET LONG, 3 FEET WIDE

Plant 25 Gesneriana Tulips on back line				
3 Oriental Poppies	3 Phloxes	12 Hardy Pompon Chrysanthemums		3 Phloxes 3 Oriental Poppies
6 Anemone Japonica		12 Delphinium Formosum and Belladonna		6 Anemone Japonica
6 Aquilegia		25 Tulips 50 Narcissus		6 Aquilegia

as these may be planted five or six inches apart, the space will allow of a double row in front of the delphiniums. Fifty of the late-blooming cottage tulips, the gorgeous Gesneriana spathulata, and the white Innocence or La Candeur, will make an effective line of bloom. Along the entire front line plant fifty narcissus of the trumpet varieties, the Golden Spur, Emperor and Empress.

Bulbs should be planted about five or six inches deep, and each one set in a handful of sand, to avoid any danger of contact with the manure.

The narcissus should be planted in September, as they make an early growth in the spring; tulips may be planted in October or as late as November. When all the bulbs are planted, rake the surface carefully and evenly. As the perennial plants may all be set out in the spring, the space for the bulbs would be vacant the first summer, and seeds of annuals could be sown for temporary bloom.

Anemones may be planted the middle of April, chrysanthemums the last of April, and the other perennials by the middle of May. The best time for planting delphinium is the spring, but columbines, Oriental poppies and phloxes may be planted in September.

Every two or three years these per-

LIST OF PERENNIAL PLANTS FOR BORDER						
Quantity	Name	Variety	Description	Time of Bloom	Price	Total Cost
1 1/2 doz.	Oriental Poppies	Mammoth	Scarlet with black blotch at base of petals	June	\$1.25	
1 1/2 doz.	Hardy Phloxes	Amazone Moliere Pantheon	Pure white and pure salmon crimson	July and August	.75	
1 doz.	Chrysanthemums	Fairy Queen Julia Lagravere Sunshine	Pink Garnet Yellow	October	1.00

50	Narcissus	Golden Spur Emperor, Empress	Yellow	April	1.00	
1/2 doz.	Herbaceous Peonies	Festiva Maxima Delicatissima Felix Crousse	White Pink Brilliant red	June	— 2.50	\$10.00
50	German Iris	Md. Chéreau Orientalis Queen of May, etc.	White edged blue Blue Rose	May	2.50	5.00
						\$15.00

ennial plants should be lifted and divided, and a new border started.

In winter the border should be covered with a light mulch of leaves or garden muck, but the phloxes will need a mulch of manure. And when the

plants are first set out they must be watered in the late afternoon.

An outlay of \$15.00 would make a border four feet wide or 120 square feet, and one could add to the other plants a half dozen herbaceous peonies

To equal the Cadillac is the universal ambition

THERE is great gratification for the Cadillac owner in this fact:
That the highest aim of the serious minded manufacturer is to approximate Cadillac performance.

Consciously or unconsciously, engineers are constantly inspired by the characteristics which distinguish the Cadillac Eight-Cylinder engine.

Consciously or unconsciously, automobile salesmanship—both oral and printed—endeavors to emphasize the claim that other cars possess these Cadillac qualities.

Consciously or unconsciously, that salesmanship continually endeavors to emphasize the very things for which the Cadillac engine is famous.

Other types sometimes claim equality and sometimes superiority, but consciously or unconsciously, it is always the Cadillac standard which they claim to equal or to surpass.

Fewer cylinders or more cylinders, they apparently have but one criterion, and that is the Cadillac V-type Eight-Cylinder criterion—forgetful of the fact that the high development of the Cadillac engine is only one fine phase of Cadillac performance.

It is well to remember that this has always been true—since the infant days of the industry.

Cadillac quality and Cadillac performance have frequently been on the very verge of being surpassed—according to the enthusiastic advertising and salesmanship of other cars.

The Cadillac market has always been *about* to be taken by storm.

But somehow, the Cadillac market continues to increase in volume and in enthusiasm, year after year.

Meanwhile, ambitious aspirants for comparison with the Cadillac have fallen away—one by one—and taken their places in a lower price class.

The simple truth is, that the beautiful riding qualities which make the Cadillac owner almost forget that he is in a motor car, represent the very uttermost that has yet been accomplished.

Styles and Prices

Standard Seven passenger car, Five passenger Salon and Roadster, \$2090. Three passenger Victoria, \$2400. Four passenger Coupe, \$2800. Five passenger Brougham, \$2950. Seven passenger Limousine, \$3450. Berlin, \$3600.
Prices include standard equipment, F. O. B. Detroit.

Cadillac Motor Car Co. Detroit, Mich.

Try this easy way to clear your skin

Bathe your face for several minutes with Resinol Soap and warm water, working the creamy lather into the skin gently with the finger tips. Then wash off with more Resinol Soap and warm water, finishing with a dash of cold water to close the pores.

Do this once or twice a day, and you will be astonished how quickly the healing, antiseptic Resinol medication soothes and cleanses the pores, lessens the tendency to pimples, and leaves the complexion clear fresh and velvety.

If the skin is in bad condition through neglect or an unwise use of cosmetics, apply a little Resinol Ointment* and let it remain on ten minutes before the final washing with Resinol Soap.

Resinol Soap contains no harsh, drying alkali, and is not artificially colored, its rich brown being entirely due to the Resinol balsams in it. Sold by all druggists and dealers in toilet goods. For trial free, write to Dept. 7-C, Resinol, Baltimore, Md.

*Physicians have prescribed Resinol Ointment for over twenty years in the treatment of skin and scalp affections.

Resinol Soap

Men with tender faces find the rich lather of Resinol Shaving Stick delightfully soothing.

Box 1

White Plains, N. Y.

With this self starting, electric lighting plant you can have electric lights in your farm home, country estate, church, general store, summer cottage, club, or plantation at 5c or less per day. Compact, simple—wife can operate it, use electric irons, washers, cleaners as well as plenty of lamps day or night. Get lights three minutes after uncrating. Write your needs for lights in detail in a letter, NOT A POSTAL CARD to the GRAY MOTOR CO., 319 Gray Motor Bldg., Detroit, Mich.

of the Festina Maxima, white, and Delicatissima, pink, or Felix Crousse, brilliant red, varieties. Get freshly dug and strong two-year-old roots; plant them in early September, and set so that the tip of the crown will be covered with two inches of soil. Mulch them lightly when newly planted. Then too, one could have fifty of the beautiful German and other Rhizomatous irises, which, unlike the tulips and narcissus, may be planted early in May. Iris bulbs should be set a foot apart, putting a handful of sand in the hole, and covering the bulb with sand. As for varieties, it is difficult to make a limited selection among the many good ones. Md. Chéreau, Florentina alba, Orientalis, Innocenza, Palida, Queen of May for the light blues, whites and rose; Purple King, a dark purple; Aurea and Darius for the yellow.

Never buy "mixtures" or "varieties" of bulbs or seeds; order a few named varieties, and plan to have masses of one or two colors instead of mixtures of many.

If time and labor are of no account one may have two borders instead of one at the same cost by raising perennials from seeds. The seeds should be sown in rows in a prepared nursery bed, in June or July, transplanted to the border in September, and the following spring they will bloom.

A GARDEN OF ANNUALS To Cost Ten Dollars

For a summer and early fall garden, annuals give a larger return on the investment than any other form of planting. They also require more care and judgment in arrangement. We must give them light and shade, perspective, and some green for a backing.

A large number of annuals may be grown from seed in the border where they are to bloom, but for those who have cold frames it will be better to start them early and transplant them to the border in June. For sowing seeds out of doors in the vicinity of New York, the first of May is a safe date; if sown as early as April there might be danger that they would rot in the ground, and fewer would germinate. In the north and in higher altitudes seeds should not be sown until June. The majority of the annuals have a long period of bloom, but a few flower only for a few weeks, and of these it is well to make two periods of sowing to give successive bloom. Sow Candytuft, Mignonette, Poppies in May and again in July.

The borders should be prepared as soon as frost is out of the ground. They need not be spaded deeper than a foot, but the surface of the bed should be raised several inches above the ground level, the earth broken up and pulverized, and raked very fine on top. The soil should be loose, friable, and mellow. If the earth is clayey, mix it with one-fourth sand; if it is soggy, mix in some lime. A moderate amount of cow ma-

nure should be used as fertilizer. If the borders are prepared the previous season the manure may be mixt thru-out the earth, but if the planting is done the same season the manure must not come in contact with the seeds.

The most expeditious way is to draw furrows six inches deep in the borders where the flowers are to grow. Fill the bottom of the furrow with cow manure; cover this with five inches of earth, prest smooth, then sow the seeds evenly and thinly, and sprinkle over them a little fine soil. Press the surface gently with a board, and water. When the small plants come up, they should be thinned out to strengthen those that are left.

The majority of garden borders should be curving and irregular. Arrange for the higher growing annuals to be at the back, such as Nicotiana, Larkspur, the branching Asters, Cosmos, the tall Snapdragons, Lavatera, Salvia, Sunflowers, and edge the front line with Pansies, Violas, the dwarf Alyssum, or Candytuft. The intermediate space between the high flowers at the back and the front edging may be filled in with medium growing plants: Calendulas and Coreopsis, the lovely Bell-Flower and the double blue Bachelor's Button, Pinks, California Poppies and Shirley Poppies, Baby's Breath and Butterfly Flower, Marigolds, Nasturtiums, possibly the annual Phlox, and surely the beautiful Stocks, the Zinnias which last late in the autumn, and Mignonette.

Another caution is in the matter of color arrangement. For planting in the borders near the house, try to select the flowers of delicate and cool colorings in lavenders, blues, whites, and pinks. The vivid yellows, the strong reds, and the coarser flowers are effective in the distance, especially with the contrast of green.

A word about some of the annuals. The California Poppies and Cornflowers re-seed themselves and come up year after year; but do not allow all the blooms to go to seed as that shortens the flowering season. Nasturtiums serve as low climbers, have a dense foliage, and fill in ugly places. Both the annual Poppies and Nasturtiums do not bear transplanting and should be sown in the border. Cosmos is a rampant grower and suits the shrubbery. Salvia in its scarlet dress swears at everything and should be given a sabbatical year; choose, rather, the blue Salvia, Harminum Violacea, and combine it with white or yellow. Carnation Marguerite with a slight protection of leaves thru the winter will bloom the following spring. Almost all annuals like the sun, but Violas prefer a partly shaded situation.

Two foliage plants, Artemisia and Racinus, grow rapidly and will serve for backgrounds. The list of good annuals is almost discouraging in its length. It is preferable to have fewer varieties and a good mass of bloom of one kind. I have made a list of about twenty-eight satisfactory annuals, and from these one could easily select fifteen or twenty varieties for a small

For Real Bicycle Joy—

YOU have only tasted of real bicycle joy until you own a SMITH MOTOR WHEEL.

Motorwheeling gives bicycling a fresh charm—the exhilaration and ease of power-riding. A sturdy, willing motor, which attaches in five minutes to any coaster brake bicycle, responds to the gentle touch of a handy lever; and in a twinkling your "mount" is a thing of life. Your pedals are footrests, after two easy turns.

Then the pulsing motor, obedient to your command, sends you

Smith Motor Wheel
DETACHABLE

magically on at any speed from 4 to 20 miles an hour. There is no jarring vibration, no grease or dirt.

Special riding togs are unnecessary.

Up to 125 miles of new pleasure and "get-about" service are yours from one gallon of gasoline.

Little wonder that there are nearly 10,000 happy motorwheelists now!

Your dealer will demonstrate. Or write for our book "Motorwheeling."

Dealers: A few exclusive territories are still open. Write for full particulars.

FOR THE SHAKSPERE TERCENTENARY

FIFTY SHAKSPERE SONGS

Edited by CHARLES VINCENT, Mus. Doc.

ISSUED IN TWO EDITIONS, FOR HIGH VOICE, FOR LOW VOICE

The editor has arranged the material selected in a logical and interesting manner, dividing it into four parts, as follows:

Part I.—Songs mentioned by Shakspeare in his plays.

Part II.—Songs possibly sung in the original performances.

Part III.—Settings composed since Shakspeare's time to the middle of the nineteenth century.

Part IV.—Recent settings.

The examples chosen will be found not only historically interesting and illustrative of the various periods, but gems of song composition as well—songs which may be sung with delight.

The prefatory and descriptive matter is full and complete, embracing a review of Shakspeare's England, musically considered and a separate descriptive and historical note to each song in the volume. A fine portrait of the poet serves as frontispiece.

Note.—The Musicians Library is a series of 75 matchless volumes containing the masterpieces of Song and Piano Music, edited with authority, and engraved, printed and bound with surpassing excellence.

Bound in paper, cloth back, each, \$1.50 post-paid; in full cloth, gilt, each, \$2.50. post-paid

Booklets giving Portraits of Editor, Tables of Contents and particulars about the Easy Payment Plan sent free on request.

OLIVER DITSON COMPANY, Dept. G, BOSTON

for late Fall greens and possibly half a dozen hills of muskmelons trained out on the grass or along the fence.

If amateurs would plan out their gardens before they started to sow the seeds, they would reap bigger crops and fewer disappointments. Also, if they would buy their seeds of reliable seedsmen, they would grow better vegetables. This latter warning is unusually important this season, for many seeds are scarce.

It pays to get down on the floor with a big sheet of wrapping paper and make a regulation plan of the backyard garden. If corn and pole beans are to be grown, they should have a place at the rear. Permanent crops like asparagus and rhubarb will need a little space at one side, where they will be out of the way when the garden is plowed. Forty asparagus plants and four of rhubarb will supply the average family.

Rotation of crops is needed to economize plant food and help avoid plant diseases. Tomatoes, lettuce and cabbages, for example, may be planted this season where peas and beans grew last. Double cropping will double the total yield. That means that beets, cabbage or celery will go in as soon as early peas are off, that turnips will follow early beets and that lettuce will be sown wherever a vacant space appears. Of course these are only illustrations; many garden-makers get their crops from a few square feet of backyard soil.

It is a wise plan to start peas, beans, corn, radishes, beets and lettuce at intervals of a week or ten days all thru the Spring. Then there will be a long season of each kind. Parsnips and salsify require the whole season for their growth and are best placed at the further end of the garden. These two vegetables should be left all winter, and dug in Spring as soon as frost is out. The seeds of parsnips, salsify and carrots are slow to germinate. To prevent weeds getting a long start before the first shoots appear, sow a few radish seeds at the same time. They will mark the rows for the wheel hoe. If the soil in the furrows is soaked with water before the seeds are sown, germination will be hastened by several days.

The earliest seeds to go in are peas, radishes, lettuce and spinach, which may be planted as soon as the soil is fit to work. Gradus, one of the best sorts of wrinkled pea, may be planted first and then American Wonder put in at ten-day intervals. Most of the common radish varieties are good, but there is a great difference in lettuce, with May King among the best for early use. The very best way to grow lettuce all summer is to make a cold frame, even tho there be no glass for it. Big Boston planted and grown to maturity in a cold frame will head beautifully in the hottest weather, while it will go to seed in the open ground or refuse to grow at all. And if a glass sash be used on the frame, both lettuce and radishes may be eaten by the time seed sown outside has broken the ground.

FRANQUETTE

and Resistibility in Northern Climates.

The Thomson Orchard, near Rochester, 228 trees, the largest commercial bearing orchard in the East, produced Fall 1915, 260 bushels Walnuts, 32 lbs. to the bushel, sold at 25c. per pound. Wholesale \$2,080. This orchard has been in bearing many years with absolutely no winter-killing—with occasional temperatures 20 degrees below zero.

MAYETTE

Northern Grown English Walnuts

"Most Profitable to Grow."
"Most Satisfactory to Own."
"Most Delicious to Eat."

Commercially, fortunes lie in the English Walnuts. Never before has the English Walnut been so available to every one as now. Our Glenwood grown English Walnut of to-day, has been bred for its majestic beauty as well as for the golden crop it bears. It has likewise been bred for Health, Hardiness.

YOU can now grow these wonderful English Walnuts around your own home or in your orchard just as you have always grown Peach and Apple trees—Elms and Maples.

Turnip	April-August	6 in.	1 oz. 100 ft.	60

Golden Bantam is unsurpassed among the varieties of corn. It is very early and may be planted in furrows rather than hills. Cultivation should be shallow to avoid disturbing the roots, which grow very near the surface of the ground.

Tomatoes in the backyard garden are best trained to stakes or supported on frames to economize space and keep the fruit clean. When you set out tomato plants which have long, spindling stalks, if a shallow trench be scooped out and a large part of the stalk bent lengthwise and buried along with the roots, scores of new rootlets will be formed and the strength of the plant greatly increased. Tomatoes may be stimulated by sinking a tin can in the ground at the base of each plant and partly filling it with manure, holes having first been made in the sides of the can. When water is poured into the cans, the roots will get a fertilizer that they can use immediately.

Several vegetables not often seen in American gardens deserve mention. One is the Chinese cabbage catalogued as Pe Tsai, which looks more like a head of cos lettuce than it does like a cabbage. It makes a delicious salad when served raw with French dressing or even with sugar and is very easy to grow, altho it likes cool weather. People who are fond of summer squashes will have a treat when they indulge in the new English vegetable marrows, which are splendid in every way and even make good midsummer substitutes for pumpkin pie. The bush varieties are best for the backyard garden. Then there is martynia, which makes the best of pickles and grows in sections where cucumbers usually succumb to the blight. Finally there is Scotch kale, a Fall green of wonderful hardiness which will last in the garden till Christmas.

In addition to steady cultivation, the backyard garden will need fertilizers and water. Without doubt the best fertilizer is stable manure broadcasted and plowed under. Five dollars' worth will go a long ways. Two dollars may possibly be spent for a ready-mixed

garden fertilizer to use in the rows and a little nitrate of soda to dig into the ground around backward seedlings and to force tomatoes just as the fruit begins to turn. A water system will greatly increase the yield of any garden and likewise reduce the labor. A very satisfactory equipment can be obtained for from five to ten dollars.

SECRET DIPLOMACY

In the *Revelations of an International Spy*, Mr. "I. T. T. Lincoln" gives a lively account of the espionage and counter-espionage preceding the war and especially the efforts of the certain Liberal leaders in England to uncover and thwart the anti-German policy of Sir Edward Grey which they feared would lead to war. The "revelations" are, on the whole, rather of the author's own psychology, albeit unconscious, than of the entanglements of European diplomacy. Big portions of the book are bland self-description, and give an occasional glimpse of I. T. T. Lincoln that is more vivid than he appears himself to know. The egotism is intentional enough when he says that, of the two strains in his nature, one is a "craving for excitement, a passion for deduction and analysis, and a love of applause that overshadows all other leadings." We cannot find much to support the supplementary claim to have "the quiet fervor of the mystic and the imaginative sensitiveness of the artist"! A man who can let go in this wise over his own qualities, and who can pride himself on the showing of this book as having been employed "in some of the most momentous diplomatic moves between 1906 and 1911, with entire and unqualified success," is not unlikely, of course, to think Sir Edward Grey "very clever, reticent, but shallow" by comparison. One is more and more curious to know what manner of man it is that can, on the strength of this outstanding quality of self-confidence and esteem, bluff his way into the House of Commons and the pages of *Punch*, secure the assistance of philanthropists, statesmen and diplomatists sufficient to further a generous scheme of personal exaltation, not omitting the fun of taking part in the melodrama of Continental high life, and finally come to attempt, with the same delicious complacency, the undoing of the country whose guest he had been for years.

Apart from their autobiographical interest, the "revelations" have, as it appears to us, little importance. There is far more of diplomatic generalities than of fresh, corroborated testimony. Aside from the documents he alleges he obtained from the French permanent official, "M. Legrange," regarding Anglo-French-Belgian military and naval consultations prior to the war (and which, incidentally, have since the war begun been admitted by Sir Edward Grey in Parliament) there is not a single instance in which Lincoln gives anything beyond his own word and an appeal to the "secret and unofficial" archives of the Foreign Office to back

"The American nation should not let its youth slip by without filling the souls of the children with music."

Josef Stransky

Conductor New York Philharmonic Society

START the small travelers on life's journey with the most helpful equipment. A knowledge of the best in music means an uplift all the way.

Begin with the incomparable Steinway. The little ones will form music habits of the highest type which the commonplace can never thereafter satisfy.

The Steinway's superiority costs but little more than the mediocrity of some of the "just as good" makes. Moderate prices and convenient terms are among the Steinway's advantages. Illustrated literature on request.

HARTSHORN SHADE ROLLERS

AUTO-INTOXICATION IS NO MYTH

AUTO-INTOXICATION is caused by constipation. The bowels fail to function properly. The lower intestine becomes filled with disease-breeding waste matter.

Many physicians, who have long recognized the dangers attending the use of strong purges and of habit-forming laxatives and cathartics, have adopted the mineral oil treatment, as a saner, more natural way of combating the evils of constipation and auto-intoxication.

Nujol conforms in every respect to the requirements of the mineral oil treatment. Its purity is vouched for by the world's largest refiners.

Most druggists carry **Nujol**, which is sold only in pint bottles packed in cartons bearing the **Nujol** trademark. If your druggist does not carry **Nujol**, accept no substitute. We will send a pint bottle prepaid to any point in the United States on receipt of 75c—money order or stamps.

Write for booklet, "The Rational Treatment of Constipation."

his assertions. The bulk of the book might have been written by anyone familiar with what he would probably call "the gossip of the European Embassies." There are many such people, and a large part of the secrets he reveals have been known or guessed by the outside world. A delightful naïveté is in the solemn reproductions of the formal letters of introduction which prove him—he would have us believe—to have been "in close personal touch" with the highest British diplomats and statesmen. Any British M. P. could have obtained such letters under similar circumstances, and that Lincoln should regard them as so convincing is not less amusing or amazing than his account of the anti-Government progressive whose offer formed the basis, if we accept his word, of Lincoln's curiously-motivated espionage campaign. It is quite clear that he hints at Dalziel as his employer "D," but (aside from the manifest improbability of Sir Henry choosing an Hungarian Jew as a pro-British agent in such an undertaking), the bottom is knocked out of the innuendo by the simple fact of there having been no tangible result, in England, from Lincoln's "discoveries." If Sir Henry Dalziel had actually learned of the Anglo-French military understanding prior to the war there cannot be the least doubt that a corresponding movement, altho perhaps discreet, would have occurred in the British press, and *Reynold's* would probably not have been even discreet!

Revelations of an International Spy, by I. T. T. Lincoln. McBride. \$1.50.

A HERO OF PEACE

Stephen Chalmers' appreciation of Dr. Trudeau, published in the *Atlantic* directly after the death of the great leader in the war on tuberculosis, is the nucleus of *The Beloved Physician*, which describes the doctor as he was known to his patients and seen by his friends and townsfolk. The introduction is taken from his last address to his fellow physicians, made when he was hardly able to stand, and, characteristically, on optimism. No better word could be found for the keynote of the *Autobiography*, which he was with difficulty persuaded to write during this last year. It is of course a book of prime importance to the medical profession in this land and abroad, and of especial interest to the thousands who have been brought in contact with the wonderful work at Saranac Lake. But aside from medical and personal interest, it is a singularly delightful and, despite its tragedies, singularly happy biography. Written with the utmost simplicity and directness, it recounts a life, after its somewhat romantic youth, of no dramatic events. But it draws a picture of a man whose strength lay in never knowing when he was beaten, of a man so absorbed in his vision that he was unconscious of the magnitude of his task, and moreover equally unconscious of his own power. The wisdom, the generosity, the devotion of his friends is the theme of every page, and he appeared to himself as simply "do-

ing the next thing." It is only by reading between the lines that one finds the self-sacrificing scientist, the dauntless leader of the forlorn hope, to whom the world owes so mighty a debt.

The Beloved Physician, by Stephen Chalmers. Houghton, Mifflin. \$1. *An Autobiography*, by Edward Livingston Trudeau. Doubleday, Page. \$2.

IRISH VERSE

With his whimsical prose fantasies, "The Crock of Gold" and "Demi-gods," James Stephens pleased his readers, and charmed or disarmed his critics. There was a racy Irish flavor to his wit, an unctious in his drollery, and a spell in his mystifications that tickled the literary palate. None knew, to be sure, what he meant or where he was "at." But what then? He was amusing; that sufficed. His Irish fancy in full career was an arresting spectacle, and so engaging were his performances in general that grave reviewers encouraged him to cut what imaginative capers he chose, and assured him of an audience, however queer the themes on which he might choose to fiddle his eccentric harmonics. When, in the essays and stories of "Here Are Ladies," he spoke directly and lucidly, he still kept in the good graces of his hearers. But a liking for this author drawn from the books mentioned can hardly fail to moult a feather after a perusal of his latest collection of verse, *The Rocky Road to Dublin*. In that slender volume of lean lyrics, Mr. Stephens, remembering both Blake and Stevenson, and aiming at a childlike simplicity and naïveté, achieves chiefly childishness and fatuity. The diction of these facile rimes sinks continually to the dead levels of prosaic commonplace; there is little music in them; and there is no evidence of the sensitive or exacting literary conscience.

The Rocky Road to Dublin, by James Stephens. Macmillan. \$1.

A GENTLER WEST

A delightful, delicate, life-like story of three dogs, three children, three men, some of them from Ireland, is *The Glory and the Dream*, by Anna Preston. Whether or not children will appreciate the charm and the humor and the pathos of Michael, aged six, grown folk will.

Heusch. \$1.25.

WHICH SCHOOL?

A most useful annual is the *Handbook of the Best Private Schools*, prepared by Porter E. Sargent. Boarding, day, and special schools and camps in the United States and Canada are listed, and careful investigation has gone to the preparation of this list and the discriminating descriptions.

Porter E. Sargent, 50 Congress street, Boston. \$2.

DOGS

Of course Scott figures in *Your Dog and My Dog*, the anthology compiled by Lincoln Newton Kinnicutt. Gilder's sounding hexameters to Leo, too, are here, and others well known. One is particularly pleased to be introduced to Celia Duffin's sympathetic verse *An Old Dog*, and Sir Bat Ears, Mrs. Eden's delightful description of an ancient English almshouse and its dog.

Houghton, Mifflin. \$1.

AS PARIS WAS

Among the many books from the other side that bear a year-old date and so miss notice in the year's art books, is a cheaper edition of *The Color of Paris*, with its essays by gentlemen of the Académie Gon-

You Take No Risk

This Razor is GUARANTEED FOR LIFE

This Shumate "Barber" razor is so good that we dare guarantee it to you for life. Here's the reason—the blade is made from Tungsten Alloy Steel, which takes a keener edge than any ordinary steel can—and it holds it. You can use it for years without honing. The secret of this wonderful steel is *ours alone*, and we guard it jealously.

Here's our *unqualified guarantee*: Buy a Shumate "Barber" razor and use it—not once, but as long as you like. If you say after an exacting trial that you don't like it, we'll exchange it *without a word*.

Sent postpaid, **\$2.00** In remitting, mention your dealer's name, and a chamomise lined, rust-proof case will be included with your razor.

State whether you want light, medium or heavy blade. Heavy blade for very strong beards.

Established 1884
Capacity 6,000 razors daily

Shumate Razor Co., 685 Locust St., St. Louis, U.S.A.

ANDREW CARNEGIE says

"Other men's brains have made me rich. 'Tis said I've more money than some. If so, 'tis because I've had more courage than some. I let the slow-coaches use the old machine—mine I chucked into the scrap heap, quick."

What message has Mr. Carnegie's pronouncement for you? Just this:

The successful man promptly utilizes the latest machine, the most improved method; consults the highest authority and reads the latest books. To be successful you must have knowledge and that's the reason YOU must own and use the

New International Encyclopædia

24 Volumes

SECOND EDITION

80,000 Articles

The only Authoritative Encyclopædia that is up-to-date

Can you afford to rely on a reference work which leaves off with 1906, 1907 and 1908; a work that brings only a few prominent articles, like the Panama Canal down to 1909? NO.

Can you afford to depend on a work that neglects mention of the Balkan War, the present great world-war, the Chinese revolution, the discovery of the South Pole, Amundsen, the Cape Cod Canal that brings Boston 70 miles nearer to New York, the New York State Barge Canal connecting the great west and northwest grain fields with New York harbor; a work that fails to note the recent tremendous progress in science, engineering, arts, manufactures; the latest developments in agriculture—such as irrigation, dry farming, motor tractors, latest discoveries in plant life and plant diseases and the methods of combating them? NO.

The New International is the Only Encyclopædia that will Give You These Facts and Thousands More Not to be Found in Any Other Work of General Reference.

Can you do without the encyclopædia written by Americans, edited by Americans and published by an American firm of 30 years' cyclopaedic experience; the encyclopædia pronounced by eminent authority "the best and fullest encyclopædia in existence" for American readers and American interests? NO.

Can you neglect that encyclopædia which is the accepted authority in the leading American School, College, University and public libraries? NO.

Can you afford to spend 2 cents

to bring you a volume of the New International Encyclopædia for examination and for comparison with other encyclopædias so that you may judge its supreme value for yourself? YES.

Then fill in your name and address on the coupon and FIND OUT about the New International Encyclopædia.

Write for the Free 80-page Book

It tells what this great encyclopædia is, what it contains, how essential it is to you and with what little expense and effort you can secure it right NOW, when you need it Most.

Re-written, Re-printed, Enlarged

The New International Encyclopædia is new from cover to cover. Its articles were prepared by highest authorities throughout the world. Its treatment of all subjects is absolutely impartial. It devotes to American subjects the same scholarly attention it gives to all other topics of human interest. Its explanations are perfectly clear and its literary style is most attractive.

Its knowledge is instantly accessible, due to the alphabetical arrangement of subjects. You can thus find the information you seek in the logical place for it to be.

The New International Encyclopædia has 300 double-page maps in color, each corrected up to the present time and each so inserted that it can be removed when out of date and replaced by a new and corrected one, which Dodd, Mead & Co., Inc., will furnish free of charge.

It is a splendid example of finest bookmaking—illustrations, typography, binding.

*"The authentic biography for all
the English-speaking peoples"*

Sir Sidney Lee's

A Life of William Shakespeare

New Edition Rewritten and Greatly Enlarged

This standard work on Shakespeare, entirely rewritten and greatly enlarged, contains all the trustworthy and relevant information about his life and work which has become available up to the present time.

"Amid the mass of writings about Shakespeare this book has been since the first and still remains one of the most valuable and permanently authoritative works. As an example of biographical research and biographical writing it has few rivals."—*Boston Transcript*.

"Contains all the reliable information now in existence . . . a mature work."—*Springfield Republican*.

"Has no rival. Would be fascinating reading even if one took no particular interest in Shakespeare."—*The Dial*.

"We can imagine no better way of celebrating the Tercentenary than by reading this book."—*N. Y. Globe*.

Illustrated, 758 pages, \$2.00.

Shakespeare's Theater

By Ashley H. Thorndike

Professor of English in Columbia University

The first comprehensive survey of the English theater in Shakespeare's time. Discusses the playhouses, their stage arrangements, the methods of presenting plays, the relations of the court and public stages, censorship, professional actors and their audiences. A volume of large interest to readers of theatrical history as well as to students of Shakespeare.

With many illustrations. Ready March 29.

Master Will of Stratford

A Play in a Prologue, Three Acts and an Epilogue

By Louise Ayres Garnett

The scene is in Stratford, on a New Year's Eve and Shakespeare's mother, Oberon, Titania and Queen Elizabeth all appear together on the stage. The style is truly Shakespearean with the raciness, the quickness of wit, the alertness and dexterity of metaphor characteristic of Elizabethan dramatic speech.

Boards, Fifty Cents

"The most readable, most attractive and convenient presentation of Shakespeare's work"

The Tudor Shakespeare

Published under the general editorship of William Allan Neilson, Ph. D., of Harvard University and Ashley Horace Thorndike, L. H. D., of Columbia University

Now complete in forty volumes including *The Facts About Shakespeare*, which supplements the introductions and notes to the individual plays and gives a corrected account of Shakespeare's life, environment, work and reputation.

Three features especially commend this edition of Shakespeare—its authenticity of text, its ideal format, and the terse practicality of its introductions and notes.

Each play is published in a small volume beautifully bound in green and gold—a binding that will open flat and not break. The end-papers are pictures of the London theater district of 1590.

The set, cloth, \$14.00; leather, \$22.00. See them at your bookstore.

Except "The Facts About Shakespeare" which is sold only with the set, each volume of the Plays and Poems may be had separately. Cloth, 35c. Leather, 55c.

"In type, paper, size, in all matters of make-up, it is safe to say this edition has never been surpassed, if equalled. . . . Every Shakespearean student should possess a set of these volumes."—*Boston Times*.

"These little volumes, in their convenient size and clear type, cannot fail to become immensely popular owing to their excellence in form and substance and their very moderate price."—*Philadelphia Public Ledger*.

court, and its exquisite plates by Yoshio Markino. The painter has caught the city in all atmospheric conditions, and made a series precious to everyone who holds holidays in Paris in rose-tinted memory.

Dodd, Mead. \$6.

A FORERUNNER OF BRIEUX

The chief work of Emile Augier is made accessible to the American public by Barrett H. Clark's translation of *Four Plays*, with a comprehensive sketch of the author's work by the translator, and a preface by Brioux. Ranging from the light to the very strong, these plays give an excellent idea of Augier's style and social theories. His work belongs to "the theater of ideas," but, unlike Brioux, he subordinates his purpose to his story.

Knopf. \$1.50.

"LITTLE WOMEN"

If you have among your most cherished possessions a leaf from Louisa Alcott's garden, you will enjoy the little volume of *Alcott Memoirs*, compiled from the papers of the late Dr. Frederick L. H. Willis, the Laurie of "Little Women." Tho the book is fragmentary and unsatisfying, and the accounts of the four sisters are disappointingly meager, there are interesting pictures of Mr. and Mrs. Alcott, and records of meetings with Emerson, Thoreau and other important figures.

Boston: Badger. \$1.

FIRST AID TO DRAMATISTS

The most excellent feature of the *Technique of Play Writing*, by Charlton Andrews, is its admirable command, for purposes of illustration, of characters and situations in contemporary drama. As the author discusses the elements entering into suspense and surprise, the climax and the development of plot, he drives his point home by examples from plays with which the reader is already partly familiar.

Home Correspondence School. \$1.50.

FOR THE FARM

The Apple, by A. E. Wilkinson, of Cornell, is an excellent working guide in the usual processes of orcharding, with directions for remaking old orchards, breeding new varieties, and for storing and marketing.

Ginn. \$2.

The Landscape Gardening Book, by Graces Tabor, has all sorts of delightful and possible suggestions for simple home grounds, and is especially noteworthy for its treatment of hedges, gate-ways and entrances.

McBride, Nast. \$1.50.

Soils, Their Properties and Management, by T. L. Lyon, tho one of the Rural Textbook Series, and an advanced treatise, will be found of practical value to the farmer in any section of the country.

Macmillan. \$1.90.

The Diseases of Poultry, by R. Pearl, F. M. Surface and M. R. Curtis, biologists of the Maine Agricultural Station, is an illustrated scientific study based upon experimental work in poultry raising.

Macmillan. \$2.

Prairie Spirit in Landscape Gardening, by Wilhelm Miller, is suggestive not alone to those whose gardens lie in the Middle West, but to all interested in the preservation and intelligent use of the characteristic beauties of our scenery.

Univ. of Illinois, Urbana, Ill.

Beekeeping, by E. F. Phillips, is as scientific and as practical as any novice could wish, but for all that it does not miss the charm that has hung thru all time about the makers of honey. One wonders not that beemen are so enthusiastic, but that they are so few.

Macmillan. \$2.

THE MACMILLAN COMPANY, Publishers, NEW YORK

Independent Opinions

Many of our readers apparently regard this periodical as a sort of "Independent Primary," for we keep getting presidential nominations:

An allusion to presidential possibilities in the last paragraph of your amusing editorial "A la carte," in the issue for January 31, impels me to add a further word. And that is concerning my astonishment that no one has yet mentioned the name of ex-Governor and ex-Ambassador Myron T. Herrick of Ohio as a strong candidate for presidential nomination by the Republican party this year. Let any one read Eric Fisher Wood's "Note-book of an Attaché" with its vivid presentation of Mr. Herrick's ability and wisdom in handling that unforeseen work in Paris, early in the war, then see if any doubt can remain that he is better fitted than any man in America to deal with the most important questions soon to press for solution. Why not replace your jesting reference to another university president with a genuine "boom" for ex-Governor Herrick?

A. B. JACKSON

North Adams, Massachusetts

I am writing you to express my high estimate of the article by Mr. Darwin P. Kingsley in your issue of January 31, 1916, on "The World's Fundamental Error."

That it may have the wider reading it deserves, I beg leave to suggest its publication in pamphlet form.

L. W. KEISTER

Los Angeles, California

The address of Mr. Darwin P. Kingsley is remarkably able and shows him to be a man with the proper American world vision. Our country sorely needs such a man in her political affairs. It would be interesting to have him give his views as to the internal needs of the United States with the same fearlessness and lucidity. I am persuaded they would prove true to the crying need for a strong but just man at the head of our national Government. Why can't The Independent suggest that the Republican party nominate him for President?

ASHLEY J. THOMPSON

Alameda, California

Mr. Kingsley's address in pamphlet form may be obtained free by writing to Mr. Darwin P. Kingsley's secretary, New York Life Insurance Company, 346 Broadway, New York City. We respectfully refer the proposed nomination to the Republican primaries.

On the puzzling question of our naval strength we have received the following interesting information from Mr. Green, of Iowa, a member of the Committee on Ways and Means:

I observe in the February 14 issue of your magazine, an inquiry from a reader as to whether the United States is building battleships of the twenty-five knot class similar to the "Queen Elizabeth" of the British navy. In your reply you seem to assume that our ships built about the same time are defective by reason of not having equal speed, and that a change will be made in our new dreadnaughts in this respect.

If such an impression was intended to be conveyed it is erroneous as to our ships now building. There is much difference in expert opinion as to what speed battleships ought to have, and after having tried out the "Queen Elizabeth" class the British Government has gone back in its later vessels to a type corresponding to that of our

Don't Go Through Life Loaded Down With a Millstone!

How can you expect to be happy, healthy or successful when you are continually handicapped by mild forms of disease? Why don't you double your margin of safety against this over-powering handicap? The life work of a Man-Builder tells how. 5 volumes, 3000 pages, sent free on approval, not a penny in advance—just mail the coupon.

THINK of the first ten men that come to mind and you will find that nine of them at some time or other were "down in the dumps." Think back to your own case and you will find that time and again you have felt that there was "something wrong" with you—yet you didn't know what it was. The reason most people feel that way is simply because we haven't enough Reserve health. We have barely enough energy and stamina to carry us through the ordinary day's work. Just the minute there is any extra strain, mental or physical, we topple over the brink and find ourselves handicapped by partial sickness. Isn't that true?

Everybody knows that physical well being is the mother of mental well being. If your body is full of super-health—if you have great reserve energy—you are irresistible! Nothing daunts you!

The biggest tasks melt under your Power. You solve problems with amazing speed, with uncanny judgment. You simply sweep everything from your path to success and victory. And still, knowing this, most men pay more attention to machines made of iron and steel than they do to their own throbbing human machine. They work and work and WORK—yet they have nothing to show for their labors except a weakened, run-down body almost ready for the scrap pile. You haven't the smashing, driving power now so necessary to win life's battles. You are only of average health and vitality so you achieve only average success—or less.

The problem of getting and keeping the human organism "fit as a fiddle" has been the life-study of Bernarr Macfadden. His mother was a consumptive. Both mother and father died before he was eight years old. Himself weak, frail, cringing, he was marked as a victim of heredity—a certain consumptive—a sure failure at living. Yet today Bernarr Macfadden's name is a synonym for health and all that health means. He is the most vitally healthy and energetic man you could see in a year's travel. He has lectured and written to millions during the past 20 years and so wonderful have been the results of his work that by some they are considered almost miraculous. Time after time he has pointed out the Right Road to men and women who had given up all hope after disheartening, discouraging experiences with drugs and medicines.

And now Mr. Macfadden has written down the results of his life's experience. Macfadden's Encyclopedia of Physical Culture is beyond question the greatest work ever attempted on this intensely and vitally interesting subject. It contains what you want to know about every phase of your constantly working engine. Its information will make a new man of you—a new kind of being, divorced from your present half-alive, half-efficient self!

Read, above, a partial list of what these marvelous books contain. There are nearly 3000 pages in the five volumes—and over 1300 illustrations. Hundreds of illustrations are from photographs, many are printed in colors and the truly wonderful dissectible manikins will fascinate you. Everything about every possible ailment, about diet, about sleep, work, play, sex, fasting, development of every organ of the body—these and a thousand and one other subjects are treated in the most intimate personal way. Everything is written in the author's simple style—amazingly easy for anyone to understand.

These five massive books—volumes that will be consulted more frequently than any other books you have or can get—these masterpieces that bring you so much in health, in personal power, in energy—will be sent to you for examination without a penny deposit. We know what you will say when you open these volumes—we know you will never let these books get out of your home. Others in every walk of life who now have them would not take five times their cost if unable to obtain another set.

We want you to see and read these books for five days—then send the entire set back. But if you want to keep the books—if you feel that the life-lengthening, health-and-energy-giving secrets it contains are invaluable to you, send us \$1.00 in 10 days and the balance in small monthly payments that you will hardly notice. This offer is special, and for a limited time. Miss this opportunity and it is gone forever. Never again will you have so much information offered you—information that concerns your most precious possession—at these prices or on these easy terms. The cost of paper, printing and binding has gone up 20 per cent. since these books were printed and as soon as the present edition is exhausted new prices must come into effect. At this price, now, we will also include a year's subscription to Physical Culture Magazine, which contains every month over a hundred pages of matter akin to health and self-betterment.

In the 3,000 pages—in the thousands upon thousands of articles—if you get only fifty rejuvenating, health-mastering ideas you will have gained a hundred times their cost in personal benefit and profit—yet there is no reason why you should not find some valuable fact that you can apply to yourself EVERY DAY.

Send no money. Just mail the coupon and the entire set, together with the latest copy of Physical Culture Magazine, will be sent prepaid. There is no obligation on your part to keep the books or make any payments—we merely want you to EXAMINE them at our risk. Address Physical Culture Publishing Co., 3423 Flatiron Building, New York.

Send me the following books on approval, not a penny in advance—just mail the coupon.

own navy, having a speed of about twenty-two knots.

An increase in speed is always obtained at a sacrifice either in armor or armament—usually of the latter. The much vaunted battle cruisers with their great speed are so lightly armored that they would be no match in battle for some of our later battleships, to say nothing of our dreadnaughts. Of course, they can run away or rush out for scouting expeditions; destroy or drive the enemies, scouts and armored cruisers off the sea, and serve many other purposes; but so far their value in fleet contests where battleships are engaged has not been shown. In the North Sea battle they overtook and with the aid of torpedo craft sunk the "Bluecher." The German battle cruisers were not strong enough to fight, but were fast enough to get away. Much has been made of speed in connection with this exploit, but had the "Bluecher" been supported by the slower but more powerful dreadnaughts a different story would have been told. The "Bluecher" was said to be faster than any of our battleships or dreadnaughts. So it was, being merely an armored cruiser—an altogether different type of vessel. While the "Bluecher" was the largest and most powerful armored cruiser that Germany possessed, we have four of equal speed, which are more powerful in both armor and armament, any one of which would have overmatched the "Bluecher."

Our new dreadnaughts, now building, or to be built, are of only twenty and one-half knots speed, but it is understood, altho no final details are given out, that they are to carry heavier armor than any vessel afloat, and it is well known they will deliver a heavier broadside. Experts are practically agreed that power in these two respects will constitute the most important factor in future naval actions.

WILLIAM R. GREEN

House of Representatives, Washington

The apostles of preparedness are making extensive use of the most powerful organ of propaganda, the movies. How the pacifists feel about it may be seen from the following:

The "Battle Cry of Peace" is particularly well adapted to deceiving the unreflecting; arousing a false and cheap patriotism, and bringing into disrepute the courageous souls, who in the face of ridicule and contumely, are laboring for the sanity of our beloved country. To a city composed largely of factory operatives who by virtue of necessity cannot stop long enough to think "The Battle Cry of Peace" with its lurid ghastliness is a veritable menace, and the victims thereof do not follow to the only logical conclusion that after being shown (by the picture) the unspeakable havoc wrought by the big guns and air fiends Americans are actually being urged to support the hellish work of creating more devils to demolish and maim and corrode and this under the guise of "preparedness." Even were this so-called "preparedness" genuine, the crime would not be so great, but to insult the already exploited "laboring man and woman" with the thinly veiled commercial scheme which underlies this pseudo "preparedness," to cheat with screen statements concerning "enemies" which have never materialized, to lure them into the meshes of "big business" under the guise of "danger to hearth and home," seems the acme of cowardly enterprise.

The little tow-headed baby, warrior in embryo, who during a lull in the battle (?), turned to me with "I like the war pictures best," spoke more eloquently and alas! more sadly than he knew.

S. G. HARRINGTON

Jamestown, N. Y.

It is a pleasant surprise—for it is not too common—to find that the "new woman" in her most provocative mood meets with approval from one who signs herself as of a former genera-

tion. She is not shocked, it seems, by anything in the article except its English. Being an author herself, she cannot condone inaccuracy in the use of words:

I have read with interest the article by Elinor Byrns in your January 10th number, entitled "I Resolve To Be Restless"; but protest that she has made use of the wrong word. Instead of restless she should have said: "I am an active woman. Almost all of my chosen companions are active women . . . activity keeps us well. We have no time to imagine ourselves ill . . . activity makes us happy."

I know this young woman and know of her chosen associates. They are doing good work in the world. They are not restless, they have poise, continuity of purpose, close application to business and persistence in working for the right. They are of the new period. Women have scarcely a generation of emancipation, but these women see things to be done and valiantly take up the work for humanity. They purpose to have a university education, and make the sacrifice necessary to secure it. They love a home of their own, whether married or single, and are willing to work to maintain it. They recognize that wrongs exist and forego leisure to right them. They read more, think more, touch life at more points than women of idleness. They are more virile, more vivacious, more interesting than men and women who say "I will take mine ease in mine inn." There are too many vital movements awaiting assistance for them to grow fidgety and restless or succumb to ennui. Besides individual development and cultural studies there is settlement work, and suffrage agitation, picketing, and housekeeping to be done.

No, these young women are not restless or they would not have the concentration to accomplish so much. It is industry, activity. It is the result of vigor of mind and body. Our great-grandmothers displayed the same traits when they capably carried on the multitudinous duties of home manufacturing, nursing, gardening, bearing and rearing families, giving lady bountiful ministrations, and dispensing hospitality.

New York A GRANDMOTHER

The article of January 10 by Professor Giddings, entitled "Which Do You Prefer?" brought out many letters of criticism. Here is one from the associate editor of *The Minneapolis Journal*:

My first whipping at school was at age six. Three of us children had gone for wild plums during the intermission and were tardy in returning. Before the whip descended the school ma'am asked the question: "Which would you rather have, plums or a whipping?"

Never since then have I heard a school teacher ask so foolish a question till Professor Giddings spoke. Where would Professor Giddings rather be today, trampling Belgium under orders of Prussian professional killers, or in America, where, if a President is a little too feeble, one has full liberty to help get a stronger one?

I do not fully agree with Professor Giddings in his indictment of President Wilson. Wilson's head and heart plus Teddy's teeth would just about suit me.

MILTON O. NELSON

Minneapolis, Minnesota

As to Professor Giddings' summary of the characteristics of Emperor William and President Wilson, I'd rather be a kitten and cry "mew" than subscribe to either, representing as they do, respectively, the two far extremes—the one the very limits of savagery and perfidy; the other the milk-and-water, word-building bluffer and mollycoddle.

I look forward with a peculiar anxiety to the November election wondering what we—the great American people as we are pleased to style ourselves—will do. I shall certainly hang my head with shame if the policy of the present administration is sustained.

THE INVESTOR'S SERVICE

The Independent is now offering a Service for Investors in which personal attention will be given to the desires of its subscribers for information in regard to investments of all kinds. We cannot of course decide for our readers where they should put their savings and will not undertake the responsibility of recommending specific securities to any individual. But we ask our readers to write to us frankly and this Department will give them by letter or thru the columns of The Independent such impartial information as may assist them in making a wise decision for themselves.

BUYING BONDS AS BUSINESS INSURANCE

BUSINESS men carry fire insurance, casualty insurance, health insurance, life insurance, burglary insurance and insurance of other sorts, but how many insure themselves against embarrassment during a period of money stringency? Right now we are in the midst of great business activity with large profits pouring into the coffers of great and small business men of certain classes. Will it continue?

For every period like 1906 or 1915 we have a year like 1893 or 1907, when the best of firms found that banks were unwilling to lend funds excepting upon deposit of good collateral; prime bonds like underlying railroad issues, the best municipals and in some cases those of industrial and public utility corporations. Commercial or manufacturing concerns carry large stocks of merchandise, raw material and supplies and own real estate, plants and machinery worth thousands; all have ordinarily sufficient cash to meet current requirements or can borrow it, but how many firms have a strong, live reserve fund against a possible money stringency at a time when cold cash is a matter of life and death to the organization? How many concerns have a reserve that would enable the president to go to a bank during a period of depression and borrow a substantial sum when his competitors were being refused?

In other words, how many firms invest a part of their surplus, a percentage of their weekly or monthly pay-roll in prime, marketable securities? The suggestion is not, of course, advanced here as a new one. But it is one that is very easily "pigeon-holed" by busy executives in favor of other matters of immediate interest, such as additions to plant. Nevertheless, in these prosperous times the matter of a reserve fund should receive more than passing notice even at the expense of increased dividend declarations. A concern can, of course, deposit its reserve fund in a bank at 2 per cent or 3 per cent interest, but with a large amount of cash available by the mere signing of a check, there is always the temptation to make expenditures for one thing or another that might not arise were the funds invested in prime securities.

Of course, ready marketability is an expensive feature in an investment in-

asmuch as it is not possible to find bonds that combine safety and ready marketability with high yield. Therefore, bonds that possess the degree of safety and marketability that makes them eligible for a business reserve fund rarely yield over 4.75 per cent. The best grades of investment bonds have not only a market on the New York Stock Exchange, but on many of the European exchanges; they also have a market in the other American exchanges and are dealt in "over the counter" in the large financial centers.

Bonds of this class include those of

railroads, municipalities, industrial and public utility corporations. When it is stated that such bonds should yield not over 4.75 per cent in order to be eligible, even the reader who is not at all initiated will realize that only the securities of the highest grade are included. There are many railroad, municipal, industrial and public utility bonds that are reasonably safe that yield as high as 5½ per cent, but, obviously, they are not so desirable as securities yielding 4.75 per cent or less and would not have the same degree of marketability during a depression as higher grade bonds.

Short term notes of strong corporations or municipalities are in demand for this purpose. Obligations of corporations known to be in a flourishing condition usually sell at very near par value, and it is assumed that they will be paid off at par upon maturity; the yield is in most cases greater than that paid by banks upon deposits. These notes are secured by collateral such as stocks or first mortgage bonds or are absolutely unsecured credit obligations; they are often in the form of receivers' certificates taking precedence over first mortgage bonds. When bought with

Business Insurance

FIRMS and individual business men should establish a fund for insurance against lack of working capital. The purpose is to provide a quick asset independent of the usual assets which may be available for collateral in time of stress.

This fund can be charged to payroll each week or month and as it should yield a fair return, it is not a dead asset.

We shall be glad to discuss the matter with representatives of business houses.

Address Department "I"

J., at 11 o'clock A. M., on Monday, March 13, 1916.

E. H. THURSTON, Secretary
St. Louis, Mo., February 21, 1916.

**THE LIVERPOOL
AND LONDON
AND GLOBE
INSURANCE COMPANY, Limited**
NEW YORK OFFICE, No. 80 WILLIAM STREET.

discrimination, short term notes form a desirable holding for a reserve fund.

A firm having a larger cash surplus than it could keep actively engaged in its own business could invest profitably a part of it in sound securities. A concern not having a large cash surplus might at some time, even when no depression existed, be pressed for funds and be unable to secure them thru lack of collateral. Any firm that has experienced the lack of funds when thousands of dollars in obligations were coming due in a few days, when the pay roll was also to be made, should prepare now for hard times by setting aside 2 per cent or 5 per cent or 10 per cent of its pay roll each week in order to provide an insurance fund against lack of ready money during a depression.

A manufacturing concern with a pay roll of \$2500 weekly might find it possible to invest \$250 weekly in prime securities, so that at the end of the year it would have \$13,000 invested. It might be able to invest a much larger sum, all depending upon how great were its profits and how much in dividends its stockholders expected. Inasmuch as a depression occurs about every seven years, if such a fund were started now, by 1923 a corporation should find itself the proud possessor of \$91,000 invested in prime securities and no great effort expended. If the securities were purchased under par, the sum would be much larger, and still larger if interest on the securities owned were added to the cash to be invested. The fund may be \$10 per week for a small firm or \$1000 a week for a large one, the principle being identical. Any concern that can count among its quick assets a few thousand dollars or a hundred thousand dollars in the best securities can command respect at a bank president's office at any time.

When such a proposition has been advanced to the head of a large business, the retort has often been that the firm's money was "all tied up in the business," or "why should we invest at 4½ per cent when we can earn 15 per cent in our own business?" or, "we need improvements to our plant," etc. Nevertheless, skeptics who failed at first to see the light are now forbearing to place funds in their business at 15 per cent and buying bonds which yield but 4½ per cent because 15 per cent today may not be an asset ten years hence when the bank president turns a deaf ear to pleas for money on unsecured paper.

Look over the holdings of savings banks, insurance companies, institutions and successfully managed corporations; what sort of investments do you find? There are mortgages yielding from 4½ to 6 per cent, not readily marketable; various corporation bonds yielding 5 to 6 per cent, not readily marketable during a depression excepting at a sacrifice; prime railroad, municipal, industrial and public utility bonds yielding from 4 to 4.75 per cent, easily marketable at all times with little sacrifice, or always available as collateral. Why do concerns like these invest in bonds yielding but 4 per cent when they could place all of their funds in securities yielding 6 per cent? The reply is obvious.

5½% Investment in Chicago's Business Center

Security over 2 to 1.
Actual present net
earnings over 2½ to 1.

First Mortgage Bonds of \$500 and \$1,000 denominations secured by one of the best paying modern office buildings in the business center of Chicago. Substantial serial payments provide rapid increase in the margin of security. An investment especially suited to investors requiring positive safety and good yield.

MUTUAL BENEFIT'S EXTRA DIVIDEND

In their report to members of the company made in January the management of the Mutual Benefit Life Insurance Company of Newark, N. J., announce that in addition to the regular dividend of \$5,784,890 apportioned for distribution among policyholders in 1916 a further sum, equalling \$1,156,978, will be paid. Every policy entitled to a regular dividend will be credited with a bonus amounting to 20 per cent thereof, both of which will be payable at the same time. This company paid supplementary dividends in 1910, 1913 and 1914, and raised the percentage rate of its dividends in 1909, 1911 and 1914. All new benefits, privileges and profits adopted from time to time by the Mutual Benefit are made retroactive, thus including the oldest policies with the latest issued.

CRITICISM OF A SORT

Sometimes, not very often, I am happy to report, I receive from readers of The Independent letters of a studied controversial character, taking issue with some fact or opinion previously stated by me. As my readers certainly realize, a satisfactory discussion of any disputed question would be utterly impracticable in the limited space devoted to this department. There are occasions when I hungrily yearn for the room and time to answer, if not refute, some of the few criticisms fired at me.

There lies before me an unpleasing letter from a member of the clergy at Morris, Ill., who tells me he is a policyholder in the Metropolitan Life; that succeeding the mutualization of that company he was told by one of its agents that his premium would be lower thru dividend earnings; and that altho more than a year has elapsed his premium remains at the old rate. He asks me if I do not think the company is overlong in getting to its premium abatements; and then adds that he thinks he notices a tendency on my part to defend the big companies. In presenting his position I have softened his attitude by abandoning the unlovely terminology he employs.

The transformation of the Metropolitan from a stock to a mutual company was only completed in January, 1915; therefore, I do not think it as yet censurable for its refusal to declare dividends on any particular policy or class of policies. Knowing, as I do, that for many years prior to its mutualization this company voluntarily distributed dividends to its industrial policyholders under policies which by their terms

is prescribed by physicians as a diet for diabetics and cases of Kidney and Liver troubles, Rheumatism, Obesity, etc. The U. S. Pure Food Laws require that Gluten Flour must contain at least 35% of gluten or protein. Our Gluten Flour contains about 40% (a recent analysis showed 42%) and must not be confused with "Standard Gluten Flours" which contain 20% only. To be safe insist on getting Farwell & Rhines cross cross brand of Gluten Flour and other cereal specialties. For booklet or samples address:
FARWELL & RHINES, Watertown, N. Y., U. S. A.

specifically excluded them from sharing in dividends, I am prepared to believe that it is now acting justly and honestly with this clergyman. He holds a non-participating policy; that is to say, he is paying a premium which is substantially lower than that charged by a mutual company for the same amount and plan. I believe his policy will earn dividends; necessarily, they must be small, because stock premiums are close to net cost; and I am confident that he will receive them in conformity with such plans as the company uses in calculating and distributing dividends.

There is no disposition in this department to defend anything but the interests of the insuring public. Careful effort is made to procure and present reliable information. Such advice as is tendered by request is founded on the knowledge and experience of the conductor of the department.

J. H. A. Punta Gorda, Fla.—The Presbyterian Ministers' Fund of Philadelphia is a sound, well managed old line life insurance company, ranking with the best in its service to policyholders.

F. J. D. Baraga, Mich.—The Great Northern Life Insurance Company of Wausau, Wis., is a stock company writing non-participating policies exclusively. It is financially sound and well managed.

J. L. H. McCutchenville, O.—Presbyterian Ministers' Fund is first class. You will be justified under the circumstances in using annual dividends in reduction of premiums. Your Columbus Mutual accident contract is limited in benefits at the price, but all right.

G. C. A. Modesto, Calif.—I regard a stock investment in a comparatively new life insurance company as a venture, one that is more often unprofitable than profitable. The financial condition of the Western States Life is satisfactory, its net surplus being about \$117,000 a year ago. Later figures as yet unavailable.

E. A. H. Richmond Hill, N. Y.—There is no Commercial Casualty Company domiciled at Philadelphia; the circular you send was issued by the Commercial of Newark, N. J., which is a sound and reliable company. The policy offered at \$6 a year is of the restricted kind. See article on that subject in The Independent of February 21.

S. A., Salisbury, Md.—As yet I have not seen the balance sheet of the Columbian National Life for the year ending December 31, 1915, but it will doubtless show that satisfactory progress was made. The company is financially sound and its management is capable. You may unhesitatingly accept its representations respecting any policy contract it offers.

F. M. McC., Bayard, Iowa—The Standard Life of Des Moines, tho young and small financially, is organized and doing business on sound lines and has a good reputation. Its sixty-days clause respecting claim settlements should be eliminated, and its application blank should be so revised as that the statements made by applicants would appear as representations and not as warranties.

J. D. P., Tulsa, Okla.—As I have stated in this department on a number of occasions, a life insurance policy reserve calculated on any basis that does not conform with the standard set by the laws for old line legal reserve companies, will finally prove to be inadequate. Consequently, I do not believe that the mathematical system employed by the Guarantee Fund Life is correct. All of the regular life companies write term policies. I don't know that policies are issued exclusively on hands and eyes, but indemnity of that kind is included in nearly all accident policies.

PHILLIPS BROOKS
Said:
"I have the profoundest honor for the character and works of Swedenborg. I have from time to time written his writings."
Swedenborg's religious and ethical teachings are based upon a wonderfully profound interpretation of
The Holy Bible
They will help you personally to a rational understanding of the Word of God—to a clearer conception of the spiritual significance of creation; of the joys of heaven and the miseries of hell; of the process of dying and the life of the real man; and of what the final judgment consists.

Busy Women & Efficient Housekeeping

The Independent has chosen for the subject of its next Efficiency Number, to be published on March twentieth, that great department of human efficiency which concerns the busy woman in her business of home making. Edward Earle Purinton, Director of The Independent's Efficiency Service, will contribute an article on

The Efficient Housewife

in connection with which will be published another of Mr. Purinton's Efficiency Test Charts, by which the housewife may quickly arrive at her percentage of efficiency.

Woman's Home Habit

will be discussed in the same number by Mrs. Martha Bensley Bruère, in the first of a series of articles for The Independent based on the author's personal observations and scientific study of housekeeping problems in many sections of the United States.

The Genial Philosopher 400 By John Kendricks Bangs

IN THE YELLOWSTONE

The exceptionally heavy snowfall this winter has deprived the wild animals in the Yellowstone region of the Rockies of their usual feeding grounds and has driven them down by thousands to take refuge in the Park.

At Gardiner, Montana, immense herds of antelope, elk, mountain sheep and deer have been saved from starvation by the Government supplies of alfalfa hay; and have made themselves thoroly at home in the hills near the entrance to the Park. The scene is one of unusual interest, remarkable enough to attract tourists and photographers from all over the country. One of the finest photographs—a big elk challenging the camera—appears on the cover of The Independent for this issue.

A SAPPER'S STORY

From the German side we get little news of the Verdun battle except announcements of the kilometers gained, guns captured and strategic points obtained. But the French papers publish many personal narratives which give one a better idea of what is happening at Verdun than any figures can give. Here, for instance, is the story of a man who exploded one of the mines which caused havoc to the Germans.

We were in a front line trench on the slope of Côte du Poivre. The captain sent me forward to a small shelter in the open, where the electric contact which led to a mine field had been placed. I crawled thru it along a narrow tunnel without mishap. Thru a slit I looked out on the battlefield as thru the opening in a theater curtain. I saw the Germans, after long wait-

ing, march forward in good order. They thought from their observation that the bombardment had sufficiently devastated our trenches, but they were unable to see that our men had held firm and were making fresh trenches and using shell craters.

The Germans were 200 yards from my post when our rifles and machine guns opened fire. They were taken by surprise and crouched down. When the order was passed along their line to advance they began to sing "The Watch on the Rhine" and dashed forward.

My heart beat madly. They were over the mine at last. I touched the button. An infernal fountain seemed to shoot up in the midst of the mass of men in gray with a great whirl of smoke. I saw men go up bodily, as if from the crater of a volcano.

The attack was stopped.

CARMEN SYLVA

The death of Carmen Sylva, Queen Elizabeth of Rumania, not only removes from the royal family of Europe one of its kindest members, but takes from the roll of Independent contributors one of its oldest names. We reprint a "folk song," from her pen, translated from the Rumanian, which appeared in our columns on May 30, 1889, but which has once more become especially significant.

I AM CONTENTED

I had a spindle of hazelwood; The spindle fell into the water by the mill. And never hath the water brought it back again.

The soldier said, as he was called to die:

"I am contented; But tell my mother in the village, My sweetheart in the cottage, To pray for me with folded hands."

The soldier's dead; his mother and his sweetheart—

They pray for him with folded hands. They dug his grave upon the battle-field, And all the earth was red Wherein they laid him.

The sun beheld him thus, and said: "I am contented."

And flowers clustered on his grave And were contented here to bloom.

And when the wind would roar Among the trees, Then asked the soldier from his deep, dark grave:

"Was it the flag that fluttered?" "Nay!" said the wind; "my gallant hero. Nay; thou hast died in battle, but the flag Hath won the day. Thy comrades Have carried it away full happily."

Then said the soldier from his deep, dark grave: "I am contented."

And then he hearkened to the wandering Of herds and shepherds, and he asked: "Is that the din of battle?"

"Nay!" said they; "nay, my gallant hero; For thou art dead; the war is over; Thy fatherland is free and happy."

Then said the soldier from his deep, dark grave: "I am contented."

And then he hearkened to the lovers' laughter;

And thus the soldier asked: "Are these the people's voices, who remember me?"

"Nay!" spake the lovers; "nay, my gallant hero.

For we are they who never do remember: For spring hath come, and all the earth is smiling.

We must forget the dead." Then said the soldier from his deep, dark grave: "I am contented."

I had a spindle of hazelwood; It fell into the water by the mill. And never did the water bring it back again.

The Independent

In announcing a series of Shakespeare contests, not only becomes a prominent factor in the nation-wide SHAKESPEARE TERCENTENARY CELEBRATIONS—but also serves to bring sharply to public notice the pronounced merits both textual and mechanical of the famous

BOOKLOVERS SHAKESPEARE

This year, the three hundredth anniversary of the death of the World's Master Writer is being commemorated everywhere—by masques, pageants, plays, monuments—but the most fitting way to pay tribute to his matchless genius is to possess oneself of the literary treasures he has left to the world for all time. Nowhere else will one find such bubbling humor, sincere pathos, stern tragedy—every height and depth of emotion—as in these wonderful plays.

Every home needs a good Shakespeare, and the BOOKLOVERS qualifies in many important features as the best. That is why nearly two million copies have been sold in the last ten years—far outranking any other edition ever published.

The BOOKLOVERS is widely commended as the best equipped edition ever offered the general public. It contains 7,000 pages, including every word that Shakespeare wrote—also every possible aid to the reader for his fuller understanding and enjoyment. Here are two sets of notes, one for general use, the other at the back for the most exhaustive study. Here are glossaries, comments, arguments, indices and full biography. The reading page is large and clear, and every manufacturing detail of the highest grade. There are 40 full-page plates in color, and over 400 other illustrations. The bindings are charming; the volumes of convenient size. Every new reader is delighted with this attractive edition.

A New Edition at Practically Half Price

No Other Edition Has These Special Features

Topical Index

in which you can find instantly any desired passage in the plays and poems.

Critical Comments

on the plays and characters. They are selected from the writings of world-famed Shakespearean scholars.

Glossaries

A complete one in each volume explaining every difficult, doubtful or obsolete word.

Two Sets of Notes

One for the general reader and a supplementary set for students.

Arguments

These give a condensed story of each play.

Study Methods

which furnish the equivalent of a college course of Shakespearean study.

Life of Shakespeare

by Dr. Israel Gollancz, with critical essays by Walter Bagehot, Leslie Stephen, Thomas Spencer Baynes and Richard Grant White.

Until this year the BOOKLOVERS SHAKESPEARE was in 40 thick-paper volumes. Now as a crowning achievement we have compressed this into 20 beautiful thin-paper books—retaining every single feature of the old edition and adding others. But the great saving in binding (20 volumes instead of 40) has enabled us to cut the price nearly in two. Instead of \$35 and \$50, the old prices—see the low prices in the coupon. Subject to advance when this edition is exhausted.

We cannot describe the beauty and the utility of this Shakespeare—or its wonderful notes and special aids to the reader—in an advertisement. WE WANT YOU TO SEE THESE BOOKS FOR YOURSELF AT OUR EXPENSE. You take no risk as you do not order until you do see them. No agent will be sent. The books are their own best witnesses. If you don't like them—send them back, also at our expense. That's the way we have dealt with thousands of pleased customers.

Readers For Pleasure—And Contestants For The Independent Prizes Will Alike Want The BOOKLOVERS

One could scarcely imagine a more perfectly equipped edition for home use—for the pleasure of the evening by the fireside, revelling in these great plots for the sheer joy of them—or for the more ambitious student of the text who will find in this one set of books every possible incentive and aid. The present special offer saves you nearly one-half on the former price of these great books—brings the full set for your personal examination—and allows you to pay for them at the rate of only a few cents a day. So why hesitate?

This entire, beautiful set will be sent you on approval prepaid—If you send Coupon at once

VOLUME 85

MARCH 13, 1916

NUMBER 3510

K I N G S

By G. Bernard Shaw

We sent G. B. S. a copy of the editorial entitled, "And There Shall Be No More Kings," in The Independent of March 22, 1915, and the following, penned on the margin of the clipping, in his careful handwriting, is his comment on what he calls "a wise and timely article."

THIS war raises in an acute form the whole question of Republicanism versus German dynasticism. After the mischief done by Franz Josef's second childhood as displayed in his launching the forty-eight-hour ultimatum to Serbia before the Kaiser could return from Stockholm, the world has the right—indeed the duty—to demand that monarchies shall at least be subject to superannuation as well as to constitutional limitation.

All recent historical research has shown that the position of a King, even in a jealously limited monarchy like the British, makes him so strong that George III, who was childish when he was not under restraint as an admitted lunatic, was uncontrollable by the strongest body of statesmen the eighteenth century produced. It is undoubtedly inconvenient that the head of the State should be selected at short intervals; but it does not follow that he (or she) should be an unqualified person or hold office for life or be a member of a dynasty.

I may add that if the policy of dismembering the Central Empires by making separate national States of Bohemia, Poland and Hungary, and making Serbia include Bosnia and Herzegovina, is seriously put forward, it would involve making them Republics; for if they were Kingdoms their thrones would be occupied by cousins of the Hohenzollerns, Hapsburgs and Romanoffs, strengthening the German hegemony instead of restraining it.

London

THE PRESIDENT AND THE RECALCITRANT DEMOCRATS

IN a time of great national stress the President can hardly have a more serious obstacle to contend with than a division in his own party. A spirited and effective opposition is not such a bad thing; it keeps the issue clear and sharpens responsibility. But disunity in the leader's own following threatens to cut the very ground from under his feet.

With such a situation President Wilson has had to contend for nearly a year. During all that time conditions in the field of foreign relations have been continuously acute. There has been imminent every day the possibility that the United States might become involved in the Great War.

In the early months of that year the President was embarrassed by the presence in the chief place in his Cabinet of a man who did not see eye to eye with him on fundamental questions of foreign policy. The story persists, without denial, that when the first "Lusitania" note went to Germany, signed with the name of Mr. Bryan, then Secretary of State, Mr. Bryan himself told the Austrian Ambassador in private conversation that the stern tone of the note was intended for effect at home and not abroad. A condition of affairs which made possible such an act was obviously intolerable. But it persisted until it was resolved a month after the sinking of the "Lusitania" by Mr. Bryan's resignation.

Now an equally serious situation confronts Mr. Wilson. Some of his party associates in Congress have proposed to have Congress lay down a different principle in relation to the protection of American citizens upon the high seas from that which the President has consistently asserted in his dealings with the nations at war. Not only was this proposal of certain leading Democrats in Congress a direct assault upon the President's foreign policy; it was an attempt to rewrite international law. The immediate effect of it was to give aid and comfort to those European governments which have also been attempting to reconstruct the recognized rules of international law to fit the exigencies of their peculiar position upon the sea. The President straightway found himself hampered in his dealings with Germany and felt a new confidence in the attitude of his diplomatic antagonists born of a not unnatural belief that the President was

not supported by a united party, to say nothing of a united nation.

Mr. Wilson did not waver. He took a straightforward course in dealing with this attempt to scuttle his foreign policy. He called upon his associates in Congress to bring the matter to a direct vote, and thus to put the Congress on record in support of the course which he was pursuing.

There are two good reasons why the Congress should have met the President's request frankly and given him the vote of confidence which he asked. In the first place, Congress—and the nation—ought to support the President at every crisis in our foreign relations, unless and until he goes so flagrantly wrong that the national honor or the national safety is clearly imperiled.

In the second place, the President is right. The advocates in Congress of the proposal to warn American citizens not to travel upon armed merchant ships belonging to belligerent powers would have the United States Government attempt to evade its primary duty of protecting its citizens upon the seas in the hope that by so doing the possible danger of war would be minimized. The motive is commendable. No American wants the United States to enter the war. But the act itself would be indefensible. To have the American Government deliberately abjure what is a cardinal duty of every sovereign nation would be a national disgrace.

President Wilson has consistently sought two ends. He has striven to keep the United States out of the Great War. He has labored to uphold the recognized and incontrovertible rights of American citizens against every assault. In so doing he has had to pursue that perilous middle path which subjects him who travels it to attack from both sides. There are those who assail him because he has been too anxious to keep the nation out of war. They are to be found chiefly in the opposition. There are those who accuse him of not trying hard enough to keep the nation out of war. They are largely those of his own party. In this difficult situation Mr. Wilson has steered a straight course. He deserves the support of Congress and of the nation. If he loses either, his dual task will become insurmountably hard. Neither the safety of the United States nor its honor will be secure.

OUR LATEST PROTÉGÉE

THE Senate has ratified the Haytian treaty with commendable promptness and unanimity. By this act the United States formally assumes responsibility for the maintenance of the financial integrity and civil order of the Republic of Hayti and so will exercise over the western third of the island somewhat the same oversight as she has exercised for the past eight years over the Dominican two-thirds.

The treaty has been so modified as to be inoffensive to Haytian pride. It calls for coöperation rather than dictation on our part and we have voluntarily withdrawn our demand for Mole St. Nicholas as a naval station. The republic is to be policed by a native constabulary; under American officers at first, but these are to be replaced by native officers as they are found qualified. An American financial adviser will control the col-

lection of the revenue and its expenditures and keep the republic from sinking deeper into debt. In Santo Domingo our administrators found it possible to scale down the extravagant obligations which that Government had incurred and doubtless it will be found in Hayti that a part of its \$40,000,000 debt is invalid.

The intervention of the United States came just in the nick of time to save Hayti from bankruptcy, anarchy and conquest. France and Germany before the war were both eager to foreclose and take possession of the island and even since the war began their representatives in Hayti have worked together to thwart the plans of the United States. Revolution had followed revolution. There have been six presidents in the last two or three years, Oreste, Zamor, Théodore, Sam, Bobo, and Dartiguenave. When Sam usurped the presidential

power a year ago our Government refused to recognize him as it refused to recognize Huerta and with still better reason. We refused to allow him to get hold of the half million dollars in gold which the Bank of Hayti had sent to New York for safe keeping. But France and Germany promptly recognized him and France offered him a loan of a million or more, altho France needs all her money for the war.

But when Sam arrested 160 of the prominent citizens of Hayti, put them in prison and there murdered them, the storm broke. Sam took refuge in the French Legation, but the mob invaded the Legation, dragged out Sam, killed and dismembered him and carried parts of his body on pikes thru the street, a French revolution in black. Then Admiral Caperton stepped in and the American marines landed at Cap-Haitien August 1, 1915, soon restored order with very little bloodshed.

In spite of the turbulent spirit of the people it is not probable that there will be any great difficulty in preventing future outbreaks of disorder. But that is the least of our obligations. Our most difficult duty will be to assist in the administration of affairs so that the people may be trained in paths of peaceful industry. Here we should heed the wise counsels of Booker T. Washington, who, tho dead, may yet speak to us. In an article published shortly before he left us he said:

I hope the United States will not pursue a mere negative policy in Hayti, that is, a policy of controlling the customs and what not, without going further in progressive, constructive directions. In a word, the United States now has an opportunity to do a big piece of fine work for Hayti in the way of education, something the island has never had. I hope some way will be provided by which a portion of the revenues will be used in giving the people a thoro up-to-date system of common school, agricultural and industrial education. Here is an excellent opportunity for some of the young colored men and women of the United States who have been educated in the best methods of education in this country to go to Hayti and help their fellows. Here is an opportunity for some of the most promising Haytian boys and girls to be sent to schools in the United States. Here is an opportunity for us to use our influence and power in giving the Haytians something they have never had, and that is education, real education. At least ninety-five per cent of the people, as I have said, are unlettered and ignorant so far as books are concerned.

In carrying all these suggestions into practise, let me repeat again and again that we will have to be patient with Hayti. We ought to be patient. We are big enough and strong enough to be patient, not arbitrary and force-compelling in our relations with her.

Also, we ought to be careful in the class of white men sent to Hayti as officials. Here is the first experience American white people have had to live and work in a black man's country, with black men and women. This is quite a different thing from living in what is called a "white man's country." Every Haytian would rather be swept from the face of the earth than give up his independence or his country. He does not wish the dominance of the white man. They are a proud people, albeit an ignorant people, often mistaken in their ideals and methods, but nevertheless a proud people determined to preserve the independence won by their ancestors in the face of great odds. The average American white man is not fitted to work with these Haytians. The average army officer, or naval officer, the average white soldier or white marine, is not fitted to live and work among these Haytians. The racial lines which are drawn in this and other countries will not be tolerated in Hayti, and American white men who go there should understand this. They must fit themselves to be white men in a black man's country if they want to live there and work there and have any influence there.

This means that we should have no more letters from Washington such as Secretary Bryan wrote to Mr. Vick, American Receiver of Customs in Santo Domingo: "Can you let me know what positions you have at your disposal with which to reward deserving Democrats?"

The suggestion of Booker Washington that we send to Hayti some of our educated negroes is a good one. When the first contingent of colored troops landed at Manila, one of the American soldiers on the dock called out:

"Why, hello, Sambo, what are you doing here?"

And the negro soldier aptly replied:

"I'se helping bear the white man's burden, sah."

Now in our new undertaking the new generation of colored people trained in practical lines and habits of industry can do better service for us than fighting. A social settlement of Tuskegee alumni would accomplish more for the regeneration of the island than a regiment of soldiers or a hundred officeholders chosen from "deserving Democrats."

THE ARRIVAL OF THE CHAUFFEUSE

THE departure of a large proportion of the able-bodied men to the front has opened many avenues to women in England and France. One of these is the demand for feminine motorists. In the *Wanted* columns of the *London Times* one often sees an advertisement for a "chauffeuse-companion" from some lady who, in the absence of men folk and mechanician, desires a young woman to go about with her and drive the car. To meet this new demand schools of motoring have been opened on Piccadilly in which women are taught not only to run an automobile but to take the engine apart, replace tires and make minor repairs. It probably will be found that women are not so devoid of mechanical ability as has been supposed, and the duties of a chauffeuse are not likely to be any more arduous or unwholesome than the confinement at hard labor in kitchen or factory, to which many women are now condemned for life.

THE CULTIVATION OF OBLIVIOUSNESS

THE art of seeing things is one which educators have always commended and tried to train, but the city man needs nowadays to learn how not to see things. Our streets are turned at night into continuous Fourth of July celebrations wherein electric fireworks flare and flash and flame. Glowworms crawl up and down the front of the buildings. Zigzag lightning strikes a sign-board. Words are spelled out letter by letter or written with an invisible pen or race across the skyline of a block. Fiery highballs are continually compounded. Bottles pour out a ceaseless flood of sparkling beverage. A mammoth squirrel runs unweariedly in his whirling cage. A four-story Highlander dances flings eternally. A gigantic kitten plays with a Ferris-wheel spool and then leaps with one bound to the top of a skyscraper. An eagle, the size of Sinbad's roc, flaps its wings and soars aloft and then returns to roost.

Amid all this glare and flare and flicker the weary workman plods his homeward way, thinking of nought but supper. The pleasure seekers thread their way thru the maze in complete unconsciousness of the rainbow lights on every side. They might not be able to tell you the name of a single one of the signs which have been flashed upon them. They have looked at them but not perceived them. They have seen them only to shut them out of their inner sight. They have found it necessary thus to blind their conscious vision in order to attend to their own affairs. The failure to cultivate obliviousness may involve the penalty of death. The automobiles

show no mercy to the startled stranger who stops an instant in the midst of the street to look at a Ben Hur chariot race.

The mental mechanism by which these sights are shunted off must be a curious thing. It is perhaps the same as the Freudian censor who shields the self from unpleasant thoughts, a sort of office boy who keeps unwelcome visitors from bothering the boss. And so the struggle goes on incessantly between the advertiser who is trying to attract our attention and the guardian of the gate whose business it is to keep our attention from being distracted. In this contest the ultimate victory lies with the defense. To dazzle our eyes is to blind them, and the signboard that we are at first forced to see becomes the easiest to avoid in the future. The consciousness becomes callous and we are protected from further disturbance by a sort of induration of the intellect. So it comes that the city man pays no more attention to a tungsten film in nitrogen or a cascade of colored lights than the countryman pays to Venus in the heavens or the fireflies in the grass.

AN AMERICAN SCRAP OF PAPER?

MR. MOORFIELD STOREY is a lawyer of Boston distinction and known outside of the shadow of the gilded dome as president of the Anti-Imperialist League; his speeches at the annual meetings of the League, for which meetings ample space is found in a club room on Jay street, are duly reported in the press. His annual address last week is distinguished by the charge that in its treatment of the Philippine people the United States is "getting dangerously near the 'scrap of paper doctrine,'" and that "surely no American with a conscience should be willing to adopt this or sell his country's honor for money."

Surely no conscientious American would adopt the "scrap of paper" policy or sell his country's honor for money. But how is it that we have come into such dangerous proximity to that hateful doctrine? What treaty have we threatened to break? Surely no treaty that concerns the Philippines. Under the treaty with Spain the Philippine Islands came into our possession and we have never promised to give them up. To be sure, a Democratic convention did make the pledge, but that is not the United States. It is true also that the United States Senate has approved a bill proposing on a given date to give the Islands their independence, but the Senate is not the United States. To pledge the United States requires the action of the popular House of Representatives as well, and the assent of the President, and that the bill will pass the House there is little reason to fear despite the Democratic platform. Either House of Congress is liable to do a foolish and hasty thing, but the other House can generally be trusted to correct the blunder. So near a new Presidential election, the House of Representatives will find a way to bury the Senate Bill.

So far from approaching a dishonorable "scrap of paper" policy, should we hold the Philippines, it would be most disgraceful and cowardly to absolve ourselves from responsibility for them. It is not true that we hold the Philippines by selling our honor for money; we hold them for the good of their people, for their advantage and at our expense. We are doing it to give the Philippines both peace and liberty, but not yet to promise them independence. Liberty and independence are dif-

ferent things. The people of New York state have freedom and liberty, but not independence. They are under the government of the nation. The Philippine Islands are now very much in the same condition that the people of Oklahoma were before Oklahoma became a state. Their people govern themselves. They choose their own mayors. They enact their own laws. They are represented in their highest courts and in the highest commission that governs them. The United States government can veto any unwise law they enact, just as any bill passed by the Oklahoma territorial legislature could have been vetoed. In the government of the Philippines there is no imperialism, no tyranny, but a good and sufficient measure of liberty, and we do not believe that the Philippine people wish to lose the protection of the United States, to lose their liberty, with the serious danger of becoming, like Formosa, subject to a neighboring island power. For the peace, the liberty, the self-government, and the happy civilization of the Philippine Islands, the United States has made itself responsible. To this it has in every way pledged itself. For this it has assumed a task of grand altruism, as real and generous altruism as that for which the Church sends missionaries to lands of dark ignorance and superstition; and now

To doubt would be disloyalty,
To falter would be sin.

WHERE PUBLIC BUILDINGS ARE NEEDED

TO the casual visitor Washington seems full of Government buildings. There are first the Capitol, with its Senate and House Office buildings; the Congressional Library, and the White House. Then come the Department buildings, the Treasury; the State, War, and Navy; the Interior; the Pension, and Patent buildings; the Printery; the Bureau of Engraving and Printing. These, however, are so inadequate that almost all overflow into rented offices, while three Departments—Justice, Commerce, and Labor—and a large number of Bureaus and Commissions are obliged to rent buildings, floors, or suites in office buildings, wherever they can. Among these are the Geological Survey, the Reclamation and Forestry Services, the Bureaus of Plant and Animal Industry, the Civil Service and Interstate Commerce Commissions, the Bureau of Mines, and a number of subordinate sections.

The result is inefficiency in administration, great danger of loss from fire or poor storage, and unnecessary expense. Many of these offices are so far from the headquarters of the Department to which they belong that adequate supervision is impossible. Not one of these rented buildings or offices, either in its construction or location can, even by courtesy, be regarded as fire proof. The invaluable records of the Geological Survey, the Reclamation and Forestry Services, the Bureau of the Census, the Passport Office, the Court of Claims, may go up in smoke almost any day, while the Patent and Land offices, and the Treasury Department are so crowded that it is impossible to keep their files in anything like decent condition.

The total rental for this next year is estimated at over \$600,000. For \$12,000,000 at the most, in bonds bearing not over \$400,000 in interest, it is estimated that the whole work could be amply provided for. Even if more were needed, or the repairs and upkeep brought the an-

nual sum up to the present figure, the gain in safety and efficiency would be enormous.

Why is it not done? These facts are perfectly well known to Government officials and to Congress. They have been stated repeatedly in the House and Senate. Meetings of scientific associations have many times emphasized the need. A few years ago, under their pressure, land was bought for three Department buildings. Not a step has been taken for their erection. Why? Popular judgment says that certain real estate interests would suffer from the lapse of rentals. There are no votes to be affected by the necessary appropriations. No Congressman will incur danger of not being re-elected because he does not vote for the appropriations. There is no "pork" in it, as there is in a Public Buildings bill for erecting massive court houses and florid postoffices in frontier towns. For the District of Columbia has no representative in Congress. That Government property is endangered, that Government work is hampered, that Government clerks suffer, means nothing to any but a very few. Not until the people of the country demand adequate provision will it be provided. What will wake them up?

FROM A PIRATE'S WINDOW

PUBLIC attention is once more directed toward the Danish West Indies by the visit of ex-President Roosevelt and the rumor that Denmark might in these troublous times be more willing to sell us the islands than she was when last we tried to buy them. In our issue of December 27, 1915, we told how nearly the United States came to getting them in 1868 and in 1902. In discussing the question of annexation much stress has always been laid upon the commercial and naval advantages of the acquisitions. But to us, looking at the matter from the point of view of a penman instead of a seaman, it seems that the romantic history which would be thrown in with the islands would be worth a lot.

The harbor of St. Thomas, big tho it be, is chockful of good stories of the pirates and blockade runners who made it their headquarters from the time of Columbus to that of Jefferson Davis. The beautiful view of "the Gibraltar of America," which we publish on another page, is appropriately taken from the tower which tradition assigns to Black Beard, as ferocious a pirate as ever delighted the innocent mind of childhood.

The feature that gave to Edward Leach his *nom de guerre* was the jet black beard which began close under his eyes and extended down so far that he braided it and hung it over his ears when actively engaged in his profession. Two lighted fuses ready for the matchlocks were stuck in his shaggy hair and glowed like fiery eyes in the dark. With a cutlass in his right hand, a pistol in his left, and five other pistols stuck in his belt he was the picture of preparedness.

Not content with preparing for this life he devised an ingenious method of inuring his crew to their life to come by what he called "making a hell of our own." In this game all parties went down into the hold and closed the hatches. Then they lit pots of brimstone precisely as the quarantine doctor does nowadays when he fumigates a ship. The man who could stand it longest without suffocating was the winner, and it was Black Beard who came up last to breathe.

Another of his diversions when in a merry mood after dinner was to blow out the candles and shoot right and left under the table to see how many legs he could hit.

Naturally such a fascinating man would be a great favorite with the ladies, as we may judge by the fact that he had married his fourteenth wife when his career came to an untimely end thru the influence of the Governor of Virginia, who in 1718 offered a prize of 140 pounds for him dead or alive. The details of his last fight we forbear to transcribe lest librarians who seem to have acquired the notion that pirate stories are not suited to the young should exclude The Independent from their reading rooms. Suffice it to say that he was not taken alive, and that when the "Pearl" returned to the port of Bath Town, North Carolina, a black beard was dangling from her bowsprit. Owing to the unavoidable absence of the leading actor the pirates taking part in that Friday's hanging numbered unluckily thirteen.

Of course we agree with the watchful librarians that such stories are unwholesome for the adolescent mind. Therefore we warn our youthful readers that if they should ever happen upon such books as Johnson's "History of the Pyrates" or Esquemeling's "Buccaneers of America," they should return them to the shelves unopened.

But when the United States acquires St. Thomas and the tide of tourists turns that way, we should like to have the postcard rights for Black Beard's Tower.

THE HERITAGE OF HATE

IT is greatly to the credit of the generous and placable Irish people that they have so readily forgiven England for its centuries of injustice and oppression. They promised loyalty and goodwill if they were allowed their own Parliament and self-government. This was granted, and they have kept their word. They have sent 142,000 of their sons to the war front to stand beside their Welsh, Scotch and English brothers, all offered voluntarily without compulsion or draft, and they are adding to the number a thousand a week; and the Irish members of Parliament are as loyal as any others.

The same generous and forgiving spirit characterizes the great majority of those in this country of Irish birth or descent. There is a multitude of branches in this country of the United Irish League and of the Ancient Order of Hibernians, with many other Irish benevolent societies. These are federated under an executive committee, which has just issued an admirable series of resolutions declaring their sympathy with the people of Ireland and their condemnation of a certain number of Irishmen in this country of the Clan-Na-Gael type, and their sons born here, who are cultivating an inheritance of hate against England. The resolutions declare that Irish-Americans are Americans first and last and all the time, and that it is not their will to make trouble for the President in his present contention.

We have observed that there are a few Irish papers, even religious papers, of which the *Sacred Heart Review*, of Boston, is an example, which cannot forgive or forget. We cannot believe that it is because they love Germany more, but because they hate England implacably, that they disparage the cause for which Ireland is engaged with the whole British people. It is a mean spirit and far from the Irish nature to hug the heritage of hate.

THE STORY OF THE WEEK

THE GREAT WAR

February 28—Germans take Dieppe and Blanzee, east of Verdun. French defending village of Douaumont.

February 29 — Germans attack Fresnes, southeast of Verdun. President Poincaré visits Verdun.

March 1—German submarines authorized to attack armed merchantmen without warning. British take 800 yards of German trenches at Ypres.

March 2—Germans attack near Malancourt, northwest of Verdun. Senate discusses armed ship question.

March 3—Germans attack Vaux, east of Verdun. Russians capture Bitlis, Armenia.

March 4—Russians take Bidyar, Persia. Increased activity near Dvinsk, Russia.

March 5—German raider "Möwe" returns to home port. Zeppelins raid northeast coast of England.

The Second Week at Verdun In their attack upon the entrenched camp of Verdun the Germans have continued to gain, though not so rapidly as during the first week. The operations have developed sufficiently for the plan of campaign to be seen. The battle opened at half past eight in the morning of February 21 by the bombardment of the northernmost line of the French trenches. The amount of ammunition expended was probably greater than in any former engagement of the Great War, and of course there is nothing in the previous history of the world to compare with it. Under this furious fire the trees were mowed down as with a scythe, the barbed wire entanglements swept away, the parapets leveled and the trenches filled.

Then followed a series of infantry attacks which in a few days brought the German lines southward three or four miles along a ten mile front. The French retired from these outlying positions as soon as they became obviously untenable; so the number of prisoners taken was comparatively small, 17,000 being all the Germans claim. But the retiring forces took a terrible revenge, for whenever a position was evacuated the adjoining batteries concentrated their fire upon it and the explosion of mines underneath ground occupied by the advancing Germans wiped out a regiment at a time.

During the first ten days the Germans launched twenty-six infantry assaults, each composed of several lines. Their gains about Verdun amount to over a hundred square miles, which is five times as much as the French won in their Champagne drive of last fall. Among the booty taken in the French entrenchments are specified 115 cannon and 161 machine guns.

The German attack from the north culminated in the capture of the Fort

de Douaumont last week. Since then their attention has been directed to the west and east of this point. To the west they took Champneuville and cleared the French from the bend of the Meuse. The French lines on the western side of the Meuse have also been bombarded between the river and the town of Malancourt. The hills on this side of the river are lower than those on the right side, but their batteries flank the line along which the Germans must advance toward Verdun.

The attack upon Verdun from the east this week resulted in greater territorial gains to the Germans than that from the north last week, but is not so striking an achievement, for it has only carried them over the Woevre plain to the edge of the plateau on which the permanent fortifications of Verdun are constructed. Their gains on this side, however, put them in possession of most of the railroad which runs below the range of hills from Vaux to Fresnes. The mud has prevented them from bringing up their big guns on this side.

Most of the French despatches describe the German losses as appalling.

Their estimates range from 100,000 to 300,000. On the other hand, the Germans deny any excessive losses and the Paris correspondent of the *London Times* says that the slaughter on neither side has been so great as when the Germans attacked the British lines in Flanders or the French lines in Artois. All the civilians have been sent out of Verdun.

The defense of Verdun has been entrusted to General Petain, who was suddenly called from the Champagne to take charge. He is one of the new commanders whom the war has made. In June, 1914, he was only a colonel and about to retire since he was sixty. But at Charleroi he showed his ability and is now recognized as one of the most energetic and skillful of the French generals.

The focus of the battle of Verdun has been for the past fortnight the Fort de Douaumont and the story of its attack and defense will doubtless be the theme of strategic study and pictorial art for more than one generation to come. The wedge

THE FIERCEST FIGHT IN HISTORY

It appears from present reports that the attack upon Verdun is unprecedented for strength of defense and violence of assault and it may prove to be the decisive battle of the war. The Germans advanced nearly four miles in the first four days and captured Fort Douaumont, which stands on a hill overlooking the surrounding country and is only five miles from Verdun. The next German attack came from the eastern side between Etain and Fresnes and was carried as far as the ridge on which stands Fort Vaux. A third attack from the western side near Malancourt is reported. The heavy line shows the German position before the present attack; the shaded portion shows the territory they now hold.

which the Germans have driven into the heart of the Verdun defenses from the north had a base of ten miles, but narrowed down to a point at Douaumont. The importance of this position lies in the fact that it stands upon the ridge leading toward Verdun. The ground in front of it had been cleared of trees, but covered with traps and tangles. The ravines which approached Douaumont on either side were of course raked by the guns of the fort. Its altitude is about 1200 feet, and it commands a view of the city of Verdun only five miles south.

The Kaiser entrusted the post of honor and danger at the apex of the German wedge to his "brave Brandenburgers," men from the heart of Prussia, who from the time of Frederick the Great have formed the nucleus of the German army. It was the Brandenburgers who captured Verdun in 1792 and led the attack on Liège in 1914.

After the steel and concrete cupolas of the Douaumont fort had been smashed by four well-placed shells the Brandenburgers charged and in spite of heavy losses from the fire of neighboring batteries they captured the fort. A French soldier thus describes the assault:

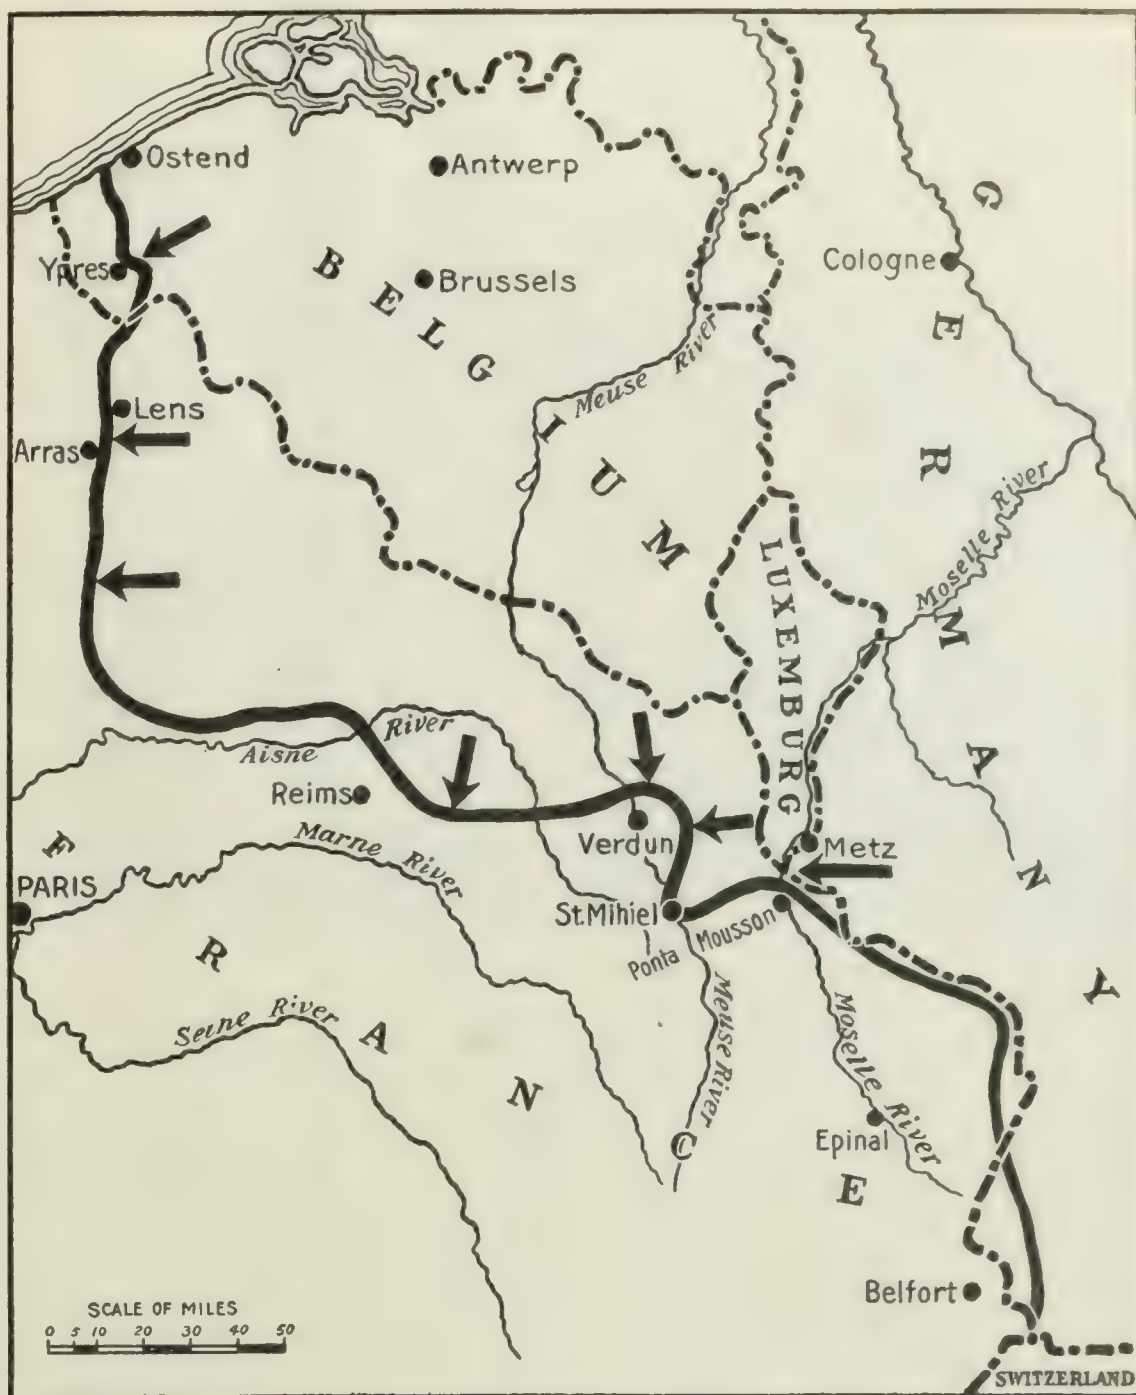

Some Boche infantry were creeping up a narrow ravine on the right front, others were crawling thru the wood directly before the position. Suddenly they surged forward in a gray mass from both quarters at once. There must have been 5000 in the ravine and perhaps 20,000 from the wood. As the former reached the plateau a single shell burst right among them, flinging pieces in all directions. The front was enveloped in a storm of shells, fragments of men, and lumps of earth.

Thru the smoke one could see them advancing, heads down, as if sheltering themselves from rain. Soon the ravine head was choked with bodies. Others tried to clamber over and kept rolling down the hillside. The heaps of dead gave us a more effective barricade than our own intrenchments. They simply could not pass. But in front, where the slaughter was even greater, they came on incessantly.

Truly, they are brave, those Boches. I would never have believed that human beings could face such a terrific fire. Yet they knew it was certain death, for the wounded were stifled under corpses or torn in pieces by fresh shells.

Wave after wave advanced. At last they reached the spot where our fortifications had been on the spur of the hill, and began piling up bodies to protect them from our fire. Douaumont was theirs, but at ghastly cost.

But the real struggle took place not over the fort, but over the village of Douaumont. This is a group of some fifty houses a little in front of the fort and a hundred feet lower. The French also brought here their crack troops, those who had been foremost in the Champagne drive. They ran around the fort from both sides and took possession of the village. The Brandenburg regiment was then virtually besieged and for the next ten days had little or no relief from the outside. The Germans made desperate efforts to come to their rescue, but the village had been previously prepared for defense by tunnels and mines and was protected by concealed batteries on each side. The Germans tried assaults by day and assaults by night, suffocating gases and

THE WESTERN FRONT

The strategic importance of Verdun is shown by this map. It is the cornerstone of the French defenses. But while the Germans seem to be concentrating their main efforts on this fortress, they have also taken the offensive at various other points as indicated by the arrows, especially in the Champagne region near Reims, in the Artois region near Lens and Arras. At Ypres the British have not only recovered the "international trench" recently taken by the Germans, but have penetrated their first line of fortifications.

streams of fire, long-range bombardment and hand grenades, and have finally, it seems, succeeded in occupying the village of Douaumont or rather the ruins of it.

The Russians in Asia

By the capture of Erzerum the Russians did not, as was at first reported, take the entire Turkish army prisoner, but they got enough of it to seriously weaken the opposition. According to the official Russian report they captured 235 officers and 12,753 men, besides 325 guns and large stores of arms and supplies. The town was practically uninjured, altho the Turks before evacuating blew up a few of the government buildings and some of the military depots.

The retreating Turks are being pursued in all directions. To the south the Russians have reached Mush and captured Bitlis, a hundred miles from Erzerum and only fifty miles from the Tigris. To the west they have reached Ashkale, forty miles away. To the north they have advanced about the same dis-

tance, which brings them half way to the Black Sea. Another column moving westward along the coast is near Rize, thirty-five miles from Trebizond. In Byzantine times the Greek city of Trebizond was the first important stronghold on the coast, but now it could not be expected to hold out against a Russian attack from both land and sea. Another ancient Greek colony of the Black Sea coast, Sinope, was shelled last week by the Russian fleet.

In Persia also the Russians are meeting with success. They defeated the Turks, Kurds and Persians in the passes between Hamadan and Kermanshah and have taken that town. Kermanshah is the most important trading center on the caravan route between Bagdad and Teheran. This brings the Russians within about 150 miles from Kut-el-Amara, on the Tigris, where the British under General Townshend is besieged.

This expedition is so closely invested by the Turks that it has not been able to get any supplies for two months except such as could be brought by aeroplane. Communication is kept up by

THE GUNS THAT CAUSE THE TROUBLE

This photograph of the Italian S.S. "Verona" shows how and where the defensive armament of a merchantmen is likely to be placed. Germany's announced intention to regard vessels so equipped as subject to attack without warning has reopened the submarine controversy and threatened to rupture the Democratic party

wireless with General Aylmer's expedition some twenty miles down the river. Altho to a civilian General Townshend would seem to be in a distressing plight, he seems to be in good spirits. When asked by wireless what he was doing and what he wanted he replied that he was planting vegetable seeds and wanted some new needles for his phonograph. The needles will be dispatched by aerial post.

The New Russian Premier

Boris Vladimirovitch Sturmer, the new Russian Premier, first became identified with the Russian Court in 1878, and since then has remained one of the "inner circle" of that court, participating in all secret councils, and never losing favor with the three emperors he served.

In 1902, as General Director of the Ministry of Interior, M. Sturmer became closely associated with Sypiagyn, Minister of Interior, who has written some of the bloodiest pages in the history of Russia. In 1903, the famous Von Plehve dispatched him to wreck the liberal Tver Zemstvo, which he faithfully accomplished. Von Plehve made no step of importance without having first consulted the present Premier, and the latter quite often served him as a tool in the fight with the rising tide of liberalism in Russia. As a reward, M. Sturmer, from Directorship of the Ministry of the Interior, was elevated in 1904 to the position of member of the Council of the Empire, a procedure unusual in the annals of the Russian Government.

As a member of the Council (Russia's House of Lords), M. Sturmer has not distinguished himself in any capac-

ity. He occupies a seat at the extreme right of the house. Thruout the last twelve years, perhaps the most tempestuous period in Russian history, he kept aloof from the raging currents of the social and political life of the country. In the last five years he had not spoken even a word from the floor of the Council of the Empire. He has, however, remained closely affiliated with the reactionary forces in the background of the court, and was regarded in Russia as the truest and most typical representative of the Petrograd bureaucracy.

His appointment to the Premiership came as a complete surprize to the Russian public, which saw in it a victory of the reactionary forces in the court which advocate a peace with Germany. The leaders of the Duma are said to have refused to accept the invitation of the new Premier to confer with him. This was an unprecedented act in Russian parliamentary life. The *Novoye Vremya*, the well informed conservative paper of Petrograd, was also taken by surprize, as it acknowledges in its editorial columns its ignorance of the new Premier's present political views. The muzzled liberal press saw but an ominous warning in his appointment.

Since the beginning of the war public opinion in Russia has not been stirred as deeply as by the appointment of M. Sturmer. To appease it, he hastened to call together representatives of the press and make some promises as to "internal reorganization" and reforms. This and his subsequent address at the opening of the Duma, in which he assured the country that Russia was resolved to fight the war till a decisive

victory over the enemy is won, has to a great extent calmed the masses, tho it has not entirely erased the distrust from their minds.

Maritime Warfare After March 1, according to the announcement of the German Government, the German submarines would begin to attack armed merchant ships without warning. The German contention is that its previous promise not to sink liners without warning and providing for the safety of passengers does not apply to armed vessels. It is held that it is absurd to require that a submarine approach, hail and search a vessel which is known to carry a gun big enough to disable the submarine with a single shot at a distance of a mile or more, especially if the merchant vessel is under instructions to open fire. This, according to the German Government, is the case with British merchantmen and they quote in evidence from the instructions found on the British steamer "Woodfield":

If a submarine is obviously pursuing a ship by day, and it is evident to the master that she has hostile intentions, the ship pursued should open fire in self-defense, notwithstanding the submarine may not have committed a definite hostile act, such as firing a gun or torpedo.

On the other hand the British Government claims that its merchantmen are armed solely for defense and makes public the instructions from which we quote in another column. The British note, however, explains that these instructions have been repeatedly modified so it is possible that the copy captured by the Germans may be one of the earlier set of regulations.

The British explain that they can put no confidence in the German promise not to attack unarmed vessels because that has been done right along. In proof of this the Admiralty publishes a list

International Film Service

BORIS STURMER

The new Russian premier is a reactionary whose war policy is a matter of doubt

of fifty-four unarmed vessels which have been sunk by German submarines without warning. Fourteen of these are neutrals; two American (the "Gulf-light" and "Nebraskan"), four Norwegian, four Swedish, and one each Dutch, Danish, Greek and Portuguese. Of the nine vessels sunk by the German submarines on March 1 and 2, when the new German submarine policy came into effect, none is known to be armed.

The French auxiliary cruiser "Provence," which was sunk in the Mediterranean on February 26, had on board nearly four thousand men, and of these, according to the French Ministry of Marine, 3130 were drowned. This is more than ever were lost before in the sinking of any ship. In the "Lusitania," 1198 lives were lost, and in the "Titanic," 1595. The "Provence" was a converted liner used as a transport and carried eleven cannon. No submarine was seen.

The Peninsular and Oriental liner "Maloja," sunk within sight of Dover on February 27, was found by the coroner's jury to have struck a mine, altho the chief officer testified that he believed she was torpedoed by a submarine. There were 169 lives lost.

Following the example of Portugal which last week seized all the German ships in her harbors, Italy has taken over thirty-four of the thirty-seven German ships in Italian ports. Germany has protested against the seizures and may declare war against Portugal and Italy, neither of which is yet nominally included among her enemies altho Portugal is allied with England and Italy is at war with Austria.

The German sea raider "Möwe" is reported safely back "in a home port," presumably Wilhelmshafen. She brought in \$250,000 in gold bars taken from the "Appam," which she sent to Newport News. She had on board 402 prisoners, from the officers, soldiers and crews of the fifteen vessels she cap-

HOUSE LEADERS WHO WARNED THE PRESIDENT

From left to right, Chairman Flood of the House Committee on Foreign Affairs, Speaker Clark and Majority Leader Kitchin. They told President Wilson that a large majority of the Representatives favored a resolution warning Americans not to travel on armed belligerent merchant men. Before the matter came to a vote the temper of the House had changed

tured. Besides those previously reported she had taken the British steamers "Saxon Prince" and "Maroni," and had sunk by her mines the British battleship "King Edward VII." The commander of the "Möwe," Burgrave Count Dohna-Schlodien, has been awarded the Iron Cross by the Kaiser.

War Problems in Congress At the beginning of last week, the tension at Washington was slightly relieved by assurances that Germany would not sink merchantmen

without warning unless there was proof that they were armed. But, on the 29th. Mr. Wilson caused surprise in Congress by what was virtually a challenge. In a letter to Mr. Pou, the acting chairman of the House's powerful Committee on Rules, he practically demanded a vote at once on the pending McLemore resolution, which warns Americans not to go on the ships of belligerents. He called the attention of the committee, he said, to a matter of grave consequence to the country. Industrious use was being made in foreign capitals of the report that there were divided counsels in Congress in regard to the Government's foreign policy. He believed that the report was false, but so long as it was credited anywhere it could not fail to do the greatest harm and expose the country to the most serious risks. And so he felt justified in urging an early vote on the resolutions concerning travel on armed merchantmen, in order that there might be full discussion at once, and that all doubts might be swept away.

The House leaders pleaded for delay, and it was suggested as a compromise that a resolution of confidence in the President be adopted. But Mr. Wilson made it very plain that he would be satisfied with no compromise. In the House there was confusion. Many wanted a resolution of confidence accompanied by a warning to travelers. Some feared that a vote on the McLemore resolution would show a very large minority in favor of it. In the Senate, where Mr. Gore's similar resolution was pending, there was a disposition to wait for the House.

British Orders to Armed Merchantmen

The German Government claims the right to sink armed merchantmen without warning on the ground that vessels had been instructed by the British Admiralty to open fire upon submarines approaching for the purpose of exercising the right of search. The British Admiralty made public on March 2, 1916, the instructions issued on October 20, 1915, and now prevailing. The rules covering the points in dispute are as follows:

The right of the crew of a merchant vessel to forcibly resist visit and search and fight in self-defense is well recognized in international law and expressly admitted by the German prize regulations in an addendum issued June, 1914, at a time when it was known that numerous merchant vessels were being armed for self-defense.

Armament is supplied solely for the purpose of resisting attack by an armed enemy vessel and must not be used for any other purpose whatsoever.

The status of a British armed merchant vessel cannot be changed upon the high seas.

The armament is supplied for the purpose of defense only. The object of the master should be to avoid action whenever possible.

Experience has shown that hostile submarines and aircraft have frequently attacked merchant vessels without warning. It is important, therefore, that craft of this description should not be allowed to approach to short range, at which a torpedo or bomb launched without notice would almost certainly be effective. British and allied submarines and aircraft have orders not to approach merchant vessels. Consequently it may be presumed that any submarine or aircraft which deliberately approaches or pursues a merchant vessel does so with hostile intention. In such cases fire may be opened in self-defense in order to prevent the hostile craft from closing to a range at which resistance to a sudden attack with bomb or torpedo would be impossible.

Defensively armed merchant ships . . . are forbidden to adopt any form of disguise which might cause them to be mistaken for neutral ships.

A contest in the Senate was precipitated, however, on the 2d, by a statement from Mr. Stone as to his own position, and by a speech from Mr. Gore. Mr. Stone, who, as chairman of the Foreign Relations Committee, has sought to prevent action upon resolutions of warning, said it was distressing to disagree with the President, but he desired to save the country from the consequences of the recklessness of foolhardy Americans. Mr. Lodge supported the President, who, he said, ought to have a vote on the question. Mr. Williams opposed any evasion. The only danger of war, he said, was in the hampering and embarrassment of the President. Mr. Gore expressed his disapproval of the madcaps who travel on armed merchantmen. He had heard, he added, that the President had recently said to Senators or Representatives that the loss of American lives on a merchantmen sunk by a German submarine would probably cause severance of diplomatic relations with Germany; that this would probably be followed by war; and that participation in the war by the United States might not be wholly an evil, because it would end the great conflict by midsummer and thus be of great service to civilization.

Mr. Stone at once denied that he had heard the President say anything of this kind. Other Senators made similar disclaimers, and an unqualified denial from the White House was published a few hours later. No action upon the resolutions was taken that day in the Senate.

The Gore Resolution Tabled

Mr. Gore's resolution was taken up in the Senate on the following day, a motion to lay it on the table having been made. Before the votes were cast he modified the resolution by an amendment or substitution, at variance with the long preamble and the original proposition. This substituted clause asserted that the sinking of a merchantman by a submarine without warning, with an accompanying loss of American lives, would be just and sufficient cause for war with Germany. The motion called for the tabling of the Gore resolution and all substitutes, and there was no debate before the votes were counted. By a vote of 68 to 14 the resolution was laid on the table. Mr. Jones, Republican, had withdrawn his similar resolution. In the affirmative were 49 Democrats and 19 Republicans. Those voting on the other side were Democrats (Mr. O'Gorman and Mr. Chamberlain), and 12 Republicans. Mr. Gore's vote for tabling his own resolution showed his attitude toward the substitute clause which he had inserted. Several who voted against tabling were not in favor of either the original or the modified resolution. They were displeased because there had been no opportunity for debate. And the modification had obscured the issue.

In the House the Committee on Foreign Affairs decided to report a recommendation that the McLemore resolution be laid on the table, with the adop-

tion of a statement that the conduct of diplomatic negotiations should be left with the President, who would report to Congress if his power should be exhausted. It is understood that a majority of the committee are in favor of a warning to American travelers, but are unwilling to embarrass the President. There was expectation that action would be taken on the 4th, but a vote was postponed. This delay was disappointing to Mr. Wilson, for the Senate's action was regarded as indecisive, and there will be further debate in that branch on resolutions like Mr. Gore's, which have been introduced since his was tabled.

Protectorate for Hayti

The treaty or agreement which gives to the United States for at least ten years wide powers of supervision over the internal affairs and foreign relations of Hayti was ratified in our Senate last week without a dissenting vote. Certain provisions of it were already in effect, with Hayti's

consent. The treaty is a long one. At the beginning it says that the United States is in sympathy with Hayti's desire to improve the condition of its finances, preserve peace, and develop the country's resources; and will assist the Haytian Government in developing agriculture, mining and commerce, and also in placing the republic's finances on a firm basis.

All customs duties on imports and exports are to be collected by a General Receiver nominated by our President and appointed by the President of Hayti, and in the same way there is to be appointed a Financial Adviser, who shall devise an adequate system of public accounting, aid in increasing the revenues, inquire into the validity of Hayti's debts, and take other action, in association with the Minister of Finance, for the republic's welfare and prosperity. These two officers (who will be Americans) are to have full protection in the use of the power thus conferred. The republic's debts are to be classified in a comprehensive statement, showing the sinking fund required for the final discharge of them. The sums collected are to be used, first, for the payment of the salaries and expenses of the General Receiver and the Financial Adviser and their assistants; second, for the interest and sinking fund of the public debt; third, for maintenance of the new constabulary; and, fourth, for the Government's current expenses.

This constabulary is to be both urban and rural. Composed of natives, its officers will be Americans nominated by our President. But these are to be replaced ultimately by Haytians found, upon examination by an American board, to be properly qualified. The constabulary is to have supervision and control of arms and ammunition, military supplies, and the traffic therein. Hayti agrees not to increase its public debt without the consent of our President, or to contract any debt unless the surplus revenue is sufficient to pay interest and provide a sinking fund. It is also agreed that Hayti will not, without our President's consent, so modify her customs duties that the revenue will be reduced. Hayti is bound not to surrender any part of her territory by sale or lease to any foreign Power, and will not make with any foreign Power a treaty that can impair her independence. All foreign claims against Hayti are to be settled by arbitration, under an agreement with the United States. Sanitary improvements are to be made under the direction of an engineer nominated by our President.

There may be intervention. "Should the necessity occur," says the treaty, "the United States will lend efficient aid for the preservation of Haytian independence, and the maintenance of a Government adequate for the protection of life, property, and individual liberty." The term of the agreement is ten years, but ten years more are to be added "if, for specific reasons presented by either high contracting party, the purpose of this treaty has not been fully accomplished."

AT THE STORM CENTER

Senator Stone, of Missouri, chairman of the Committee on Foreign Relations, disagrees with the President as to the status of armed merchantmen, but has labored to prevent any action by the Senate which would embarrass the Executive. It was his letter to which President Wilson replied with so emphatic a statement of his policy

FROM STATE TO STATE

ALABAMA: As a means of attracting immigration to this state, Emmet A. Jones, chief of the Immigration and Markets Bureau, has compiled what he calls "The Alabama Land Book." It is said to answer every question that any prospective settler can reasonably ask concerning not only the lands of different sections, but the roads, schools, churches, public improvements, taxes, towns and general character of each region. For the publication and nation-wide distribution of this book Governor Henderson, State Treasurer Lancaster and Commissioner of Agriculture and Industries Wade have consented to act as trustees, without compensation, of a fund to be raised by private subscription, and Mr. Jones has agreed to serve, also without compensation, as secretary and treasurer.

ARKANSAS: A movement is on foot in Sebastian, Crawford, Washington and Benton counties for a first-class modern highway from Ft. Smith thru Winslow, Fayetteville and Rogers to the Missouri border, where it is to connect with the great system of roads in that state and, by the Santa Fé trail, with points east and west. The section of the road in Arkansas is to be known as "The Ozark Trail."

IOWA: This state is making systematic and determined war upon rats. Dairy and food inspectors are calling upon all dealers in edibles to concrete their cellars and other storing places. They say they find merchants generally willing to comply with this requirement, tho in some cases it has been necessary for the courts to compel them to. It is the declared purpose of the state authorities to persist in this work until every citizen may feel assured that all food offered for sale is not only unadulterated, but is secure against vermin.

KANSAS: The recently increased demand for potash and the high prices it commands have induced many Kansans to set up a search for it in their state. It has been demonstrated that potash deposits are likely to be found where salt and gypsum abound, and since Kansas has a profusion of both these substances, United States Senator Curtis is hopeful that the Federal authorities will include his state in the investigations for potash now being made in Utah, Texas and other promising states.

LOUISIANA: The recent investigations of the Bureau of Plant Industry of the United States Department of Commerce into possible uses of the water hyacinth have been interesting to the people of this state. This troublesome plant propagates very rapidly, chiefly by offshoots, and soon chokes up any stream in which it gains a foothold. The length of its stem and its fibrous nature suggested that it might be used as a substitute for jute, but investigation has shown that the fiber

is too short and too irregular for spinning. It has been learned, however, that the plant makes fairly good forage for cattle.

MAINE: The State Highway Commission is working out a plan to have the principal trunk highway of every town in the state patrolled by men who will devote their entire time from early spring to late fall to keeping the roads in the best possible condition. It is estimated that this will require about 500 patrolmen, but it is pointed out that it will mean the rehabilitation of hundreds of miles of highway now rapidly going to ruin for lack of maintenance.

MASSACHUSETTS: Altho this is one of the most thickly populated states in the Union, it contains tens of thousands of acres of barren lands which have lain idle since they were long ago denuded of their forests. Now the state purposes to renew these forests. The State Forester reports 7,000,000 young trees in the state nurseries, 1,000,000 of which are to be planted this spring. Next year the number will be increased to 3,000,000, and it is expected that eventually a total of 15,000,000 trees will be planted every year. While the preliminary work is expensive, the state authorities believe that the investment will ultimately prove very profitable.

MINNESOTA: The Minnesota Art Commission recently began a movement for the better housing of farmers and villagers in this state. Several plans for model farm houses of varying cost were sent to about 1,000,000 farmers thruout the state. As a result the commission has been deluged with requests for information, which are being answered by the Minnesota Chapter of the American Institute of Architects, giving its services freely thru the art commission. Fifty plans for model village houses to cost \$3000 each have been prepared and are being sent out for the bare cost of making the blue prints. The responses indicate that rural Minnesota is soon to have hundreds, if not thousands, of new, artistic homes.

MISSOURI: The walnut timber trade, which is of great importance to many Missouri land owners, has had its full share of ups and downs. A generation ago most of the furniture in this country was made of walnut. Then, as our population grew and the demands increased, the big manufacturers, fearing that walnut would soon be exhausted, created a fashion for other woods. That made it necessary for walnut growers to seek another market, so they laboriously built up a trade with Europe, especially with Germany and Austria. Then the war put a stop to those exports, and for more than a year there was practically no market anywhere for walnut. Now every owner of a walnut grove is busy trying to supply the demand for gun stocks. Two Kansas City concerns are sawing

up more than 300 carloads of walnut logs a month, turning out 5000 gun stocks a day.

MONTANA: According to preliminary estimates made by the United States Geological Survey the value of the output of gold, silver, copper, lead and zinc from Montana mines in 1915 was nearly \$87,000,000, an increase of more than 81 per cent over the total value of output of the same metals in 1914, which was \$47,849,747. The greater quantities of all these metals, especially lead and zinc, were produced, the increase in value was due principally to higher prices. The mine output of lead increased from 9,656,008 pounds in 1914 to more than 14,000,000 pounds in 1915, and that of zinc from 111,580,544 pounds (figured as spelter) in 1914 to 184,086,000 pounds in 1915.

NEVADA: An epidemic of rabies, said to have been caused by mad coyotes, has been spreading so rapidly in Nevada that the state and local authorities and almost the entire citizenry of some counties have been unable to cope with it. Large numbers of wild animals and dogs, and not less than 500,000 head of sheep, cattle and horses have been destroyed by this scourge. So serious has the epidemic become that neighboring states are fortifying against it and the Federal Government has sent aid. The intention is to exterminate the coyote family.

NEW YORK: At a recent largely attended meeting of the Penn Yan Grange the question of incorporating farms was seriously discussed, many members favoring the plan and expressing the opinion that it would soon be adopted. Mr. Francis E. Hoyt strongly advocated it, pointing out many advantages to be gained if, say, fifty farmers, each with 100 acres worth \$200 an acre, should combine and operate a farm of 5000 acres with a capital of \$1,000,000 on a wholesale scale, breeding horses or specializing in fine cattle, grains, etc. Then, said he, modern farm implements and tractors, now beyond the purchase of the average farmer, could be used, the help problem would be solved and conditions which make for the instability of prices be eliminated.

NORTH CAROLINA: The immense power plant at Baden in this state, after many vicissitudes, is at last to become one of the most important industrial centers in the South. It was originally promoted as a commercial hydro-electric proposition by a Pittsburgh company which went into the hands of a receiver. About three years ago the plant was taken over by the Southern Aluminum Company, organized by French bankers. Considerable development work had been done on the plant, which was planned to cost over \$10,000,000, when the European war put a stop to it. Now the Aluminum Company of America has secured control and begun carrying out an even

larger plan of development. The partially constructed hydro-electric and aluminum reduction plants will be completed at once. It is said they will give employment to several thousand.

TENNESSEE: Within a short time Tennessee has raised herself from the third to the seventh state in percentage of illiterate population. A considerable measure of this improvement has been due to the intelligent and energetic efforts of Prof. John B. Brown, the state rural school agent. Yet he is far from satisfied with the situation, and is pressing for longer terms, better equipment and more efficient teachers. He is convinced that fewer instead of more rural schools are needed. Consolidation of these schools, he says, means better buildings, better equipment and more money with which to keep the schools open for nine months. In twenty-one counties he has succeeded in effecting such consolidations, and the results, he asserts, have been good.

UTAH: The Utah Chamber of Commerce has been organized to advertise every resource and industry of every section of the state. It will have four general departments: County exhibits, publicity, general exhibits and public intercourse. Under the first head each county will maintain a display of its representative products, mineral, manufactured, agricultural, etc., together with maps, pictures, literature and data needful for the information of persons seeking homes or investments. The publicity department will conduct a systematic national advertising campaign, while the department of public intercourse will seek to bring the county and general exhibits to the attention of all tourists, school children and the public.

WEST VIRGINIA: The perennial if not everlasting controversy over West Virginia's share in Virginia's ante bellum debt has perhaps engaged more legal talent for less pay than any other pecuniary case ever tried in America. The latest citation of authorities by a leading member of the West Virginia Bar Association seems to leave no room for doubt that, altho the Supreme Court of the United States has decreed that West Virginia must pay some \$12,000,000, there is no lawful way in which that decree can be enforced.

WYOMING: Definite steps are being taken for the establishment in this state of what is expected to be the greatest game preserve in the United States. Wyoming, with its wide plains, long ranges of foothills, lofty mountains, immense forests and numerous lakes and streams, is an ideal habitat of wild creatures, especially large game animals. The plan as proposed is to set apart a vast area as a preserve, with a considerable portion of it reserved as a perpetual refuge in which it shall be unlawful to kill any creature not of a predatory nature.

WHAT WOMEN KNOW ABOUT MEN

BY IRVING BACHELLER

AUTHOR OF "EBEN HOLDEN," "DRI AND I," "KEEPING UP WITH LIZZIE"

THE old rib theory glorifies man in reducing woman to a kind of paring off his finger nail. In those days nobody tried to understand women. Why should they? It was only necessary that women should understand men and so keep their heads from being broken.

Here is a fundamental point in the proper understanding of woman: she has always understood man because it was unsafe to misunderstand him.

The rib theory is too forced either for credible history or good fiction or reconciliation with the processes of nature, which it completely reverses. If we were permitted to believe that woman was fashioned first we spare Adam that needless and incredible bit of violence and found the Old and New Testaments on two sublime and harmonious miracles of birth.

The story of the fall has never satisfied my sense of fairness. Any good judge of human nature would lean to the theory that Eve became weary of seeing Adam lying idly about and probably littering up the place. So she cunningly devised a way of getting him a permanent job. The secret was committed to her daughters and went on down the line, and so the sons of Adam have been busy ever since.

From the beginning men have invented many fictions about women. They enslaved and married them *en masse*. They held the club. They commanded the legions jointly with the Lord. The Lord had tacitly accepted the honor. Therefore it was so. No man dared deny it. Their treasuries were filled with fiat money, their souls with fiat virtue. Thus equipped they began to practise generosity. Woman was its first victim. She became a confirmed receiver. Men like to be generous. It makes them feel good and great. It is a common form of masculine dissipation. Many wars have been caused by the feeling on the part of some king that he needed larger accommodation for his generosity. He wanted more people to be indebted to him for the privilege of living.

For ages men have used women for receivers of generosity and sayers of gratitude. In Europe even now a woman is largely dependent on the generosity of her husband. Man has always misunderstood both the needs and desires of woman. With his well-known generosity he has at sundry times conferred upon her many kinds of distinction, including that of be-

ing an incipient angel. What she needed and desired and dared not demand was the chance to be a human being. Man conferred upon her silks and jewels and laces and slaves and flattery and inferiority. At best she was an ignorant and beautiful plaything, who achieved her ends by subtlety and cunning.

If there were any trouble you had to *chercher la femme*. It was never necessary to *chercher l'homme*. The man was always in evidence. The woman had some sense of shame. She had to have it, being aware that if the facts were known it would be all up with her, while he could wipe it off the slate with some magnificent stroke of generosity. He thought that her lack of courage and frankness signalized a nature essentially base. Here was the first great misunderstanding.

There was only one part of life where a woman had any chance of respect. It was down among the toilers, where heavy tasks gave her strength and destroyed her beauty; where men had no leisure—for leisure among men generally brought trouble to women. There she was a human being and not a bedizened plaything. There appeared the first really great mother of whom we have any record.

Whatever else we may say of her she was blessed above all women in her understanding of the terrified children of the empire—in her sympathy, in her passion, in her vision. She gave to her son, returning day by day to that humble home weary from his tasks—her soul. It was a full and beautiful soul. When the qualities of a strong woman join those of a rugged man in the same body and spirit—when the tenderness of the one softens and directs the strength of the other—then have we the foundation of miracles. Only that type of man understands woman and gives her the sympathy and honor she deserves. Whatever else we may say of Him, that son of the great mother in Galilee was the first man who understood women.

He put them on a new footing, and not yet have women learned how immeasurably sacred he made the office of motherhood.

So, then, let us be sure that we understand this much about women—no man was ever really great who had not in some measure within him the qualities of womanhood. Alexander and Cæsar and Napoleon were monsters—nothing more. The man

who shows only strength and a talent for spreading terror and destruction is on a plane with the submarine and the howitzer.

Now we are in the immediate neighborhood of one big fact about men and women. The spirit of either sex can never be fully great until the other has contributed to its content.

Some women have achieved greatness, and how? Was it not by filling mind and body with the strength and firmness and courage of manhood? The greatest human being I ever saw was a mountain woman with the strength of a man in heart and sinews. Strong to endure great tasks in the midst of poverty, she was the tenderest and most unselfish creature I have known. The greatest women the world has seen, probably, were the wives of the pioneers who made America. They were mostly strong-armed, broad-backed, big-shouldered women who could do and dare, and yet they were the tenderest of mothers. Many of them had a certain beauty of countenance hard to define, for it was not a thing of form or color. Out of their bodies came the new children of light and went to their tasks—Washington, Webster, Whittier, Lincoln, Grant, Greeley, Beecher and their like. Here in America our eyes have seen true womanhood. New ideals set in immortal phrases, the silent drum, the stilled cannon, the forgiven foe, the freed slave, the onmoving hosts of democracy celebrate her greatness.

Men are largely what their mothers make them, working on the tender soul of childhood; women are largely what men make them in the season of youth and beauty. It all goes back to the mother. She is the barometer of morality. Paint, idleness and peroxidity are storm points on the dial.

Therefore I think that I understand this much about woman: she carries the flag in the front rank. She is the chief servant making the hand and spirit which are strong in peace and irresistible in war. All that is she, or a shirk, a gadder, a whister, a peacock, a leader in great debacles.

To condemn the beauty and pride of woman is treason to the human race. They are as natural as the summer shine of a bird, but they have led to the worst of all misunderstandings. It is that of women regarding themselves.

Riverside, Connecticut

WHAT MEN KNOW ABOUT WOMEN

BY CORRA HARRIS

AUTHOR OF "THE CIRCUIT RIDER'S WIFE," "THE RECORDING ANGEL," "THE CO-CITIZENS"

DO men understand women? They do. This is the reason why they say they do not. Thus are they absolved from so many responsibilities toward women. They evade them.

The unjust judge said, "Because this woman troubleth me, I will avenge her"—not because he considered the righteousness of her cause, but to be rid of her. To this day the same man in every man often does what a woman wants him to do, not because he ought to do it, but because he understands her and knows this is the only way to be rid of her, "lest by her continual coming she weary me." A woman can weary a man sooner by demanding justice of him than if she asked anything else, because he knows exactly how importunate she is.

If men admitted the truth once and for all, that they do understand women, they would be forced by their own confession to act up to their enlightenment, or be stultified before the bar of their own conscience. This would precipitate the greatest revolution in the history of man (there is no history of woman!). He would be compelled to provide a place for her commensurate with his by changing all the laws he has made, forms of government, social and economic conditions, and his own standards of morals. It is easier to keep on pretending that he does not understand her.

He hails her as the sweet goddess of charming mysteries by way of throwing dust in the eyes of the goddess, not because he really regards her as mysterious. And he has practised this method so long, for so many, many centuries, he has finally convinced woman herself that she is a vague, amorphous creature not yet sufficiently evolved from the unknown for it to be possible to understand her. So she takes it out on him by being "importunate." She wants this or that. She is always wanting something. And she has learned that she can get it, not by demanding intelligent justice, but by "troubling" him.

Still, she has her moments of suspicion, when weeping or some lightning flash of anger clears the dust from her eyes. She knows then that she is not the cryptic, smiling sphinx of his romantic protestations, but that generous fool who shared too graciously the first fruit of knowledge with him in the Garden. She took one bite and gave him the rest

because it was "good." She should have eaten it all. The uneven division has been bad for her ever since, gave him the advantage in wisdom and this matter of understanding.

"Why, oh! why, then, doesn't he understand *me*?" she is forever complaining.

He does, my dear. He only pretends ignorance. He knows your frantic uprisings and despairing down sittings, your little east from your farther west. He knows early in the morning whether your weather will be fair or cloudy that day. He knows by that pale mewing face of yours before you suspect your own intentions that you will make him and yourself and the cat unhappy that day, because you are feeling for some reason so keenly the sorrow of being misunderstood. But not for worlds would he relieve the tension by saying:

"I understand, my dear, exactly how it feels to be a woman with the zodiac of your emotions scattered to the four winds."

He knows when you are getting ready to raise your banner and lead a world movement, knew it long before you did.

First, you study Browning because you are not understood. This pulls the neck of your soul, by the pain of which you discover that something is wrong. And when something is wrong it is bound to be man, and, if it is man, Browning is not equal to your emergency. Forthwith you discard him, all poets, and study "social unrest," economics, parliamentary law, until you find that you are the victim of it all. Then comes your World Movement, tramping up Fifth Avenue or some other avenue—and that is as far as it gets. You can move the world three times over without moving man once. You must get back home in time for dinner, to make sure that everything is in order, comfortable for *him*. He knows that, understands you perfectly, and your little rubber string excursion. And he is not troubled, because, bless you, you've got to come back home to him. And he is so stupid. You are obliged to forgive him for not understanding how it is with you.

This is the strength of his position; woman absolves him from his responsibility by accepting his solemnly reiterated excuse of his inability to comprehend her. You cannot hold an idiot responsible. He understands that. Besides, to feel that, as

a woman, one is incomprehensible, appeals to the vanity. He understands that point, too. It is shrewdly taken.

The rub comes here: women really do *not* understand men. Not only that, but they literally crave to be deceived by men. The one perfectly happy woman, if such a being exists, is the one who is in complete ignorance of man. This is, from his point of view, an exceedingly satisfactory state for her.

No one ever heard of a man who has past the sophomoric stage of personal revelations, when he has nothing to reveal but his adolescence, who ever complained because women do not understand him. On the contrary, if they did, he would feel that some violence had been done him, and he would immediately change his disguise.

If women gave more attention to the study of man, less to his representations of himself, of his laws and standards and all the other dust he stirs up to conceal himself, his motives and purposes, from her—there would be something doing in the world. He is not a rogue, nor a criminal, nor selfish, nor mean, he is simply the one sex there is in the human or any other specie. And you cannot get around that with all the thinking and doing that can be thought or done. This is the secret which explains the whole phenomenon of man, including woman. So far it has never been acknowledged nor recognized.

Women know much about him. They know what he likes and does not like, how far they can "trouble" him, and when to stop. But at last this outside, incidental knowledge amounts to nothing, no more than knowing his food, habits, and the measure of his clothes. For they do not know *him*, nor recognize him as the other part of themselves. This is a mistake which he never makes. Whenever he considers woman, he is himself the standard, and he considers her only in relation to himself, what he needs, what he will have of her, more particularly what she cannot give and what he does not want of her, and nothing else.

This is why things are as they are. Men do understand women, and women do not understand men. If the order is ever changed, then men will do it, and the women will not do it, because they do not grasp and will not admit that mastering phenomenon of the one sex.

COURAGE, MON VIEUX!

HOW ADRIENNE, OF PROVENCE, REVEALED THE SPIRIT OF FRANCE

BY HENRY G. DODGE

IT was there at the station in Marseilles that we saw the thing which shall surely live longest in our memories, which—more than all the battlefields and hospitals in France—brought us face to face with the realization of what war really costs.

As we drove up we found the square packed with waiting ambulances and automobiles driven by soldier chauffeurs. A number of the *grands blessés*, or the badly wounded, had just arrived from Geneva by way of Lyons, and were being unloaded here for distribution thruout Provence. They were a part of the great exchange of crippled prisoners that is continually going on between France and Germany, thru the intermediary of neutral Switzerland. Tho entirely recovered, no one of them will ever fight again, for it is only the hopelessly crippled who are exchanged.

We stood by the station entrance and watched them cross the narrow platform to the line of ambulances backed up to the curb. They came out of the door, a pitiful company, a hundred strong, and each man had lost a leg or an arm. Behind those who were walking or hobbling on crutches or canes came a line of wheel chairs with those who had lost both legs; and behind them—the blind.

DO not know if other wars have left in their wake so much of that most hopeless of afflictions—blindness, but it is the most terrible and impressive result of this war. A dozen of these poor sightless heroes, each supported by two orderlies, came thru the door of the station, out into the sunlit square. They felt the warm glow of the Provençal autumn, but they would never see its brilliance again. Their Provence, the "Empire of the Sun" as its children love to call it, could now only give to them its soft airs, its familiar sounds, and the warmth of its summer days. The brilliance of its mornings and the beauties of its nights, its rugged Alps and its lordly Rhône, and the sparkling blue of its Mediterranean, are to be no more for them.

The waiting crowd, silent and with uncovered heads, as if at mass, made a lane thru which the blind soldiers came. They stumbled over the flagging and down the steps with groping feet, and always, tho the order-

lies guided them by the arms, their hands were stretched before them, open wide; hopeless, hesitating hands, distrustful of the dark.

The last in line was a handsome boy not over twenty-one, a sub-lieutenant of the Chasseurs d'Afrique. His fair hair was pushed back from his forehead by the black bandage over his eyes, his red fez was tipped to one side by another dressing on his head—and his right sleeve was empty. And tho there glittered on his breast the Military Medal and the Cross of the Legion of Honor, pinned there when he had crost the Swiss border into France, he was trembling from head to foot, and kept repeating over and over and over, "J'ai peur, j'ai peur, j'ai peur"—"I'm afraid, I'm afraid, I'm afraid." France had given him all she could—but he was afraid of the dark.

AND then that happened which changed the whole gruesome picture of horror and misery into something sublime.

A girl stepped out of the crowd to the boy's side, put her arm about his waist, and took his groping hand in hers. She was no more than sixteen, beautiful with the dark, splendid, Greek beauty of the women of Provence—a girl of the people, who looked as tho she might have come into Marseilles that day from the country with her cartload of garden truck.

"Courage, mon vieux," we heard her say, and the boy could feel, I am sure, the smile in her voice, even tho he could not see, as we could, her smiling and compassionate eyes. "Do not have fear. Let me walk with you."

The orderly saluted and unhesitatingly stepped aside. The boy turned his bandaged eyes toward the girl, and, as he felt the protecting arm about his waist and the strong hand closing over his, his trembling ceased, his shoulders went back, and what had been a terrified child became a soldier again. It was the woman's touch that he had been needing—the hand and the word of encouragement of a woman of his own France—during the agonizing days in the hospital, and the long terrifying train journey in the darkness.

"Courage, mon vieux!" It was the spur to make him a soldier again. One does not show fear before a

woman. He took the few steps across the pavement to the waiting ambulance with steady and confident feet, his head turned always toward the sound of the voice at his side, and as he walked he smiled into the girl's face. How long it had been since he had smiled!

They came to the curb; and as she released his arm and an orderly stood ready to guide his foot to the step of the ambulance, he turned to the girl and paused a moment, with trembling lips. He raised his hand half way to the salute, and stopped.

"What do you call yourself, my friend?" he said.

"Adrienne, my lieutenant," she replied softly, still smiling.

There was no trace of coquetry in her voice or in her bearing. She stood, slim and straight, before him, like a soldier before his superior officer.

The boy whipped off the red fez from his blond head and tucked it under the empty sleeve pinned to his breast. His hand went out and found her shoulder, as she instinctively stepped nearer to him, a look of incredulous wonder upon her uplifted face.

"*Merci, Adrienne,*" he said huskily, and bent and kissed her upon both cheeks.

THE little peasant drew herself up like a queen, but her eyes were full of tears and for a moment she could not speak. Then, tremblingly but proudly:

"*Merci, mon lieutenant.*"

Her hands were clasped together upon her breast and on her face was the look of Jeanne d'Arc standing before the Vision. The boy took his seat in the ambulance and as it swung away from the curb his hand went to the salute, and his bandaged eyes turned toward the spot where she was standing. And until the car disappeared into the traffic beyond the station gates we could still see his erect figure and his hand raised to his forehead.

The girl stood motionless, looking after him, until he was out of sight, her face transfigured and her dark eyes still brilliant with tears. She had not been kissed; she had been decorated, and she wore the red badge of her glory in her flaming cheeks as proudly as the blind boy soldier wore the red ribbon of the Legion of Honor upon his breast.

M. William Shak-speare:

EIGHT PAPERS BY FREDERICK HOUK LAW
IN OBSERVANCE OF THE THREE HUNDREDTH
ANNIVERSARY OF SHAKESPEARE'S DEATH

The Tragedies: Plays of Romance and War

SHAKESPEARE was no exception to the truth pronounced in "The Two Gentlemen of Verona," that "Experience is by industry achieved and perfected by the swift course of time." He gained his success not by genius alone, but also by work—hard and patient work that, by repeated trials, made way for him to the heights of tragic power. If some one had asked him how he had gained the ability to write "Hamlet," "Othello," "King Lear" and "Macbeth," he might have answered in the words of one of his characters: "I have labored with all my wits, my pains and strong endeavors." Shakespeare's great tragedies, masterpieces in the world's literature, were not produced without preliminary attempts at tragic writing. The surprising excellence of his first efforts is strong evidence of his natural genius.

Between the ages of twenty-four and thirty-one Shakespeare wrote in "Romeo and Juliet" a passionate tragedy of youth; in "Titus Andronicus" a terrible tragedy of blood; and in "Henry VI," Part I, Part II, and Part III, "Richard II," "Richard III," and "King John," a series of chronicle plays that concern the romantic tragedies of great English rulers. All these plays, in spite of great story interest, put the emphasis on character, pointing the way toward the searching character analysis of the great tragedies. To Shakespeare, even in the beginning of his dramatic work, men appeared as more than puppets tossed about by fate; in part, at least, they were makers of their own destinies.

There is a kind of character in thy life,
That to the observer doth thy history
Fully unfold.

In some respects "Romeo and Juliet" is the most pleasing of all of Shakespeare's tragedies. It is a play of summer, and youth, and love, a play of misty moonlit nights in medieval Verona, with the breath of

roses blowing over old gardens, telling:

How silver-sweet sound lovers' tongues
by night,
Like softest music to attending ears.
and at another time saying

Violent delights have violent ends
And in their triumph die.

Romeo, a Montague, falls in love with Juliet, a Capulet, between whose family and his own there is deadly enmity. On the heads of this "pair of star-cross'd lovers" fall the baneful results of their parents' discords.

Shakespeare wrote this play of love and rapid action with all the poetry of youth, for he himself was then less than twenty-seven. Interested as he was in unfolding a romantic story, he did not fail to make his characters real. In Juliet particularly he presented an altogether charming example of womanly love, forethought, faithfulness and daring.

"Titus Andronicus" is so different from "Romeo and Juliet" that we are glad to believe that Shakespeare had hardly any part in writing it. In place of romantic imagination and rich poetry there is a series of shocking events, with little attempt to fasten attention on anything but gruesome detail. Nowhere else in Shakespeare can we read of such deeds of horror as those enacted by the Roman general, Titus Andronicus, in revenge for wrongs done to his daughter Lavinia. Undoubtedly Shakespeare, when about twenty-five years old, felt the attraction of an old tragedy of vivid action, and recast it for his company. The play as a whole is strikingly different from the rest of Shakespeare's tragedies, but here and there, like glittering jewels on black velvet, there stand out against the dark background of crime some passages that are wholly typical of Shakespeare:

The hunt is up, the morn is bright and
grey,
The fields are fragrant, and the woods
are green.
The birds chant melody on every bush;
The snake lies rolled in the cheerful
sun;

The green leaves quiver with the cooling
wind,
And make a chequer'd shadow on the
ground.

It is far easier to think that the young man who had just come down into London from the country peace of Stratford wrote such lines as these than it is to think that he wrote of the heartlessness of cruel Tamora, or of the fiendish revenge of Titus Andronicus.

"Romeo and Juliet" is a tragedy of love; "Titus Andronicus" is a tragedy of blood; and "Henry VI," Part I, Part II, and Part III, "Richard II," "Richard III," and "King John," are tragedies of history. In Shakespeare's time, because England was thrilling with sense of national greatness, the history play was widely popular. Men had strong interest in hearing of the great deeds of their fellow-countrymen, and, in particular, of the lives of noblemen and kings, the nation's leaders in times of crisis. They knew that in such men the common ideals of their people were crystallized. They felt that the lives of the great represented humanity in magnified form. In the triumph or the tragedy of the nobility the common people found their own best souls. Royalty might represent all that is ideal, and right to kingship might rest upon the possession of

The king-becoming graces,
As justice, verity, temperance, stable-
ness,
Bounty, perseverance, mercy, loveli-
ness,
Devotion, patience, courage, fortitude.

In stories of the rise or the fall of kings the people of Shakespeare's time were, in reality, considering the rise or the fall of humanity, as it keeps true to ideals or swerves from them.

They found an especial pathos in the fact that kings, great as they were, had no escape from common ills.

Within the hollow crown
That rounds the mortal temples of a
king,
Keeps Death his court, and there the
antic sits,
Scoffing his state and grinning at his
pomp.

EDMUND KEAN AS RICHARD III

THE ELDER KEAN (1787-1833) WAS THE OUTSTANDING SHAKESPEAREAN ACTOR OF THE FIRST HALF OF THE NINETEENTH CENTURY. HIS FIRST APPEARANCE AT DRURY LANE WAS IN 1814, AND BYRON, WHO SAW HIM IN THIS ROLE THAT YEAR, WROTE A FIERCE APPRECIATION OF HIS ACTING. COLERIDGE SAID THAT TO SEE HIM ACT WAS LIKE "READING SHAKESPEARE BY FLASHES OF LIGHTNING." HIS SON, CHARLES KEAN, PLAYED SHAKESPEARE AFTER 1850.

Allowing him a breath, a little scene,
To monarchize, be fear'd and kill with
looks,
Infusing him with self and vain conceit,
As if this flesh which walls about our
life
Were brass impregnable.

They found consolation for their own
humbler lives by considering the re-
sponsibilities and misfortunes of
kingship, that led Henry IV to say,
"Uneasy lies the head that wears a
crown." They would hear to the full
the story of royalty so that their own
lives might catch something of the
national greatness, and gain satis-
faction in lowliness.

Let us sit upon the ground,
And tell sad stories of the death of
kings:—
How some have been depos'd, some
slain in war,
Some haunted by the ghosts they have
depos'd,
Some poison'd by their wives, some
sleeping kill'd,
All murder'd.

They would know the irony of great-
ness, the king living in seeming hap-
piness,

His viands sparkling in a golden cup,
His body couched in a curious bed,
When care, mistrust, and treason waits
on him.

Beside this they would place the
happiness of some care-free humble
life, such as that of the shepherd
who has

His cold, thin drink out of his leathern
bottle,
His wonted sleep under a fresh tree's
shade,
All which secure and sweetly he enjoys.

It was a great day for London,
and for English literature, when
Shakespeare, at about the age of
twenty-seven, united with some
other dramatists in writing three
plays on the life and times of Henry
VI. The writers had the practical
aim of giving dramatic life to old
material. Taking some earlier plays
on the same subject they made them
over, adding reality, power and
beauty. The first play tells of the
brave deeds of Talbot and the Eng-
lish lords fighting in that French
war in which Joan of Arc played so
great a part. The play is highly
patriotic and full of the strong spirit
shown in old Talbot's account of the
death of his son:

When he perceived me shrink and on
my knee,
His bloody sword he brandish'd over
me,
And, like a hungry lion, did commence
Rough deeds of rage and stern impa-
tience;
But when my angry guardant stood
alone,
Tendering my ruin and assail'd of none,
Dizzy-eyed fury and great rage of
heart
Suddenly made him from my side to
start
Into the clustering battle of the
French;

And in that sea of blood my boy did
drench
His over-mourning spirit, and there
died!

The second play tells of the over-
throw of the powerful Duke of
Gloucester; of the tragic love story
of Queen Margaret and the Duke of
Suffolk; and of Jack Cade's rebel-
lion. It is far more spirited than the
first, and far more interesting in its
characterization. Eleanor, Duchess
of Gloucester, is not unlike Lady
Macbeth in unscrupulous ambition;
and Queen Margaret, with her jeal-
ousy and passion, is a memorable
character.

The third play concerns the wicked
deeds of Richard, Duke of Glouces-
ter, afterward Richard III, and more
particularly his murder of King
Henry. The fiendish and courageous
Queen Margaret is in strong con-
trast with the weak king, who creeps
from the battle and moans, "Would
I were dead! if God's good will were
so!" Such plays as these, with vivid
stories of heroic action, must have
taken London by storm. They were
a triumph for the young Shake-
speare just entering upon his dra-
matic career.

"Richard II" tells another tragedy
of history. The strong, self-willed,
ambitious Bolingbroke—a man of
action and genuine power—takes the
throne from the unscrupulous dream-
er, Richard II. The play has much
manly spirit and an ardent patriot-
ism, as well as far more poetry than
appears in most of the historical
plays.

"Richard III" and "King John"
have great dramatic interest because
of strong characterization. In some-
what leaving the method of the
chronicle and centering all attention
on some one powerful character each
play approaches the method of the
great tragedies. Richard III, putting
himself against society, wages a
titanic battle against the forces of
right. Hated and deformed, he out-
wits his enemies and send them, one
by one, to bloody deaths until, at
last, he rises to royalty. Giant as he
is in intellect, he is no match for the

stern forces of retribution, chief of
which is that inner force so strongly
shown in Macbeth. In the midst of
battle it is not man he fears, but
himself:

My conscience hath a thousand several
tongues,
And every tongue brings in a several
tale,
And every tale condemns me for a
villain.

"King John" is another history
play of direct purpose and strong
characterization. John, having stolen
his throne, makes a hopeless effort
to keep it against his enemies. Once
again Shakespeare shows that evil
can never gain lasting power, and
that conscience, if nought else,
brings sure punishment. King John,
in mental agony, says:

My nobles leave me; and my state is
braved,
Even at my gates, with ranks of foreign
powers:
Nay, in the body of this fleshly land,
This kingdom, this confine of blood and
breath,
Hostility and civic tumult reigns
Between my conscience and my cousin's
death.

In this play are three of Shake-
speare's most notable characters:
John, with contemptible meanness of
spirit; Constance, with beautiful
mother-love; and Faulconbridge,
scorning baseness, and showing Eng-
lish dash and patriotic ardor that
undoubtedly represents Shake-
speare's ideal of a noble man of ac-
tion. Powerful in conception, dra-
matic in arrangement, realistic in its
characters, and touching in its
pathos, "King John" is without
doubt one of the greatest of Shake-
speare's plays.

Shakespeare had probably sketched
"Henry VIII" before his retirement
to Stratford, but he left its comple-
tion to John Fletcher. The play that
we have is a series of spectacular in-
cidents showing pompous court life.
Its theme is highly appealing, for it
shows the pathos of earthly great-
ness. The dignified and noble Queen
Katharine is driven from the King's
side, and the rich, cunning and am-
bitious Cardinal Wolsey falls from
power, saying nobly:

Had I but served my God with half the
zeal
I served my king, he would not in mine
age
Have left me naked to mine enemies.

"Romeo and Juliet," "Titus An-
dronicus," and the history plays—
so many "Mirrors for Kings"—show
Shakespeare's interest in tragic
story largely for the story's sake.
They show, most of all, his certain
development toward searching analy-
sis of the inner nature. They are the
stepping stones by which he ad-
vanced toward ability to produce the
great tragedies.

THE WORLD OVER

Our Increasing Population

Census Bureau experts estimate that the population of the United States on January 1 was 101,208,315, and that by July 1 next will be 102,017,302. On July 1 last year they figured the population at 100,399,318.

On the basis of the rate of increase between the 1900 and the 1910 censuses the bureau estimates that there is an increase of 808,997 in the population of the United States every six months, or an annual increase of 1,617,994. The census estimate is that the population of the country is increasing at the rate of 4433 a day—184 every hour and 3 1-15 persons every minute.

Western states have led in growth, Washington heading the list, with Oklahoma, Nevada, North Dakota, and New Mexico following in the order named.

Forward to the Land

An organization to get people out of the cities by teaching them how to make farming both profitable and pleasant, and by establishing them in coöperative agricultural colonies throughout the country, is the Forward-to-the-Land League, which has its headquarters in New York City.

It has opened evening classes in gardening, poultry-raising, dairying, etc., in many of the large cities, where experts are prepared to give unbiased advice regarding location and the purchase or rental of land to any who are genuinely interested. At present a large tract of land in Florida is open for inspection and land-owners in many other states have declared their willingness to equip for colonization according to the high standards recommended by the League.

Emphasis is continually put on the necessity of colonization. The small individual farm has proved over and over again that it does not pay, since it cannot command adequate marketing facilities. Co-operative management of fifty farms as a business unit, with an agricultural instructor and a market expert, is the League's advice.

The new type of rural school, with ten-acre garden and auditorium for social activities of the "grown-ups" is stipulated; and a rural Y. M. C. A. secretary and an engineer

WHEN A FIRE BURNS THE CORD WHICH RUNS UNDER THE WINDOWS, THE LEVERS DROP, THE FIRE ALARM SOUNDS, AND—

© International Film Service

THE DOORS OPEN AND THE HORSES RUN OUT

enough to get it in good working order. The plan sounds Utopian, but it has already shown its practicability to some extent.

A Fire Drill for Horses

By means of an arrangement of levers, invented by John Batty, of Los Angeles, horses are not only given a chance to escape when their stable catches fire, but they are actually taught how to do it.

The stables are built so that the horses are all headed toward the doors, which, of course, swing outward.

The invention works on the theory that any dangerous fire would burn the fusible cord stretched along the top of the doors and thereby release the levers which it holds in place. When these levers drop they throw open the doors of the stalls.

In order to make the horses take advantage of their automatic release a terrific clanging of gongs sounds an alarm as soon as the doors open. The noise is supposed to frighten the horses into running away from it, and consequently from the fire.

As yet no real fire has tested the invention. But at the Cudahy estate in Los Angeles, where the apparatus has been installed, there have been several fire drills in which both machinery and horses have done their part to perfection.

An Egyptian Tomb in New York

Perneb, a high dignitary of the Egyptian court, lived some 4000 years too early to spend his money in New York. So he built a costly tomb, near the royal pyramid in the cemetery of Memphis, stocked it with provisions and decorated it as a worthy dwelling place for his body and a memorial to his name.

Thru the centuries it has been successively a monument, a storehouse, a robbers' cave, a quarry, and now a Fifth avenue residence—erected in the north end of the entrance hall of the Metropolitan Museum.

It is the first Egyptian tomb to be so perfectly transplanted and reconstructed. The colors of the decorations are still bright and most of the stones are whole. On the outer walls, on either side of the entrance, are colored portraits of Perneb, and inside, his statue, carved

Feature Photo Service

AN ELEVATOR IN THE ALPS

from cedar. It was the belief of those days that if the body were removed from the tomb the soul would be lost, but a chance of rehabilitation was given it if it chose to enter the statue.

Outside the real tomb, as it stands in the Museum, is a miniature reproduction which shows the complete structure in detail. The tomb proper, containing the sarcophagus, was sunk in the rock over fifty feet below the building. Originally it was covered with circular blocks of stone and tightly sealed.

In the superstructure is the chapel, or offering chamber, covered with elaborate pictures of the offerings and representing the earthly pleasures and activities of the owner. This chamber opens on the main entrance, but at right angles to it, so as to elude the evil spirits.

Near it, and entirely inaccessible, is the secret statue chamber or "serdab," into which only the spirit of the deceased was supposed to enter.

As it stands in the Metropolitan Museum the inner walls of Perneb's tomb are all protected by glass and lighted from above. It is the gift of Edward S. Harkness, one of the trustees of the Museum.

For Smaller Electrical Machines

By the use of a new material, discovered at the Engineering Experiment Station of the University of Illinois, many electrical machines in common use may be made smaller and more compact without sacrificing strength or power capacity. The material is a compound of silicon and iron produced by fusing in a vacuum, a process which effectually eliminates all impurities in the iron and makes it possible to procure an alloy of exact proportions.

The magnetic permeability of the new material, or the ease with which it may be magnetized electrically, is

ten to fifteen times greater than that of commercial iron or steel now employed, while its hysteresis loss, or the electric energy which must be supplied in order to reverse its magnetism, is only one-eighth as great. In dynamos, transformers, loading coils in telephone circuits, electrical testing machinery and numerous other electrical machines, the new vacuum alloy will make possible economies in cost and size, and will increase the range of usefulness of such machinery.

T. D. Yensen, the discoverer of the new material, is a Norwegian by birth. He is a Research Assistant Professor at the University of Illinois. The experiments leading to the discovery have occupied a period of nearly three years.

Going Up!

The Bürgenstock Hotel, overlooking Lake Lucerne, is perched on the top of a cliff, 2880 feet above sea level. And the nearest railroad station is on the shore of the lake—nearly 1500 feet below.

Making connections is obviously difficult. A road is impossible and airships rather expensive. But the missing link has finally been forged in the shape of an enormous lift, standing straight out from the edge of the cliff and fastened to it at intervals by framework and bridges. It is run by electricity and the cage is suspended by cables which run over a pulley at the top.

The schedule of trips is adapted to the railroad time-table. The elevator leaves "on arrival of connections" or whenever there is a special demand for its service. It is run primarily for the convenience of the Hotel Bürgenstock.

Probably it is the only elevator in the world which combines esthetic pleasure with utility. As an observation tower it offers a panoramic view of the Swiss lakes and surrounding country that is almost as perfect as that from an aeroplane.

Information by Machinery

A mechanical directory, the object of which is to convey information concerning leading business and professional men and companies in one city to persons who happen to be situated in another, has been invented by William C. Cutler, of Los Angeles, California. Its

operation and the results to be obtained from this device are unique.

For instance, should a person be located in the northern part of California and desire the address of and information concerning a business and professional man in Los Angeles, all that person would need do would be to step on the platform, turn the pointer to the word "Los Angeles," and push the dial button. Instantly the large directory card representing Los Angeles would appear under the glass front of the card space. By simply remaining on the platform the operator retains the directory card before him, but the moment he takes his weight from the platform the card is automatically returned to its original position within the lower part of the case.

This case is about six feet high, two feet wide and a foot thick. Its display space is 18x22 inches, which permits the insertion of names, addresses and information concerning several hundred business men in each city.

Not only can this device be used in the manner herewith described, but it may profitably be used in connection with banks, newspaper offices, business establishments, etc. It takes a weight of but thirty pounds upon the platform to operate the machine, and its operation, after the button is prest, is practically instantaneous. Any number of cards from one to a hundred may be placed in the machine at one time.

INFORMATION WHILE YOU WEIGHT

HOW TREE PLAYS SHAKESPEARE

BY MONTROSE J. MOSES

AUTHOR OF "FAMOUS ACTOR-FAMILIES OF AMERICA," "THE AMERICAN DRAMATIST"

SINCE 1887, Sir Herbert Tree has been one of the leading actor-managers of London. He has produced various plays of a melodramatic and romantic character, varying all the way from "Jim, the Penman," "Partners" and "Captain Swift" to "Fedora," "Trilby," "The Musketeers" and "The Darling of the Gods." When he leased the Haymarket Theater, he produced Maeterlinck's "The Intruder," won success in Ibsen's "The Enemy of the People," and gave a spirited revival of Wilde's "A Woman of No Importance." But his greatest claim to recognition was the standard of his Shakespearean productions.

When he visited America some twenty years ago, he was known to the play-going world as Mr. H. Beerbohm Tree. Since that time, the London public has come to regard him almost as a national institution, and for his great services to the art of the theater he has been knighted, adding another name to the list of titled actors, including Forbes-Robertson, John Hare, and George Alexander.

Sir Herbert comes to New York now, for a season beginning March 14, as an exponent of no "new" art, but as the upholder of a generous policy started in years gone by by Charles Kean, and brought to such extravagant perfection by the late Sir Henry Irving. Instead of offering, during his Tercentenary season of Shakespeare here in America startling examples of "new" scenery, where decoration and symbolism play a large part; instead of showing himself to be under the same spell as that which prompted Mr. Granville Barker last season to give his fantastic setting of "Midsummer Night's Dream"; he brings with him a solidly, splendidly pictured pageant of "Henry VIII," and equally colorful productions of "Richard II," "The Merchant of Venice," and "The Merry Wives of Windsor."

If Sir Herbert had done nothing more than present Shakespeare fairly well, he would have gained some reputation for the mere fact that he had had sufficient courage and conviction to appear in seventeen of the plays. But in all of these productions he scored because of the beauty of the scene and the excellence of the acting. Supporters of the Elizabethan Stage Society registered complaint that Mr. Tree was smothering Shakespeare in unnecessary paraphernalia. They urged that one

should present Shakespeare simply and crudely as he was given in Elizabethan days.

Such a claim was a challenge to Sir Herbert, and then and there began a battle of words which has been carried on ever since. If we consult Miss Ellen Terry's charming "Memoirs," we will find mention of Tree's production of "The Merry Wives of Windsor," where she asserts that the actor-manager spent most of his time inventing "new" business of a humorous character for herself and for Mrs. Kendal. This is one of the ways in which Mr. Tree revivifies Shakespeare for modern audiences. He does not believe in becoming a slave to convention; he scouts any idea of becoming either archeological or academic. What he strives for is illusion, and he has declared more than once that he has taken his cue from Shakespeare's own stage directions. He spares no expense in order to gain truth in atmosphere and gorgeousness in spectacle.

Most of his productions, since he built for himself a theater which he calls "His Majesty's," have been on a stupendous scale. He likes to strive for pictorial effect. That, in all probability, attracted him to the late

Stephen Phillips, whose "Nero" and "Ulysses" he gave in magnificent fashion. London theatergoers have become so used to his extravagance that when he appears in anything slight, they regard it as unworthy of him.

Like his brother, Max Beerbohm, who succeeded Bernard Shaw as dramatic critic on *The Saturday Review*, Sir Herbert Tree possesses a facile pen, and in his book, "Thoughts and Afterthoughts," he is not only epigrammatic regarding life in general, but he is very pronounced in his declarations regarding the way in which Shakespeare should be produced. He says:

The public of today demands that, if acted at all, Shakespeare shall be presented with all the resources of the theater of our time—that he shall be treated, not as a dead author, speaking a dead language, but as a living force speaking with the voice of a living humanity.

He is frank in his confession that tho he has been extravagant in his preparations, every production of his has been profitable. After he had been attacked for his realism in "The Tempest," he came forth with a declaration that of all Shakespeare's plays demanding the resources of the modern stage, this was the most exacting. He showed in an analytical paper how the stage directions in the play called for even more detail than he was capable of supplying. But, as an "Afterthought," he added that the tendency toward simplicity is the modern demand, and he has found that in his performance of "Hamlet," for example, he can get more suggestive effects by the use of simple curtains than by cluttering the stage with unnecessary trappings for pictorial interest. In other words, the stage is now groping toward spiritual effects, or moods.

"Henry VIII," which has not been seen in America for many a year, will be done by Sir Herbert, who plays Wolsey in the Irving style; there will be no Urban, Reinhardt or Gordon Craig concessions. Mr. Tree embroiders his pictures; his is a taste that tries to suggest what others would leave to the imagination. Without discounting the modern audience, he has always held that the present age is not as fresh as the Elizabethan in its power to conjure up a scene mentally and requires a setting as rich as the lines suggest.

Of course to this he adds his personality as an actor. Even as Irving used to cast his plays to the highest

SIR HERBERT AS CARDINAL WOLSEY

Friction in the Human Machine

FRICTION in the human machine is called constipation—the break-down of the mechanism by which the body disposes of its waste.

You can't repair the trouble by means of laxatives and cathartics. These give only partial and temporary relief and almost invariably serve to throw the bowel mechanism even further out of gear.

Permanent relief from constipation can only be obtained by restoring the normal functioning of the bowels. This necessitates lubrication—providing the intestinal tract with an efficient substitute for the mucus which exhausted nature has failed to supply.

Nujol, a pure white mineral oil, is not a medicine but a lubricant. It oils the intestinal tract, prevents the contents from becoming hard, and facilitates the passage of waste.

Nujol taken regularly, in conjunction with reasonable care about eating (coarse foods are preferable) will frequently bring about a complete restoration of normal bowel activity.

Nujol is the purest and safest form of the mineral oil treatment for constipation, first advocated by Sir William Arbuthnot Lane, the famous English surgeon, and now prescribed by eminent specialists everywhere, both in this country and abroad.

Most druggists carry Nujol, which is sold only in pint bottles packed in cartons bearing the Nujol trademark. If your druggist does not carry Nujol, accept no substitute. We will send a pint bottle prepaid to any point in United States on receipt of 75c.—money order or stamps.

Write for booklet "The Rational Treatment of Constipation." Address Dept. 12.

point of excellence, so does Sir Herbert. As an actor-manager, he tries to overcome the prejudice against his "species," where everyone believes that a play is panned and shifted about until the whole substance of it falls upon the shoulders of the "star." But the very fact that as his opening bill he has selected "Henry VIII," with all its pageantry, is measure of his taste; undoubtedly he will go down in English dramatic history as the successor of Irving. It is his love for spectacle, no doubt, among other things, that induced him to come to America, and to appear in a gigantic moving-picture production of "Macbeth"—a production which in scope and pictorial splendor will vie with "The Birth of a Nation."

Put his portrait gallery in a row—the lean, tall figure of Svengali (for Sir Herbert is over six feet in height), the crouching devilish person of Fagin, the majestic austerity of Wolsey, the sensuous insolence of Nero, the coxcomber of Malvolio, the military bearing of Colonel Newcome—were it not for the fact that in whatever he undertakes, Sir Herbert has a mannerism of voice which betrays him as one and the same person, he would be the foremost character actor of his time. As it is, not only do his productions vie with Royal Academy canvases, but he himself, in bearing and in gesture, shows how uppermost in his mind is the pictorial effect. And he claims that his palette is the identical one Shakespeare would have used had he been alive today. Thus does he brave the Elizabethan Stage Society, and the modern movement of which Gordon Craig was virtually the founder.

THE NEW BOOKS

THE PEACE PROTOCOL

Seventy per cent of the clothing worn by American women is manufactured in New York City. This metropolitan part of the trade is capitalized at \$100,000,000 and employs over 100,000 workers. It is largely a Hebrew industry both on the side of employer and employed. It is divided into half a dozen branches. The cloak, suit and skirt branch is the most powerful. In 1910 a great strike took place in this branch. Owing largely to the conciliatory efforts of the great-hearted Boston lawyer, Louis D. Brandeis, the strike was settled. But the chief difficulty arose over the question of the open versus the closed shop. A deadlock ensued. Mr. Brandeis suggested his famous compromise of the preferential union shop. This was finally accepted and in order that the industry might be protected from the recurrence of strikes and lockouts, a trade agreement was entered into, known as the Peace Protocol, which, in our judgment, is the longest step yet taken in the United States toward the goal of industrial peace, and which can be compared in industrial significance only with the Compulsory Arbitration Law of New Zealand and the Compulsory Investigation Act of Canada.

The Protocol was intended to perform four main purposes: First, to raise the general standards of the industry and to make them uniform; second, to strengthen both the Employers' Association and the Union; third, to insure to the worker just, reasonable and fair treatment on the part of the employer; and fourth, to inaugurate in the industry the principle of industrial democracy, i. e., to make a beginning of joint control and joint responsibility on the part of both employers and employees in their common enterprise.

The Protocol has been successful beyond expectation. It has had its setbacks and vicissitudes, of course, but it is steadily going ahead. It has now been copied in the dress and waist industry of New York, the clothing and cloak making industries in Chicago, the cloak and dress and waist industries in Boston and in Philadelphia. In New York it was also followed in three other branches of the needle-working industry—the misses' and children's wear, wrappers and kimonos, and muslin underwear.

To Mr. Brandeis more than any one else credit must ever be due for initiating the Protocol. But the men upon whom have devolved the chief burden of working out its provisions—are the attorneys for the Manufacturers Association and for the Union. Of these Mr. Julius Henry Cohen, the attorney for the manufacturers, has been the most active and thoroughgoing. He

knows probably better than any one else the history and philosophy of the Protocol, and it is fair to say that his mind has been the constructive force in upholding its manifold provisions.

Accordingly when his volume, *Law and Order in Industry*, came to our desk we were prepared for something unusually good. We were not disappointed. Mr. Cohen has not only given us a history and philosophy of the Protocol, but he offers a constructive plan for the enlargement of its scope that is worth the serious attention of economists and statesmen. And not the least worthy of mention is the fact that Mr. Cohen is the possessor of a literary style that we commend with earnest solicitude to the average brief writer. Consequently we have here an intensely interesting pioneer treatise on a novel and highly significant forward movement in American life that is a credit to American scholarship and industrial statesmanship.

We have not the space to recapitulate Mr. Cohen's thesis, argument or conclusions; suffice it to say his facts are trustworthy, his statements of controversial questions impartial and his inferences in the main sound. The book is a distinct contribution to the science of social relations and as such should have a wide reading both here and abroad.

Law and Order in Industry, by Julius Henry Cohen. Macmillan. \$1.50.

CHESTERTONIAN HISTORY

Everybody who likes G. K. Chesterton has wished that he might be induced to follow the example of Charles Dickens and write a Child's History of England. When a literary man of wayward genius undertakes to interpret and record the story of his country the result is almost always worth while. We do not get the white sunlight of impartiality, but we get a beautiful rainbow of prejudices, personal opinions and mystical insight. Chesterton has still to write us a complete English history, but he has dealt faithfully with about a century and a half of it in his latest book, *The Crimes of England*. It is due to him to say that the unhistorical character of the work is caused rather by partizan emphasis than by any inaccuracy of detail. Rarely if ever has Chesterton written with such care for his facts, and, as for his transcendental interpretation of them, he has as much warrant to philosophize as Carlyle or Taine or any other literary historian. But one does tend to get the impression from the book that only Prussians had ever incurred the scriptural curse on him who removes his neighbor's landmark.

For the "crimes of England" are really the crimes of Prussia, and England's guilt is summed up in the phrase

that English politics has been devoted ever since the time of Frederick the Great to "the belittlement of France and the gross exaggeration of Germany." Chesterton denounces the part played by his country in the wars of Frederick the Great, in the Napoleonic struggles, in the repression of Ireland, in tolerating Bismarck's schemes of aggrandizement, only to bring into darker relief the wickedness of the state which used England thruout all these years as a catspaw. Yet the indictment of England as Prussia's accomplice is delivered in very sharp terms; so far as Chesterton shows bias it is pro-French or pro-Irish rather than pro-British. He really believes that the war is an epic struggle between the old soul of Christendom, most clearly incarnated in the Roman Catholic nations, and a blast of sinister materialism from the wastes and forests of Brandenburg. In this belief he writes not only seriously, but soberly, as befits the great hour, and concludes his book with a vivid and moving description of the Battle of the Marne which has in it a world of eloquence and no "cleverness" at all.

The Crimes of England, by Gilbert K. Chesterton. Lane. \$1.

MODERN FRENCH POETRY

Six French Poets of the great epoch in French literature, which the war brought to its untimely end, are studied, translated, and explained by Amy Lowell in a series of brilliant essays, each prefaced by a portrait of the poet and generously interspersed with quotations of his best work. Miss Lowell's own delightful style and her keenly appreciative comments add much to the pleasure of reading the poems, and her particularly happy translations accomplish the difficult art of keeping the spirit of a French poem in an English dress.

Six French Poets, by Amy Lowell. Macmillan. \$2.50.

RELIGION IN INDIA

Professor Pratt of Williams College, author of "The Psychology of Religious Belief," visited India in order to learn at first hand not merely what are the documents on which the religions of India are based but what in actual life is their influence upon their adherents and what is the nature of their religious experience. The fruit of this study is *India and Its Faiths*. He did not avoid the missionaries and foreign teachers, but he sought especially to meet the native representatives of Hinduism, and Buddhism, as well as Mohammedans, Parsees, Jainas and Sikhs. As he studied these religions as one not interested in proselyting, but in their philosophical aspect, he was quick to see their spiritual content and to recognize what is good in them. We have a fair statement here of their doctrinal beliefs but particularly of their influence on life and character. He dwells on the passive side of religious experience, the value of meditation which so far takes the place of that active service which is the

mark of Christianity. He does not dwell on the grosser side of Indian religions, so that one is startled when he comes across a scathing description of the morals of the Brahmin priests. The author discovers the immense influence which Christianity has already had in creating reformed sects, such as the Brahm Somaj and the Adya Somaj. These reformed sects abjure caste and deny the subjection of women. Professor Pratt finds that among the great obstacles to the spread of Christianity are the bad morals of Europeans, and the hateful war which, devastating the world, makes it appear that Christianity is inferior to Buddhism and Hinduism, and the ultra-conservative teachings of many missionaries. The book is well worth careful reading.

India and Its Faith, a Treatise in Prose, by James Bissett Pratt. Houghton, Mifflin. \$4.

AUX ARMES

Eric Fisher Wood's book with the somber prophetic title *The Writing on the Wall* is the most important of the later contributions to the momentous question of Preparedness. It is important because its author, tho a layman writing for laymen, has had singular opportunity to know what war is today, for he has traveled freely with the best credentials, a messenger among the warring nations. In America he has conferred with our military and naval authorities and been accepted by them as an expert. In short he is in an unofficial way a spokesman of their views. He appeals for better discipline in army and navy, for immediate supplies of mines, ammunition, armored motors and the like that would be needed to repel an attempted invasion should the kaleidoscope of fate in some quick turn produce one, and he advocates, as do others, the introduction of the Swiss and Australian systems of national defense. In an appendix, Mr. Wood quotes concretely the opinions of many prominent citizens.

If we are unprepared and should be prepared, no doubt we should be thoroughly prepared. This is the starting point of General Woodhull; a veteran volunteer of the Civil War. He considers that modern conditions, efficiency and suddenness of attack prohibit reliance on volunteers. Nor does he have confidence in a citizen soldiery as he reads Secretary Garrison's plan. He would increase West Point's capacity from seven hundred men to thirty-six hundred, thereby having officers enough, some in reserve, some in the standing army, whom he would place at 200,000 men, raised and maintained under a conscription system, which he regards as not only necessary and just, but the only possible efficient method. A reserve army of 800,000 would be the natural result. He regards the Panama Canal and the Philippines as danger spots—and it is true that in the splendid isolation of earlier days we had to consider neither.

But while we are thinking of an enlargement of the army, a view of the *U. S. Army from the Inside* comes to us from Van C. Kirkpatrick. It is brief and direct and it scores the army se-

verely for gambling, drunkenness, the Scarlet Woman and laziness. This little pamphlet advocates an army half as large as that we have now, double pay, equality between men and officers and an aroused public conscience. It approves an increase of the National Guard and citizens' training camps. University military training is also suggested to take the place of fees for other tuition. The author was for five years in the army.

The Writing on the Wall; The Nation on Trial, by Eric Fisher Wood. Century. \$1. *West Point in Our Next War; The Only Way to Create and to Maintain an Army*, by Maxwell Van Zandt Woodhull. Putnam. \$1.25. *The U. S. Army from the Inside*, by Van C. Kirkpatrick, Caldwell, Idaho. 10 cents.

A COWARD WHO DARED

Out of the Great War will come many studies in the psychology of the man under fire. *The Belfry*, by May Sinclair, is a notable one, and it is more than a study of the war in Belgium of which the author writes with sure knowledge, it is also a great novel. Two-thirds of the book is given to making us acquainted with a group of characters, so unusual, so individualized, and so interesting, that we follow them into the war zone with the breathless anxiety of relatives or, at least, of lifelong friends. The central figure, the novelist, Tasker Jevons, who moves heaven and earth to reach the front—just because he is afraid to go there—is one of Miss Sinclair's subtlest studies of character. He is by turns, exasperating and lovable; a snob and a genius; a coward and a hero. His incredible courage in Belgium is not more magnificent than his fight against his horror of going there. The man of superior intellect and imagination, who can visualize danger with exceptional vividness, always is at the disadvantage of his qualities, and might well pray to be made stupid when he goes to war. And thru those hurried, incredible war scenes in Belgium, *The Belfry* of Bruges stands as a symbol of a love that greatly dared, of aspiration, and of ultimate peace between warring nations and riven classes of men.

The Belfry, by May Sinclair. Macmillan. \$1.35.

ADVENTURES

White Tiger, by H. M. Rideout, is a tale of the experiences of a lad just out of college, sent by his uncle to the family tin mines of the Dutch East Indies, where follow mysterious adventures in a new setting.

Duffield. \$1.

WINTER PLAYGROUNDS

The Lesser Antilles form a pleasure ground within reach but little visited. *The Isles of Spice and Palm*, A. Hyatt Verrill calls them, and describes with enthusiasm the scenery, the quaint customs and the foreign ways of the Barbadoes, of St. Thomas, of Saba, "strangest of all islands," of Trinidad and Surinam, "quaintest spot in America."

Appleton. \$1.25.

ANOTHER MESALLIANCE

In *The Strangers' Wedding*, W. L. George forgets that most marriages are just that—the union of two strangers; and with a little more patience and a little more love, his ill-assorted couple might have won happiness, as the majority of married folk do. However the distance between an Oxford man and a London laun-

You Know This Trade-Mark Through National Periodical Advertising

THE success of a manufacturer, whether he makes clothes or biscuits or automobiles or garden implements, depends upon the friendliness of the public—not necessarily friendliness for the business, nor for the man at the head of it, but for the product of the business.

Big business cannot be built without big friendliness. But friendliness to be effective in the promotion of a business must be positively and constantly directed toward the product of that business.

That is the reason for trade-marks—to give direction and certainty to the friendliness that has been created by a satisfactory trial of the product itself. If a man buys an axe that holds its edge, cuts well, fits the hand and balances right, he develops a friendliness for that kind of an axe and wants another one like it when the first wears out.

When the axe does not bear a trade-mark the value of the friendliness created by the first axe is lost.

But if the axe is trade-marked that manufacturer has a continuous, progressive asset in the good will of every purchaser.

Trade-marks make profits out of good will.

Conversely, it is not worth while for manufacturers to place their brands on unworthy goods because such goods will not create the friendliness which is the basis of value in trade-marks. Trade-marks on unworthy goods are danger signals to the consumer.

That is why branded goods are so generally the best of their kind.

Trade-marks and national advertising are the two most valuable public servants in business today. Their whole tendency is to raise qualities and standardize them, while reducing prices and stabilizing them.

LONGMANS, GREEN, & CO.'S NEW BOOKS

JEFFERY AMHERST—A Biography

By **Lawrence Shaw Mayo**. Crown 8vo. With Portraits and other Illustrations. Pp. xii+344. Gilt top. \$2.00 net.

Jeffery Amherst was Governor-General of British North America in 1761, having previously served as major-general in the British Army at Louisburg, Ticonderoga and Montreal. The author in his preface observes "Jeffery Amherst was human and, like the rest of us, possessed faults as well as virtues: otherwise he would have been far less interesting. Britain associates his name with the conquest of Canada, and America connects it with an institution of learning in the fairest region of New England, yet the man's personality has been ever inscrutable." The book tries to throw more light on an entertaining character.

THE CROWD IN PEACE AND WAR

By **Sir Martin Conway**. Crown 8vo. \$1.75 net.

"It is a lively essay packed with observation, reflection and modern instances: it intrigues us with audacious and disputable generalizations, acute criticism, and liberal temper. Solemnity and dullness are banished from it. . . . Politics without tears."—*Punch*, London.

Mr. Robert Bridges' Anthology THE SPIRIT OF MAN

An Anthology in English and French from the Philosophers and Poets Made by the Poet Laureate in 1915. Crown 8vo. Cloth, \$1.50 net. India Paper Edition in a box. Cloth, \$2.00 net. Leather, \$2.50 net.

The book is a new kind of anthology, the quotations, prose and poetry mixed together, being arranged in context, to exhibit the aspects of life on a spiritual basis. It was made for those who wish for serious reading at the present time, and the last section relates to the war.

"This is the most beautiful small anthology that we have handled since 'The Golden Treasury' first came our way; and in no selection of the kind

since Palgrave's have we found notes at the close fuller of light and leading."—*Saturday Review*.

LONGMANS, GREEN, & CO.

443-9 FOURTH AVE., N.Y.

dress is difficult to bridge, and the readjustments are painful processes of growth and disillusionment. The story is cleverly told and is a subtle satire on the English mores it depicts.

Boston: Little, Brown. \$1.35.

CAUSES OF PROGRESS

Dr. Lucius M. Bristol's *Social Adaptation* is a very comprehensive survey of the views of modern sociologists in America and Europe who have considered the question of adaptation to the environment as a means to social progress.

Harvard University Press. \$2.

FROM POLAND

Tales by Polish Authors, translated by Else Bencke. Sienkiewicz is the only one of the four authors represented in this group of powerful, touching stories known to English readers. Two have been Siberian exiles and write of the Siberian life and of the Yakut Indians.

Longmans, Green. \$1.25.

THE MOST INTERESTING AMERICAN

For a thoroly attractive description of Theodore Roosevelt, one that will show those who do not admire him the undoubted and powerful charm he has for his friends and followers, read Julian Street's little book, *The Most Interesting American*.

Century. 50 cents.

FAMOUS ACTRESSES

Forest Izard is the author of two books that will attract lovers of the stage, *Sarah Bernhardt, an Appreciation*, is a critical study of her personality and art. *Heroines of the Stage* contains biographical accounts of Rehan, Terry, Marlowe, Adams, Duse and other favorites of this and the last generation.

Sturgis & Walton. 50 cents and \$1.50.

POETRY WELL CHOSEN

The Leading English Poets from Chaucer to Browning, edited with introduction, biographies and glossary, by Lucius Hudson Holt, is a rather comprehensive order for one book to fill. By a wise recognition of its own limitations, however, this anthology does succeed in living up to its title. Only the best-known poets of the period are included and an unusually liberal amount of each author's work is given.

Houghton, Mifflin. \$2.25.

EVERYMAN'S

The editors of Everyman's Library are amazingly clever in the choice of books that one has wished in vain to find in cheap edition. Among the recent issues is Green's *Short History of the English People*; Margaret, Duchess of Newcastle's, *Life of the First Duke of Newcastle*, a quaint and charming classic; and Penn's *Peace of Europe*, which fits the times. Volumes of Gogol, Balzac and Ibsen are added to the fiction and drama series.

Dutton. Cloth 35 cents, leather 75 cents.

HOLLYHOCKS ALL IN A ROW

Here is a wonderful picture book, with superb colored plates interspersed among near two hundred half-tones. *The Beautiful Gardens of America*, by Louise Shelton, is calculated to turn the head of any townswoman. Gardens of the North—as far North as Alaska—South, East and West are framed in evergreens, set by ponds, punctuated by cactus. It is good to see there is such elaborately ordered beauty here and there in this still rough land.

Scribner. \$5.

THE DIGESTION OF PROTEIN

Not many years ago food chemists and physiologists were content to lump everything containing nitrogen into one bundle labeled "proteids" and assumed to be of equal value. How much fine research work has been done recently in this field may be seen from Prof. Frank P. Underhill's summary of the results in *The Physiology of the Amino Acids*. It is now probably possible to support life entirely on artificial fats, carbohydrates and amino acids made out of the elements in the laboratory.

Yale University Press. \$1.85.

MR. PURINTON'S EFFICIENCY QUESTION BOX

220. Mr. L. S., Michigan. "In your efficiency article for November 22, you tell how to become an efficient optimist. Can you suggest books which would be helpful in cultivating hope, faith, perseverance, independence, courage, and other necessary faculties and qualities of the mind? Also kindly name books for the attainment of health and the banishment of poverty."

There are so many good books for your purpose that we hardly know which to suggest. However, you might start with these: "Health and Happiness," by Bishop Samuel Fallows; "Story of My Life," by Helen Keller; "Pollyanna," by Eleanor H. Porter; "As a Man Thinketh," by James Allen; "Thought Force," by William Walker Atkinson; "Power, Peace and Plenty," by Orison Swett Marden.

Books on health have been cited frequently in these columns. Books for improvement of your finances: "Why I Believe in Poverty," by Edward Bok; "The Book of Thrift," by T. D. MacGregor; "Overcoming Poverty," by Bruce Maclelland. These volumes may all be obtained thru Efficiency Press Syndicate, Woolworth Building, New York.

221. Mr. B. B. T., Maine. "Kindly advise me as to the best course to pursue in my profession. Am graduate in Electrical Engineering; for past three years have been in a machine shop, getting the practical side. But the army is my ambition; have been lieutenant in militia; wonder if I could use my education to better advantage where I am, or should I prepare to qualify for a commission?"

The United States Army has employment for engineers, therefore you should find entrance easier because of your experience. Write the United States Military Academy, West Point, New York, for details of the preparation required of candidates for the army.

But there is not much future—educational, industrial, financial or moral, in the average life of an army officer. The training is fine—but the goal futile. You may be a born soldier; if you are, you belong in the army; otherwise, better stick to your job.

222. Miss H. M. B., Minnesota. "Your articles have interested me very much, and you may be able to help me. I am a college graduate, twenty-five years of age; prepared myself for teaching, but feel that I am not suited for that work. I should like to become a private secretary, but am a poor speller, do not express myself clearly, and do not know how to secure a position as secretary. Please advise me regarding secretarial work."

Addresses of secretarial schools were given October 4, 1915, in reply to Question Box query 160. Why not plan to enter the field of social service? The possibilities for usefulness are very great, and the work would combine tutorial and secretarial activities. Write for details, to the School of Civics and Philanthropy, Michigan avenue, Chicago; the Associated Charities Training School for Social Service, Cleveland, Ohio; the School of Philanthropy, 105 East Twenty-second street, New York.

223. Mrs. A. B. C., Missouri. "I am a woman of forty, have taught most of my life, am now at the head of the Household Arts Department in a college for young women. There seems to be a demand for this line of work, yet so few heads of schools see the value of good experienced teachers. How can I reach a broader field, and grow to be more useful? I have not been successful in applying thru agencies."

You have a great opportunity right where you are. Find it, and use it. Mrs. Rohrer, Miss Farmer, Mrs. Pattison, Mrs. Frederick, and other women have made themselves national authorities in domestic science—and with poorer chances than you enjoy. Prof. L. B. Allyn of Westfield,

1775

1916

We Are Prepared

Within the wide boundaries of our country, embracing more than three million square miles, dwell a hundred million people.

They live in cities, towns, villages, hamlets and remote farms. They are separated by broad rivers, rugged mountains and arid deserts.

The concerted action of this far-flung population is dependent upon a common understanding.

Only by a quick, simple and un-failing means of intercommunication could our people be instantly united in any cause.

In its wonderful preparedness to inform its citizens of a national need, the United States stands alone and unequalled. It can command the entire Bell Telephone System, which

completely covers our country with its network of wires.

This marvelous system is the result of keen foresight and persistent effort on the part of telephone specialists, who have endeavored from the first to provide a means of communication embracing our whole country, connecting every state and every community, to its last individual unit.

The Bell System is a distinctly American achievement, made by Americans for Americans, and its like is not to be found in all the world.

Through it, our entire population may be promptly organized for united action in any national movement, whether it be for peace, prosperity, philanthropy or armed protection.

Shakespeare's Portrait

While our limited supply lasts we will mail in a tube suitable for framing an excellent reproduction on heavy cameo paper of Leopold Flameng's etching of the famous Chandos portrait of Shakespeare. Send six two-cent stamps to cover cost of wrapping and mailing.

THE INDEPENDENT

Shakespeare Dept., 119 W. 40th St., N. Y.

Mass., founded a national pure food movement by the original work he did among his classes in food chemistry. Wake up, and build up, your own classes, neighbors and friends on domestic science lines—then your field will broaden of itself. Write for literature of American School of Home Economics, Chicago; of Domestic Engineering Company, 200 Fifth Avenue, New York; of Mrs. Mary Pattison's Household Experiment Station, Colonia, New Jersey; of Associated Clubs of Domestic Science, 45 West Thirty-fourth Street, New York; of West Virginia University Agricultural Extension Department, Morgantown, West Va.; of United States Department of Agriculture, Washington, D. C.

224. Miss A. S., Pennsylvania. "Are there institutions for persons mentally deficient from childhood? A woman of thirty-five has been neglected all her life, she cannot do much more than knit and perform simple household duties when properly directed. She has gotten certain fixed ideas and notions which are undermining her health. If you can suggest an institution to aid her, your advice will be gratefully received by an appreciative reader of The Independent Efficiency articles."

There are various institutions and methods for cases of this kind; with hundreds of records of cure or partial relief, to encourage the friends of those who are mentally deficient. The choice of an institution depends on local and personal conditions. Hence we would refer you to a number of places where you may find the knowledge you seek: Neurological Institute, 149 East Sixty-seventh street; Department of Psychiatric Institute, Ward's Island; *Journal of Nervous and Mental Diseases*, 64 West Fifty-sixth street; all of New York City.

225. Prof. H. J. F., Tennessee. "I am a school teacher, and am making good in this work; finished college at the head of my class. I desire to become a lawyer. Should I try to be one; if so, in what class? Will you give practical advice concerning the cultivation of alertness and quickness in thinking? It seems hard and awkward for me to change rapidly from one line of thought to another. Would this handicap me as a lawyer?"

It would handicap you greatly as a pleader in court, but not necessarily as a counsellor. We would urge you not to resign your position, if you depend on it for support; but to study law by correspondence—a number of mail courses have been advertised in The Independent; and to find an opening in a law office while teaching. First consult one or more of the character analysts, mentioned frequently in the Question Box. A man successful in any field of work should wait long and think hard before changing to another field.

The time-study and motion-study phases of scientific management should quicken your thought in action; a good course in public speaking should serve perhaps better.

226. Mr. N. T., Delaware. "In your estimation what field opens up the best inducements for a young man? Does mechanical engineering offer good returns from both a financial and physical standpoint? Would you advise one to study for such, if interested?"

I don't like your emphasis on "inducements"—apparently you consider the selfish returns the most important. Of course you should want to make money; but in all good work the aim and ideal of service comes ahead of the salary. A man receives most where he serves best.

You are likely to succeed in any work that greatly interests you. Consult an experienced character analyst—names were given, Question Box for January 31; also familiarize yourself with magazines and books in Mechanical Engineering, before deciding on this vocation. Secure copies of *Engineering Magazine*, 140 Nassau street; *Engineering News*, Tenth avenue and Thirty-sixth street; *Engineering Record*, 239 West Thirty-ninth street; *Engineering Graphic*, 20 Broad street; all of New York. Write also the Librarian, Engineering Societies, 29 West Thirty-ninth street, for names of books, and the Secretary, Engineers' Club, 32 West Fortieth street, for data that might be helpful.

You Can Weigh Exactly What You Should

You can—I know it, because I have reduced 32,000 women and have built up as many more—scientifically, naturally,

without drugs, in the privacy of their own rooms; I can build up your vitality—at the same time I strengthen your heart action; can teach you to breathe, to stand, to walk and to correct such ailments as nervousness, torpid liver, constipation, indigestion, etc.

One pupil writes: "I weigh 83 lbs. less and I have gained wonderfully in strength." Another says: "Last May I weighed 100 lbs., this May I weigh 126, and oh! I feel so well."

The largest mail order shirt house in the World

AN INCOME FOR LIFE

Of all the investment opportunities offered there are few indeed not open to criticism. Absolute safety is the first requisite and adequate and uniform return equally important, and these seem incompatible. Aside from government bonds, the return under which is small, there is nothing more sure and certain than an annuity with the **METROPOLITAN LIFE INSURANCE COMPANY**, by which the income guaranteed for a certain lifetime is larger by far than would be earned on an equal amount deposited in an institution for savings, or invested in securities giving reasonable safety. Thus a payment of \$5,000 by a man aged 67 would provide an annual income of \$618.35 absolutely beyond question or doubt. The Annuity Department, **METROPOLITAN LIFE INSURANCE COMPANY**, New York, will give advice as to the return at any age, male or female.

For 36 years we have been paying our customers the highest returns consistent with conservative methods. First mortgage loans of \$200 and up which we can recommend after the most thorough personal investigation. Please ask for Loan List No. 710. \$25 Certificates of Deposit also for saving investors.

THE RAILROADS

Great congestion of freight in the vicinity of northeastern ports continues to present a problem which the railroads have been unable to solve. The American Railway Association, at a recent meeting of its leading officers, took action which may have some effect, and the Interstate Commerce Commission has given notice that it desires to hear the opinions of railroad men and shippers at a conference in Washington on the 6th and 7th. While the Commission has no direct authority to apply remedies, it hopes that relief will be obtained by an agreement of the interests involved. At the meeting of the Railway Association it was decided that roads east of Chicago should deliver to Western lines twenty per cent more box freight cars than they receive from them. There is a marked shortage of cars in the West. The roads in that part of the country hold only ninety per cent of the cars which they own, while the Eastern roads have thirteen per cent more than they are entitled to by ownership. In New England the excess is forty-three per cent.

It is well known that the congestion is due almost wholly to the export trade in war supplies, altho it appears that nearly three-quarters of the Pennsylvania Company's 11,896 loaded cars held in the vicinity of Philadelphia carry goods for local delivery and use. Delay in unloading at New York and other ports is due to several causes. Many of the ships are not so well fitted to receive the freight as a majority of ocean freight carriers are in normal times. Therefore the work of transferring the freight takes much time. And ships which were to take certain kinds of freight have unexpectedly been commandeered by Governments. At the munition factories, especially those in New England, the railroad men say, there is great delay in unloading raw material from cars, and in many places manufacturers who fear a strike at the mines have been ordering unusually large supplies of coal. This has reduced the number of cars available for other freight. While certain manufacturers in New England unload their raw material slowly, others, unable to get cars, are bringing raw material from New York and other points to their factories on automobile trucks.

The great volume of freight which has caused this congestion has largely increased the gross revenue and net

Stop Eating Poisonous Food Combinations!

Every day—at every meal—most people eat foods which would be very good for them if eaten alone, but which when combined with other good foods actually create a chemical reaction in the digestive tract and are converted into the most dangerous poisons. Eating poisonous food combinations is claimed by many to be the cause of 90% of all sickness.

On the other hand, there are certain other food combinations which are so harmonious that they produce sparkling health and greatly increased efficiency.

These startling facts have been proved by Eugene Christian, the noted Food Scientist. Twenty years ago he was at death's door suffering the agonies of acute stomach and intestinal trouble. After having been given up by doctors, and as a last resort he commenced to study the food question. As a result of what he learned and in a remarkably short space of time he succeeded in literally eating his way back to perfect health without drugs or medicines of any kind.

Today Eugene Christian is a man 55 years young. He has more stamina, vitality, and physical endurance than most youngsters in their teens. He literally radiates mental energy and physical power. So remarkable was his discovery that up to the present time he has successfully treated over 23,000 others for almost every kind of non-organic ailment. And has greatly increased the physical energy and mental power of as many more who are not suffering from any specific trouble.

Anyone can now secure the benefit of Eugene Christian's experience, in convenient form for every day use.

Little Lessons in Correct Eating

24 Pocket Size Booklets in
Leatherette Container

Send No Money—Only \$3.00 if You
Keep Them

Christian's course of 24 lessons does not merely tell you why you should practice correct eating, but it gives actual menus covering every condition of health and sickness, based on occupations, climates, and seasons. No drugs or medicines of any kind are used and neither is it necessary to purchase special foods—you do not have to upset your table, nor eat anything you don't enjoy. In fact, you will enjoy your meals as you never have before.

The price of Christian's course of 24 lessons, containing rules, methods, and actual menus is only \$3.00. Do not send any money now, but merely mail the coupon or write a letter, and the complete course will be mailed to you at once—all charges prepaid, for free examination. Test the lessons for five days in your own home, then if you decide to keep them you can send the money. If not, simply mail the books back.

The course contains more than 300 pages. If you get but one single suggestion from them you will get many times the cost back in personal benefit. Yet hundreds of others write us that they find vital help on every page.

Tear out and mail the coupon now before you forget. Address Corrective Eating Society, 43 Hunter Ave., Maywood, N. J.

CORRECTIVE EATING SOCIETY, 43 Hunter Ave., Maywood, N. J.

DEAF?

This "1916" Acousticon Must Sell Itself!

Every Motor Car dealer is willing, yes, eager, to have you try his car before you buy or even pay a deposit—because he believes in his car, is proud of it and has confidence in its recommending itself to you. No matter how many satisfied customers he has, he would not expect or dream that you would obligate yourself, until you know how it suits you. That is exactly our policy in selling Acousticons. But we go much further. Although we have 270,000 delighted users and friends, we urge every person hard of hearing to try the type of Acousticon which suits the best, in his or her own home for ten days, absolutely free of a penny of cost, or even of deposit. By that time you will know if you can hear, and we will know if you keep it that you will be satisfied with it—and satisfied customers are the only kind we have or desire.

WARNING! There is no good reason why everyone should not make as liberal a trial offer as we do, so do not send money for an instrument for the deaf until you have tried it.

The "1916" Acousticon has patented features and improvements that are exclusive, and this generous offer is likely to put us somewhat behind in our production. So we suggest that you send for your free trial today. Just say "I am hard of hearing and will give the Acousticon a trial if it costs me absolutely nothing." Address

GENERAL ACOUSTIC CO.
1320 Candler Bldg. New York
Toronto, Ont. Office, Royal Bank Bldg.

HERE is your future charted for you, based on the actual average earnings of trained and untrained men.

Which way will you go—up, through training, to a position that means good money, or down, through lack of training, into the ranks of the poorly paid?

It rests with you. And now is the time to decide. Not next year, not next month, but now. You can get the training that will command a trained man's salary. The International Correspondence Schools have helped hundreds of thousands to qualify for advancement. Let them show you how you can prepare yourself, in your own home, for the position you want in the work you like best.

Just mark and mail this coupon. It will be the first step upward. Mark and mail today.

earnings of the roads. This is proved by their reports. The returns from 476 roads (248,437 miles) for the month of December last shows an increase of \$62,438,000, or twenty-seven per cent, in gross revenue, and of \$44,692,000, or seventy-three per cent, in net profits, when comparison is made with December, 1914. The Pennsylvania's report shows, for the calendar year, a gain of nearly \$15,000,000 in gross, and one of \$8,334,000, or more than twenty per cent, in net, the net being equal to 8¾ per cent on the capital stock, against 6¾ in the preceding year. But railroad gains, as a rule, did not begin to appear until last September. Reports issued last week show what several roads were doing in January. The Pennsylvania's increases were nearly \$8,000,000, or thirty-one per cent, in gross, and an advance for the net from less than \$2,000,000 to \$7,048,000. Gross revenue on the New York Central in the same month showed a gain of \$6,000,000, or thirty-one per cent, the net rose from \$3,085,000 to \$7,720,000, or 150 per cent.

While the railroads are doing a large and profitable business, it must be borne in mind that the demand for the war supplies which they are carrying has very considerably increased the prices which they must pay for new equipment and maintenance. In his recent address to the stockholders of the Lackawanna, President Truesdale remarked that if the war should suddenly end, the business of the railways would drop off quickly. "It is difficult, therefore," said he, "to plan for the future with any degree of certainty, and in view of the high prices of labor and all commodities a conservative course would seem the wisest for railway companies to pursue."

Prices of railroad shares in the stock market have not moved in accordance with the evidence of increased profits. The causes of restraint have been the uncertainty to which Mr. Truesdale referred, the effect of our international complications upon the entire market, continued sale of English and other foreign holdings of our railroad securities on the New York Stock Exchange, and the menace of a possible general strike in May. A peaceful settlement of the coming wage controversy would considerably increase the companies' expenses for labor.

Three copper mining companies and a company that produces zinc increased, last week, their regular quarterly or extra dividends. The price of copper, from 27 to 28 cents a pound, depending partly upon the time of delivery, is now higher than it has been at any other time in the last forty-three years.

The following dividends are announced:

Liggett & Myers Tobacco Company, preferred, 1¾ per cent, payable April 1.
Electric Storage Battery Company, 1 per cent on both common and preferred, payable April 1.
Ray Consolidated Copper Company, quarterly, 50 cents per share, payable March 31.
American Can Company, preferred, quarterly, 1¾ per cent, payable April 1.
Federal Mining and Smelting Company, preferred, 1 per cent, payable March 15.
Mergenthaler Linotype Company, quarterly, 2½ per cent, payable March 31.

CAMP CHAMPLAIN

An Ideal Summer Camp for Boys on Lake Champlain. 23rd Year opens June 30th. Special attention to safety and comfort. Waterproof tents and floors. Two motorboats. Rowboats, canoes. Fishing, swimming, baseball, tennis, all land and water sports. Trips to Adirondacks, Green Mts. and Montreal; also numerous short hikes. In charge of experienced college graduates. Tutoring if desired. Large Assembly Hall, with piano, games, etc. Best of food and plenty of it. Camp physician. No mosquitoes or malaria. Long distance phone. Number limited. References invariably required. Illustrated booklet.

WM. H. BROWN, 307 West 70th Street, New York City.

CAMP WINNAHKEE

On Malletts Bay, Lake Champlain, between the Green and Adirondack Mountains.

An Ideal Camp for the Mental and Physical Improvement of Girls. In charge of experienced directress and councilors, who share in sports and daily occupations. Large bungalow with all improvements, sleeping porch, or tents. Nature study, woodcraft, manual training, swimming, boating, fishing, horseback riding, tennis, under competent direction and chaperonage. Trips to points of interest. Unimpeachable references required. Price includes all expenses. Booklet from Wm. H. Brown, 307 W. 70th St., New York City.

AGENCY

ALBANY TEACHERS' AGENCY, Inc.

Provides Schools and Colleges with competent Teachers. Assists Teachers in obtaining positions.

Send for Bulletin. 81 Chapel St., Albany, N. Y.

MANUSCRIPT

Fiction, narratives, travel; historical and scientific matter in prepared MSS., 25,000 words minimum, receives our careful consideration for BOOK issue. Readings absolutely necessary, no charge.

Roxburgh Pub. Co. (Inc.), 61 Court Street, Boston

The Top of Your Head

should be covered with a natural growth of hair, and it can be—if roots are not dead. **Dandruff can be removed** and

grey hair arrested through our Physical Culture Exercises and local treatment for the scalp.

Insurance

Conducted by

W. E. UNDERWOOD

CONTINENTAL LIFE OF UTAH

Recent inquiries touching the financial condition and management of the Continental Life Insurance Company of Salt Lake City make timely the information just promulgated by the Insurance Departments of Colorado, Wyoming and Utah, the examiners of which recently completed an investigation into its affairs. Two changes have occurred in the management of this company within the past three years. The parties preceding the present management, which assumed control in 1914, evidently conducted the business in an extravagant, probably in a reckless, manner. Since that time, while expenses have been above normal, there has been much improvement. The examiners state that the men now in charge of the company are of good repute and possess ability, and that they realize the seriousness of the task they have undertaken in endeavoring to remedy the defects resulting from the mistakes of their predecessors.

This company writes both participating and non-participating insurance. Its participating business is on the annual dividend and deferred dividend plans. Its existing deferred dividend policies have little or no dividend reserves behind them. My advice to those taking insurance in the company is to confine themselves to the acceptance of non-participating policies.

The financial condition of the company on October 31, 1915, as found by the examiners, was as follows: Assets, \$1,477,846; total liabilities, except capital stock, \$1,223,979; capital stock, \$208,875; net surplus, \$44,992.

M. T. H., Warren, O.—In the long run you will find the Connecticut Mutual much the cheaper. It is incomparably a better company than the other.

H. C. L., New York City—You have a line of life insurance considerably above the average in amount and excellent as to character of companies. Advise against replacing any of the policies now.

N. H. E., Alliance, O.—Some of the casualty companies may issue health policies on women beyond the age of forty-five, but I do not know of any. Perhaps some of our readers among agents or company officials could help us. Names of companies issuing such policies, if any, will be printed in this department on receipt.

C. L. R., Union Mills, Ind.—The fact that the agent of the Association is urging the holders of old line companies to lapse their policies and sacrifice valuable equities, for the purpose of enabling him to gather in commissions by rewriting them in his institution, is enough to discredit him and it. His association does not maintain an adequate legal reserve, and its policyholders who live long enough will have to pay for the mistake.

Insure Yourself Against Loss

Actual Size

\$2.00

Invested now in this wonderful invention may tomorrow save you Hundreds of Dollars.

The SAFETY Check Protector

is the last word in efficient check protecting. No matter where you have to draw a check—at your business desk, in another man's office, in your home, on the train or boat, in your hotel or club, the SAFETY is always ready. It goes in your vest pocket—in a neat leather case. As simple as a toy, this substantial business device is revolutionary. Weighs just one ounce. Made to last. It does everything that machines costing ten times as much will do. It works quickly and surely. Sharp points pierce holes in the check for any amount you desire—inking the holes with an acid and water-proof ink. All characters are visible—no danger of errors or spoiling check. Made in German Silver heavily gold plated. Cannot rust or change color. SEND COUPON TODAY. Money back if not satisfied.

WACHUSETT SPECIALTY CO. Box 794, Worcester, Mass.

SCHOOLS

Emerson College of Oratory

HENRY LAWRENCE SOUTHWICK, President

Largest school of expression in the U. S. The demand for our graduates as teachers in colleges, normal and high schools is greater than we can fill. Courses in Belles-lettres, oratory, pedagogy, physical culture, voice, dramatic art, etc. 36th year opens September 25th.

HARRY SEYMOUR ROSS, Dean
Huntington Chambers Boston, Mass.

Russell Sage College of Practical Arts

Founded by Mrs. Russell Sage in connection with Emma Willard School

Designed for the vocational and professional training of women. Secretarial Work, Household Economics and Industrial Arts. Courses of two to four years will be offered. Special students admitted. Address Secretary,

Russell Sage College of Practical Arts, Troy, N. Y.

HARTFORD

Scientific methods with practical training for the ministry. Large faculty and library.

THEOLOGICAL

SEMINARY

Graduate fellowships, both foreign and resident. Open to college graduates of all churches.

Associated with Hartford School of Religious Pedagogy Training Sunday School and other lay workers.

Kennedy School of Missions, fitting for foreign service. Address M. W. JACOBUS, Dean of Seminary Hartford, Conn.

HARTFORD

Theological Seminary

Scholarly and practical training for the ministry. Faculty of thirteen resident professors besides special lectures. Notable library of 95,000 volumes. Liberal scholarships to students of high rank and graduate fellowships. Open to college graduates of all Christian denominations. Address

Dean M. W. JACOBUS

School of Religious Pedagogy

Degree Course for graduates of colleges and theological seminaries. Diploma Course prepares lay workers for salaried positions in all kinds of Christian service, church, Sunday-school, mission and settlement work. Correspondence Courses for teacher training. Demand for trained workers greater than supply. Address

Dean E. H. KNIGHT

The Kennedy School of Missions

A Graduate School for Special Preparation. Interdenominational. For candidates, appointees and missionaries. Large faculty and library. Courses in phonetics, certain vernaculars, history and religions of mission fields, sociology, Bible, business methods, etc. Address The Secretary,

ABBOT ACADEMY

A School for Girls. ANDOVER, MASS. Founded 1828. 22 miles from Boston. General course with Household Science, College Preparation. Address MISS BERTHA BAILEY, Principal.

Miss McClintock's School for Girls

Miss Mary Law McClintock, Principal

4 Arlington Street

Boston, Mass.

The Brookfield School

An open-air school for a small group of girls

AIM

To develop a sound mind and heart in a sound body.

To make the girl capable, alert and womanly. To help her to find herself, and therefore To make her happy and useful.

METHODS

Individual and class instruction—close supervision of work—careful study of each girl's nature—work made a joy—power of concentration developed—intimate association with teachers—sports made a means of education—teaching by example rather than precept.

COURSE OF STUDY

An enriched high school course—general, special, and college preparatory—modern languages a part of daily life—Domestic Arts—Music—Gymnastics—foundations laid for culture.

PLAY

Tennis—basket-ball—tramping—coasting—skating—snow-shoeing—hockey—singing—games—story telling—play-acting.

MISS HELEN FAIRMAN COOKE

The Brookfield School

North Brookfield, Massachusetts

President

JOHN KENDRICK BANGS

Presents THE GENIAL PHILOSOPHER

"I OBSERVE with interest," began the genial Philosopher.

"Never mind about the interest," interrupted the Cynical Sciolist. "Give us the principle."

"I observe with very great interest," repeated the Genial Philosopher, "that my friend, the Secretary of the Treasury, in order to make up for the general bustification of this nation in respect to spare change, which Uncle Sam seems to need to the tune of \$112,000,000, proposes an increase of the income tax, and a tax upon gasoline, and one upon crude and refined oils. He has also got his eye upon sugar to sweeten the treasury."

"O well, what of it?" said the Cynical Sciolist wearily. "Let others worry—I shan't. I can't qualify for the privileges of the income tax under the most favorable exemptions. Having no motor car I don't use gasoline. I neither burn nor drink oil, crude or refined, confining my attention solely to cod-liver; and since I took to drinking hot water instead of tea and coffee I don't use sugar. Wherefore, pile the taxes on. Let 'em rise, mount, climb, and soar, until they look like Barbarossa piled on Perihelion—it's all the same to me."

"That is the comfortable view of taxation that most people take who pay taxes without knowing it," said the Genial Philosopher, "but it was not of them that I intended to speak, tho I must confess they are a class deserving of considerable attention—the man who rejoices that he derives all the benefits of modern civilization without paying for them; the Something For Nothing man. We all know him—the Hitch-Behind Citizen, beating his way on the Public Ice-Wagon, as it were, just as we old New Yorkers used to sneak rides on the real ice-wagons in our boyhood days when New York was a pleasant little Village, filled with human beings. No—this is too pleasant a morning to discuss the Tax-Dodger, high or low. What interested me when I read the Secretary's program was the possibility that flashed across my mind of a Double Function of Taxation. Primarily, of course, taxation was invented to increase the public revenue, and short of a scheme of general confiscation of the gross earnings of humanity, it is the best method yet devised for the purpose. But why should it not also exercise the function of suppressing Nuisances, and Viciousness, and the crudeness and vulgarities of life?"

"For instance, one of the curses of modern civilization is NOISE. We have made great progress in this country along many lines of industry, but I do not think I exaggerate when I say that in general Sonority we are the Grand High Stentors of All the Ages. In things obstreperantly fulminate it requires undiscovered superlatives in clangor fitly to describe the quality of

our hullaballoonacy. The man who invented the phrase that this or that was *noised abroad* must have had a prevision of conditions in these United States of America in this year of grace 1916. The gum-shoe, the pussy-foot, the muffled thing, the subtleties of the inaudible, are coming to be strangers in our midst. Our Detectives go about their work with megaphones, and the brass-band is ever with us. Conversation even in exclusive circles is conducted on lines of a shrill fortissimo series of rising crescendos in order that it may surmount the alpine heights of the general vocal bombilation."

"Can't ybu as a special favor to me commute some of your sentences?" pleaded the Cynical Sciolist, clutching his forehead in his hands.

"Certainly—we live in an Age of Holler," said the Genial Philosopher. "Wherever we go it is noise, NOISE, NOISE. A poet friend of mine has recently taken desk-room in a boiler-riveting establishment so that he may have at least one spot in which to write his Odes, Sonnets, Triolets, and Limericks, in comparative quiet; and my cousin, Billie Binks, has actually reached a point in his life where he has got so used to noise that he can't sleep when it stops; and consequently he has a frieze of a hundred and twenty alarm clocks on a shelf running around his bedroom to bang away every two minutes during the night in order that no untoward silences may break in to destroy his slumbers. In short, my friend, life has become just one slam thing after another.

"So I have heard," said the Cynical Sciolist, "but what of it?"

"Why not make of Taxation a sort of Soft-Pedal on the general Jangle?"

"You mean to tax unnecessary noises?"

"I mean to tax all noises," said the Genial Philosopher. "Who shall say what noises are necessary, and what noises are unnecessary? What is one man's noise may turn out to be another man's necessity, and it would never do under our present political system to make differentiations in noises which politicians seeking the emoluments of public office could use as the basis of further demagogic appeals. No, tax 'em all. Why think about it just a moment. If Congress were to pass an act requiring that on and after April the first every maker of noises in this land shall pay a tax of one cent per noise on each and every noise projected by himself on the public ear, either necessary or unnecessary, during the day, the revenue would be enormous, and the word Deficit would become obsolete. We have in round figures a hundred million people in this country who average I should say not less than one hundred noises per capita per diem, or 36,500,000,000,000 noises a year. Fig-

ure that out on a basis of one cent apiece, and you have a revenue of \$36,500,000,000. Figure also the value of such a tax in the suppression of the tendency. If every noisy person in the land realized that he was compelled by law to put a one cent stamp, figuratively speaking, on every noise he made, I fancy he'd calm down a bit, and reduce his output materially; say possibly fifty per cent, which even then would give the Government a revenue of \$18,250,000,000, to say nothing of the blest relief to the public eardrum. There might also be certain exemptions for five or six years until the people had learned how to be quiet. This of course would result in a further reduction of the gross revenue, another fifty per cent perhaps, leaving the total at \$9,125,000,000, but that would be an income which even a modern Congress would find difficulty in appropriating."

"I don't see exactly how you would be able to establish the accuracy of the returns," said the Cynical Sciolist, shaking his head doubtfully. "Who's going to keep track of these Noises? Do you propose that every citizen shall carry a sort of Noise Register on his chest?"

"That is a point that will have to be worked out by an Auxiliary Board of Inventors," said the Genial Philosopher. "If the Navy Department is permitted to mobilize the Inventors I don't see why the Treasury Department can't do the same thing. Anyhow if our Government would go in for the Double Function System of Taxation, and use taxes not only for the purpose of raising revenue, but for the suppression of Nuisances as well, taxing over-crowded trolley and subway cars; taxing the Gum-Chewing hordes according to the density of the obnoxious perfumes they breathe into the air; taxing persons who carry lighted imperfectos into vehicles, so much per pipe, cigar, or cigarette; taxing burglars ninety per cent on the swag they accumulate; taxing people who come late to the theater fifteen cents per minute; taxing every fake item of war news that appears in the newspapers thirty cents a line; and confiscating all tips paid to persons who earn them only by a supercilious inattention to the payor—well, my friend, Uncle Sam would be able to drop all other kinds of taxes altogether; build three more Panama Canals, one for traffic, one for slides, and one to hold in reserve for emergencies; maintain an Army and Navy big enough to defend our Planet against invasion by the unscrupulous hordes of the Milky Way; meet the highest expectations of the Pork Seekers the country over, and still have enough left to look his Creditors in the face on pay day. Eh? What?"

"It sounds good," said the Cynical Sciolist, "but I am not ready yet off-hand to classify it. It may come under the head of mere NOISE after all."

THE GREAT GRAY CARPET

A young French soldier of the class
of 1914, who was wounded in the battle
of Verdun, gives this vivid account of
the German attack on the fortress:

"As for the cannonade, it was a regu-
lar deluge. Our trenches were demol-
ished as if they had been deliberately
turned upside down by a giant hand.
After six hours of that there was noth-
ing left to defend, so we retired to the
support trenches near Anglont. We
had to crawl, and, what with shell
holes, corpses, and barbed wire, it was
no trip in a sleeping car.

"Then the enemy began to advance.
They looked like a big gray carpet be-
ing unrolled over the country. Our guns
had the range exactly, but the gaps
filled up as by magic.

"We opened fire at 200 yards. I guess
there were few misses at that close,
but we might as well have been firing
peas. They never even hesitated.

"Then our mitrailleuses got going.
That was different. Whole rows of the
enemy toppled over like corn under
the scythe. They stopped; then we
charged with the bayonet. They died
just like sheep, almost without resist-
ance."—*New York Times*.

"GASSED"—PIERRE LOTI

A place of horror which one would
think Dante had imagined. The air is
heavy—stifling; two or three little
night lamps, which look as if they were
afraid of giving too much light, hardly
pierce the hot, smoky darkness which
smells of fever and sweat. Busy people
are whispering anxiously. But you
hear, more than all, agonized gaspings.
These gaspings escape from a number
of little beds drawn up close together
on which are distinguished human
forms, above all, chests, chests that are
heaving too strongly, too rapidly, and
that raise the sheets as if the hour of
the death rattle had already come.

It is one of our hospitals on the bat-
tle line, improvised as well as was pos-
sible on the morrow of one of the most
infernal of German abominations; all
these children of France, who look as
if they are at the last gasp, were so
terribly injured that it was impossible
to carry them further away.

But, why this heat, which the stoves
send forth and which makes breathing
almost impossible? The reason is that
it cannot be too hot for asphyxiated
lungs. And this darkness, why this
darkness? It is because the barbarians
are there in their burrows, quite close

to this village, whose houses and
church tower they have more than once
amused themselves by pounding with
their shells. Every moment nurses
bring huge, black, air balloons, and
those who are struggling in agony
stretch out their poor hands to beg for
them; it is oxygen, which makes them
breathe better and suffer less. Many of
them have these black air balloons
resting on their panting chests, and in
their mouths they greedily hold the
tubes thru which the saving gas es-
capes; you would say that they were
great children with milk bottles; this
throws a sort of grotesque buffoonery
over these scenes of horror.

Thank God, they will save almost all
of them! As soon as they can be moved
they will be taken away from this hell
of the battle front, where the Kaiser's
shrapnels fall so willingly, even on the
dying; they will be laid more comfort-
ably in quiet hospitals, where they will
still suffer much, indeed, for a week, a
fortnight, a month, but which they will
presently leave, more cautious, more
prudent, and eager to return to the
fight.

But the next time they will not be
caught, neither these men, nor any of
our soldiers; with masks hermetically
sealed they will stand immovable
around heaps of fagots prepared be-
forehand, the sudden flames of which
neutralize the poisons in the air, and
there will be no result beyond an hour
of discomfort, painful to pass thru, but
almost always without fatal conse-
quences.—*New York Times*.

P E B B L E S

Next to the new minister's wife the silk
bat is the object of the most suspicion in
the small town.—*Kansas City Star*.

Well, the President seems to have stated
in no u. t., his attitude on preparedness.

And what will Mr. Hearst's cartoonists
do now, poor things?—*New York Tribune*.

If you think you are pretty well read in
world-literature, how does it strike your
complacency to learn that the Nobel prizes
for literature have been awarded to Ro-
main Rolland, Henrik Pontoppidan, Troels
Lundane, and Verner von Heidenstam?—
Kansas City Star.

He was enormous, with offensively promi-
nent, milk-blue eyes, and a disorderly
beard, garishly red but trimmed at the
temples with white.—*The New Republic*.

You might say that that was a high-
brow beard, such as you might expect to
find growing in the New Republic.—*New
York Tribune*.

Two little fleas sat on a rock

And one to the other said:

"I have no place to hang my hat

Since my old dog is dead.

I've traveled the wide world over.

And farther will I roam.

But the first darn dog that shows his face

Will be my Home Sweet Home!"

—*Argonne*.

The grouch was dissatisfied with the let-
ter which his stenographer presented for
his signature. He signed, but made her put
it back into the machine and add: P. S.—
Dictated to a poor stenographer.

She folded the letter and put it in the
envelope, but no sooner was her employ-
er's back turned than she took it out and
added: P. S.—No. 2. The reason I am so
poor is because he pays me only \$6 per
week.—*Collier's*.

His Favorite Remedy—

These days physicians prescribe Home Billiards to keep the whole family *rolling in health!* All that the doctor calls for now is to take his own medicine on the Brunswick "Baby Grand." This famous home table brings 33 carom and pocket billiard games. Year-round sport that banishes brain fag, aids digestion and *puts new blood into folks who work all day!*

Send for our catalog at once, and join this movement for "home preparedness."

BRUNSWICK Home Billiard Tables

Now \$27 Up—Pay 10c a Day

Whether mansion or cottage—there's a grown man's Brunswick made to fit your home.

Brunswick "Grand" and "Baby Grand" are made of genuine San Domingo mahogany richly inlaid.

Our "Quick Demountable" can be set up in a jiffy anywhere, and taken down quickly when not in use.

"Convertible" Brunswicks serve as perfect dining and library tables when not in play for carom or pocket billiards.

Scientific Qualities

Every Brunswick is a scientific table with ever-level billiard bed, celebrated Monarch cushions—life! speed! and accuracy! Why be content with a toy billiard table *when 10c a day buys a genuine Brunswick!*

Balls, Cues, Etc., FREE!

Complete High Class Playing Outfit included without extra cost—Rack, Markers, Balls, Cues, Cue-Clamps, Tips, Chalk, expert book of 33 games, etc.

30-Day Home Trial

Accept our trial offer and let the Brunswick win every member of the family. Factory prices, easy payment plan and all Brunswick Home Tables shown in our handsome color-book—"Billiards—The Home Magnet." *It's FREE.* Write or mail the coupon today.

THE DEFENDER OF THE FRONTIER

GENERAL FREDERICK FUNSTON, WHO HAS CHARGE OF THE PUNITIVE EXPEDITION INTO MEXICO, HAS HAD A LONG EXPERIENCE IN THIS SORT OF FIGHTING. HE GOT HIS MILITARY TRAINING, NOT AT WEST POINT, BUT IN THE CUBAN ARMY, FIGHTING THE SPANIARDS IN 1896. WHEN OUR WAR WITH SPAIN BROKE OUT HE WENT TO THE PHILIPPINES, WHERE HIS DARING CAPTURE OF AGUINALDO PUT AN END TO THE FILIPINO REBELLION.

WE CAN WAIT NO LONGER

THE murderous raid upon the town of Columbus in New Mexico by the organized and lawless crew of Francisco Villa, the Mexican desperado, was the last straw. We could wait no longer. We might watch no more.

Year after year we have suffered in unbelievable forbearance the wanton destruction of American property in Mexico, the slaying by predatory bands of law-abiding American citizens there, and even the killing, by shots fired across the border, of American soldiers upon American soil performing their allotted duty of patient vigilance. Under intolerable provocation we have held our hand.

But the hour struck. American soil was invaded. American sovereignty was flouted. The American nation was defied. We could not in honor submit longer to insult and wanton injury.

The murderer Villa and his fellow bandits must be punished. Carranza, the recognized ruler of Mexico, cannot do it. His impotence in Northern Mexico is beyond dispute. The United States Government must perform the task itself. Its armed forces must seek out the murderers of Columbus and put them to death. They must follow the trail wherever it leads; they must use whatever means are necessary to bring the guilty to book.

We are not waging war; we are administering justice. We shall not assail the rights of any other people; we shall merely defend our own. To do less would be national dishonor.

This is the second time during the present administration that the policy of watchful waiting has been laid aside. Two years ago the armed forces of the United States attacked and captured the city of Vera Cruz. But the purpose for which it was captured was never accomplished. After seven months of occupation our forces withdrew with no better reason than existed for the original capture of the city. The first act in the drama of Vera Cruz was a mistake; the second was a more serious one.

We must not make the same mistake again. The punishment of Villa and his band is our present duty; but a greater lies behind. Peace and good order must be established in Northern Mexico. Our southern border must be made inviolable. We must do for that anarchic region across the Rio Grande what the helpless Carranza cannot—and apparently will not try to—do. Our troops must not come home until the lives and property of American citizens are safe not only along the border but in those parts of Mexico where the *de facto* Mexican Government is powerless.

THE MEANING OF VERDUN

WHATEVER may be the outcome of the battle which has been raging for three weeks at Verdun, this furious onslaught by the Germans upon the foremost fortress of France is obviously one of the most important operations of the war. If the Germans succeed they will have broken thru the strongest barrier between them and Paris. If they fail they will have sacrificed their precious men and munitions in vain and will suffer a loss of prestige that will seriously impair their chances of winning the war. Such a bold enterprise of what seemed a hopeless undertaking can be justified only by success. What they have so far accomplished, the gain of a hundred square miles of strongly fortified ground, is indeed a striking triumph of courage and preparedness, but in itself avails them nothing, for it merely reinforces the lesson already learned from the attacks of the Germans at Ypres, of the British and French at Lens and of the French in Champagne; that is, that it is possible to smash in the front of any line, but not to break thru it so long as it is ably defended. According to the British press correspondent the French and British have more than twenty miles of trenches to every mile of front or 10,000 miles altogether.

Even the capture of Verdun would, therefore, not mean that the Germans could repeat the advance toward Paris which they undertook in August, 1914. Paris is 150 miles from Verdun and the invaders might be stopped or held at any point as well as they have been in the mud-flats of Flanders or the valley of the Suippe. It all depends upon what power of resistance the French still possess and what support the British can give them.

The dispatches from France claim that the French were well aware of the plan of the Germans to attack Verdun. But if the French were not surprised they certainly were not fully prepared. General Sarraill, who

defended Verdun previously and who had reconstructed its fortifications in accordance with the lesson of Liège and Namur, was in Salonica, and General Petain, who was holding the Champagne line, was called from his bed in the night and had to take command of Verdun at two hours' notice. We hear of Australians and Canadians assisting in the defense of the fortress; also that the British have extended their line in Artois to replace the French troops who have been sent to Verdun. This indicates that the French have not been able to defend Verdun with the troops already there or by their reserves behind the line, but have been obliged to make some radical and sudden rearrangements at the front.

If the German objective is Paris one would suppose that they would have attempted to break thru on the Aisne, where they are only fifty miles away and there are no permanent fortifications to prevent, rather than on the Meuse, a hundred and fifty miles away, which the French have been for thirty years engaged in fortifying. Perhaps that is the very reason why they struck at the Meuse instead of the Aisne. The strength of Verdun lies in its location among the river bluffs and in the recently constructed entrenchments and concealed batteries. The millions which were expended in the impregnable steel and concrete cupolas were worse than wasted. The fort of Douaumont was smashed by three shells; the village of Douaumont held out for a week. How little such rapid reduction of permanent fortifications was anticipated, at least by the Allies, may be seen from the very thoro article on "Fortification and Siegecraft" in the *Encyclopedia Britannica*, published in 1911. We quote a few sentences:

At the present day little military importance is attached to bombardment, since under modern conditions it cannot do much real harm.

To stop a single shell of any siege caliber in use at present five feet of good concrete would be enough.

The cupolas can hardly be considered ideal targets and the probability is that they would hold their own against both direct and indirect fire for a long time.

Since this article was written by Colonel Jackson, Instructor in Fortification at Woolwich and Assistant Director of Fortifications in the War Office, it may be taken as representing the opinion of the British military experts at the opening of the war and so may account for the failure of the Allies to reach Belgium until after Liège and Namur had fallen.

The German authorities on the contrary held that it was better to put money into men and guns than into armored turrets, so they constructed few fortresses. Maybe these can be taken as easily as the French, Belgian and Russian, but so far the Allies have not had a chance to try because the German army has stood in the way.

It would be a strange historical coincidence if Verdun should prove the turning point of the war, for it was at Verdun that France and Germany first were parted. By the Treaty of Verdun in the year 843 the kingdom of Louis the Pious was divided among his three sons; Louis the German taking the right bank of the Rhine; Charles the Bold taking the Seine valley, and Lothair taking the valley of the Meuse. The kingdom of Louis became Germany; the kingdom of Charles became France and these two have been quarreling for a thousand years over the kingdom of Lothair, which lay between.

In all these wars Verdun has figured prominently. The Germans held it in the tenth century. The French regained it in the sixteenth. In 1792 Verdun was besieged by the Duke of Brunswick with a coalition force of Prussians, Austrians, Italians and French *émigrés*. The fortress succumbed after so feeble a resistance that the commandant, Colonel Beaurepaire, shot himself from chagrin. The inhabitants greeted the conquerors with joy and young girls strewed flowers in the path of the Prussians as they marched thru the streets. When the revolutionary forces regained the city these girls were put to death for treason.

Next time the Germans came, in 1870, Verdun was commanded by a man with a Franco-German name, Guérin de Waldersbach, and he held out till after the fall of Metz, altho Verdun was three times invested and bombarded. On the hills where the Germans then placed their guns the French after the war built the inner ring of forts about Verdun. Later as the range of guns increased they put fortifications on the outer hills, such as Douaumont and Vaux, which the Germans have now destroyed.

The attack upon Verdun was probably instigated as much by political as by military strategy. The Germans may be thinking not so much of capturing Paris as of holding Constantinople and of winning Bucharest. Whether or not they succeed at Verdun they have, by taking the offensive in the early spring at a distant part of the line, disarranged the plans of the Allies for a spring drive at the Belgian end. This may give the Germans time enough to carry out their own plans, whether these be another drive at Calais, a further invasion of Russia, an attack upon the Suez Canal, a raid by the fleet or something less obvious. At any rate the Germans have "got the move" in this game of war by their assault at Verdun.

THE UNPREPAREDNESS OF THE BRITISH PEOPLE

EVER since the war began various members of the British Government have come out with statements that they had long believed that war with Germany was imminent, if not inevitable, and that England was in duty bound to intervene in case Belgium was invaded. Sir Edward Grey in his speech of August 6, 1914, convinced the House of Commons, even those members most reluctant to accept it, that England had been ever since 1906 and more definitely since 1911 under the strongest moral obligations to join with France in the war.

But the more clear it is made that the Government anticipated the war and regarded British participation as unavoidable, the more clear it appears that there was a wide difference between the British Government and the British people, even the well informed, as to England's obligations toward Belgium and the advisability of her entering upon a continental war. For instance, the University Extension Manual on *English Colonization and Empire*, prepared in 1890 to instruct the people on Britain's history and foreign policy, states:

As it stands now, it is difficult to imagine any purely European difficulty arising that would call us to arm. An attack upon Belgium hardly would do so, nor upon Denmark, nor even Holland; if they cannot stand alone it is difficult to persuade us now that Britain ought to prop them up, even if it were possible.

In a speech of May 7, 1913, the Right Honorable L. V. Harcourt said:

I can conceive of no circumstances in which continental operations by our troops would not be a crime against the people of this country.

That same year an ex-Lord Chancellor, the Earl of Loreburn, declared:

That any British Government would be so guilty toward our own country as to take up arms in a foreign quarrel is more than I can believe. To say so appears to me a duty not less to ourselves than to Continental Powers.

And on the morning of the day when England declared war with Germany the *Manchester Guardian* expressed for the last time this view:

If and when England joins in the war it will be too late to discuss its policy. Meanwhile we hold it to be a patriotic duty for all good citizens to oppose to the utmost the participation of this country in the greatest crime of our time.

Such opinions could be multiplied indefinitely. These are merely a few that we have happened upon. We quote them, not to prove that the British Government entrapped the people into war, but to show how great a misunderstanding may exist for years between Government and people as to the policy and obligations of a country. And if such a condition prevails in a nation where the people take an active interest in foreign politics and where the administration is under direct parliamentary control, a similar misunderstanding could exist in a country where the people are little concerned with foreign affairs and where the administration is independent and irremovable.

We do not go so far as to say with some that all secret negotiations must be abolished and the people be allowed to vote on a declaration of war. Secret diplomacy is a decided advantage in international bargaining and a nation which had to hold a referendum before it began to fight would most likely be beaten before the returns were in.

But it seems to us that the war clearly teaches the desirability of a greater frankness and a better under-

standing between a government and its people if, when the crisis comes, they are to act together. We believe also that more publicity in the discussion of foreign policies would tend to prevent wars. It is, for instance, a disputed point whether Germany would have abstained from war if she had known that the British Government was determined to come to the aid of Belgium. But we may be sure that if she had known that the British people were either in accord with their Government on this point or were prepared to give it their loyal support without regard to their previous opinions, as they have, Germany would have shown greater hesitation about engaging Great Britain in war. Such considerations go a good way toward counterbalancing the advantages of a secret diplomacy and an instantaneous initiative.

THE BIBLE SOCIETY CENTENNIAL

THE oldest Bible Society in the world apart from the Christian Church is the British and Foreign Bible Society organized in 1804. Among the incidents which seem to show the need for such a society was one, much repeated at the time, of a Welsh woman who walked twenty-five miles barefoot to buy a Bible for which she had been saving up money for eight years. The American Bible Society followed in 1816, and these two societies have covered the world with their agencies. In a single year the American Bible Society issued six and one-half millions of Bibles and the British society over ten millions. There are twenty-five Bible societies, American and European, and about nine-tenths of the issues of the Bible printed the world over are produced by five societies in Great Britain and the United States. Their purpose is by their agencies to supply Bibles by sale or gift to every Christian family in the world.

For several years before 1816 there had been organized local societies for the distribution of the Bible, and in that year their representatives from ten states met in New York to organize a National Society. They made Elias Boudinot its first president. In 1783 as President of Congress he had signed the Treaty of Peace with Great Britain after the Revolutionary War. John Jay was the second president, and John Quincy Adams one of the first vice-presidents. A provision in its constitution rendered it possible for all Protestant denominations to unite in its support; namely, that the Bible should be printed without note or comment. To be sure this was not literally observed, for the familiar headings to the chapters were retained, and these in the Song of Solomon interpreted the "Beloved" and his "Love" as Christ and the Church, and we recall the difficulty which Dr. R. S. Storrs and his committee had in securing the issue of an edition in which these comments were omitted. There was a similar long hesitation before the society ventured to issue the Revised Version in its American Revision.

It is not our purpose here to go deeply into the statistics of the work of the American Bible Society. Its receipts in its first year were less than one thousand dollars, while its appropriations for the last year were \$652,300, and its endowment is nearly two and a half millions. During the last twelve months Bibles were issued in ninety-two languages and dialects other than English, among which we note 214,189 copies in Spanish, 97,138 in Italian, 32,971 in German, 31,610 in

Polish. There is not a language of any part of the world where American missionaries are working for which the American Society does not supply Bibles.

The Bible is not a fetich. The possession of a Bible does not make a family Christian. There were large bodies of Christians before one book in our New Testament was written. But the Bible is the symbol of the Christian faith, the source of history and teaching and without the written word as its foundation the structure would have fallen. We need not worship the Bible in the way that our fathers did, as if like the image of Diana it had fallen down from Heaven, infallible in its history and its teaching, and as if God had since given us no instructor in religion. But any imperfections or errors which scholars may find cannot affect the fact that it is from the teachings of Jesus and His Apostles as recorded in the Bible that the mightiest influence has come for the regeneration of the world. We have good reason to believe that far from being supplanted, the Christian faith, resting upon the Bible, is sure to cover the world. Those who carry that Christian faith to the nations will first hold out in their hand the book which for a hundred years our American Bible Society has been putting within the easy reach of all people of every civilized and savage tongue.

AN AMERICAN DIPLOMAT

THE United States has not always had the reputation of providing trained and cultured representatives in its diplomatic posts. Indeed we have heard much of our "shirt-sleeve diplomacy," but certainly in the fearful strain which has come upon our ambassadors and ministers abroad during the present war we have good reason to feel satisfaction. Every report that comes back from the field of war tells us that they have been equal to the strain of an unusual responsibility. Two of them especially who are now taking a vacation at home, Mr. Gerard and Mr. Morgenthau, are receiving unusual and well deserved honor, in acknowledgment of their distinguished success in very difficult fields.

It has lately come to be known that Mr. Morgenthau shortly before the opening of the European war was the recipient of an unusual and quite unconventional invitation from the Turkish Government to which he was accredited. He is an experienced and accomplished business man from New York, a member of many directorates, and on reaching Constantinople he soon showed himself interested in the business affairs of the country, and members of the Turkish Cabinet sought his advice. When he replied that he had been so short a time in the country that he was not yet acquainted with its conditions they made it convenient for him under the most favorable auspices to visit Palestine and Syria and portions of Asia Minor. To his surprise on his return they asked him to join the Cabinet as Minister of Commerce and Agriculture. He told them that he regarded his present position as Ambassador as more important. Whereupon he was told with all seriousness that he might yet hold the double position of Turkish Cabinet Minister and American Ambassador. It will be remembered that Mr. Morgenthau is a Jew, and he has a German name; but he is first and last an American. We get the spirit of an American diplomat from his

reply when welcomed on his return by a thousand members of the Merchants' Association:

My task was a comparatively easy one, because I went out there every inch an American and every bit possessor of American ideas and brought up in this school where we all sit down together, whether we be Protestants or Catholics or Jews, and are devoid of prejudice. I did not devote my time in a snobbish way and associate with Marquises and Dukes and the Barons and the ladies of the Diplomatic Corps, for I felt that I had gone there as an American representative, as an American merchant to help the country, and I tried to do it.

When the various representatives of countries came together, whether representatives of the Zionist movement or from the Jewish community or Armenians or the Grand Rabbi or the Bishop of the Greek Church, I made known to them that I was ready to receive them as a brother, not as a high-class diplomat who had to look up precedents on how to receive them or how he should talk or who should talk first. I met them on an equal basis.

The great American influence in Turkey is educational and missionary, and the three great American colleges in Turkey are enthusiastic in their admiration for him, and declare that no one could have better served their interests, or the interests as well of all the suffering races of Turkey. He returns to get a fresh dose of Americanism, and he tells us that every diplomat ought to return home once every year or two to freshen his patriotism.

VOLUNTEER AND REGULAR

IN these stirring days, when the voice of the militarist is heard in the land, and we are solemnly warned that only a great standing army can save us from invasion, it is refreshing to turn back to the "Reminiscences of Carl Schurz" and read that great hyphenated citizen's opinion of the American volunteer soldier.

Says Mr. Schurz in volume III, page 121:

Some years later, when I visited Germany again and met the Chancellor, Prince Bismarck, as well as several generals of the Prussian army who had studied the history of our Civil War, they plied me with questions about the organization, the spirit, and the efficiency of our volunteer army. What I told them was substantially what I have put into these pages. It amused them immensely, but, accustomed as they were to judge everything by the high standard of professional instruction and discipline of the Prussian army, they seemed unable to understand how an army like ours could fight. How would it cope with any of the regular armies of European powers arrayed against it on anything like equal terms in point of numbers?

They listened to me with a polite smile when I expressed the opinion that no country had human material superior to ours as regards physical development, intelligence, and martial spirit; that in the long run our volunteers could outmarch any European troops, and surpass them in the endurance of any sort of fatigue; that our volunteers, with incredible skill and rapidity, would build roads, and expedite serviceable railway bridges and viaducts, with nothing but nails and tools, such as axes and saws and hammers and picks and shovels, and pine trees near at hand, and a clever engineer to guide them—I had seen them do it—and that they would construct temporary entrenchments and defenses almost without tools—I had seen them do that, too, many times—and that, in my opinion, they would, in a conflict with a European army, perhaps at the beginning of a campaign suffer some reverses by the superiority of European drill and discipline, but soon become acquainted with the tactics of their adversaries, and prove decidedly superior in the long run, especially if the contest were to be fought out on American soil.

Here is the secret of it, which the European mind, unacquainted with the genius of this country, finds it difficult to understand: Owing to the educational power of free institutions, many things are accomplished in America without much drill and discipline, for which in Europe very much drill and discipline is required.

As to the bravery of the American soldier, Northern as well as Southern, volunteer as well as regular, there can hardly be two opinions. He will not suffer, but rather profit, by any comparison with any other. In his courage

there is a peculiar element of national pride. But I must confess that my war experience has destroyed some youthful illusions as to the romantic aspect of bravery or heroism in battle.

Mr. Schurz knew what he was talking about. He received his military training in the German army and then, after he emigrated to the United States, enlisted as a volunteer in our Northern army. We need only add that the American volunteer is generally supposed to have given a pretty good account of himself in every war in which the United States has been engaged. At least such is the popular impression.

But lest it be claimed that modern warfare has now so changed conditions that no volunteer army can hope to cope with the technically trained, highly seasoned regulars of a modern militaristic state, we venture to point to the Canadians, whose volunteer army has stood steadfast without fear or faltering against the most excellently trained army the world has ever seen. The Canadian volunteer today fears no man on earth. Would his American cousin prove a whit less valiant fighter in the trenches?

THE GOAL OF HOUSEHOLD EFFICIENCY

WHAT is the ultimate end and aim of the movement for household efficiency? Is it to make the home a better place to live in or an easier place to get away from?

On another page we print the first of a series of four articles by Martha Bensley Bruere on different phases of this interesting question. Mrs. Bruere sums up her subject in the phrase, "The Habits of Women Under Domestication," and presents her thesis something in this form:

Most teachers in domestic science and most people who speak and write on the subject of household efficiency take the attitude that the result of increased efficiency in housekeeping will be to reduce the cost of living, to make domesticity more satisfying to women, and to keep the home the center of community life. None of these things will inevitably follow. The real object of increasing home efficiency is to get rid of housework—to transform as much as possible of it into community work, and to boil down the rest to an irreducible minimum, so that women may have a chance to do some of the other things, from regulating the gas supply to supervising the schools, that need to be done in a country that is trying to become a democracy. For no interest in clubs, sports or society, no suffrage agitation or feminist propaganda will so effectually undomesticate and socialize women as the simple expedient of cutting the cable of household drudgery that has hitherto tied them to the house. Every new apparatus for house cleaning, every satisfactory prepared food, every laundry which washes the clothes as well as "Maggie" at the wash tub, every invention from the electric egg-beater to the machine to darn stockings is a direct step toward women's political, social and industrial enfranchisement for a larger usefulness.

This point of view has something a little startling about it. But that should be no reason for assuming it to be unsound—nor, for that matter, for assuming it to be sound. Many of the readers of *The Independent* will doubtless have ideas of their own on this point. We shall be glad to welcome expressions of any opinions that they may have on the subject as the series progresses.

THE STORY OF THE WEEK

Villa's Attack Upon Columbus

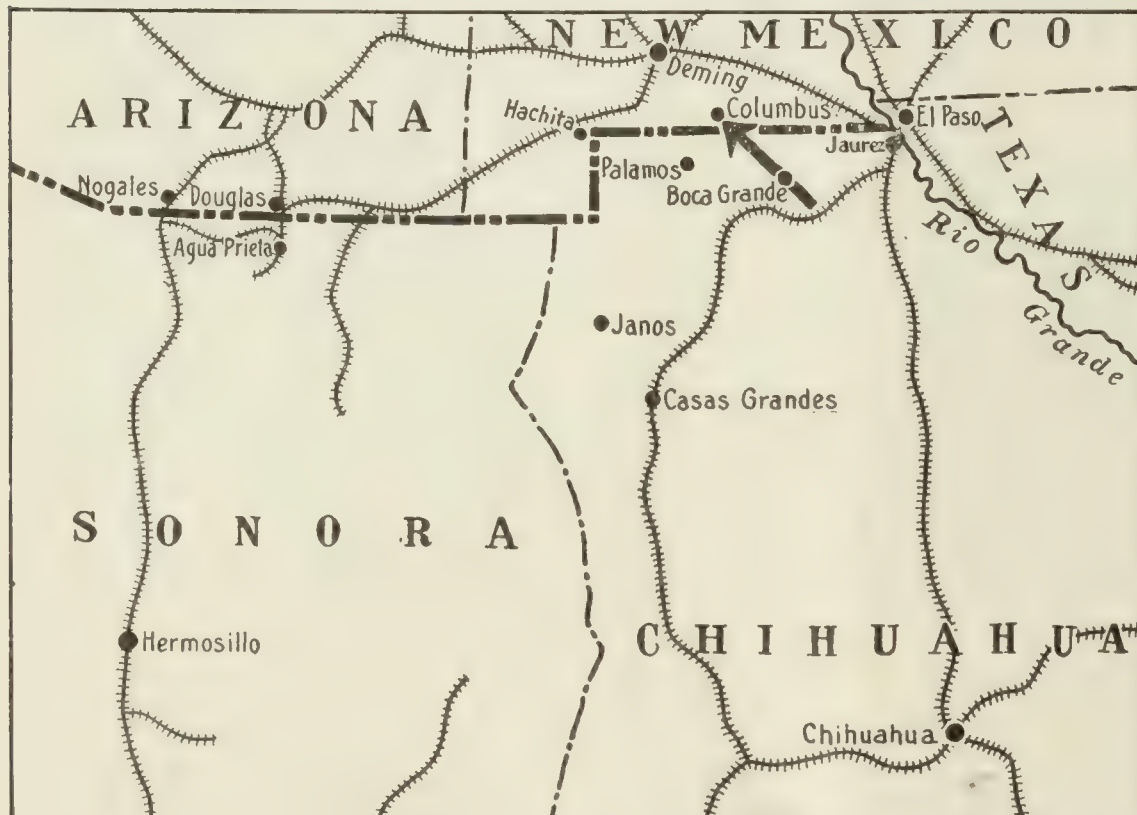

Our Government has sent into Mexico about 5000 soldiers of the regular army. This force is ordered to capture General Francisco Villa, dead or alive, and to punish or disperse the bandits whom he has been leading. Mexico has been invaded in this way because of Villa's invasion of the United States and his attack upon the people of the town of Columbus in New Mexico. In the dark, at half past four in the morning, on the 9th, Villa, at the head of 1500 of his men, suddenly attacked Columbus and the camp there of three troops of cavalry. Their conduct was that of assassins who showed no mercy. Residents were murdered at the doors of their houses. The landlord of a hotel was dragged from a sick bed and put to death. The torch had been applied to his hotel, and his body was thrown into the flames, to be consumed. A druggist was killed in his store. The husband of a guest in the hotel was torn from the arms of his wife, who was striving to save him, and murdered five minutes later. He was a delegate to the State Sunday School Convention. One of the victims was Dr. Hart, an Inspector of the Bureau of Animal Industry in the Department of Agriculture.

Eight civilians were killed, and nine soldiers of our army. Many buildings were burned. But when the Mexicans withdrew, after a stay of two hours, they left the bodies of twenty-seven of their men in the streets. One of these was the body of Pablo Lopez, second in command to Villa, and the leader of the bandits who murdered nineteen Americans at Santa Ysobel. Colonel

Slocum, commander of the American cavalymen, had his revolver shot from his hand.

When the bandits withdrew from Columbus they were pursued by 250 cavalymen, who followed them for five miles on Mexican soil. There was more fighting, and it is reported that not less than forty of the Villistas were killed, altho the cavalry lost only one man. The bodies of fifty-seven Mexicans have been buried or burned, this number including the twenty-seven found in Columbus. At 10 o'clock in the morning the pursuing cavalry returned.

It is now known that Villa had spies in Columbus on the 7th. They located the cavalry camp and reported the number of soldiers in it. When the attack was made, Villa cut the telegraph and telephone wires, and no warning could be given to other American soldiers along the border. He had misled the American authorities by a telegram, on the 8th, saying that he was at Nogales ranch, forty-four miles south of Columbus, and by causing the publication of reports that he was seeking a conference with officers of our army. Just before the attack, however, he had looted the ranch of an American land company at Palomas, killed four Americans there and burned their bodies. And he brought with him to Columbus, where she was set free, the widow of a murdered American. She had been a prisoner for nine days. Villa asserted, she says, that if possible he would kill all the Americans, men, women and children, and that he would have the aid of Japan and Germany. In addition to the 1500 men whom he led to Columbus he had about 1000 whom he had left a few miles south of the boundary.

THE WAR AREA IN MEXICO

Villa raided Columbus, New Mexico, from Boca Grande. The border patrol of the United States Army stretches along the entire frontier from the Gulf of Mexico to the Colorado River. The country south of the Mexican border here is almost entirely mountainous and arid

Our Punitive Expedition

The news excited much indignation in Washington, where the President and his Cabinet at once began to plan the course our Government would take. It was the first day of Mr. Baker's service as Secretary of War. It is understood that Mr. Wilson promptly informed Señor Arredondo, Carranza's Ambassador, that our army would be used in Mexico for the capture of Villa, with or without Carranza's consent. Arredondo replied, it is said, that he would advise Carranza not to object or interfere. It was thought that at least 5000 men would be required. At Columbus there were only 350. Scattered along the border were 19,000. On the 10th it was decided that a punitive expedition should go into Mexico at once. General Funston, who captured Aguinaldo in the Philippines, was to be in command, with full responsibility and a free hand, but the leader in the field was to be General John J. Pershing, another officer who has served in the Philippines. The sole object of the movement was, of course, to be the capture of Villa and his forces. As General Funston has asked that publicity be avoided, the official statements have been brief. The first official announcement, on the 10th, was as follows:

An adequate force will be sent at once in pursuit of Villa, with the single object of capturing him and putting a stop to his forays. This can and will be done in entirely friendly aid of the constituted authorities in Mexico, and with scrupulous respect for the sovereignty of that republic.

General Funston said that day in a message that unless Villa should be relentlessly pursued and his forces scattered he would continue his raids. As Carranza's troops were accomplishing nothing, but were guilty of apathy and gross inefficiency, it would be unwise to fritter away the whole available American force by guarding towns, ranches and railroads, because Villa could strike with 3000 men at any point on the border. On the 11th, Secretary Baker said that General Funston was free to move his expeditionary force across the border at any time, and to use it at his own discretion. As soon as the crossing had been made, this fact would be given to the public. In the absence of official information it was understood that there would be three columns, one starting from El Paso, one from Agua Prieta, and one from some western point, and that the three were to converge. Carranza has sent 1200 men to Palomas, and Calles, his Governor of Sonora, has promised to guard passes westward which Villa might desire to use. The 400 Mormon colonists at Casas Grandes have been in danger. Villa intended to attack them, and a part of his force was recently only 30 miles from the place.

Carranza sent to Secretary Lansing,

Kirby in New York World

THE RATTLESNAKE

Pease in Newark (N. J.) Evening News

GO GET 'EM

GET VILLA—DEAD OR ALIVE

on the 10th, a long message in which he expresses regret for the "lamentable incident" at Columbus, and says it was similar to the attacks made by our Indians about the year 1880, and at later dates, upon the Mexican people in Sonora and Chihuahua, when many murders were committed. As there were agreements then permitting the armed forces of either country to cross into the territory of the other, he asks that his forces be allowed to cross in pursuit of Villa, "acknowledging due reciprocity in regard to American forces crossing into Mexican territory."

Our Congress supports the President in his course. At meetings of the House Committee approval has been expressed. Mr. Mott, Republican, introduced a resolution declaring that the President was justified in the proposed use of armed forces. In the Senate Committee there was informal approval. It was held that the consent of Congress was not needed, as war was not involved. Senator Fall introduced a resolution authorizing the use of our armed forces in Mexico and calling for 500,000 volunteers. One from Senator McCumber says that Mexico has no Government capable of punishing Villa, and that the force sent after Villa by us should be large enough to overcome opposition "from any source."

Wages and Strikes As a result of the conferences in New York between the miners and their employees, the bituminous miners, nearly 300,000 in number, have obtained nearly all they demanded. An agreement has been signed which goes into effect on April 1 and will be in

force for two years. It gives a wage increase of from 5 to 13½ per cent, and this will add \$8,000,000 to the annual cost of production. A price increase of 12 cents a ton will be required, it is said. The wage increase for miners ranges from 18 to 28 cents a day, and the addition for day laborers is from 10 to 16 cents. A settlement for the anthracite miners has not been reached. They ask for an increase of twenty per cent, an eight-hour day, and recognition of the union. Their employers say that compliance with the demands would increase the annual cost of production by \$23,000,000. More than eighty per cent of the 400,000 members of the four railroad unions have voted for the demands which are soon to be laid before all the companies, and which, the companies say, call for an addition of \$100,000,000 to the annual expenditures. Already the telegraphers and trackmen of two roads are on strike.

There was news, last week, of many strikes. In Buffalo more than twenty factories are affected by a strike of 7500 machinists, who ask for an eight-hour day, with time and a half for overtime and a minimum of 40 cents an hour. Higher wages are demanded by 5000 strikers at the Massachusetts and New Hampshire quarries. In Baltimore, 7000 strikers from the garment makers' factories took part in a riot, and 116, several women among them, were arrested. There were arrests also in Shelton, Connecticut, where girl strikers from a corset factory attacked with eggs and pepper the girls who remained at work. About 2000 men employed in three or four factories at Passaic, N.

J., are out for an increase of 20 or 25 per cent. At the fertilizer works in Roosevelt, N. J., where two men were killed in a strike last year, 900 are out, demanding an increase of 18 cents a day. At Washington the street cars were tied up for two days by a strike of 1200 of the 1500 employees. Service was resumed after an agreement to submit the dispute to arbitrators had been reached. The men demand an increase from 22½ to 30 cents an hour and other changes.

Hired gunmen have been used in the garment workers' strike at New York. Three men arrested for attacking guards stationed in front of one factory to protect girls remaining at work confess that they had been employed by a representative of the union to shoot the guards. The price was to be \$100 for each guard shot. They had wounded one, named Benjamin Weinstein. These strikers ask for a week of fifty hours, with a wage increase ranging from 15 to 25 per cent.

All the employees of the hand window glass factories (six states are affected) are to have a wage increase of 7½ per cent. In East St. Louis, 5000 men employed by the Armour and other packing companies get an increase of \$3000 a week. The pay of 5000 men at the Cramp shipyards, where there is work for two years on hand, has been increased by 10 per cent. Representatives of the canning factories in the State of New York ask the State's Industrial Commission to exempt them during the canning season from the requirements of the laws regulating hours of work for women and children. They call for a limit of twelve hours.

President Gompers, of the Federation of Labor, has been urging the public school teachers in New York City to form a union and affiliate with the national organization.

The Warning Resolutions

After the tabling of the Gore resolution in the Senate, action in the House upon the McLemore resolution, warning Americans not to take passage on the ships of the belligerent nations, was delayed until the 7th. The Rules Committee proposed that there should be debate for an hour and a half on its reported plan, and for four hours on the motion to table. There had been some misgivings as to the result, but the first test, a vote of 256 to 160 in favor of ordering the previous question, reassured the supporters of the President. On the adoption of the rule or plan the vote was 271 to 138, and after a debate in which the speeches were short the McLemore warning resolution was tabled by a vote of 276 to 142. In the affirmative were 182 Democrats and 93 Republicans, and on the other side 33 Democrats and 102 Republicans were counted. The record was quite emphatic against any interference with the President's treatment of the issue involved, and it is not expected that the question will be raised again.

A day or two earlier a collection of letters and reports had been published which tended to show that the German-American Alliance had been interested in a lobby at Washington, engaged in suggesting the introduction of such resolutions and in promoting the adoption of them.

Representative Page, of North Carolina, a brother of the Ambassador to

Great Britain, has given notice that he will retire at the end of his present term because he cannot support the President's foreign policy. His conscience would not permit him to vote against a resolution of warning, and he thinks all semblance of neutrality here was destroyed when our Government failed to express disapproval of the \$500,000,000 Anglo-French loan. For similar reasons, and because he opposes the defense or preparedness program, Representative Kitchin, Democratic floor leader, it is said, will retire. Another Democrat, Representative Sherwood, of Ohio, will go because he is at variance with the President as to a warning and also concerning the defense bills.

In the Senate, Mr. McCumber, Republican, withdrew his resolution of warning, which resembled Mr. Gore's, saying he thought Americans had been warned effectively and that it might embarrass the President in his negotiations. Senator Vardaman, in a speech, defended the Gore resolution, attacked the manufacturers of munitions and said the press advocates of preparedness were patriots for pelf. Senator Stone said he had had a frank talk with the President, whose supreme wish was to avoid the calamity of war.

The nominations of Newton D. Baker, to be Secretary of War; David R. Francis, to be Ambassador to Russia, and Joseph H. Shea, of Indiana, to be Ambassador to Chile, have been confirmed. Mr. Baker, a lawyer, formerly Mayor of Cleveland, was a supporter and assistant of the late Mayor Tom L. Johnson, and has not been regarded as an advocate of the defense program. Mr. Francis was a member of President Cleveland's Cabinet.

Trust Cases

In Youngstown, Ohio, a grand jury has indicted the United Steel Corporation, the Republican Iron and Steel Company, the Carnegie Steel Company, the Youngstown Sheet and Tube Company, two other steel companies, and Judge E. H. Gary, chairman of the Steel Corporation's board, for conspiracy, in violation of Ohio's Anti-Trust law, to fix the rate of wages in the steel industry. The indictment follows an investigation concerning the strike riots at East Youngstown in January, when several persons were killed and \$1,000,000 worth of property was destroyed. It appears that the conspiracy, if there was one, was for the purpose of increasing wages, for the complaint is based upon the fact that an announced increase of 10 per cent by the Corporation was followed within two days by a similar increase at the works of the other five accused companies. The county prosecutor says Judge Gary was indicted because he is the dictator of the steel industry. Judge Gary says the indictment is an outrage, and that there are no facts to justify it.

The Eastman Kodak Company has appealed from the decision of the Federal District Court, which held that the company is an illegal monopoly and ordered the dissolution of it. The company is willing to discontinue certain trade practises as to which complaint was made, but will oppose dissolution. Probably a year will elapse before the appeal can be taken up at Washington.

In an interesting decision announced at Baltimore by Judge Rose, of the United States District Court, in the suit of the Government, under the Anti-Trust law, for dissolution of the American Can Company, it

IN COMMAND AT COLUMBUS

Colonel Herbert J. Slocum was commanding the Thirteenth United States Cavalry at Columbus, New Mexico, when Villa took that town by surprise on the morning of March 9. As he ran out of his house at the first alarm the Mexicans were already so close that his revolver was shot from his hand. Colonel Slocum is a nephew of Mrs. Russell Sage. Up to 1914 he had been in Cuba, where he organized the Rurales for the Cuban Government.

is held that, altho the company had its origin in unlawful acts and thereby acquired power which may be harmful, it has for some time past "used that power on the whole rather for weal than for wo." It is impossible, Judge Rose says, to put things back, in this industry, where they were in 1901, and probably highly undesirable if it were possible. The company's power is great, but it is limited by a large volume of actual competition. Those in the trade do not complain and do not want a dissolution. It is "doubtful whether dissolution would profit any one."

Judge Rose is "frankly reluctant to destroy so finely adjusted an industrial machine." The situation which existed before the company or combination was formed cannot be restored. The Government, he continues, fears that the company "will hereafter, to the public prejudice, dangerously use the strength which it gained by its original law-breaking." Therefore he decided to retain the bill of complaint, without ordering a dissolution, but reserving the right to do this if hereafter it shall appear that the company's power is being used to the injury of the public, or has given the company so great control over the industry as to make dissolution expedient. This is the first decision of its kind in the record of cases under the Anti-Trust law.

The Thirteenth Belligerent At half past three on the afternoon of March 9, Germany declared war upon Portugal. Virtually, however, the two countries have been in a state of war since February 23,

when the Portuguese Government, at the request of England, seized all of the German ships in Portuguese waters. There were thirty-six German steamers at Lisbon and eight at St. Vincent, Cape Verde Islands, thus appropriated. The German Government protested against this as an illegal and unfriendly act and called attention to other violations of neutrality such as the use of Portuguese ports by British warships, the permission granted to British troops to cross the colony of Mozambique in order to attack German East Africa, the fighting on the frontier of Angola and German Southwest Africa, and the employment of Madeira as a naval base by the British.

The position of Portugal has indeed been anomalous, for she was virtually allied with Great Britain when the war broke out and under treaty obligations to supply 10,000 troops at any time they were requested. This alliance and obligation were confirmed by the Portuguese Parliament in August, 1914, but no hostilities have taken place except in the African colonies and that soon ceased.

By the seizure of the German shipping Portugal multiplies her merchant marine by three and will be able to relieve the embarrassment which the interruption of Portuguese commerce has caused the country. The German ships may also be used for the transportation of British troops, and in many other ways the participation of Portugal in the war will be of great advantage to Great Britain apart from the army, which on a peace footing numbers 32,000; on a war footing 183,000. The value of these troops is questionable, but they could, no doubt, be made useful either in France or in the conquest

AMBASSADOR TO RUSSIA

David R. Francis, who has been Mayor of St. Louis, Governor of Missouri, and Secretary of the Interior under President Cleveland. He is a grain merchant of St. Louis.

THE DEAN OF DRAMATIC CRITICS

In honor of William Winter, who is eighty this year, a great number of distinguished men and women—the President and ex-Presidents of the nation, publicists and artists in all fields—asked his permission to give a testimonial performance at the Century Theater in New York on March 14. Mr. Winter is a poet, author, dramatic critic and editor, and has been a regular contributor to magazines and newspapers since 1852. From 1865 to 1909 he was dramatic critic for the New York Tribune, and it is as a loving exponent of the finest standards of dramatic art, and a strong force for the maintenance of the dignity and purity of the stage, that he commands such widespread loyalty and affection.

of German East Africa, which General Smuts is now undertaking.

This brings the number of nations formally taking part in the war up to thirteen, Great Britain, France, Russia, Belgium, Italy, Serbia, Montenegro, Japan and Portugal on one side and Germany, Austria-Hungary, Turkey and Bulgaria on the other. Besides these the war has extended into the territories of five other countries, Luxemburg, Albania, Greece, Persia and China.

Russian Conquest of Armenia

The most spectacular and quite possibly the most important campaign at present is the Russian invasion of Turkey from the Caucasus. Since the loss of Erzerum the Turks have offered no resistance to the Russian troops who are moving north, west and south from that city. On the Black Sea coast, north of Erzerum, the Russians have landed forces which are marching westward to take the city of Trebizond, the principal city on the south coast of the Black Sea. They have already reached Rize, the nearest town to Trebizond and only forty miles away.

South of Erzerum the Russians have possession of all shores of Lake Van and by the capture of Bitlis, a fortified town twenty miles west of the lake, they have come within less than fifty miles from the Tigris. Whether from this point they will go down the river to Mosul or up the river to Diarbekr

remains to be seen. If they go downstream they may be able to reach Bagdad and make connections with the British, who for more than a year have been trying to force their way up the Tigris to Bagdad. The advance detachment of the British army under General Townshend has been since last November besieged at Kut-el-Amara, over a hundred miles below, but now it is announced that the relief expedition under General Aylmer, which started the first of the year, has got within seven miles of Kut. Between the two British forces the Turks are occupying a fortified position, but this barrier may soon be broken down and then the combined forces may resume their advance on Bagdad. This time the Ottoman opposition will probably not be so strong as it was last fall because the Russians from Erzerum are threatening and may even have interrupted the line of communication with Constantinople.

The Russian advance has also checked any plans which may have been made at Constantinople for an attack upon Suez. If the Russians can go on twice as far as they have already gone they will reach Aleppo, which is the railroad junction for the line that runs east toward Bagdad and the one that runs south toward Jerusalem and Egypt. From Aleppo to the Gulf of Alexandretta is only about fifty miles farther and the French and British

warships in the Mediterranean could land troops in Alexandretta at any time, to make connection with the Russian forces coming overland from the Caucasus.

This would cut the Ottoman empire in two and leave the three powers free to divide up Turkey and Persia to suit themselves. It has long been surmized that whenever the time came for a partition of these regions that Great Britain was to get Egypt, Arabia, Mesopotamia and southern Persia, Russia was to get northern Persia and Armenia with a southern port at Alexandretta, if not Constantinople, and France was to get Syria. These territories are now rapidly passing into the possession of the Powers to which they are supposed to have been allotted.

The Assault on Fort Vaux

The attack on Verdun began with an advance of the German center directly north of the town. That was carried as far as Fort Douaumont, five miles from Verdun. This was followed by a swing of the left which brought the German line up Fort Vaux, five miles to the east. The third movement is the advance of the right wing on the west bank of the Meuse River. If this meets with equal success the Germans will have Verdun closely encircled on three sides and every part of it will be under fire as soon as they get their big

THE GREAT WAR

March 6—Germans take Forges, west of Meuse. Russians advance twenty-seven miles beyond Kermanshah, Persia.

March 7—Germans attack Vaux and takes Fresnes and Regnéville, near Verdun. Admiralty announces that British navy is stronger by 1,000,000 tons than before the war.

March 8—French regain Bois des Corbeaux. Austrians closing in on Avlona, Albania.

March 9—War declared between Portugal and Germany. Norwegian bark "Silicas" with seven Americans on board torpedoed without warning.

March 10—Russians land at Rize, forty miles east of Trebizond. Germans take French lines near Rheims.

March 11—Germans gain trenches on Dead Man's Hill. Portuguese cabinet resigns.

March 12—Russians reach Karind, Persia, 110 miles from Bagdad. Italians resume bombardment of Görz.

guns established on these new positions. When this is done the eventual reduction of the fortress would be inevitable, provided, of course, that the French do not launch a serious counter-offensive and that the Germans do not run short of men and ammunition before accomplishing their purpose.

As to this question of how long the Germans can afford to keep up an offensive on such a gigantic scale there is room for wide difference of opinion. From the Allies side we hear that the Germans are every day suffering enormous losses, that they have already used up two-thirds of the 300,000 men engaged, and that their assaults are growing constantly weaker. For instance this is the way the correspondent of the London *Daily Mail* reports his observations of the new battle at Vaux:

Not since the battle of Verdun began have the German losses been so terrible as in yesterday's fighting. Whole brigades which went into action against Douaumont, Vaux village and Vaux fort were practically wiped out of existence and most of the German units engaged lost two-thirds of their strength.

They suffered heavily, as always, in fighting the French infantryman, marvelous with the bayonet, and the Zouaves, Turcos and Senegalese, who figured prominently in yesterday's engagement, like demons let loose, as they drove their bayonets home with an overarm plunging stroke. Unlike British and French infantrymen, who usually thrust upwards, the French African troops raise their rifles above their heads, and with the whole weight of the body bring it down with a thrust which sends the bayonet thru the opponent. The Germans suffered even more cruelly from the French artillery and machine guns.

On Wednesday the Germans gained a footing for less than an hour in the streets of Vaux, but they could not withstand the cyclonic rush with which the French counter attacked, and when the latter paused for breath the German dead and dying lay in heaps where they had fallen. Another fruitless German attack was led against the trenches lining Hill 600, on which Vaux fort stands. Here the Germans met with even less success, for they never reached the trenches, but were mown down almost to a man.

THE DEFENDER OF VERDUN

General Petain, called on two hours' notice to take command at the threatened fortress. He was an obscure officer before the war, but proved his fitness in the fighting at Charleroi and has won rapid promotion.

On the other hand unofficial reports from Berlin claim that the German losses at Verdun amount to "only a few thousand." According to the British version, the Brandenburgers, who stormed Fort Douaumont, lost 40,000 of their number, but the official casualty list gives the loss as only 202 of whom fifty were killed.

There is also a great discrepancy between the accounts of the early operations at Vaux. The German headquarters reported with unusual definiteness that

in the Woëvre district the village and armored fort of Vaux, with numerous adjoining fortified positions, were captured in a glorious night attack, after thorough artillery preparation, by the Posen reserve regiments Nos. 6 and 19, under the leadership of the commander of the Ninth Reserve Division of infantry, General von Guretsky Cornitz.

It was categorically denied by the French Foreign Office that the Germans had captured the village or had even attacked the fort at that time. But it is now acknowledged by the French that the Germans have possession of the village and also the slope of the fort.

Other forts on the same ridge as Vaux, such as Moulainville, Tavannes, and Eix, have been bombarded, and further south the village of Fresnes has been taken by the Germans.

The fighting on the western side of the Crows' Wood Meuse is very different and perhaps even more important than that on the eastern, for a sufficient advance here would cut off Verdun, which so far is kept in communication with Paris by railroad trains and a double stream of automobiles. As will be seen from the map the river pursues a very winding course below Verdun. In one of its westward loops is the village of Champneuville, which the Germans took last week. Just below this the Meuse makes a curve to the east around the villages of Forges and Regnéville, which the Germans have taken this week.

But to go farther was no easy matter for the way was barred by two strongly fortified heights, Côte de l'Oie

and Le Mort Homme, or, to put them into English, Goose Ridge and Dead Man's Hill. Both are over eight hundred feet high and dominate the plain and ravines across which the Germans had to advance. They stand about two miles apart and the lower hills between are covered with timber known as the Bois des Corbeaux or Crows' Wood. Barbed wire stretched from tree to tree had made of it a veritable crow's-nest entanglement and concealed batteries covered all approaches.

In spite of these obstacles, however, the Germans succeeded in penetrating Crows' Wood and by Tuesday night held virtually the whole of it and were beginning to ascend the slope of Goose Ridge. But the French drove them out by raking the woods with their 75's and then charging with infantry. Later the Germans again gained the wood and now threaten the French line south of Bethincourt.

Berlin claims the capture in the fighting about Verdun of 26,472 unwounded prisoners, 41 heavy guns, 148 field pieces and 232 machine guns. The French deny that the German gains are so great as this.

The German activity is not confined to Verdun but extends east. Along the Aisne River they took three-quarters of a mile of French trenches, part of which the French regained.

CLOSING IN ON VERDUN

The Germans have gained ground successively on the north, the east and the west of the fortress and now are within five miles of the town at several points. During the past week they have taken Fresnes and demolished the fort of Vaux on the east, while on the western side they have penetrated the wood that lies between the two hills of Côte de l'Oie and Le Mort Homme. This attack from the west was the last to develop and shows the Germans attempting to complete their semi-circle of siege guns. The shaded area shows the ground now held by the Germans. The solid line is their position before the recent attack; the dotted line is their present front.

I have always been a peace advocate. I believe in peace and in the proper enforcement of the laws of peace—by force, if necessary

NEWTON D. BAKER
SECRETARY OF WAR

BAKER: TRAINED ADMINISTRATOR

BY FREDERIC C. HOWE

COMMISSIONER OF IMMIGRATION AT THE PORT OF NEW YORK

FEW men in public life more completely refute the opinion commonly held that democracy involves the commonplace and will not tolerate the expert trained official than Newton D. Baker, the new appointee to the portfolio of war. For few men in America are more thoroughly prepared for public life, and few men have had a longer, more progressive and more fruitful career, measured by achievement, than the most recently appointed member of President Wilson's Cabinet. Probably the increasing number of trained men who are finding their way into municipal, state and Federal service is the best evidence of the changing character of our politics.

Mr. Baker has been in the public service almost continuously since his graduation from Johns Hopkins University in 1892, where he took his Bachelor degree, and Washington and Lee, where he completed his law studies. Trained for the law and really interested in the profession, he has been called from it repeatedly from the moment he returned to his native town of Martinsburg, West Virginia, down to the present. He was first appointed private secretary for Postmaster-General Wilson, the author of the Wilson Tariff Bill. Leaving that position, he was induced to go to Cleveland, Ohio, as a larger field for professional work. Almost immediately after arriving there he was appointed assistant solicitor in the City Law Department, and upon the election of Tom L. Johnson as Mayor in 1901 he was appointed city solicitor. This position he filled for eight years. It was an experience that would train any man in the most difficult legal problems, in the most complex administrative difficulties, for these were years of strenuous city building in Cleveland, in which the old traditions of spoils politics and corrupt control by public service corporations were being shattered, and the foundations of a new type of city government were being laid.

Mr. Baker was not only the city solicitor, he was the close confidential adviser of Mayor Johnson in his struggle to free the city from the public utility interests controlled by Hanna and other politicians. The street railway franchises were expiring. The companies desired their renewal. They refused to grant satisfactory terms. Mayor Johnson insisted that his experience had demonstrated that three cents was a rea-

sonable charge for carrying passengers. And this was his rallying political cry. The issue was as to whether Cleveland really owned its streets. It seems a simple one, yet all the intrenched privileges of the state were bent on denial of this right. Year after year the struggle waged. Probably twenty elections turned around that issue.

At the end of eight years of struggle the street railways finally capitulated. They were driven to accept a three-cent fare. This fare has continued, with only occasional interruptions when it has been necessary to add one cent for a transfer to tide over periods of hard times which were reflected in the companies' earnings. Thru this reduction in fares the car riders of Cleveland have been saved from \$2,500,000 to \$3,000,000 every year.

On the death of Mayor Johnson, Mr. Baker was recognized as his logical successor. He was elected mayor by a majority of 15,000, a large part of his support coming from districts which had been most antagonistic to Mayor Johnson and his program. The program of municipal ownership had been freed from many obstacles, and Mayor Baker was first elected on an issue of municipal ownership of the electric lighting plant. A \$2,000,000 plant was approved by the voters. It was subsequently erected. Electric lighting rates were immediately reduced to a maximum of three cents and a minimum of one-half cent per kilowatt hour. Even on these charges the municipal plant has proven a great success; it has not only earned all operating and fixed charges, but a substantial surplus as well.

These dominating issues being out of the way, Mayor Baker turned to other lines of municipal activity. Under the provisions of the Constitution the cities of Ohio were authorized to draft their own charters. A charter commission was appointed of fifteen men. It was a really representative and distinguished commission. It sat for several months, and finally reported back a model democratic charter, which was subsequently approved by the people. Under this charter Mr. Baker was elected mayor for a second term, which expired January 1, 1916.

During the years of his administration Cleveland took rank as probably the best governed city in America. A splendid project of grouping all the public buildings was adopted. Similar plans were carried thru in

the surrounding territory, so that Cleveland has now provided wonderful suburban developments capable of accommodating probably half a million people. Other great projects were the completion of the water works system, the building of splendid bridges over the Cuyahoga River, the completion of the park system, and negotiations for the acquisition of a large part of its lake front to be used for municipal docks and terminals.

This is but indicative of the big visioned development which it has fallen to Mr. Baker's lot to carry thru. It has trained him in the handling of big projects; it has familiarized him with men and methods, and the interests which menace the nation no less than the city and the state. It has been a training involving just such large administrative and legislative measures as the administration of the portfolio of war presents.

At the expiration of his second term as mayor, Mr. Baker declined to be a candidate for reelection. He desired to return to the law. He is recognized as a great orator and he is an orator of the scholarly type. At the Baltimore convention which placed Mr. Wilson in nomination he delivered an address recognized as one of the most brilliant of the convention, and his activities on behalf of Mr. Wilson contributed greatly to his nomination.

Mr. Baker is one of the few men in politics who keeps all of his academic enthusiasms alive. He is a constant reader and has a remarkable memory. He is interested in many social activities. For several years he was president of the Phi Gamma Delta Fraternity, which he joined at Johns Hopkins when he was a student under Woodrow Wilson. He has recently been elected national president of the National Consumers' League. While mayor he gave a great deal of attention to many social activities for the amelioration of housing, living and recreational conditions in the city.

According to the press Mr. Baker, who at forty-four is the youngest member of the Cabinet, is said to be profoundly interested in peace. He has, however, expressed approval of the President's preparedness program, and if the news accounts may be accepted as correct, we may assume that he is for preparedness for defense and the conduct of the War Department as an aid to the preservation of peace, rather than an instrumentality for easy war.

Ellis Island, New York

WHY GIRLS SHOULD NOT BE TAUGHT TO DO HOUSEWORK

BY MARTHA BENSLEY BRUÈRE

OF all the inconsequent recommendations for the general instruction of girls, none is so recklessly handed about as the advice to teach them domestic science. It is the impressive Podsnappean wave of the educational arm intended to solve the girl as an economic problem. When housework required practically all the time of every woman it might have been an adequate solution. Then female seminaries and even colleges taught it as a matter of course, but as woman's opportunities broadened it was dropt. Now enlarged, elaborated and insistent, it is being brought back into education from the grade into education under the guise of vocational training.

Why?

Thru the mistaken idea that we need more and better housekeepers!

We do not. The more women who must make housework their profession, the more backward we are in industrial organization and the less able to protect the family. What we do need is more and better community servants. So far as under the guise of domestic science women are trained for restaurant keepers, laundry supervisors, pure food experts and the hundred other forms of community service, that study justifies itself. But then it has become *community*, not *domestic science*. So far as it trains them to be their own or some one else's domestic servant it is not valuable, for housework is obsolescent. In a perfect progression from the mountain cabin, where the woman has no time for anything but housework, to the city apartment hotel, where her duties consist of checking the monthly bill, the need for training in domestic science proper is vanishing away. And even when a city woman chooses to "keep house," her housework has reached a minimum which no one has yet presumed to call irreducible.

It seems necessary to remind ourselves that we are living under a form of government that is trying to become a democracy, and that democracy implies that every adult human being shall put in a full time job for life of real work—not merely keep busy; and that real work is doing something that needs to be done. If a girl expects to do housework in her own home, under modern conditions that should not take more than one-fifth of her time. If she plans to make housework a paid profession,

This article is the first of a series on "The Habits of Women under Domestication," written for The Independent by Mrs. Martha Bensley Bruère, a graduate of Vassar College, and the author of numerous books and articles on efficiency for women. Among them are "Experiences of a Nursery Governess," the record of Mrs. Bruère's own experiments in that profession, and "Increasing Home Efficiency," written with her husband, Robert W. Bruère. Mrs. Bruère is an active worker for woman suffrage and for socialism.—THE EDITOR.

then she is going into domestic service. It would be a great gain if the vociferous advocates of universal conscription into the ranks of houseworkers would open their dictionaries, and, while holding the left forefinger on the definition of "education" as "to train for the duties of life," would turn to the last census, which shows that nearly one-fifth of those who find their life duty in manufactures are women; that in places eighty per cent of the teaching force are women, and that vast numbers of women are engaged in business, commerce, the professions and agriculture. They should also look up the table which shows that in the larger cities nearly one-fifth of the women who work are married. Obviously housework is no longer inevitable even if one is a female and married and a housekeeper. It is in fact increasingly improbable.

And there are other adverse reasons. When practised as a profession housework is the most dangerous trade for a woman. The Government investigations made by Miss Conyngton of industrial centers, the reports of correctional institutions, and the recent Chicago investigation all show that a larger percentage of criminal women come from domestic service than from any other occupation, in some places a higher percentage than from all other occupations combined. And in spite of seemingly high wages it is not profitable. I examined the records for two months of a great institution for the care of paupers—ninety-four per cent of the women admitted had been domestic servants. Why train girls for a dangerous trade where they may confidently contemplate a dependent old age?

Some urge domestic science as a cultural study—discipline for the mind like higher mathematics. This

is true of the scientific basis on which domestic as well as other science rests. But the knowledge of housework as commonly imparted to the young has about as much cultural value as speech imparted to a parrot. I found in a city public school rows of little girls putting squares of calico together with a fine "over and over" stitch to make a patchwork quilt. They raised the picture of myself as a little girl being taught that same work by a mother who never made a patchwork quilt in her life, but who had been taught the method by my grandmother who did in her day produce masterpieces. There have been some four generations of girls taught to make patchwork quilts since the world took to sleeping under blankets, and in the name of domestic science it is still going on. They say that patchwork is "good to learn on." Learn what? If those rows of industrious little girls earn a living by sewing they will not use the "over and over" seam stitch nor anything more closely resembling it than can be produced by a power machine. Learning to make patchwork has ceased to be a training for life and become an experiment in archeology.

And yet how easily the housework-child makes the glad parent."

"Annie can make a two egg cake that she learned at school—why I couldn't buy better anywhere!"

"Hazel's been taught to make biscuits and her father's so pleased!"

But under questioning neither Annie nor Hazel showed any knowledge of how to make a cake when only one egg was present, or knew what happened when a biscuit rose. I asked the same questions of a girl who was deep in chemistry, but quite innocent of its domestic application.

"Let me see what's inside a biscuit," she said, and got the family cook book. Then she looked up the chemical composition of baking powder, and told me. She proved also quite as able to make biscuits as to perform any other chemical experiment. Her scientific training made her able to cook quite incidentally. She was beginning on the sort of education which is the basis for housework as well as for most other occupations and was also getting a physical training for any work—an education which would poise her as lightly as a boxer on her industrial toes, ready to jump either way. For every woman who knows chemistry and physics, who owns a good cook

book, who can measure by weight and quantity and can watch the clock, can cook. She may be awkward about it at first, but so is the best trained cook if she is out of practise or in a strange kitchen where the pots and pans are in unaccustomed places, the egg beater hanging beside the stove instead of reposing in the table drawer, the drip board on the left instead of the right side of the sink.

It is fortunate that here and there this scientific training is taking hold

of the schools and colleges in spite of the emphasis placed on the narrow form of domestic science. For those who are distractedly advocating housework as a safe and sound study for girls who must—such is the insistent nature of the female—be taught something, but who should be tenderly blocked in their inherent tendency to abandon domesticity, are not furthering the interests of the family by any means

And in the face of the fact that

housework is dangerous, leads to dependency and is decreasingly needed, is it not possible that those who want girls trained for safe and lucrative occupations are not enemies of society? That those who feel that a girl may be educated to some career in addition to matrimony are not traitors to the child? That those who believe in undomesticating woman in order that she may be socialized are not attacking the state?

New York City

THE THAW

BY O. WARREN SMITH

SPRING is imminent. Somewhere the robins, blue birds, meadowlarks and song sparrows—spring makers—are advancing northward. What's that? How do I know? Have patience and I will explain.

Recently, while the snow lay almost four feet deep in the swamp, I received a "wireless" which set my heart a-bounding. Nothing more or less than a common sapsucker beating the long-roll to the South-Wind upon a resounding dead branch. How the hollow sound awakened the long silent echoes of the swamp, until the very air seemed to pulsate with the gladsome music. Yes, I call it just that—"music."

For two days of zero weather that bird drummed away with all the faith of your true optimist, until I felt like shouting encouragingly, "Keep it up and you will win out."

The swamp was calling me, but I waited. Upon the fourth day after I noticed the drumming, a slight change was discoverable, a certain indefinable, intangible something had crept into the atmosphere. The sapsucker, half crazed with delight, beat the long-roll in double time until all the woodpeckers took up the refrain and my swamp fairly pulsated with the rolling, throbbing sound.

I am never tired of watching the transforming miracles of falling snow, over night accomplishing wonders beyond the power of pen to describe; but a warm south wind will change the face of nature in a few short hours, destroying fantastic snow-drifts and liberating ice-bound creeks. A few warm days and the snow settles rapidly. Listening, you can hear a low "seep, seep," the swan song of the snow. When the water begins to run in the sleigh tracks we know that winter is all but defeated.

Did you ever notice how restless the farmer's cattle become as soon

as the spring thaw sets in in earnest? They are no longer satisfied to feed in the comfortable barn-yards, but must go out into the fields, where they stand, knee-deep in the heavy snow, and gaze out upon their buried feeding grounds. Why is it? What memories of bygone days haunt them? I, too, am conscious of a desire to explore the woods and fields. I needs must up and away. I, too, must respond to the insistent invitation of the sapsucker's long-roll. Is it just an animal joy in the return of warm days, or is it a sub-conscious memory of hairy ancestors, illy protected against the cold, rejoicing once more in life? I leave that for the reader's speculation.

There are two birds I look for these warming March days, precursors of the real spring birds. The first is a constant dweller in the north; no winter is too cold for him; and yet the first hint of thaw sets his blood a-bounding, and puts a new note in his throat. Down in the thick swamps, where the sapsucker and his relatives spend the winter, a little black and white bird feels the urge of spring time and changes his note from "chick-a-dæ-dee" to "phoebe-e-e." Not uncommonly people will inform me that they have heard a phoebe long before that bird has even thought of journeying northward; knowing what they have heard, I only smile and look interested. If you have not heard the March phoebe note of the chickadee you have missed something well worth while.

The other bird that helps to bring the spring, blazes a trail as it were for the bluebirds and robins, is that bird of mystery, the prairie horned lark, which appears in Wisconsin in mid-February or March. Its whistle—one cannot call it a song—while not very musical is decidedly cheery. Usually these birds are found in pairs, tho once in a while I find them

in flocks of half a dozen. There is no mistaking the bird; the two little tufts of feathers, or horns, upon either side of the head are sufficient to identify it. To a great many people they are just "sparrows," as every brown or indeterminate bird is. Nevertheless our inconspicuous early visitor and summer resident is a true lark, something which can not be said of our well-beloved "spring of the year" bird, for the meadowlark belongs to the blackbird family and is not a lark at all.

Those are the two birds I think of in connection with the first thaw, perhaps there is some connection between them and the long-roll of the sapsucker. Honestly, I believe that I owe the thaw itself to the drumming of that "wicked woodpecker," my "bird of faith."

As I sit here in my pleasant study I can hear the puffing of busy switch-engines down in the yards, the throb of the machinery on the coal-docks, the rat-a-tat-tat" of many busy hammers; yet over all, under all and thru all, I can hear the sound of the woodpecker's long-roll, beating a knell to dying winter. Now I would hear the gladsome sound if I were incarcerated in a cell of solid masonry. What I hear depends largely upon what I am prepared to hear. If I let the sounds of the busy world shut out the higher music, whose fault is it?

Come, are you not conscious of a desire to wander, to get away from the noise and hurly-burly of the town? Have you not heard the long-roll of the sapsucker? Do not wait for spring or summer to journey a-field. Now, while the creeks are beginning to rejoice in regained freedom, and the chickadee to call "phoebe-e-e," take a day off. You need it.

And it was only the long-roll of a sapsucker.

Washburn, Wisconsin

M. William Shak-speare:

EIGHT PAPERS BY FREDERICK HOUK LAW
IN OBSERVANCE OF THE THREE HUNDREDTH
ANNIVERSARY OF SHAKESPEARE'S DEATH

The Tragedies: Plays of Character and Pathos

Mrs. Sarah Siddons (1755-1831), sister of John Philip Kemble, first played Lady Macbeth in London in 1785. No other English actress has so completely dominated the stage of her own day. From an old print

ANY of Shakespeare's plays, instead of concerning the work - a - day world, tell of far-off places richly beautiful as pictures on antique tapestry—a romantic Verona or Padua; the woodland spaces of an unreal Forest of Arden, where life is jest and song; or a forest-bounded Athens, where a medieval court, English fairies, clownish workmen, and wandering lovers move in the shades of dream. The scenes of many comedies, Ephesus, Messina, Rousillon, Navarre, Illyria, are little more than suggestive names in the land of romance, "Too flattering sweet to be substantial."

Altho the English scenes in the histories, London, Gloucestershire, Pomfret, Shrewsbury, Westminster, show something more of the stern realities of life, they are principally

a setting for one mighty pageant of kings and queens, and for a series of events that unroll in vividly dramatic form, wakening once more the memory of desperate battles and the deeds of forgotten years.

As a young man, Shakespeare was most interested in event, delighting in the hearty laughter of "The Comedy of Errors," the practical jokes of "Henry IV," the idyllic story-life of "Love's Labour's Lost," and the romantic tragedy of "Romeo and Juliet." And yet, even in his earliest plays, reality treads upon the heels of romance, and the deeper, inner life begins to take the place of outward event. Juliet warns Romeo that their love is

Too rash, too unadvised, too sudden,
Too like the lightning, which does cease
to be
Ere one can say "It lightens."

Henry VI, in the bedchamber of a dying man, says:

Ah, what a sign it is of evil life,
Where death's approach is seen so
terrible . . .
Forbear to judge, for we are sinners
all.
Close up his eyes and draw the curtain
close;
And let us all to meditation.

Jacques, in "As You Like It," looks upon life thru the eyes of satire and says:

All the world's a stage,
And all the men and women merely
players.

He suggests that life, even if lived thru honorable days, ends at last in "second childishness and mere oblivion."

In spite of Shakespeare's interest in the far-off days of romance and war, people of the everyday Elizabethan world come into his plays: ignorant members of the watch; servants busy with the preparation of a feast; a gross-minded talkative nurse; hired murderers not wholly dead to sympathy; Scotchmen and Welshmen speaking dialect; carriers busy in an inn-yard; parsons; physicians; justices—in fact, the world of reality as opposed to the world of romance.

Into the midst of comedy scenes breaks noble poetry. A boisterous passage in "The Taming of the Shrew" suddenly gives place to this:
'Tis the mind that makes the body rich;
And as the sun breaks thru the darkest
clouds,
So honour peereth in the meanest habit.

At about thirty-seven years old, as tho he had not found the world of romance wholly satisfactory, and as tho the reality of life had prest in upon his dreams and made him almost bitter against the false existence of outward action in the story-world, Shakespeare wrote comedies far more thoughtful than those that had preceded, touched with satire, and darker in meaning. No one knows exactly what it was that changed the current of Shakespeare's thought. Perhaps it was years of experience in an active city; perhaps it was the death of his little son Hamnet, and the succeeding death of his own father; perhaps it was some experience of which we have no knowledge—at any rate, Shakespeare turned from light-hearted imagination to a consideration of that greatest of all realities—the human soul, saying, as it were:

I will find
Where truth is hid, tho it were hid
indeed
Within the center.

Some of Shakespeare's comedies find solution in fortuitous event; the great tragedies are immutably final. Two comedies, for example, "Much Ado About Nothing" and "Measure for Measure," end happily in surprising event. In the first, Claudio, thinking that his injustice has killed Hero, agrees to marry her cousin—and finds the "cousin" no other than Hero herself! In the second, Angelo and Isabella think that one whom they love has been executed—but, when they no longer hope, they see a form unveiled, and behold their friend alive! The results of the great tragedies are decisive and beyond recall. Lear moans for Cordelia, whom he has lost, and says in vain: "I might have saved her; now she's gone forever!"

Othello, learning of the innocence of Desdemona, whom he has murdered, has no relief except in his bitter cry: "O fool! fool! fool!"

Lady Macbeth, and Macbeth, having killed Duncan, could never recall him to life. The one mourns hopelessly in her sleep:

Here's the smell of blood still: All the perfumes of Arabia will not sweeten this little hand.

The other goes from crime to crime, knowing that no unmuffling would ever reveal a living Duncan or a restored Banquo, and realizing that his old heroic high-mindedness had gone forever. Thus, faced by reality, he says:

I 'gin to be a-weary of the sun,
And wish the estate o' the world were
now undone!

The great tragedies are tragedies of actuality, whose irresistible force makes them great. In such plays the characters, face to face with choice, solve their own fates. They move, thru wavering resolutions, to an apparent brute mastery over the deep, unmoved machinery of existence. Finally, they confront the eternal verities, and find no relief except in madness or death.

"Julius Caesar" shows us, in Brutus, a man whose failure to understand the actual world brings him to destruction. Brutus is a man above reproach, a kindly master, a devoted friend, a faithful husband, and a high-minded patriot; but he is also an idealist living outside the world of fact. His ignorance of life makes him a ready instrument for the unscrupulous villain, Cassius, who confronts him with the apparent necessity of killing Caesar or being false to Rome. Thus led to kill his best friend, he fails again and does not recognize the worldly wisdom of shrewd Marc Antony, who stirs against him the retribution of Rome. Brutus' virtues are so many, his character so noble, that he awakens our deepest sympathy.

"Hamlet" also is the tragedy of a man incapable of practical action. Hamlet, a Danish Prince, called upon to revenge his father's murder, so wavers between thought and deed that he brings others, as well as himself, into a circle of death. Polonius, killed behind the arras; Ophelia, driven to madness and death; Rosenkrantz and Guildenstern sent to execution; and Laertes, dying with Hamlet when revenge has been achieved, make Hamlet's own tragedy of irresolution all the greater. Hamlet is as much a man of introspection as Brutus is a man of ideals. His wonderful meditations reveal a depth of philosophic nature that lifts us into sympathy with this man of

thought, called upon by fate to carry out action for which his nature is not fitted. He judges himself, and emphasizes the need of strong, decisive action, when he says:

The native hue of resolution
Is sicklied o'er with the pale cast of thought.

The remaining tragedies, "Othello," "Macbeth," "King Lear," "Antony and Cleopatra," "Coriolanus," and "Timon of Athens," instead of showing men unfit for the world of practical reality, tell of those who yield to overmastering passions, and thus, by action, make themselves unfit for a moral world. Othello yields to jealousy; Macbeth to unrighteous ambition; King Lear to self-will; Antony to pleasure-seeking love; Coriolanus to self-centered

pride, and Timon to anger and disgust. All are strong characters, their tragedies being great in proportion to their greatness of nature.

"Othello" is a tragedy of jealous love. The Moor, Othello, telling of

Battles, sieges, fortunes.
Of moving accidents by flood and field,
Of hair-breadth 'scapes i' the imminent
deadly breach,

unconsciously wins the love of Desdemona, daughter of Brabantio, a Senator of Venice. Then Iago, one of his officers, in a spirit of revenge, spurs him to an unfounded jealousy. He yields, and strangles Desdemona, allowing passion to overcome his noble nature. The deed has no sooner been accomplished than the truth of Desdemona's innocence is flashed upon him. He realizes the wrong he

MR. GARRICK in Four of his Principal Tragic Characters.

David Garrick (1717-1779) made his first prominent London appearance in 1741, as Richard III, and from then to 1776, as actor, playwright and manager (he controlled Drury Lane), he was the most important dramatic personage in England. His roles included seventeen Shakespearean parts, and he produced—with more or less fidelity to the original text—twenty-four of the plays at Drury Lane.

has done to her and to himself, and cries in agony:

O cursed slave!
Whip me, ye devils . . .
Blow me about in winds . . .
O Desdemona! Desdemona! dead!
Oh! Oh! Oh!

A single flaw could destroy a noble soul, whose appealing greatness makes the tragedy convincingly powerful.

"Macbeth" is another tragedy of true greatness ruined by a line of weakness. Macbeth, one of the boldest and most ardent of King Duncan's generals, is led by his success to desire Duncan's throne. Goaded on by his secret ambitions, and the help of an understanding wife, he kills his king. Then, to cover his sin, he kills Banquo, his fellow-general, and moves from crime to crime until he meets death gladly, realizing that he has made of life

A tale
Told by an idiot, full of sound and fury,
Signifying nothing.

If Macbeth had been an ordinary murderer we should have slight interest in the tragedy. His overmastering power, introspective nature, and ever-punishing conscience stirs us to the keenest sympathy. In the wreck of his life, caused by his own evil-doing, he says:

I have liv'd long enough: my way of life
Is fall'n into the sear, the yellow leaf;
And that which should accompany old age,
As honor, love, obedience, troops of friends,
I must not look to have; but, in their stead,
Curses, not loud but deep, mouth-honor, breath,
Which the poor heart would fain deny, and dare not.

In the fall of such a man there is all the awe-inspiring power, and something of the glory, of a burning city.

"King Lear" is a terrible story of self-will, narrowed affections, and

misdirected love. King Lear, a doting old man on whom madness is slowly closing in, gives his love to his flattering daughters, Goneril and Regan, and curses Cordelia, the one daughter who loves him too much to flatter. In the same play, parallel with the story of Lear and lighting it by contrast, is the story of the Earl of Gloucester, who trusts a deceitful son and drives away one who is virtuous. In both cases the favored children turn against their parents and bring them into wretched agony. Lear, driven from home, old, white-haired, bereft of reason, rages in a midnight storm; Gloucester, cruelly blinded, is turned upon the world. In the all-enshrouding gloom is the bright gleam of faithfulness in Lear's court fool, who follows his old master; and the beauty of Cordelia's love for her unfortunate father. In the words of the King of France, her lover, one thinks of Cordelia as

Most rich, being poor;
Most choice, forsaken; and most loved, despised!

"Antony and Cleopatra," "Coriolanus," and "Timon of Athens," are less gripping in power. The first, richly powerful in language, and superbly strong in characterization, is a romantic story of glowing color and passion, telling of the ruin of a great man who devoted himself to

pleasure rather than to moral duty. As in the other tragedies the pathos is not in mere event, but in the downfall of noble manhood. When both Antony and Cleopatra are dead Caesar says:

High events as these
Strike those that make them; and their story is
No less in pity than his glory which
Brought them to be lamented.

The second play, "Coriolanus," tells of a proud, quick-tempered Roman noble whose contempt of the people's rights led him to unite with the enemies of Rome. Even among them he did not subdue his pride and temper, and so he met death at their hands at a moment when his wife and his mother had somewhat softened his haughty spirit. His character is well given by the Volscian general, who says:

He could not
Carry his honors even: whether 'twas pride,
Which out of daily fortune ever taints
The happy man; whether defect of judgment . . .
Or whether nature . . .
As he hath spices of them all, not all,—
For I dare so far free him—made him fear'd,
So hated, and so banish'd.

"Timon of Athens," written only in part by Shakespeare, tells of a man of extraordinary generosity and friendliness, who found that wealth brings flattery and that friends are sometimes false. Angered so that he was willing to die rather than live among liars, he forsook the world.

The greatest of Shakespeare's tragedies have such dramatic intensity and moral grandeur that they "purge the soul thru pity and fear." They are human studies, vivid, soul-deep, appealing directly to the heart of every reader because every reader feels within his own breast passions that ally him with Shakespeare's great protagonists.

MY GRAND AUNT'S PATCHWORK QUILT

BY FLORENCE RIPLEY MASTIN

Sedate and silent little quilt of mine,
What wonder that I dream 'neath thy caress?
Soft forms sway phantom-like in curve and line,—
Thy flower bright patches shimmer into dress!

Within this bit of silk as blue as May,
A little girl in hoops is curtsying low.
Her lover dons that velvet on the day
When all the blossoms of the Springtide blow.

Such snowy satin sheathes a lily maid
As fair as one in Astolat who died;
And, mischief in jade green, some lad is paid
Who steals a kiss while sitting by thy side!

O stern old maid, in sober, Sabbath brown
Of silk magnificent that stands alone,—

I see thee look askance upon the gown,
Peach colored, in the pew beside thine own!

And now, behold, within that sapphire square,
As dusky as the blue of summer night,
Beribboned masters pledging to their fair
In foaming tankards till the dawn is white!

Hark how the music of the minuet
Calls from the dim brocade each shadowy face.
It seems as tho they all were living yet,
Pale lovers swaying slow with stately grace.

Dear little grand aunt in the silver grey,
Unconscious of thy patchwork wizardry,
Thy placid hands have summoned yesterday
Down pansy 'broidered paths of dreams to me.

THE EFFICIENT HOUSEWIFE

BY EDWARD EARLE PURINTON

DIRECTOR OF THE INDEPENDENT EFFICIENCY SERVICE

THE leading citizen of the world is the housewife. A bold, new appraisal of the values of the world is to be made by the women of the twentieth century. The guide for the race to come is the scientific housewife. In the shaping of her hands lie the gifts of heart, brain and body that shall belong to the children of tomorrow.

The housewife is the first keeper of a man's morals. Fat body, lean soul. Sick body, frail soul. Weak body, numb soul. Coarse body, hurt soul. The care of the body, for her husband, her children and herself, is a moral responsibility second to none, which every housewife must meet fairly and discharge fully, or be derelict.

Further, a man's capacity for work and a child's for study, analyzed and traced to their source, depend largely on the home regimen directed by the

wife and mother. Given the right home care, a man may work two hours longer a day, with less fatigue and more enjoyment. His alertness, decisiveness, energy, accuracy and endurance will be increased from ten to forty per cent by science in the home. I have seen a man's output of work doubled by the reorganization of his household.

Experts declare that seventy per cent of the school children of the United States are physically defective; that a large proportion of backwardness and dullness may be ascribed to this oft-unsuspected state of chronic ill health; and that the causes reside principally in the home factors of food and drink, sanitation, ventilation, clothing, baths, exercise, and other daily features of home life. The housewives of America, if they would learn their profession, could save to their families at least \$500,-

000,000 a year—now being wasted in hospitals, asylums, sanitariums and drug-stores.

To the average woman, the bed-rock reason for mastering the new art of household engineering lies in the reduction of her home cares, periods of hurry and worry, exactions of the daily budget, hours of toil and fatigue. And a neat and clever, prompt and cheerful, wholesome and economical housewife is much more attractive to her husband! (That is, if she does not forget to be his sweetheart first.)

There are more people engaged in some branch of household work than in any other trade or profession. The number in the United States has been conservatively reckoned at 20,000,000. Among this great body of workers the dearth of scientific knowledge is appalling. My work has brought me in touch with many thou-

HOUSEHOLD EFFICIENCY TEST

FOR ANY HOUSEWIFE OR HOUSEMAID; ALSO FOR ANY
HOUSEDAUGHTER, WHO MAY SOME TIME BE A HOUSEWIFE

DIRECTIONS. Where answer is Yes, write numeral 5 in blank space opposite. Where answer is No, leave space blank. Find percentage by adding column of numerals. This Test is not exhaustive—merely indicative. Questions on any phase of the subject will be answered by Mr. Purinton, so far as possible, on application to The Independent Efficiency Service, 119 West Fortieth Street, New York.

1. Do you regard your vocation as a high profession and a shrewd business combined?.....
2. Have you prepared for it, by years of scientific study and experiment?.....
3. Can you finish your work in a regular eight-hour day?
4. Are you saving at least 30 per cent on former cost of provisioning the household?.....
5. Do you keep a daily schedule, list, and memorandum pad?
6. Is all your routine work planned ahead?.....
7. Are the meals prepared according to the rules of modern food science?.....
8. Are your kitchen and pantry arranged so as to waste as few steps as possible?
9. Does the family consider you the best cook in the neighborhood?
10. Does each member of the family enjoy helping you when necessary?.....
11. Have you made a special study of conserving your energies?
12. Is the kitchen fully supplied and equipped with labor-saving devices?.....
13. Are your relations with all tradespeople satisfactory?
14. Do you follow the budget plan of apportioning expenses?
15. Have you read at least three modern books on household engineering?.....
16. Are you an adept in personal hygiene and home sanitation?
17. Do you belong to one or more national domestic science organizations?
18. Do you enjoy your work thoroly?.....
19. Is your spare time largely devoted to self-improvement and self-advancement?.....
20. Can you make your guests feel at home?.....

The \$100,000 Man Who Went to School Again

This is an inspiring story of a big-minded business man. Despite his wide experience, despite his huge income, he left his business for a year while he **learned the fundamental principles** behind the problems of his complicated business.

Many Big Men Doing the Same

The brainiest men in America today are doing what he did, for exactly the same reason he did it. The only difference is that they do not now have to leave their business as this man did. Instead, the Alexander Hamilton Institute now brings this business training right to their desks or to their home reading tables.

The Advisory Council

Judge E. H. Gary, Chairman of the U. S. Steel Corporation; Frank A. Vanderlip, President of the National City Bank; John Hays Hammond, the great engineer; Joseph French Johnson, Dean of the New York University School of Commerce; and Jeremiah W. Jenks, the statistician and economist, compose the Advisory Council.

How Men Make Good

What our Modern Business Course and Service has done for its 35,000 subscribers will probably never be known in its entirety. But daily there filter into the headquarters in New York many intensely human stories, showing how men are helped. One day you hear of a brilliant lad of twenty-two, in a big New York Bank, rising to a \$9,500 job and giving credit to the Institute for his success. The next day a factory manager writes that the Course has just helped him save his firm \$7,000 a year, and that a "fair slice" of this went to increase his salary. Or a man in a western concern tells how he saved the firm \$37,000 a year **by one suggestion**, and what happened then to **his salary**.

These are only typical cases. There are literally hundreds of them described in the 128 page book, "Forging Ahead in Business," a copy of which will be sent you, **free**.

sands of women whose labor and love is for the home;—but I have not met a dozen housewives who really knew their business.

There are in this country approximately 150,000 doctors; and at least 150 schools where the doctor's profession may be studied. Equal provision for training those occupied in the household would require 20,000 schools of domestic science in America! We have perhaps *twenty* good institutions of household engineering—for *twenty million* people in urgent need of schooling. Was there ever a greater field for applied efficiency?

I would here interject a word of preface. No mere man, tho he be a Solomon of domestic lore, could ever persuade, an orthodox housekeeper that he knew her business better than she did. Therefore, modestly and becomingly, I would state that, in preparing this paper, I have consulted various women authorities considered among the best in the world. House-keeping is a hard job—a much harder job than the ordinary *man* ever tackled. But the way to make a hard job an easy one is to put some education into it. Therefore, while agreeing with the housekeeper as to the difficulty of her problems, I hold the average man's view that they *need not* be difficult.

To introduce our theme, let us borrow a printer's term and produce a "lay-out" of the matter before us. In approaching any kind of work, the initial move is to build an outline of the duties and functions of the worker, and their relations to each other, to the worker, and to those affected by the work.

WIFE, MOTHER, HOUSEKEEPER

AN efficient housewife is three women—a wife, a mother, and a housekeeper. Now being a wife is an art, being a mother is a profession, and being a housekeeper is a business. The art, the profession and the business must be learned separately and completely, then so united as to create a perfect mosaic of labor, life and character. Most of a woman's troubles and perplexities at home are but the failure to realize and observe this classification of her duties and opportunities. We must here limit ourselves to the discussion of the factors in efficient housekeeping only, but we wish it thoroly understood that when a wife has become an efficient housekeeper, she is still but a third of an efficient woman.

The *complexity* of household management is the real problem to be solved. How can any mortal be a sanitary expert, a hygienist, a psychologist, a purchasing agent, a sartorial counsel, a seamstress, a dietetic phy-

sician, a director of employees, a kindergarten supervisor, a household financier, a nerveless mechanism, a hostess, a helpmeet and a beautiful lady of leisure—all at the same time? Yet these are only a few of the multiple individuals the average man expects his wife to be—and her salary nothing but the supernal joy of waiting on him. Is a housewife more foolish for not learning her business, or a husband more foolish for not being willing to pay her a salary when she does learn her business?

SAVE

MANY a housekeeper could learn to save \$100 to \$300 a year by adopting scientific methods of marketing. The Commissioner of Weights and Measures of New York City declares the people of New York are cheated out of \$50,000,000 a year, by means of the false weights and measures, imitations and substitutions, and other swindling devices in daily use by New York butchers, grocers, bakers, delicatesseners, and other shopmen who ought to be in jail. More money is wasted thru negligence and ignorance on the part of the housewife. Let us give one example—out of scores of similar cases.

Lamb chops and leg of lamb cost about the same. But the chops are nearly half bone—why pay for the bone? Also the leg of lamb remaining from the first meal can be served again, revamped or disguised; but the chops left over cannot be safely put in hash and called by a French name used for an alias. Why waste perfectly good money on porterhouse steak because it sounds elite, when it costs fifty per cent more than other good cuts whose protein equivalent is almost the same? Why imagine that you need expensive meats at all? An order of steak for a small family costs, we will say, fifty cents. This makes one meal. For fifty cents you can buy two or three meals of fish; and four or five meals of nuts, legumes, cheese or grains. If you are feeding your imagination, you will go on buying steak; if you are feeding your stomach, you will buy mostly something else.

Other examples of economy: A ten-cent box of whole wheat crackers will yield more nourishment than two ten-cent loaves of ordinary white bread. For most sweetening purposes, "brown" sugar is better than granulated, and costs less. Home-made grape juice can be put up for about eight cents per pint—the store price is twenty-five cents. A barrel of apples in season from Oregon, a crate of oranges and grape-fruit from Florida, may be purchased at a saving of twenty to forty per cent on

each piece—and a large supply of fruit the whole year round is a mighty good investment for any family. The cost of nearly all the articles of home consumption may be reduced, yet the quality improved, if you know when, where and how to buy.

PLAN THE MENU

A COMPLETE scientific table of food values, covering all the articles of home use, and specifying both hygienic and economic percentage, should be the constant guide of the housekeeper. A balanced menu is fundamental to health. And no one ever happened on a balanced menu system—it has to be studied out. I know people who have cut down their druggist and doctor bills by two-thirds, merely thru applying some dietetic wisdom. There is a fascination, moreover, in learning how far you can make a dollar go in the kitchen. Five ounces of cornmeal, costing about one cent, offer as much nutrition as ten eggs, costing twenty to thirty cents. When you learn a few hundred facts like this, and base your marketing on these principles, you will come to enjoy your work as everybody does who is expert and masterful. How to like your work better: *Do it better.*

This means also, do it more easily. I judge that the typical American housewife wastes nervous energy to a wholly unnecessary degree every day. This explains why she frets and scolds, and why she is too tired to greet her husband with a smile when he comes home from work. She must learn to adopt the general truths of scientific management, and to save her time and strength as well as her husband's money. Theoretically, the operations of the household should all be standardized, in respect to motion, time and sequence. But as the homes of today were constructed by men architects and builders, who had no scientific knowledge of household engineering, the usual arrangement of the kitchen, pantry, dining-room and cupboards makes a perfect "routing" system next to impossible. A man can no more be the sole architect of a home than a woman could be of a factory. A woman specialist—a domestic science engineer, should be consulted before any home has the foundation laid. Such mechanical devices as the speaking tube and dumb-waiter connecting different floors and saving many trips a day up and down stairs, or the belt line tray carrier from kitchen to dining-table which brings all dishes to and from the meal in one operation, cost little when embodied in the first plans of a house; their upkeep is almost nil.

The Fascination of the New Housekeeping

THAT is how members speak of the everyday humdrum tasks of the home when they get into the new correspondence course, HOUSEHOLD ENGINEERING, SCIENTIFIC MANAGEMENT IN THE HOME.

The new "scientific management" is really nothing very perplexing or difficult, but the results of its application in all industries have been *truly marvelous*.

This course applied to housekeeping will actually produce results *just as unbelievable*. It will save up to a third or more of the time spent in housekeeping. The housework will go more smoothly with less effort. It will be done better with a considerable saving of expense.

Even more important, the course gives to housekeeping fresh, live interest—changes indifference to enthusiasm—brings about the splendid efficiency attitude of mind that masters all difficulties. It is an inspiration to beginners, the way out for the discouraged and the next step forward for experienced housekeepers.

The author Mrs. Christine Frederick is a pioneer worker in this field. The twelve years' experience in correspondence instruction and the reputation of the American School of Home Economics is back of this course.

"Household Engineering" is divided into twelve (12) Parts or lessons as follows:

1. THE LABOR-SAVING KITCHEN.
2. PLANS AND METHODS IN HOUSEWORK.
3. HELPFUL HOUSEHOLD TOOLS.
4. METHODS OF CLEANING.
5. FOOD PLANNING FOR THE FAMILY.
6. THE PRACTICAL LAUNDRY.
7. FAMILY FINANCING AND RECORDS.
8. ECONOMICAL HOUSEHOLD PURCHASING.
9. HOUSE PLANNING AND SANITATION.
10. THE SERVANTLESS HOUSEHOLD.
11. MANAGEMENT OF HOUSEHOLD SERVANTS.
12. THE HOMEMAKER'S PERSONAL EFFICIENCY.

These lesson books contain 40 to 60 pages, very liberally illustrated and attractively bound. The Reports sent in are read by Mrs. Frederick or her assistants, graded, all questions answered and returned. The lessons are sent one a month for a year—wonderfully interesting continued story on the NEW ART OF SCIENTIFIC HOUSEKEEPING.

All who are interested in housekeeping, or who would like help in their problems, or who wish to make progress in their life work are invited to enroll (for a month only) *free of charge*. Send a post card or note as follows or clip:

AMERICAN SCHOOL OF HOME ECONOMICS,
529 WEST 69TH ST., CHICAGO.

Free of charge, and with no obligation, please enroll me in your new correspondence course, Household Engineering, Scientific Management in the Home. Send full details and directions and Part I, *The Labor-Saving Kitchen*, 64 pp. When I am sure of the value of the course to me, I will send the introductory rate, \$8.50, in full payment (or) I will send \$1.00 per month till \$9.00 is paid. If for any reason the course does not suit me I will return the lesson books received.

Signed

(Kindly give some information about yourself.)

But in all efficiency work, our aim is to turn limitations into opportunities; and the faulty arrangement of a house merely gives the housewife a better chance to use her wits in her own behalf.

PLAN THE DAY

Planning the day ahead is a fundamental factor in good housekeeping. A schedule of the duties and responsibilities for each member of the family, and each day in the week, should be lettered attractively, posted conspicuously, and observed minutely. A good business man has the entire business day mapped out in advance. A good housekeeper does likewise, finishing each bit of work in its allotted time, and proceeding calmly and quietly from one memorandum to another, without the nerve strain and emotional panic that result from hodge-podge habits of work. A housewife's first need is to get over being a hodge-podger.

Meals can be scheduled and ordered a week in advance, and the whole job done at one time. This method not only helps the maid, the grocer and the butcher to avoid haste and errors, but provides for the complete utilization of "leftovers," and relieves the mind of the housekeeper from the everlasting bother of having to think always what the family can eat next. The bargain-day shopping, the sessions with milliner and dressmaker, the attendance at social functions, the care of the children, the philanthropic work, everything that a modern woman does and wants to do, may be so effectively reduced to a system that worry and fatigue are banished, and duties become delights. I am theorizing or sentimentalizing? I am not—I have seen it done.

Many a housewife walks ten miles a day, in pursuing her vocation. Has she fitted all her house shoes with rubber heels? Has she tried openwork sandals for home wear, in place of shoes? Does she know that cushion felt slippers are made so easy that you hardly think you have anything on your feet, but so durable that they wear as long as leather shoes? Further; does the housewife suspend all her clothing from the shoulders, none from the waist? Can she forego the corset, and every other tight garment, while at work? Has she learned how to look attractive, and feel comfortable, both at the same time? Is it her daily custom to go to her rooms, give orders not to be disturbed, and relax entirely for a half hour each afternoon? A few dozen questions like these will show the housewife whether she is, or is not, fully conserving her energies.

USE HELPFUL MACHINERY

The best hardware, housefurnishing, and department stores now handle an assortment of devices, tools, and implements for saving labor, time, health and money in the home. To women folk living in the country, many of these utensils are offered by mail-order houses. We can mention here but a small number of these aids to easy and effective housekeeping: Fireless cook-

er, with recipe book and instructions for saving time, care and fuel; kitchen cabinet, for eliminating much of the standing and walking work, and enabling you to sit comfortably with most of your dishes and supplies in reach; sanitary window-ventilator that keeps out dust and germs, rain, snow and drafts; oiled mop and duster, for settling the dirt instead of scattering it; safety clothes-line, non-stretching, non-staining, non-raveling, warranted to keep clothes from blowing away; dish-pan that fits into the sink and protects it while accommodating all the dishes at once; tea wagon to save steps; paper towels for bathroom and kitchen; sanitary cleaning brushes for specific uses, to fit cracks, corners and curved surfaces; meat perforator to make "round steak as tender as porterhouse"; nut-crackers that deliver kernels whole; glass dishes for baking, that let you watch the process going on inside, then serve food in same dish, and wash easily; duplex bulb for electric light, that regulates amount of current used, with light bills and eye strain reduced fifty per cent; guaranteed aluminum cooking utensils, to prevent scorching and retain full flavor of food; family clothes washing machine, electric or water power, that does not break buttons, tear clothing or fray edges of garments.

Among the new manufactures and inventions for making housework a joy instead of a nuisance are the varied and appealing forms of electrical contrivance now available, and growing more and more economical. A few examples: The electric ironing machine and washing machine which make washing day and ironing day one and the same by saving hours of time and pounds of former drudgery. The electric vacuum cleaner; the dish-washer that cleanses, rinses and dries the table dishes for an average family in less than five minutes; the sewing machine motor, that enables you to complete a day's sewing in a few hours with scarcely any fatigue; the portable desk lamp and floor lamp, for directing the most concentrated light wherever needed, while protecting the eyes from the glare; the water heater; the "sad" iron—not sad in this case; the toaster stove; the warming pad; the rotary fan; the pocket searchlight; the household interphone.

EMPLOYEE—NOT SERVANT

But the human element, in domestic science as in all applied science, takes precedence over the material adjuncts. I refer now to the housemaid, and to the storekeeper, on whose coöperation the mistress of the home has to depend for a large degree of her success. The loyal, energetic, enthusiastic team work that makes a business project forge ahead is conspicuously absent in the home régime. Did you ever see a housemaid illumined with ardor and joy in her work, and so faithful and devoted that she clung to her mistress ten or twenty years without a murmur? If not, why not? Did you ever see a grocer who respected the business acumen of

Are You a Vegetarian?

Do you know what "Vegetarianism" is?

"No."

Then you should find out.

Because—

It is far more—means far more—than you can think, until you actually know just what, and all, it is and means.

How can you find out about "vegetarianism"?

Easily enough.

Write your name and address in the coupon margin, cut or tear it out and mail it at once.

And you will receive, by return post, without obligation, fully postpaid, a copy of the vegetarian magazine—GOOD HEALTH—and much other interesting information—information you will be glad to have, because it will help you to get more out of life.

In the vegetarian diet there are *over seven hundred* recipes. Think of it!

Wouldn't you like to know about them?

Then send the coupon.

Going up?

-or down?

HERE is your future charted for you, based on the actual average earnings of trained and untrained men.

Which way will you go—up, through training, to a position that means good money, or down, through lack of training, into the ranks of the poorly paid?

It rests with you. And now is the time to decide. Not next year, not next month, but now. You can get the training that will command a trained man's salary. The International Correspondence Schools have helped hundreds of thousands to qualify for advancement. Let them show you how you can prepare yourself, in your own home, for the position you want in the work you like best.

Just mark and mail this coupon. It will be the first step upward. Mark and mail today.

the housewife as much as that of her husband? If not, why not?

The cure for the "servant" problem is to realize that there is no servant. There is an employee—but no servant. What the housemaid objects to is being called, classed and treated as a servant. When she does her work right, she is an artist. But, ordinarily, she is an out-cast in the family. She is promptly banished to a cold, ugly, dreary attic room; she is robbed of the home ties and sense of personal ownership that every woman craves; she is run thru a mill of monotony, slavery and drudgery, with no chance of promotion or advancement; she is forced to work at any or all hours of the day or night; she has for an employer a mistress who knows neither her own business nor that of the maid, but who gives orders with the air of omniscience and the finality of fate; she cannot have Sundays or legal holidays to herself, as other employees rightfully demand; she loses caste everywhere because of being a "domestic"; she receives in cash only a half to a third of what she might expect, sooner or later, in other lines of work; and she has no compensations for all these drawbacks and discouragements.

Do you have trouble in getting, keeping or managing a maid? Then it might be well to ask yourself how many of the usual defects in the household employment relation you have discerned, acknowledged and corrected. Also, if your butcher, grocer, ice-man or plumber treats you badly, you have yourself to blame. A shopkeeper would not dare to cheat or maltreat a first-class business man; why should he dare to cheat or maltreat you? We are always discounted in being disrespected—no matter who does the disrespecting.

I can only suggest briefly and roughly in this article a few of the most important branches and phases of domestic engineering.

HOW TO LEARN

To the progressive housewife determined to know her business, I would recommend one or more of these five channels of knowledge now open to her. (1) Books and magazines for the home and the home-maker; (2) Bulletins and reports from leading experts and national organizations; (3) Personal courses in all branches of household management, for mothers, daughters and maids; (4) The direct service and counsel of a qualified domestic engineer; (5) The aid of agricultural colleges and extension departments of state universities in many localities of the United States.

I have before me a recent announcement from the household science department of the University of Illinois, stating that a demonstration car will be sent to clubs and organizations of women thruout Illinois, for the purpose of showing the newer methods of house-keeping in actual operation. No matter where you live, nor how little you have to live on, you can learn how to live better, and make life easier and happier.

THE SUMMER QUARTER OF THE UNIVERSITY OF CHICAGO

Affords opportunity for instruction on the same basis as during the other quarters of the academic year.

The undergraduate colleges, the graduate schools, and the professional schools provide courses in **Arts, Literature, Science, Commerce and Administration, Law, Medicine, Education, and Divinity.** Instruction is given by regular members of the University staff which is augmented in the summer by appointment of professors and instructors from other institutions.

The New Books

BRITISH HUMOR

Some Americans think that they do not like British humor. That is because they expect it to be like American humor. They might as well dislike the charming Surrey hills because they are not the Rocky Mountains. American humor is original, quick and striking; it insists on your attention like a lively terrier. British humor is quiet and confident; it sits and purrs by the fire until you come and stroke it. It is an acquired taste, but it is worth acquiring. A good way to begin is with *Happy Days*, a collection of A. A. Milne's contributions to *Punch*. Do not begin at the beginning. Margery is the most English part of the book, and should be worked up to gradually. Begin with the Little Plays for Amateurs. No one who has ever trod the boards can fail to appreciate such a bit as this:

"Henry—Who is the lucky little lady?"

"George (taking out a picture postcard of the British Museum and kissing it passionately)—Isobel Barclay!"

Then read *The Making of a Christmas Story*, and then the charming little sketches about the spaniel, Chum, and then—well, then you may read the rest in any order you please; you are probably well advanced toward a proper appreciation of British humor.

Happy Days, by A. A. Milne. Doran. \$1.25.

THE SACRIFICE OF BELGIUM

Belgium has a double claim upon the sympathy of the world in that she has suffered both a legal wrong and an undeserved injury. The former aspect of the case of Belgium, the violation of territorial neutrality, has occupied more public attention than, relatively to other features of the war, it deserved, considering first that the German Chancellor admitted at the start that it was wrong and, second, that Great Britain would have gone into the war anyway, even if Germany had kept out of Belgium.

But those who wish to acquaint themselves with both sides of the question will find it ably argued by the two books before us. In *The Neutrality of Belgium*, Alexander Fuehr, LL.D., presents the German side of it. He shows that the binding force of the treaty of 1838 guaranteeing the perpetual neutrality of Belgium has been questioned at various times by British, French and Belgian writers; that Palmerston, Gladstone, Derby and Stanley did not regard England as obligated to intervene to defend it and that in 1887 both Liberal and Tory papers took this view. He reproduces in facsimile the secret papers discovered in Brussels by the Germans, showing that plans had been

If your floors could show the steps you waste

If a tally could be kept of all your trips up and down stairs; if all the footsteps you take to find the maid and all her steps in coming to you

could be counted, what a waste of time and energy would be revealed! The more convenient way—the approved method—of home management is to connect rooms or floors by means of

Western Electric Inter-phones

These inexpensive little time savers are adaptable to any home, old or new. They are easily installed. They can be placed anywhere. A set, as illustrated, connecting any two points, costs only \$15, and can be put in by any competent electrician without disfiguring the walls.

You surely need this great convenience. If your local electrical store cannot supply you, we will ship the outfit by parcel post, with full directions for installing.

Write for our illustrated booklet, "The Way of Convenience." Ask for Booklet No. 33-BJ.

made by Belgium for British military cooperation in case of an invasion by Germany. The British Military Attaché told the Belgian Chief of Staff in 1912 that British troops would be landed in Belgium in such a case immediately even if Belgium did not ask for them or consent to their coming. In August, 1911, according to Lord Roberts the British fleet had its torpedo nets down and "our expeditionary force was held in equal readiness instantly to embark for Flanders." From this Dr. Fuehr argues that Belgium had forfeited her guarantee of neutrality by 1905, and that in any case Germany was justified according to international law in crossing Belgium by right of military necessity.

In opposition to this is *Belgium Neutral and Loyal*, by Emile Waxweiler, Director of the Solway Institute of Sociology at Brussels. He, tho a Belgian, is much more moderate in his language and fair-minded in his argument than most English and American advocates of the cause of Belgium. He points out that neutrality was imposed upon Belgium by the Powers for their own interests, and that it was their duty to defend it. He frankly admits that the German troops were in some cases fired upon by civilians, but he denies that there was any such opposition as would justify the German reprisals, and he disproves the rumors of Belgian cruelty to German wounded.

Emile Verhaeren is one of the few Belgian authors, except Maeterlinck, known to the outside world and none is better qualified to voice *Belgium's Agony*. Three new poems are given in the original, *La Belgique sanglante*, *Ceux de Liège* and *Guillaume II*. The prose portions of the book are translated with sufficient skill to convey the fire and force of the original French in which he laments his country's wrongs and denounces her enemy. Here is a passage from the chapter on Germany Uncivilizable:

With what clumsy violence does the German conqueror impose himself on the lands he wins. France, in fifty years, has made herself beloved in Savoy; in two centuries she assimilated Lille, Dunkirk, Strasburg, and Alsace. England in a few decades has attached to herself Egypt and South Africa. But Germany is still a hated name alike in Poland, Schleswig and Alsace-Lorraine. Wherever she goes, she is unwanted. She knows only the way to tear apart; not the way to unite and heal. Her proclamations shrivel the human mind as frost shrivels plants. She can neither attract, nor tempt, nor civilize, because she has herself no deep spiritual force. Europe, under the successive hegemony of Athens, Rome, and Paris, has been the noblest home of human progress and development. Under German domination she will drift dismally into a gloomy officialdom, organized and drilled by a tyrannous ruling caste.

If there is any one yet unconvinced that the German advance thru Belgium was marked by official tyranny, violations of rules of war and unwarranted cruelty the collection of texts and documents entitled, *Belgium and Germany*, should be brought to his attention. Here are facsimiles from the diaries of German soldiers telling of their atrocities, photographs of buildings destroyed and

C. E. BROOKS, 1952 State St., Marshall, Mich.

of civilians shot, lists of the victims and reproductions of the German proclamations threatening and announcing the burning of towns and the shooting of hostages. But, on the other hand, if we accept these documents as evidence of German misdeeds we cannot altogether disregard them when they accuse the Belgians of sniping, using dum-dum bullets, etc.

Two little volumes of eye-witness testimony are at hand, one, *The Truth About Louvain*, by a Belgian, René Chambry, the other, *The Germans in Belgium*, by a neutral, Professor Grondys, of Dordrecht, Holland. The latter is especially interesting since it is the narrative of his personal observations in Louvain, Ghent and Brussels. He tells of German kindness and courtesy as well as of German cruelty and unmannerliness.

The peaceful community of Irish nuns which had for two hundred and fifty years been established at Ypres found itself suddenly the center of the fiercest war of history. Their experiences under bombardment from Krupp guns and aeroplanes are well narrated in *The Irish Nuns at Ypres*.

Most of us have felt the need of a better comprehension of the background of Belgium since that country has been thrust into this unhappy prominence. The *Short History of Belgium*, by Professor Van der Essen, of the University of Louvain, admirably fits this need, for in brief and readable form it tells the story of the country from the time of Caesar to recent times. It does not touch upon the present war and seems unmoved by its animosities.

The Neutrality of Belgium, by Alexander Fuehr. Funk & Wagnalls. \$1.50. *Belgium Neutral and Loyal*, by Emile Waxweiler. Putnam. \$1.25. *Belgium's Agony*, by Emile Verhaeren. Houghton, Mifflin. \$1.25. *Belgium and Germany*, by Henri Davignon. Thomas Nelson. 25 cents. *The Truth About Louvain*, by René Chambry. Doran. 25 cents. *The Germans in Belgium*, by L. H. Grondys. Appleton. 50 cents. *The Irish Nuns at Ypres*, by D. M. C. Dutton. \$1.25. *A Short History of Belgium*, by Léon Van der Essen. Univ. of Chicago Press. \$1.

TROUT SEASON

Let no one be kept by the color of the cover from sending to his fisherman friend, with the first hint of spring, Bliss Perry's delightful little essay, *Fishing with a Worm*.

Houghton, Mifflin. 50 cents.

LESSONS IN LEADERSHIP

A suggestive little book for the use of all people who have the care and training of groups of young girls, is *Leaders of Girls*, by Clara Ewing Espey, and any troubled teacher or welfare worker should find it helpful.

Abingdon Press. 75 cents.

THE TRAIL OF THE TICKER

To those who love to read of the romance of "the street," Edwin Lefevre's *Wall Street Stories* will furnish many pleasurable thrills. These character studies, anecdotes and descriptions are a graphic presentation of the human side of the noisy, tragic, busy world of speculation.

Harper. \$1.

PULPIT AND PEN

Albert Currier's *Biographical and Literary Studies* contain a simple, comprehensive presentation of four great preachers, Augustine, Fuller, Herbert and Knox, and suggestive essays on Imagination in Preaching and the Psychological Value of Self-Forgetfulness. The questionable taste of the title: Where is Charlie? prejudices

The day's tasks become delightful adventures when complete rest arrives on the wings of the morning.

A QUARTERLY DIVIDEND OF ONE AND ONE-HALF PER CENT. on the Preferred Stock of this Company (No. 43), and a quarterly dividend of ONE PER CENT. on the Common Stock (No. 18) have been declared payable April 15, 1916, to stockholders of record at the close of business on Monday, March 20, 1916.

THOMAS A. DOE, Treasurer.

the reader in advance against the discussion of immortality. Thruout the book a heaven and hell theology and a painful fondness for quotation are redeemed by sincerity and earnestness of purpose.

Boston: The Pilgrim Press. \$1.50.

MEMORIES OF THE STAGE

Kate Ryan's recollections of *Old Boston Museum Days* date from 1832 when a young girl, entirely untrained, she walked into the Boston playhouse and demanded a position. A position she won and held to the close of the house in 1893. The book has not only anecdotes of famous actors, but is of especial interest as the story of a successful stock company.

Boston: Little, Brown. \$1.50.

ALASKA IN VERSE

The Independent first published some of the thoughtful poems now gathered in R. G. Taber's *Stray Gold*. Much of the book, however, is later work, the fruit of years in the north; dramatic incidents in the miner's life and a group of Esquimaux legends. The Song of Azrael is an excellent example of Mr. Taber's forceful irregular verse and To Fit a Clown a delightful satire.

St. Paul, Minn.: Stationery and Book Co.

THE CHANT OF LOVE FOR ENGLAND

Most of Helen Grey Cone's new volume, *The Chant of Love for England*, has been published before in book form, but among the new poems are three born of the war: the title poem; the noble lines in memory of the sons of Mr Dent, the publisher; and a splendid lyric, *Soldiers of the Light*. The collection closes with the ode to Lincoln, which is worthy to stand with that small group of real poems to his memory.

Dutton. \$1.

EVOLUTION OF THE VARIETY

How far the vaudeville stage has evolved from the days of blackface comedians and low-brow comedy may be glimpsed from *Writing for the Vaudeville Stage*, by Brett Page. Here in more than 600 pages is well reasoned instruction how to write and sell playlets, monologs, two act burlesques, musical comedies, and songs, together with working models from some of the more successful vaudeville authors.

Home Correspondence School. \$2.

ART AND PHILOSOPHY

Professor L. W. Flaccus has a refreshing gift of saying what he means and leaving one with a definite impression. In *Artists and Thinkers* he proposes a question, a question impossible to answer, he assures his readers, but well worth considering: Is the Artist a Thinker and the Thinker an Artist? On this as a framework he builds excellent studies of three artists: Rodin, Maeterlink, Wagner; and three thinkers: Hegel, Tolstoy, Nietzsche.

Longmans, Green. \$1.25.

AMATEUR DRAMATICS

Written for a congenial group of amateur actors, Mary Aldis's *Plays for Small Stages* should be of value to similar organizations, not for their intrinsic worth, but as suggesting lines along which to work. The plays are simple in setting, relying for their effects on dialogue and the interplay of character. They make the average amateur feel: "I could write a better play on those same lines myself"; and that is a feeling worth cultivating.

Duffield. \$1.25.

A HARRIMAN VINDICATION

In the *Chicago and Alton Case* George Kennan has reviewed the Interstate Commerce Commission's investigation of Mr. Harriman's reorganization of the Chicago and Alton Railroad and the criticism that ran with and followed the investigation. It is a good comment on investigations and on critical methods, and a good defense of Mr. Harriman and his hundred financial associates who, with a widely approved scheme, improved the road greatly both physically and as an investment—tho it met misfortune later.

Insurance

Conducted by—

W. E. UNDERWOOD

TWO LARGEST IN THEIR LINE

Included among the very few insurance companies which have published their balance sheets as of date December 31, 1915, are the two largest of their class in the world: the New York Life and the Home Insurance Company. The New York Life begins the year with total resources aggregating \$822,917,850 and surplus of \$123,564,466. While the Home is not the largest insurance company writing fire insurance, there being a number of British companies with greater resources transacting all the various lines, it is undoubtedly the largest in point of assets confining its activities to fire insurance alone. The Home ended the year 1915 with total assets of \$37,982,744 and a policyholders' surplus of \$19,536,177.

E. F. B., Grove City—See answer to E. A. H. in The Independent for March 6, 1916.

C. H. F., Lafayette, N. Y.—It is my opinion that a twenty-year endowment is one of the best forms of life insurance a young man of twenty-one can carry. The company is reliable.

M. B. B., Palestine, Tex.—As between the Illinois Bankers' Life Association and the Postal Life, take the latter. There is reserve security behind the Postal. The mathematics of the other are faulty.

J. F. J., Waukesha, Wis.—You are probably referring to group insurance. Your data are insufficient to enable me to aid you in finding the article you are hunting. For information respecting group insurance, write Equitable Life Assurance Society, 120 Broadway, New York, N. Y.

E. E. H., Oxford, O.—For its age, the company is of good average quality. Considering all your circumstances, would advise you to take ordinary life (instead of endowment) insurance. You have a dependent who needs protection. You can get twice as much in the way of a policy for the same premium. Put it in one of the old, well established companies with a good annual dividend record.

D. D. J., St. Louis, Mo.—As investments for profit, stock in new insurance companies may be classed as pure speculations. They may turn out well; a few do; most of them are failures. I should say that the necessity to increase the premium rates on life insurance policies is an indication that the persons calculating the inadequate rates are incompetent. A properly managed new life company would not earn a dividend for its stockholders under five years.

J. G. C., Clifton, Ariz.—The Western Mutual Life Association of Los Angeles, California, is an assessment organization, collecting from its members only an amount sufficient to pay current death losses and expenses. Funds requisite to offset the increasing age of the membership are not accumulated and the total net assets of about \$600,000 are obviously inadequate if used as a reserve to protect the \$15,000,000 of outstanding insurance. The cost to members must inevitably increase. The New York Life policy will be the more economical in the long run.

"Standard" Built-in Baths

insure pride of ownership, satisfaction in service and an every-day appreciation of the bathroom because it is modern and right.

The up-to-date home deserves a Built-in Bath, together with other "Standard" Plumbing Fixtures for bathroom, kitchen and laundry.

The use of a "Standard" Built-in Bath is like bathing in a china dish. The beauty of "Standard" equipment, together with its sterling worth, mean the correct solution of your plumbing problem.

Ask your architect or plumber about it, or see these fixtures at any "Standard" showroom. The green and gold guarantee label identifies the genuine. Write for a copy of "Modern Bathrooms."

THE MARKET PLACE

A REVIEW OF FINANCE AND TRADE

WAR SUPPLIES

There were rumors last week that several new orders for munitions had been placed in this country by the Allies, but evidence was produced concerning only one, an order for \$5,775,000 worth of eight-inch shells, given to four Western manufacturing companies that are not widely known. Many of the Eastern companies are busily engaged on orders placed several months ago. For example, work on the Westinghouse Air Brake Company's orders will not be complete until the beginning of August. New orders for shells are expected in Canada, where the British Government's expenditures for such ammunition this month will be \$25,000,000, a sum which is advanced by the Government of the Dominion. Large quantities of shells are needed. This is shown by the estimate that more than \$50,000,000 worth have been used in the Verdun battles.

Large shipments of munitions and other supplies have recently been made from New York. In thirty-six hours, beginning on March 3, nine ships sailed with cargoes of this kind, the total being 55,000 tons. In the list were several liners withdrawn from the British naval service for this work. Only one of the nine was armed, and only three carried passengers. The shipments included shells, cartridge cases, bayonets, rifles, revolvers, fuses, toluol, copper, brass, steel, aeroplanes, automobiles, alcohol, powder, dynamite, wire, spelter, and 1257 horses.

The British Government bought \$6,000,000 worth of sugar here last week. In association with the French Government it has recently purchased great quantities of wheat elsewhere, paying \$16,000,000 in Australia, \$20,000,000 in Argentina, and \$50,000,000 in Rumania. It is estimated that the Allies now own or control 323,000,000 quarters, while the neutrals have 189,000,000, and 56,000,000 are assigned to Germany, Austria and the minor nations associated with them. These large British and French purchases abroad have in some measure affected our wheat market.

OUR FOREIGN TRADE

Our exports in January, \$335,535,000, were less by \$17,000,000 than those of December (which had never been equaled), but there was an increase of \$12,000,000 in the value of imports. Those who watch the course of our foreign trade are accustomed to look for the excess of exports over imports. In January it was \$151,343,000. December, with an excess of \$187,459,000, still holds the record. The extraordinary growth and amount of this balance in favor of the United States are shown when the figures for the seven months ending with January are considered, and when comparisons with the trade reports of past years are made. For

those seven months the excess was \$1,084,333,000, a sum nearly equal to half of the exports. In the corresponding months of 1915 the excess was only \$403,000,000, and \$454,000,000 was the amount for 1913. Official figures for the entire calendar year of 1915 were published last week by the Government. The exports were \$3,486,015,000—an increase of nearly \$1,500,000,000, or about seventy per cent—over those of 1914, and the imports were \$1,779,794,000. Little change in the value of imports was shown, the reduction having been less than \$10,000,000.

The great increase of our exports has been due mainly, of course, to the shipment of war supplies to the Allies in Europe, but there has also been a large increase of our sales to South America, China, the British East Indies, Australia and New Zealand. Our imports from those countries, also, have grown. Comparisons between the transactions of last December and those of December, 1914, show how great has been the advance in the values of exported war supplies. Explosives rose from \$2,200,000 to \$46,000,000; manufactures of iron and steel, partly for use in making ammunition, from \$15,000,000 to \$45,000,000, and copper from \$7,000,000 to \$16,000,000, while the shipments of brass were multiplied by ten, growing from \$900,000 to \$9,000,000. It is estimated that the value of ammunition, other explosives and firearms sent to Europe from this country since the beginning of the war has been \$201,679,000.

COPPER AND STEEL

It is estimated that if the present prices of copper, from 27 to 28 cents a pound, are maintained thruout the year, our producers will receive in 1916 about \$200,000,000 more than was paid to them in 1915.

On the 2d, the members of the London Metal Exchange decided to suspend trading in all metals except tin. This action was taken in obedience to the following order issued by the British Government:

It shall be unlawful for any person to sell or buy, or to offer to sell or buy, iron, steel, copper, zinc, brass, antimony, nickel, tungsten, molybdenum, ferro-alloys, or any other metal specified by the Ministry of Munitions as necessary for the production of any war material, unless the metal is in the possession of the seller or in course of production for him; and, in the case of the buyer, unless the purchase is made for the actual consumers.

This suspension in London will not appreciably affect our market. The price of copper is determined in this country. For this metal, and also for lead and spelter, England must depend mainly upon the United States. There has been a partial resumption of business on the Exchange, under an agreement with the Minister of Munitions concerning prices.

Since the beginning of the year, the prices of steel products have been rising steadily. Additions were made last week. The average for all is now about \$49 a ton, against \$30 one year ago. But the increase in twelve months for several prominent products has been almost 100 per cent. This is true of steel billets and sheet bars. Never before has the output of the mills been so large or sold so far ahead. While the largest tonnage demands at the present time are for shrapnel steel—and there are inquiries for several million shells from Russia and Great Britain—the shipyards are calling for large quantities of the metal. In this country there are now 334 ships under contract, 275 of them for the merchant service, and 59 for our Government. There is much ship-building for foreign owners. Since January 1 orders for 43 ships have been given.

All the orders placed at the steel mills since that date amount to 4,000,000 tons, and have a value of \$240,000,000. They include about \$30,000,000 worth of locomotives and cars. Much of the steel is to go abroad in one form or another. It is estimated that about 15 per cent of our steel output is now exported.

An addition of about 600,000 tons to the Steel Corporation's total of unfilled orders was expected at the end of last week, but the official statement showed an increase of 648,199 tons, and a new high record was made. February's output of pig iron, 3,087,212 tons, was a little less than the product in December and in January, but February is a short month, and the daily average at the furnaces was the largest ever known. We are now making pig iron at the unprecedented rate of 39,500,000 tons a year.

Several new plants are to be built, or existing plants are to be enlarged, with a part of the steel industry's surplus earnings. The Corporation has decided to use \$25,000,000 in making a new mill at Gary, Ind., where it has already invested \$65,000,000. And during the last six months \$28,000,000 has been set aside for development work. A large mill may be erected in Canada. The Bethlehem Steel Company will spend \$25,000,000 for additions and improvements at the Sparrows Point plant of the recently acquired Maryland Steel Company.

The following dividends are announced:

Manila Electric and Lighting Corporation, quarterly, 1½ per cent, payable April 1.

American Car and Foundry Company, preferred, 1¼ per cent; common, ½ per cent; both payable April 1.

Utah Copper Company, quarterly, \$1.50 per share; extra dividend, \$1 per share; both payable March 31.

United Shoe Machinery Corporation, preferred, quarterly, 1½ per cent per share; common, quarterly, 2 per cent per share; both payable April 5.

American Agricultural Chemical Company, preferred, quarterly, 1½ per cent; common, quarterly, 1 per cent; both payable April 15.

The striking photograph of a bronze
statue, "The Pour," which appears on
the cover of The Independent for this
issue, is reproduced thru the courtesy of
the Damascus Bronze Company, in
whose offices at Pittsburgh the statue
is exhibited, and which holds the copy-
right.

A MENTAL INVENTORY

Some of our readers are writing in
to know when the next information test
will appear. Owing to the press of other
matters, etc., etc.—but here it is. As
usual we borrow it from our Friends.
It is the custom of the Quaker schools
to put to their pupils once a year a set
of questions designed to show the range
of their reading and their familiarity
with terms occurring commonly in
books and newspapers. They prospect,
so to speak, the minds of the boys and
girls by running down the diamond drill
into their apperceptive basis. The fol-
lowing list of 100 questions has been
prepared from the General Information
Tests used recently in the Germantown
Friends' School and the Friends' School
of Baltimore, by eliminating those ques-
tions depending upon local events and
observation. It is a useful sort of ex-
amination, for there is no possibility of
cramming for it. Try it out on your stu-
dents, club members, friends and other
willing or defenseless individuals. Next
month we will publish the answers, but
do not send us the papers. Grading ex-
amination papers is not the sort of
thing one does for fun, and we are not
paid for it.

GENERAL INFORMATION TEST

GERMANTOWN FRIENDS' SCHOOL

Second Month 11, 1916

Name: 1. The President of the United
States. 2. The Secretary of State. 3. The
Speaker of the House of Representatives.
4. The Secretary of the Navy. 5. The mayor
of your town. 6. The Governor of your
state. 7. The President of Mexico. 8. The
president of Mount Holyoke. 9. The presi-
dent of Columbia University. 10. The Great
Commoner. 11. The Iron Duke. 12. Old
Scratch. 13. The Wizard of Menlo Park.
14. The European countries not engaged in
the present war. 15. The countries between
which the "Alabama" case was arbitrat-
ed. 16. The Hoosier Poet. 17. The Harvard
professor who won the latest Nobel prize
for chemistry. 18. The world's most famous
tenor. 19. A European possession on the
mainland of South America. 20. The Sen-
ators from your state. 21. The book in the
Bible in which the Ten Commandments
are found. 22. The two great powers whose
boundary has remained unfortified for over
100 years. 23. The city in which the Dem-
ocratic convention of 1916 is to be held.
24. The city in which the Republican con-
vention of 1916 is to be held. 25. The Lone
Star State.

Locate when possible; otherwise explain:
26. The Black Forest. 27. The Green
Mountains. 28. The Golden Rule. 29. The
Black Hand. 30. The Scarlet Letter. 31.
Yellow journalism. 32. The White Ribbon
33. A blue stocking.

What do the following mean: 34. S. O. S.
35. S. P. C. A. 36. B. & O. 37. cf. 38.
A.D. 39. B.S.

What part of the following plants do we
use; 40. Almonds. 41. Sweet potatoes. 42.
Irish potatoes. 43. Cinnamon. 44. Cloves.

Give the author of the following book or
quotation: 45. "Judge not that ye be not
judged." 46. "A Man without a Country."
47. "A Comedy of Errors." 48. "A Christ-
mas Carol." 49. The Koran. 50. "Captains
Courageous." 51. "The Little Minister."
52. "Bless the Lord, O my soul; and all
that is within me, bless his holy name." 53.
"Don't give too much for the whistle." 54.
"The Rubaiyat of Omar Khayyam." 55.
Out of the trenches by Christmas.

To what country is each of the follow-
ing ambassador: 56. Graf von Bernstorff.
57. Brand Whitlock. 58. Henry van Dyke.
59. Walter H. Page.

Show the difference in meaning between
the following: 60. Feminist and effeminate.
61. Direct taxation and indirect taxation.
62. Custom-house and clearing-house. 63.
Indulging in personalities and having per-
sonality. 64. Diadem and diaphragm.

Explain: 65. Mardi Gras. 66. Sublime
Porte. 67. White Wings. 68. Old Faithful.
69. Adam's ale. 70. Hyphenated Ameri-
can.

State some interesting fact about each
of the following: 71. Booker T. Washing-
ton. 72. Anna Howard Shaw. 73. George
Fox. 74. Lewis Carroll. 75. Fritz Kreisler.
76. Sir Edward Grey. 77. Joseph Pennell.
78. Sarah Bernhardt. 79. Venizelos. 80.
Thomas Mott Osborne. 81. John R. Mott.
82. William Dean Howells. 83. Charles E.
Hughes. 84. Sir Douglas Haig.

Miscellaneous: 85. What two bodies of
water are connected by the Dardanelles?
86. Why is a German submarine called a
U-boat? 87. What is "the Christ of the
Andes"? 88. What is the aim of workmen's
compensation laws? 89. To what city was
Paul of Tarsus going when he saw the
vision? 90. What story by Robert Louis
Stevenson is a study in dual personality?
91. What city was the seat of our Govern-
ment in 1783? 92. What is the motto of the
Boy Scouts? 93. What league was form-
ally organized on June 17, 1915, in Independ-
ence Hall, Philadelphia? 94. Who discov-
ered radium? 95. Which foreign nation ex-
erts the greatest influence upon China? 96.
On what island were United States marines
recently landed to restore order? 97. What
Welshman is Minister of Munitions in
Great Britain? 98. What is meant by con-
scription? 99. Which of the four seasons
is now being experienced in Australia? 100.
In what direction from the North Pole is
Alaska?

TO ALL PATRIOTIC AMERICANS

The American Society, a Federation for National Unity

This advertisement in The Independent is an appeal for membership and financial support. The American Society was incorporated under the laws of the State of New York in October, 1915, to federate American organizations and American citizens in the great work of Americanizing America, to oppose un-American ideas and activities and to awaken patriotic interest in American institutions, language and law. The American Society is supported by voluntary contributions from its members.

The American Society is incorporated:

1. To foster Americanism.
2. To bring together into a closer union all engaged in any work which tends toward the use of our national language and an understanding of American laws and institutions.
3. To bring into mutual understanding all intending citizens, naturalized citizens and native citizens.
4. To aid in upholding the fundamental institutions of the United States, fostering American ideals and loyalty and a spirit of single-minded allegiance to our flag.

The American Society is working to achieve a reading and writing test (in English) for

voting; reading and speaking test (in English) for naturalization; amendment to the general Immigration Act, to dispose of the entire Immigrant Head Tax Fund for the welfare and education of the immigrant; study of Spanish and Portuguese in the public schools of the United States; use only of English in teaching, in text books, and as the only mandatory language study in all schools.

Enroll with The American Society as a patriotic duty and send any contribution that you may feel inclined to make, no matter how small. Checks or money orders should be made out to Perley Morse, C. P. A., and addressed to The American Society, Woolworth Building, New York City.

WHAT WE MUST DO IN MEXICO

AFTER a week of preparation, the punitive expedition against Villa and the sackers of Columbus is well under way. It sets out upon its mission with the express acquiescence of the *de facto* government of Mexico. Before acquiescing in the action of the United States army, Señor Carranza stipulated that reciprocal permission should be given to Mexican forces to pursue raiders across the American border if occasion should ever arise. President Wilson promptly agreed to the Mexican suggestion. In so doing he made it perfectly clear that the conditions must be precisely parallel. He declared that permission was readily granted for military forces of the *de facto* government of Mexico "to cross the international boundary in pursuit of lawless bands of armed men who have entered Mexico from the United States, committed outrages on Mexican soil, and fled into the United States."

So the pursuit of Villa goes vigorously on. It is not yet clear to what extent there will be active and efficient coöperation by the Carranza forces. Such coöperation would doubtless be of value; but whether it is forthcoming or not, the task of punishing Villa and suppressing the activities of similar lawless bands must be carried thru to the end. "Thoro" must be the slogan.

Meanwhile it must not be forgotten that our purpose is not to be confined within the four corners of the idea of vengeance or even of retribution. Villa must be pun-

ished. But we are not to stop there. In his reply to Carranza the President gives admirable expression to this larger duty. The privilege of sending our armies into Mexico, he says, will be exercised "in the hope and confident expectation that . . . lawlessness will be eradicated and peace and order maintained in the territories of the United States and Mexico contiguous to the international boundary." To this important purpose the energies of the United States must be bent. We must not recall our forces until this end is accomplished.

The Senate has unanimously adopted a concurrent resolution—which must be also passed by the House to become effective—approving the action of the President in sending the expedition against Villa. In the resolution the Senate "joins with the President in declaring that such military expedition shall not be permitted to encroach in any degree upon the sovereignty of Mexico or to interfere in any manner with the domestic affairs of the Mexican people." This is a good declaration, provided it is interpreted broadly and sanely. We have no purpose of aggression against the people of Mexico. We intend no assault upon their sovereignty. But the duty of making American life and property safe which has been thrust upon us by the impotence of the Mexican people themselves is one which we must perform with all thoroughness. We must not tie our hands by any declaration which means that we may be expected to relax our efforts before this end is accomplished.

THE MYSTERY OF THE ALTRURIAN BATTLESHIP

THE other day a curious craft bobbed up at Washington, a semi-submersible torpedo-battleship of unprecedented speed and power, capable, it seems, of putting out of action a fleet of the old-fashioned dreadnoughts. This vessel was introduced by Captain Sims, of the new battleship "Nevada," in his testimony before the House Naval Committee, and he credits its invention to Commander Schofield.

Now we are particularly glad to see the torpedo-battleship come to the surface again, because we have been wondering what had become of it. It appeared out of nowhere in *The Independent* of September 30, 1909, and, after making some commotion in naval circles, vanished into the limbo of forgotten things. All we know about it was what was told by Park Benjamin in the article of that date on "The New Altrurian Battleship." From this it appears that the Republic of Altruria, tired of having to compete with "the Bullonians and the Crapaudians and the Dagoes and the savage tribes which once annihilated the legions of Varus" in the construction of bigger and more expensive battleships, set its wits to work to invent a new kind of craft that could knock them all out—and did it. This is the description of it:

Now the Altrurian vessel looked a good deal like a "whale back," such as one sees on the Great Lakes, only she was longer and narrower, say 500 feet in length and perhaps not over 30 or 40 feet in beam. Her deck, which curved over on each side, rose at the highest barely 3 feet above the water and was armored. Nothing showed on it except a low conning tower and a periscope tube, which, as is now common in torpedo boats and submarines, projected the picture of her surroundings upon the whitened table in front of the helmsman far below the water line. Her frames were of light but excessively strong steel, some one of the odd alloys which have lately been invented, and they were filled in

with immensely strong but again light compressed paper pulp. Oil carried in her double bottom supplied the fuel for her tremendously powerful internal combustion engines, which drove a multiplicity of propellers, and gave her a speed of at least 35 knots per hour. Her sole armament was ten fish torpedoes on each side, each delivered from a separate water-tight compartment, each capable of going straight for 4000 yards under water, and at a speed of perhaps 37 knots, and in the racks adjacent to each torpedo tube were six spare torpedoes. The absence of guns and of all armor except the protective deck, together with the light construction of the hull, rendered it possible to give to the gas engines the high power noted, not only for a sudden dash, but for comparatively long periods of time, and while the vessel was driving ahead, a peculiar formation of her bow sent the sea over her for a depth probably sufficient to cause any projectile striking her at the necessarily low angle to glance and ricochet from her deck without penetration. The Altrurians found that they could build six vessels like that for the cost of one dreadnought, and that she needed for her management less than one-fifth of a dreadnought crew. And because of her speed she could lie far off from the fleet and arrive close at hand at any desired moment, say in thick or foggy weather, or when the fleet was threading narrow straits, or otherwise navigating troublesome waters.

This corresponds closely to Captain Sims' subsea battleship, even in details, so it seems that there must be open sea between Altruria and the United States, altho the two countries are evidently far apart, since it takes seven years to make the passage. This may give a clue to the location of that unknown land which Howells describes so attractively in his "Traveler from Altruria."

But a more important possibility is that the "Altrurian" or her sister ships may have got to Kiel as well as Washington. If von Tirpitz or rather von Capelle has some of these up his sleeve it may go far toward neutralizing the advantage of two to one in dreadnoughts which the British now have over the Germans.

DO IT WELL

BACK of all achievement, personal and national, is Will; but the determination to achieve needs skilful directing. "Efficiency" is the science of guiding human endeavor, with the minimum of waste, to the best possible results. Everywhere is the desire to achieve, and every day the thought is growing that half life's problem is to know the simplest, quickest and most satisfactory way of doing things.

No doubt can exist as to America's constructive vitality: there is already proof of it in a coast-to-coast chain of accomplishment, in which the Woolworth Building and the Panama Canal are but two of the "outward and visible" links. And only the threshold has been crossed. None can forecast the future, but it is clear that enormous possibilities wait upon the ability of Americans to develop further, in a hundred different directions, the science of achievement as well as its spirit. In every sphere "the better method" is being sought, and the urge toward improvement affects the intimate home life of America's myriad units no less than their composite life as a community and nation.

The National Institute of Efficiency, the organization of which is reported in this issue, has come into being, as the name implies, as a part of the rapidly growing movement toward the increased effectiveness which, beginning with the individual, can become nation-wide in extent. Its endeavor will be to focus some of the attempts that are already being made to develop personal efficiency in its many aspects, as well as to encourage, by every fitting means, the acquirement of fresh knowledge leading in the same direction.

"The man is the nation," and the National Institute of Efficiency is organized in the belief that the future lies with the nation, no less than the individual, that has learned to Do It Well.

THE COLLAPSE OF A PERSECUTION

THOMAS MOTT OSBORNE, humanitarian warden of Sing Sing prison, has been acquitted of one of the charges against him in quick time. Before the defense had presented any evidence whatever, the judge directed a verdict of acquittal. The charge was perjury. The specifications were that in an investigation of conditions in the prison made by a member of the State Prison Commission the warden evaded questions as to the existence of cases of immorality among the convicts.

The judge summarily disposed of the charge by declaring that the investigation by a single member of the commission acting on his own initiative was not authorized by the law. The investigator, therefore, could not administer a valid oath, and a witness could not commit perjury in testifying before him.

The judge further declared that Mr. Osborne did not wilfully deceive the investigator, because the latter already knew from other witnesses, and the warden knew that he knew, that there had been cases of immorality among the prisoners. The judge further explained, with implied approval, why Mr. Osborne evaded the questions about immorality. He said:

The defendant's refusal to answer and his evasive replies were to keep good the promises he made to the men when they confest to him their offenses and received their punishment under the prison management; namely, that they would not be subject to further punishment therefor,

and that he would go to jail rather than betray their confidence.

The summary termination of the case by judicial decree is all the more gratifying, in that it is not the result of a technicality. "The question," said the judge, "goes to the very heart of the case."

Another indictment hangs over Mr. Osborne. In that one appears the charge of personal immorality. The warden and his attorneys press for an immediate trial, but the district attorney shuffles and delays as he has done thruout the case. As the matter proceeds, the indications become stronger and stronger that there is malevolent animus back of the prosecution. Mr. Osborne should have his second day in court without delay. There is no reason to fear that he will emerge from it less triumphantly than from the first.

Meanwhile, the inmates of Sing Sing greet the news of the warden's acquittal with boisterous applause. Their rejoicing at his exoneration is not the least evidence of his success in his whole-hearted attempt to treat criminals like men—and so help them to become men again.

THE BETTER HALF OF MEXICO

NOT all the news from Mexico is bad. For while the men are raiding and fighting, the women of Mexico have held a congress to advocate "a new system of moral and religious education." Over a thousand delegates, representing all sections of the republic, met recently in Mérida, in the province of Yucatan. They suggested measures for the enfranchisement of women and the betterment of her condition socially; they discussed progress and culture for women and for the state; and they made practical plans for acting upon the inspiration which the convention gave.

It is a striking illustration of the possible value of women in government. Mexican leaders have been for years floundering in the midst of petty revolutions and personal recriminations. They have seen no wise way out. But Mexico's women have taken a real step toward democracy and an orderly government for their country.

Naturally they urge the necessity of woman suffrage as a basis for their work. When popular suffrage is established in Mexico—as it must be if the republic is to prove worthy of the name—it will be the women who have earned the right to vote rather than the men. But perhaps they will succeed in getting it for both sexes.

WELL DONE, ST. LOUIS!

THE great city of St. Louis has voted three to one that hereafter negroes shall not move into blocks in which seventy-five per cent or more of the houses are occupied by whites, and that whites shall not move into blocks in which seventy-five per cent or more of the houses are occupied by negroes.

This is excellent as far as it goes, but why stop there? Would it not be a good plan to reserve the streets in which over seventy-five per cent of the traffic is white entirely to whites, and the streets—if there be any—in which over seventy-five per cent of the traffic is colored to the colored. If this works without injustice or friction, then St. Louis might pass an ordinance requiring the two races to eat different food, to wear different styles of clothes, and to think different thoughts.

We respectfully suggest that the fair city of St. Louis

send a commission to India to investigate and report on the admirable caste system prevailing there. It will evidently need all the light it can get in working out the broad and humane policy it has now begun.

COME BACK

COLONEL ROOSEVELT is back. He is back from his trip to the Spanish Main; and he is back on the front page of the newspapers.

There is only one man who shares with him the popular interest as possible opposition candidate for President—Mr. Justice Hughes. Local politicians are vociferating the names of favorite sons like Root, McCall, Estabrook, Sherman, Burton, Hadley, Brumbaugh, Borah, Fairbanks.

But the public will not listen. They talk only of Hughes and Roosevelt—with varying emphasis. Some like one, some the other. Some like neither, but make a wry face and admit that the one (or the other, as the case may be) must be nominated in order “to beat Wilson.”

The recrudescence of Mr. Roosevelt as a figure of political prominence is an interesting phenomenon. One phase of it is set forth on another page, where a young business man explains how he “swung back to Teddy.”

The Colonel cannot be kept for long at a time off the front page because he persists in doing and saying things that challenge attention. You may admire him or you may disapprove of him; you may hate him or you may love him. But you cannot ignore him.

He has an uncanny faculty for knowing what the people are going to be interested in, and talking about it first. When he begins to talk about it, they listen. Then they begin to talk about it, too, according to their several kinds—with acclamation or vituperation. Never with indifference.

The Colonel is bound to be an increasingly interesting figure until the seventh of June. And after? That depends.

Anyhow, he has come back.

SHAKESPEARE IN MAGNIFICENCE

SHAKESPEARE'S “Henry the Eighth” is not a closely knit, logical drama. It might appropriately be called “Scenes from the Life of a King, and His Court.” But the scenes are splendidly pictorial, and one or two of them somberly dramatic. It is not a great play, but it can be made a great spectacle.

This feat has been accomplished in rich measure by Sir Herbert Beerbohm Tree in his production at the New Amsterdam Theater in New York. It is a series of superbly decorative pictures, splashed upon the canvas of a huge stage with a lavish hand and colorful brush.

As a pageant it is even better than the best of the “movies.” One can hardly say more than that in these latter days.

But it is something more. There are two pieces of characterization in the present production that rank high as examples of the actors' art.

American audiences have learned to expect great things from Edith Wynne Matthison. Once more they are not disappointed. As Henry's queen, Katherine, she is a lovely, tragic, heart-breaking figure. Not less effec-

tive is the Henry of Lyn Harding. The sensual, heartless buffoon of a king straddles before us “in his habit as he lived.”

One would like to add a third great characterization to the list. But candor forbids. Sir Herbert's Wolsey misses greatness by the breadth of a voice. Tree is a master producer and a sound actor, but his own medium is not equal to his conception of the part he plays.

But this is ungenerous criticism. We owe him great thanks for so magnificent and artistic a production.

A NEGRO NONCONFORMIST

AN eleven-year-old colored boy in Des Moines has been brought before the Juvenile Court because he refused to salute the American flag. He declares that he will salute “nobody or nothing” but his God. His parents approve his stand.

Several such cases of refusal to conform to this new patriotic ceremony have occurred in various parts of the country, so it is well to consider the principle involved in the question. Assuming that this is a case of real conscientious scruple and not wilful disobedience or caprice, it seems to us clear that the boy is wrong in his opinion and right in his action. To most of us the salute to the flag seems a beautiful and appropriate way of expressing our loyalty to our country and our allegiance to our government. But we can easily understand that to some it might seem a bit of patriotic superstition and therefore wrong. To compel outward conformity in such a case would be to inculcate hypocrisy, and any teacher or magistrate who should use his power to such an evil purpose should himself be brought before the court. The more anxious we are to inculcate a real spirit of reverence to the flag as a symbol of our nation the more careful we should be to prevent its becoming an empty form or false pretense, and to avoid making unnecessary martyrs of conscientious dissenters.

In New Jersey not long ago a boy got into trouble with the authorities for refusal to take part in the flag ceremony, and it turned out that he was a Canadian. Of course, a foreigner who has no intention of becoming a citizen could not be expected to say: “I pledge allegiance to this flag and to the republic for which it stands,” or anything of the kind. Instead of being compelled to take such a pledge he should never have been allowed to do so. But the true born Britisher may without disloyalty raise his hat to the American flag or even join in the singing of the “Star Spangled Banner.” We will not in that case regard it as discourteous in him if he omits to voice the lines so uncomplimentary to him and the Hessians:

Their blood has washed out their foul footsteps' pollution.
No refuge could save the hireling and slave
From the terror of flight or the gloom of the grave.

On the other hand, the American does not renounce his republicanism when he joins his British cousins in singing “God Save the King.” There are some, we know, who on such occasions surreptitiously substitute the words of “America” or who modify them to “God Save Their King,” but such we regard as overscrupulous.

The modern trend is toward conformity to the customs of the community in which one happens to be as a matter of propriety and without sacrifice of principle. To be continually objecting to forms one does not like or believe in makes one obnoxious, and, besides, a conspicuous act of disapproval often gives to the ceremony an

importance and significance which it does not actually possess in the minds of its adherents. The Quakers of our acquaintance are as quick to raise the hat as any worldling, yet their forefathers would have gone to the stake rather than do such reverence to a human being.

But we must deal gently with those who decline to adopt this modern attitude and who cannot look at the question in this light. The willingness to make personal sacrifices for private convictions is all too rare nowadays to be crushed out when it appears. The question is often a vital one. Many a Chinese Christian has gone to his death rather than kowtow to the tablet of Confucius, and we honor them for it. Yet we do not believe that they were necessarily more conscientious than those who choose to interpret the ceremony not as an act of worship but as the homage due to the memory of a great and good man. Since the war began the oath required of British recruits has been changed to read: "I swear by Almighty God." This is keeping out of the army both conscientious infidels and conscientious Quakers, who are willing to give their lives for their country but refuse to say what they do not believe. Such men are needed in the British army—and elsewhere.

So let us not be hard upon little Hubert Eaves, of Des Moines, wrong-headed and pig-headed tho he may be. If he is as scrupulous in big things as he is in this comparatively little thing he will make a good citizen, even tho he may never doff his hat to the flag or stand when the national anthem is played. Such acts are valueless unless voluntary.

Very likely, if we got at the bottom of it, we should find that Hubert had been led astray by the reading of pernicious literature such as the story of William Tell. If that is the case, we are glad he refrained from using the teacher as a target for his bow and arrow. When he grows older he will learn that Third Reader heroes are to be admired, not imitated, and that there is a difference between an Austrian duke's hat and our own flag.

PREPAREDNESS IN THE SCHOOLS

WE have pointed out the objections to military training in the public schools. It should not be necessary to explain that our objections apply only to military training in a technical sense of the term, and not to those exercises and disciplines that are proper elements of any sound education, preparatory to a responsible citizenship. As we do not propose to have our actual contention in this matter distorted or perverted by parties who will not or who cannot make valid discriminations we shall take the trouble to present certain distinctions explicitly enough to remove all excuse for misunderstanding.

The essentials of technical military training are drill in the manual of arms, organization by military units, and specific instruction and practice in military operations. The public schools, we contend, are not the place for these exercises and schemes of organization.

On the other hand, there are disciplines that are essential to the making of good soldiers which also are essential to the making of self-reliant men and women, good members of society and good citizens. These exercises the schools should give with firmness of discipline and under intelligent direction.

First among these measures of preparedness for sound and dutiful living is physical training, as rigorous, as

scientific, as the most urgent military necessity could call for. Not only should all school pupils be taught habits of proper care of their bodily health and made to perform the ordinary gymnastic work, they also should be held strictly to the achievement of specific accomplishment, namely, to carry themselves properly, to endure marching, to swim, to handle the tools that pertain to emergency situations, as ax, pick and spade. The spirit and the method of such instruction is totally different, as every well-informed person knows, from the spirit and the method that go into a feverish training for doing athletic "stunts." The public school athletic activities that have been developed in New York City under the enthusiastic supervision of General Wingate and of Dr. Crampton afford suggestions that are well worth the serious study by other communities.

In the second place, public school pupils should be taught respect for authority, decorum, and obedience. The extent to which rowdyism and hoodlumism prevail in America is not only a national disgrace, it is an incontrovertible evidence of indifference to a serious situation which includes wastage of energy and a general state of inefficiency. We let children grow up without respect for their elders and without courtesy toward one another. Those educators who see in an insistence upon deference and obedience a survival of the obsequiousness of subject classes to the socially powerful are blind to some of the most essential facts of life. Obedience of the weak to the powerful is not the only or the most important obedience in human society. If we are to have collective effort, organized activity and the achievements which are possible only thru a proper functioning of society, respect for experience, obedience to accredited leaders and to group law are far more essential than is any obsequiousness of the subordinated to the dominating element in the despotic state. They are facts of sound economy, of efficiency, of moral steadiness, and of self-command.

Finally, there should be stimulation of initiative and training in self-reliance. We believe that one of the most costly and lamentable fallacies in prevalent educational philosophy is the assumption that there is a necessary conflict between an old-fashioned discipline which included an insistence upon acquisition, obedience and facility, on the one hand, and, on the other hand, the encouragement of curiosity, the strengthening of powers of observation and invention, and the development of self-reliance. There is no such conflict except in the imagination of pedagogic partisans. There is no good reason why all that has been best in the older schemes of education should not be conserved and combined with all that is good in the so-called Gary plan. Also our educational scheme should include practically all of the activities that have been developed in the Boy Scout movement.

When pupils leave the public schools they should be ready for the further disciplines of peace or the further disciplines of war as fate shall require of them. They should be physically sound and be masters of the important physical activities. They should be obedient, respectful and law-abiding. They should have acquired sound knowledge and facility in applying it. They should also be independent, inventive and resourceful. To think of this ideal as beyond attainment or even as of prohibitive difficulty or costliness, is absurd and inexcusable. If we do not demand its realization it is because we are un-awake, indifferent and ineffective.

THE STORY OF THE WEEK

Our Soldiers in Mexico

The troops of our punitive expedition crost the boundary and entered Mexico on the 15th, General Pershing commanding one column that started from Columbus, New Mexico, while another, entering at a point further west, was led by Colonel Dodd. The entire number was a little more than 4000, but it is said that between 7000 and 8000 American soldiers are in Mexico now. General Pershing's force was joined by a party of Carranza's soldiers, several of whom were used as scouts, altho this is denied by General Gavira, the Carranza commander at Juarez. Villa had gone southward. On the 18th he was about 110 miles southeast of Casas Grandes, and 100 miles in advance of the American troops. Carranza, who had about 5000 men in Chihuahua, ordered reinforcements, and 20,000 men were said to be on their way north.

When it was reported that our troops were about to enter Casas Grandes, General Gavira telegraphed an order that they should not be permitted to do so. For a time there was danger of a collision, but our Government gave notice that its forces would not occupy any towns, whereupon Gavira said the crisis had passed. He had exprest disapproval of the admission of American troops, and had feared that our soldiers would be attacked by "snipers" if they should enter Casas Grandes, or even pass thru the place. The fact that they had entered Mexico without being molested he regarded as a supreme tribute to the Mexican people's confidence in Carranza. Colonel Slocum, who was in command at Columbus when Villa attacked the town, has offered a reward of \$50,000 for the capture of Villa, and about \$50,000 more has been offered by American ranchmen in Northern Mexico.

Our Government, on the 13th, accepted Carranza's proposal that there should be reciprocity in crossing the

boundary. It "readily granted permission for military forces of the de facto Government of Mexico" to cross in pursuit of "lawless bands of armed men who have entered Mexico from the United States, committed outrages on Mexican soil, and fled into the United States," on the understanding that a reciprocal privilege should be given to our forces. Gratification was exprest because Carranza had shown "so cordial and friendly a spirit of coöperation." At the same time Secretary Lansing issued a statement in which he said that, to remove any misapprehension that might exist here or in Mexico, the President had authorized him to give the public "assurance that the military operations would be scrupulously confined" to the pursuit of Villa, and "in no circumstances would be suffered to infringe in any degree upon the sovereignty of Mexico or develop into intervention of any kind in the internal affairs of our sister republic." On the contrary, what we were doing was "deliberately intended to preclude the possibility of intervention."

Carranza at once ordered his forces to coöperate with our soldiers, and a similar order was sent to the border garrisons by General Obregon, his new Minister of War. Carranza also published a statement in which he said that there was no longer any danger of international complications. At the Mexican capital and in Queretaro there were parades, with cannon salutes and the ringing of church bells. Placards asserted that Carranza was the savior of Mexico's honor. From a large meeting in Vera Cruz a message of congratulation was sent to President Wilson. But there were disquieting reports from many places in Mexico. Carranza's troops in Juarez were angry, and Americans were insulted there. Our consul at Torreon, Mr. Williams, with eighty-six American residents, came to Texas because Torreon was no longer safe. There was trouble in Tampico.

To many Mexicans, Villa was a hero, and they had no confidence in the assurances given by our Government.

Action Taken in Congress

On the day when Carranza's request for reciprocity in crossing was granted, Mr. Wilson urged the leaders in Congress to prevent delay in the consideration and enactment of the pending defense bills. During a debate in the Senate, Mr. Borah and Mr. Warren, Republicans, heartily supported him and argued against delay. Mr. Borah remarked that the result of the movement against Villa could not be foreseen. On the Democratic side, Mr. Myers said the present army was large enough, but he was met by a chorus of protests. He assumed that we had 100,000 men. Mr. Chamberlain said that in the continental United States there were only 35,000, and that only half of these were available for service in Mexico. Mr. Borah exprest the opinion that we might need 50,000 or 100,000.

At the urgent request of the President, on the following day, the House passed a resolution authorizing him to increase the army to the maximum permitted by existing law. The vote was 236 to 1, Meyer London, Socialist, being the only member in the negative. It was shown that our mobile army was composed of 36,433 men, not including the coast artillery, and that only 34,510 were available for service in Mexico. There have been 19,000 on the border. Mr. Hay said that many in the militia had volunteered, but he thought it would be better to enlarge the regular army. The same resolution was adopted in the Senate by unanimous vote.

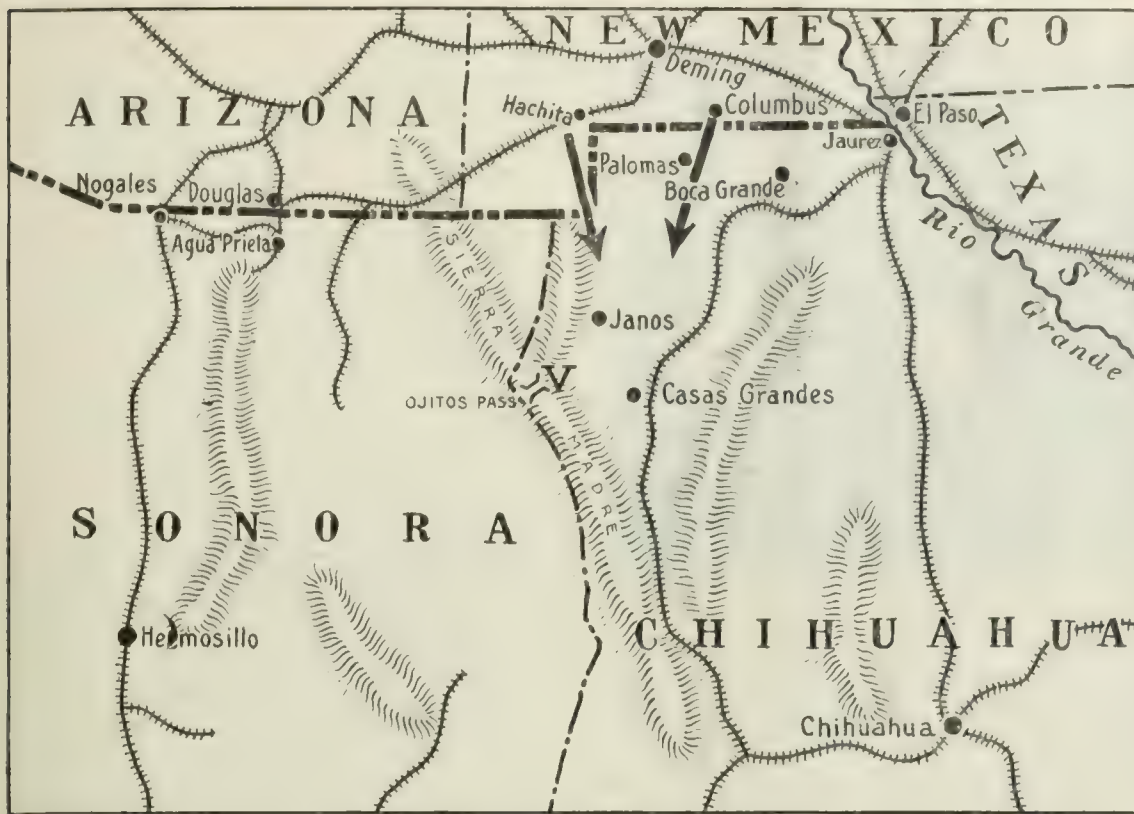

Two days later, Senator La Follette, with the knowledge and approval of President Wilson, introduced a concurrent resolution, in which, after preambles referring to the assurances already given by the President and Secretary Lansing to Carranza, the use of the

ACTIVITY ON THE BORDER

Two columns of American troops, cavalry with some artillery, have already crost over into Mexico hunting Villa

THE AMERICAN PURSUIT OF VILLA

As The Independent goes to press the cavalry column commanded by General Pershing, which started from Columbus, is reported to be beyond Casas Grandes, and moving southwest, 133 miles from the border. Villa is said to be near Babicora—about where a line drawn thru Palomas and Casas Grandes would intersect the Sierra Madre. Carranza forces are said to hold all the passes thru these mountains.

armed forces for the sole purpose of apprehending and punishing Villa and his lawless band was approved by Congress, which extended to the de facto Government of Mexico and to the Mexican people assurances that this was the only object of the punitive expedition, and that "Congress, in approving this use of the armed forces of the United States, joins the President in declaring that this military expedition shall not be permitted to encroach in any degree upon the sovereignty of Mexico or to interfere in any manner with the domestic affairs of the Mexican people." Without debate the resolution was adopted by a unanimous vote. Mr. Fall, of New Mexico, was absent. After his return he said that if he had been present he would have registered his complete disapproval of the resolution, and would have opposed the adoption of it. Similar action upon the resolution in the House within a few days was expected. It is understood that our Government has given large

orders for munitions to several companies that have been at work on foreign contracts.

The Army Bills

There has been debate in the House on the bill reported by Mr. Hay for enlarging the army, and in the Senate a bill of the same general character has been reported from committee. The House bill provides for a regular army of 140,000 men, and empowers the President to make the total 170,000 in an emergency. In the Senate bill provision is made for an army of 194,000 in time of peace, with a war increase to 236,000. Both bills call for a federalization of the militia, but the plan in the House bill is held by some to be at variance with the Constitution. In addition, the Senate bill proposes something resembling the Continental Army which was a feature of the plan supported by Secretary Garrison. Both bills largely increase the number of West Point cadets.

Representative Gardner read a letter, signed by Mr. Baker, the new Secretary of War, severely criticizing the Hay bill and the committee's statements in support of it. This letter, it has been shown, was prepared in the War College, and signed by Mr. Baker as a matter of routine. Mr. Hay declared that his bill was satisfactory to the President. The Senate has passed a bill appropriating \$2,065,000 to be used in equipping the Puget Sound Navy Yard for the construction of battleships.

The Sugar Duty Retained

It was provided in the Underwood tariff law that the duty on sugar should be removed in May of this year. Because more revenue is needed, on account of the great war, it was decided some time ago at Washington that this part of the tariff law should be repealed. On the 16th a resolution repealing it was adopted in the House by a vote of 346 to 14. Those in the negative were thirteen Democrats and the only Socialist member, Mr. Meyer London. There will be concurrence in the Senate, and by this action of Congress there will be retained \$44,000,000 of annual revenue. Preceding the vote in the House there were seven hours of tariff debate.

The respective merits or demerits of the Payne-Aldrich and Underwood tariff laws were the subject of much talk. Democrats were accused by Republicans of reversing their policy as to "free sugar." Among the Democrats who voted against repeal were Mr. Tavenner and Mr. Buchanan, of Illinois, and Mr. Bailey, of Pennsylvania, an intimate friend of Mr. Bryan. Several of the opponents said that they could not vote against removal of the duty after telling the voters in their districts that removal was one of the Democratic party's most notable achievements. The duty is a little more than one cent a pound. Mr. Bailey has introduced a bill providing for complete free trade with any country in South America or Central America that will adopt the same policy with respect to imports from the United States.

Democratic leaders in the House intend to present for action a bill creat-

IN SERRIED RANKS THE POETS STOOD

At the Civic Forum dinner in New York last week most of the better known poets of this country and some of England were guests. A few of them are here, gathered around Masefield, in whose honor the literary dress parade was held. Standing, from the left, Lawrence Housman, Witter Bynner, Percy Mackaye, Edwin Markham, Cale Young Rice, Louis Untermeyer, Vachel Lindsay. Seated, Amy Lowell, Josephine Daskam Bacon, John Masefield, Alfred Noyes

ing a tariff commission of the kind suggested by President Wilson, certain changes in duties relating to dyestuffs, and the provisions proposed by Secretary Redfield for protection against the "dumping" of European products on our market at very low prices after the war. Some increase of the present duties on dyestuffs will be proposed, but the additions will not be so great as those recommended in the schedule submitted by the American Chemical Society. The taxes of the war revenue law will be continued, the stamp taxes excepted, and the bill will include the projected increase of the income tax.

Trust and Rebate Cases Three and one-half years ago the Government brought suit against the Association of Billposters of the United States and Canada, under the Sherman Anti-Trust law, asking for a dissolution. In Chicago, last week, Judge Landis, of the Federal court, decided that the association was an illegal combination in restraint of trade. Execution of an order for dissolution was deferred for sixty days, to give time for an appeal to the Supreme Court. The Government charged that the association, since it was formed in 1891, had sought in many ways to crush competition. It had admitted to membership, the Government asserted, only one person or firm in each town; had declined to serve advertisers who gave work to those who were not members; had established uniform prices; had driven out of business lithographers who worked for those outside, and had formed an alliance with a dozen prominent advertising agencies, by means of which its ability to injure competitors was increased.

Judge Gary, of the Steel Corporation, and the steel companies indicted at Youngstown, Ohio, for violating Ohio's Anti-Trust law by conspiring or agreeing to increase wages, have moved that the indictment be quashed, saying that it does not show how the alleged agreement was carried out. The charge was based upon the fact that within two days all the accused

companies increased the wages of their workmen by 10 per cent. The business men of Youngstown regret that the companies (one of them being the Steel Corporation) were indicted, fearing that Youngstown will not be in the list of places where the companies are to spend large sums for those extensions and improvements which the great prosperity of the steel industry demands. The Government, which was to submit at Washington, on March 15, its appeal from the decision in favor of the Steel Corporation (in the suit for dissolution) has asked that the time limit be extended until July 15.

Following the decision which required the New Jersey Central Railroad Company to pay a fine of \$200,000 for giving rebates to the Lehigh Coal and Navigation Company, a Federal court has now found the latter company guilty of soliciting and receiving the rebates. As the company was convicted on twenty-seven counts, the maximum fine permitted by the law is \$540,000, but the jury recommended clemency. It has been pointed out that the Government is authorized to sue for three times the sum involved in the rebates, or for several millions of dollars. There are no indications, however, that it will take such action.

Wages and Strikes Altho the bituminous coal miners have been successful in conferences with their employers, and have gained a wage increase that will add \$8,000,000 to the annual cost of production, a settlement with the anthracite miners has not been reached. They ask for a wage increase of twenty per cent, an eight-hour day, and recognition of the union. Their employers, who assert that the proposed wage increase would add \$23,000,000 to the annual cost of their labor, say that the cost of production has already been considerably increased by the high prices of explosives used in mining, this advance having been due to the war. It is said that they will not recognize the union. Many real estate, civic and commercial organizations, led by the New York Real Estate Board, have sent letters to Presi-

dent Wilson and members of the Senate and the House, asking that an investigation concerning the coal industry, with especial reference to distribution and prices, be made by a Federal commission. Such an inquiry, they say, might prevent a strike.

In New York City, 1000 public school teachers have formed a union, to be affiliated with the American Federation of Labor. Among the speakers at their meeting were Miss Haley, who organized the teachers' union in Chicago, and a representative of the Federation. At a meeting of 800 actors in New York there was a unanimous vote in favor of organizing a union, to be associated with the Federation. Meetings at which similar action was taken were held on the same day in Boston, Chicago and Philadelphia.

Twenty thousand painters, paperhangers and decorators in New York have voted to strike for a daily wage of \$5. Those in Brooklyn are to go out on April 1, and those in other parts of the city one month earlier. It is said that about 20,000 in other Eastern cities will begin a strike on April 1, and it is expected that 6000 tailors in New York will decide to take the same course in the early weeks of April. Twenty-seven shops in New York are still closed, on account of the strike of cloak and suit makers, but the 8000 workers in the embroidery trade, after being on strike for nearly six weeks, have returned to work, having gained a wage increase of about ten per cent, a week of fifty-two hours, and a plan for the settlement of grievances, with final appeal to an arbitration board. Additional strikes have closed several factories in Passaic, N. J., where about 4000 employees are out. The demand is for a wage increase of 15 or 25 per cent. A few have accepted ten per cent and returned to work.

The Progress of Woman Suffrage The New York State Assembly has passed by a vote of more than three to one the woman suffrage bill providing for a referendum on the Constitutional amendment. The majority in favor of the measure was larger than even the most optimistic suffrage predictions—109 for the referendum and only thirty-one against it.

In the New York Senate, however, an entirely different attitude toward woman suffrage is being shown. By a program of procrastination and obstructionist tactics the Judiciary Committee is putting off its report on the Whitney-Brereton bill, in spite of the fact that eight of the thirteen members of the committee have declared themselves in favor of it. Senator Elon Brown, chairman of the Judiciary Committee, is held responsible for the successive delays, tho he has tacitly promised a report of the bill by announcing that he will vote against it when it comes before the Senate.

At an indignation mass-meeting in Cooper Union both men and women suffragists of New York City voiced their protest against this inaction.

In Congress the question of nation-

wide woman suffrage has been promised a hearing as the special order of business on March 28. Lobbyists from all over the country, armed with petitions, letters, and telegrams from constituents "back home," are urging a favorable consideration of the Federal Suffrage amendment. The women voters of Illinois have sent to Congressman Kitchin a petition bearing twenty-one feet of signatures in its favor. Most of the members of the Judiciary Committee have promised to support the amendment.

The Fourth Week of Verdun

During each of the first three weeks of the attack on Verdun the Germans made definite advances, first on the north, then on the east and lastly on the west. During the past week on the contrary they have made no perceptible progress altho they have attacked on both the eastern and western sides.

On the western side of the Meuse the Germans last week obtained a lodgement in Crows' Wood (Bois des Corbeaux) which lies between the heights of Le Mort Homme (Dead Man's Hill) and Côte de l'Oie (Goose Ridge). These are isolated elevations commanding the railroad, which runs along the left bank of the river, and the route along which the Germans must advance if they are to encircle Verdun on the western side. The French, fully realizing the importance of holding these positions, had banked here their famous 75 millimeter field guns. Met by this withering fire the German troops were mowed down before they got half way up the slope of Goose Ridge.

Their assault on Dead Man's Hill promised to be more successful. After a terrific bombardment of ten French trenches, lasting more than twenty-four hours, the Silesians charged the hill from Crows' Wood in three separate columns. Line after line swept up the slope, a hundred yards apart, the men standing so close in the line that they could have clasped hands. In crossing the open they were exposed not only to the fire of the batteries they were assaulting, but to an enfilading fire from the neighboring heights. Nevertheless they succeeded in gaining some two hundred yards of the outermost French trenches and captured a thousand prisoners. Apparently they were not able to hold these gains for at the end of the week the French official report claimed complete possession of Dead Man's Hill.

On the eastern side of the Verdun complex the German bombardment and assaults were directed at the fort and village of Vaux. But the attacking troops were driven back by the French curtain of fire, leaving, it is said, thousands of their dead on the field.

Airy Navies The battle of Verdun, unprecedented in the amount of ammunition expended and probably also in the numbers slain, is unique in another respect as the first time in history that aeroplanes have taken an active part in the fighting. They are employed not only against

other planes, but against troops. When the Germans were bringing up a battery to shell Pepper Ridge (Côte du Poivre) an air squadron swooped down upon them and dropt bombs from an altitude of less than a thousand feet. The first series of bombs killed nine horses and thirty men. With other horses wounded and frightened the guns could not be moved and the soldiers abandoned them and ran to cover.

In one day the French reported twenty aerial engagements in the area northeast of Verdun. Sometimes these are duels, sometimes a score of avions participate. The new German "dreadnought of the air," the Fokker biplane, turns out to be not so invincible as was feared at first.

The most famous of French airmen is Sub-Lieutenant George Guynemer. He is barely twenty-one and at the outbreak of the war was a high school student. He offered himself for the army, but was rejected by the examining board. Then he set himself to learn flying and last August obtained his pilot's license. In December he brought down his first German machine, a Fokker, and since then he has devoted himself to single combats with the German aeroplanes. He flies alone and acts both as pilot and gunner. In one of these duels he chased the German to a height of two miles, where the air was so cold that his machine gun would not work because of the freezing of the oil. But Guynemer dashed against the German machine and both fell. The German aeroplane was crushed on the ground, but Guynemer recovered control at a height of 1500 feet and alighted

safely. For his exploits he has been awarded the Legion of Honor, the Military Medal and the War Cross. On the ribbon of the cross are embroidered eight palms, one for each German aeroplane that he has brought down. According to a Swiss report he has been shot by a German aviator and wounded in the face and left arm.

Doubtless one reason why the German onslaught on Verdun has slackened is because the French air raids have interfered with the lines of communications to the supply depots in the rear. The army which is attacking Fort de Vaux receives its ammunition and reinforcements by means of the railroad that runs via Conflans to Metz. But one night last week a squadron of seventeen French aeroplanes from Verdun flew over this line, dropping forty large caliber shells on the station at Conflans and fourteen on the station at Metz. All the aviators returned to base unharmed. On another night forty-two shells were dropt on the station at Brioules which feeds the northern sector of the investing force.

Mülhausen was raided by a French air squadron of twenty-three machines bent on destroying the railroad station and aviation camp. According to the German report four of the French aeroplanes were brought down. Seven of the inhabitants of Mülhausen were killed and thirteen injured. One soldier is reported killed.

Four German seaplanes flew over Kent at a height of over a mile. A British monoplane pursued them out to sea and brought down one of them, the first

SHAKESPEARE SUPERBLY PLAYED

In the production of "Henry the Eighth," made by Sir Herbert Beerliohm Tree, a high level of dramatic characterization is reached by Edith Wynne Matthison as Katharine and Lyn Harding as Henry. We comment editorially on the production elsewhere in this issue.

THE GREAT WAR

March 13—Germans and British fight over Hohenzollern Redoubt, near La Bassée. Turks report British loss of 5000 in Tigris.

March 14—Germans attack Dead Man's Hill, west of Verdun. Senussi defeated on Egyptian frontier.

March 15—Austrians repel Italian attacks on San Marino, near Görz with heavy loss. Dutch liner "Tubantia" sank.

March 16—Admiral von Tirpitz retires from Ministry of Marine. General Roques succeeds General Gallieni as French Minister of War.

March 17—Germans repulsed at Vaux, east of Verdun. Antonio Almeida becomes Premier of Portuguese war ministry.

March 18—Dutch liner "Palembang" sunk. Seventeen French aeroplanes bombard Conflans and Metz.

March 19—Forty French aeroplanes raid Alsace-Lorraine, killing seven civilians. Four German aeroplanes raid England, killing nine civilians.

time the British aviators have succeeded in inflicting any damage on the air raiders. One bomb dropt on an orphan asylum. The total losses were three men, one woman and five children killed; seventeen men, five women and nine children injured.

Retirement of Gallieni General Joseph Gallieni, who last fall succeeded M. Millerand as Minister of War, has now resigned that post by advice of his physicians. There have been rumors of his disagreement with Generalissimo Joffre, but we need not question that the strain of his tremendous exertions have been too much for his sixty-six years. It was he who organized the defenses of Paris in August, 1914, and gave the first check to General von Kluck's advancing army.

His successor in charge of the war department is General Pierre Augustus Roques, who is, like Joffre, an engineer and a southerner, and served with Joffre in Tangking and Madagascar. The splendid record which the French have made in the air is largely due to General Roques, for as Inspector General of Aeronautics, 1910-1912, he devoted himself to the development of the aerial arm. For his distinguished services in the fall of 1914 he was placed at the head of the First Army. He has six years the advantage of General Gallieni in the matter of age.

The repulse of the Germans at Verdun has greatly encouraged the French and they speak now with more confidence not merely of their ultimate victory, but of its speedy coming. The Minister of Finance, Alexandre Ribot, in presenting the budget to the French Chamber of Deputies, said:

We can say without exaggeration, without illusion and without vain optimism that we now see the end of this horrible war.

The new budget calls for an appropriation of \$1,560,000,000 for the second quarter of 1916. This will bring the total French expenditure on the war to \$7,400,000,000 by the end of June. The daily expenditure has risen to \$17,400,000.

M. Ribot recommended the curtailment of all luxuries and the sale of American securities:

We must look thru our portfolios of foreign securities and send to the United States all we are able to pick up in the French market of securities negotiable there. The total amount of American securities is not as large as we could wish.

The Teutonic Neptune

The resignation of Admiral von Tirpitz as Imperial Minister of Marine is doubtless one of the crucial events of the war tho what are its reasons and what will be its effect upon the German naval policy must remain for the present a matter of speculation. It was he who developed the giant submarines which were to shut off England's commerce and he has bitterly opposed all restrictions of their power of attack upon merchant shipping. It is also rumored that the Kaiser has been dissatisfied with him because of the inactivity of the German fleet.

Whatever may be the judgment of the future upon the effect of his activities it cannot be denied that few men have had a greater influence upon the course of history than Admiral von Tirpitz. The present war is essentially a struggle between Germany and Great Britain for the mastery of the sea and it is thru the efforts of Tirpitz that the German navy was created. While still a boy he acquired a great admiration for England and was seized with the desire to have Germany emulate her naval prowess. In 1898, when the Kaiser, largely under the influence of Admiral Mahan's "Influence of the Sea Power on History," came to the conclusion that "the future of Germany lay on the sea," he called upon Tirpitz to put this policy into effect.

From 1898 to the present Admiral von Tirpitz has remained in power and by his indomitable will has overcome all opposition. His first naval bill in 1900 called for a program almost as ambitious as that announced by President Wilson in his western speeches:

Germany must have a fleet of such strength that a war even against the mightiest naval Power would involve such risks as to threaten the supremacy of that Power.

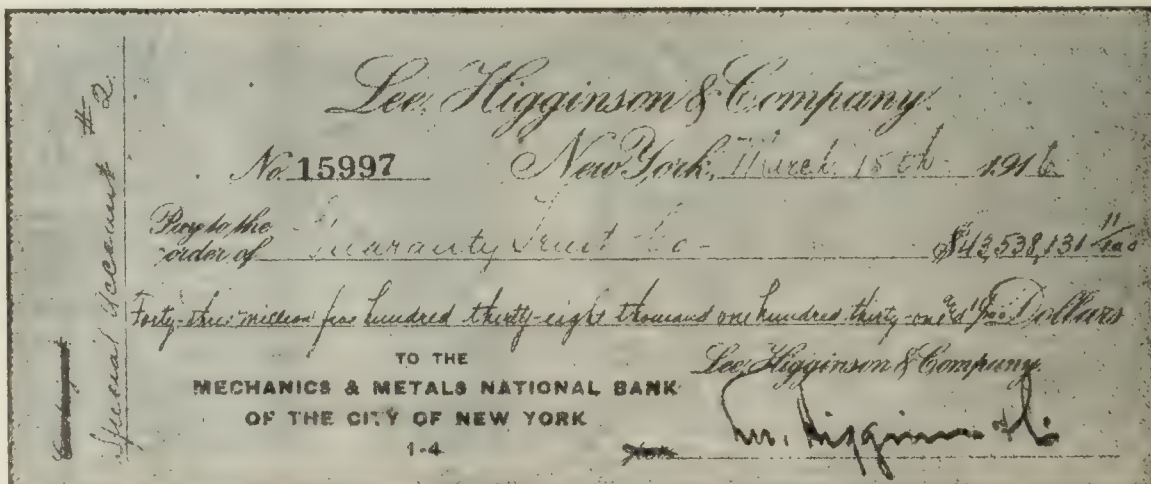

The year before the naval appropriation has been thirty millions a year, but by the time the war broke out he had forced the Reichstag to provide \$115,-

000,000 a year, and the German navy had been raised to the rank of the second in the world.

The sinking of two unarmed neutral vessels "Silius" and "Tubantia" within a week has revived the discussion of the question of Germany's submarines. There is, however, no clear evidence as to the cause of the disaster in either case. The "Silius" was a Norwegian bark carrying grain from New York to France. She had arrived at her destination and was anchored in Havre Roads when in the middle of the night she was blown up by an explosion. The French steamship "Louisiane," close by, had been sunk a half hour earlier. The "Silius" carried a crew of seventeen of whom seven are Americans. All of the Americans were saved, tho one was wounded. The German Government has denied that any of its submarines were concerned in the sinking of the "Silius." The channel where she lay was only thirty feet deep and no submarine has ever been known to attack in such shallow water, so it seems more likely to have been a floating mine. Since the American sailors being members of a Norwegian crew were under the authority and protection of Norway, and since the disaster occurred in French waters over which the United States has no jurisdiction, it is not probable that our Government will take any action in the case, tho if the "Silius" should prove to have been sunk by a German submarine it would increase the distrust of Germany's pledges not to attack unarmed merchantmen.

The other case is somewhat similar. The Holland-Lloyd liner "Tubantia" was struck amidships nine feet below the water line early in the morning off Noordhinder Lightship. She had left Amsterdam for Buenos Aires with 80 passengers and a crew of 300. All on board except four were rescued by Dutch torpedo boats.

The anti-German feeling in Holland was intensified by the sinking of a second Dutch liner three days later. The "Palembang," bound for Java, was struck by a torpedo off the Essex coast and sank in nine minutes. All of the crew were saved, altho nine were injured by the explosion.

THIS CHECK WAS PASSED IN NEW YORK LAST WEEK

It was part of the payment of \$50,000,000 for the issue of Midvale Steel convertible five per cent bonds recently sold to a New York banking syndicate. Only two larger checks are on record, the largest being for \$62,075,000

NATIONAL INSTITUTE OF EFFICIENCY

YESTERDAY "Efficiency" was a suspected term. Today it stands as a beacon light to which thousands, in every walk of life, are looking hopefully. Tomorrow it is destined to be the very key-note of personal and national activity. Efficiency is no longer a vogue, but a principle. Its claim on the future is inevitable, and no less certain are the enormous results that must spring from its application. Even from day to day there is better understanding of what Efficiency means in its widest aspect, and how vastly greater is its field than any successful experiment in motion-economy or a newly found instrument for labor-saving—however valuable these may be within their limited sphere. Rather than representing the source of technical devices and "smart" business methods, Efficiency is seen to be the path down which every ambition, however lofty, must work to its goal. The word is coming to embody the very spirit of attainment.

Five factors are involved in all great work: material, machines or tools, methods, money, and man, and the greatest by far is the man. Minute study has already been devoted to the first four, and specially to machines and methods. But the experts have given less attention to the most important factor. Scores of organizations, local and national, are doing valuable service for Efficiency, but hitherto none has emphasized fully the intimately personal application of the Efficiency Idea. The domain of Efficiency stretches, potentially, far beyond the routine side of the workaday world. Centering first in the individual, it may and should permeate every science and art contributing to the advance of American civilization. It is in the spirit of this belief that a new organization—destined, its originators hope, to materially serve the movement toward Efficiency—has been brought into being.

On Lincoln's birthday, the 12th of February, there was incorporated, under the educational laws of the District of Columbia, the National Institute of Efficiency, and on Saturday, March 11th, the organizing meeting of the Board of Governors was held at the Aero Club of America, New York. Those who were present, representing widely varied fields of activity, were at one in their conviction that Efficiency is the commanding need of the nation, and the Institute is dedicated to the proposition that human Efficiency—the Efficiency of the individual—lies at the foundation of all great work, in government, in business, in the home. Its purpose is therefore to promote Efficiency in the individual, to popularize its practise, and to develop personal Efficiency as applied to every problem of life. Accordingly its aim will be to make available and of practical value to the average man the best results attending the work of experts in the universities, laboratories, factories, studios, and even the playing-fields of the country.

From the list of Governors of the new Institute, given below, can be gauged the breadth of the movement of which the organization should become the instrument:

Mr. Gutzon Borglum, Sculptor and Publicist.

Hon. Melvil Dewey, President of the Efficiency Society.

Mr. William F. Dix, Secretary of the Mutual Life Insurance Company.

Dr. Henry Sturgis Drinker, President of Lehigh University.

Hon. John H. Finley, Commissioner of Education of the State of New York.

Hon. Philip H. Gadsden, President of the Charleston Consolidated Railway and Lighting Company.

Hon. John Hays Hammond, Mining Engineer and Diplomat.

Hon. Job E. Hedges, Lawyer and Statesman.

Mr. Henry B. Joy, President of the Lincoln Highway Association and of the Packard Motor Car Company.

Mr. Curtis J. Mar, President of the Efficiency Publishing Company.

Mr. J. Horace McFarland, President of the American Civic Association.

Hon. Truman H. Newberry, ex-Secretary U. S. Navy.

Hon. Alton B. Parker, former Chief Justice of the Court of Appeals of New York.

Admiral Robert E. Peary, Explorer, and discoverer of the North Pole.

Hon. Herbert W. Rice, President of the U. S. Gutta Percha Paint Company.

Hon. John A. Stewart, Chairman of the Executive Committee of the American Peace Centenary Association.

Hon. Conrad H. Syme, Corporation Counsel of the City of Washington.

Mr. Richard B. Watrous, Secretary of the American Civic Association.

Hon. William R. Willcox, former Chairman of the Public Service Commission of New York.

Mr. Henry A. Wise Wood, President of the American Society of Aeronautic Engineers.

Major General Leonard Wood, United States Army.

The by-laws of the Institute were adopted and the following officers elected for the coming year: William B. Howland, president; Alton B. Parker, vice-president; Richard B. Watrous, secretary; Herbert W. Rice, treasurer.

With the work for which the National Institute of Efficiency has been established The Independent has been conspicuously identified, especially during the past year, and it has now been chosen by the Board of Governors as the official organ of the Institute.

The Independent entered actively upon its Efficiency crusade a year ago last November, with an article on "Efficiency and Life," by Edward Earle Purinton. This was followed by the discussion of various phases of Efficiency by men of power and achievement, such as Elbert H. Gary, William R. Willcox, John Purroy Mitchel, Harrington Emerson, John Wanamaker, Frank A. Vanderlip, Louis D. Brandeis, F. C. Henderschott, Luther Halsey Gulick and Charles W. Eliot. Mr. Purinton's article was accompanied by a "Personal Efficiency Test," affording opportunity for showing in terms of percentage the effectiveness of the individual. Mr. Purinton's articles, and especially the Efficiency Test, attracted very wide attention. With these articles and tests originated The Independent's Efficiency Service, under Mr. Purinton's charge, which has been of practical use to a great number of people in all walks of life.

Mr. Purinton has been selected by the Board of Governors of the Institute as the Chairman of its Editorial Board, which, in coöperation with the Institute Committees, has before it the task of presenting the most recent findings of a science that is daily extending its boundaries. There is no last word in Efficiency. Able minds are constantly coming upon improved means of meeting specific needs in their individual life work. Data accumulates faster than it can be used, and needs only careful correlation to transmute it into the concrete stuff of self-improvement. In this fact is to be found the goal, no less than the origin, of the Institute. Such a goal, in face of the complexity of modern life, is beyond any single individual, but to a body of the scope of the National Institute of Efficiency it would appear as possible of attainment as it is desirable. And the names of those identified with the Institute's future stand, meanwhile, as assurance that great and varied ability will be brought to the matter in hand.

Boye, San Francisco

ELBERT H. GARY
CHAIRMAN OF THE BOARD OF DIRECTORS
OF THE UNITED STATES STEEL
CORPORATION

BUSINESS TO-MORROW

BY ELBERT H. GARY

CHAIRMAN OF THE UNITED STATES STEEL CORPORATION

WHAT changes the next generation will see in American business and industry no one can tell. There has probably never been a time when the forecasting of the future was more difficult and hazardous. As a result of the great war the entire civilized world is confronted with economic and political conditions that have no parallel in history.

It is true that we in America have been less directly affected than the peoples of the belligerent nations. But the whole fabric of modern industrial civilization has become too closely woven to permit of any civilized nation escaping some share in the consequences of this epochal world war.

Not even of the immediate future can we speak with any feeling of certainty. This war will end some time, of course, and it is my personal opinion that it will be ended sooner than most people think—by the economic exhaustion of the belligerents, if in no other way. One thing seems fairly sure. Whenever peace comes American business men must be prepared to face, temporarily at least, a falling off in our present enormous export trade. Moreover, the purchasing power of the whole world will have been greatly reduced, and in all the markets of the world there will be the keenest kind of competition based on cheap labor and low costs. Most of the foreign manufacturing countries, if not all of them, will protect themselves from destructive competition by tariff provisions, and we should even now be giving careful thought to this subject. So far as possible the entire question should be removed from politics. A scientific study of the facts should be made, and based on that study there should be evolved a tariff system that will be adequate—no more and no less—for the protection of our manufacturers and wage earners.

The plain dictates of common sense bid us to make these preparations. The transition from war to peace must necessarily entail a period of economic readjustment that will bring radical changes in volume and prices to most lines of business. There is some danger at present of overproduction, overextension of credit and liabilities and over confidence. We should proceed

Judge Gary—he sat on the bench for two terms in Du Page and Cook counties, Illinois—had practised law for twenty-five years and had been president of the Federal Steel Company for several years when the United States Steel Corporation was formed in 1901. He was an active participant in its organization and became chairman of the Board of Directors and of the Finance Committee. In this position—which is one of the half dozen most responsible in the financial and industrial world—Judge Gary has stood for many years as a leading spokesman of progressive business.—THE EDITOR.

with caution, but with faith in the great future of our country.

HOW SHOULD YOUNG MEN TRAIN FOR THE FUTURE?

IT is, in truth, with the next generation of American business men that some of the greatest problems and opportunities of American history lie, and it would serve a more useful purpose here to point out what, in my opinion, these problems and opportunities are, and how the young men of today may best prepare to meet them, than to attempt to forecast the future. I address myself, therefore, primarily to the ambitious young men who are shortly to enter business and are now seeking to obtain the training that will best fit them for successful careers.

Before there can be any intelligent discussion of what nowadays constitutes the right sort of educational training for a successful business career we must have an accurate conception of the service requirements of modern commerce and industry. They are very different from what they were when I was a young man. The past thirty or forty years have seen amazing changes in practically every line of industry. This is an age of vast coöperative organization, of large scale production going hand in hand with minute scientific economies in every process of manufacture. It is an age of great machinery and enormous mills and factories where armies of men labor under the efficient direction of technical experts. Above all it is an age of specialization. No man can expect to go very far in modern commerce or industry unless he is a specialist in some line or other.

Now what training does the young

man of today get to prepare him for these bewilderingly complicated activities of modern business? The average American has always very properly looked for the foundation of his educational training in the public schools. How, then, do our public schools, in the education they give, measure up to the service requirements of modern commerce and industry?

Not, I fear, to the extent which might reasonably be expected. There may have been a time when the preparation given by the public schools of the country was really adequate for business life. But of the average public school that cannot be truly said today. It is because this question seems vitally important to me that I have been so deeply interested in the splendid work done by Mr. William Wirt in the public schools of Gary, Indiana.

The Gary plan has been too thoroly discussed in newspapers and magazines to need any description here. But I want to say that in my opinion Mr. Wirt's work is the first successful attempt to bring the teaching in public schools into any real adjustment with the conditions of life in modern industrial communities. The children get everything of any practical value that is taught in the ordinary public school, and in addition acquire most of the advantages of a thoro vocational training. The boys in the cabinet and furniture shops, in the printing establishments, foundries, and so on, are obtaining practical experience that will be invaluable to them in later life, and, what is even more important, they have an opportunity to learn along what lines their real talents lie.

The young men who enter the business life of the next generation with such a training as this will be fortunate, indeed, and it has been a great pleasure to me to learn how extensively Mr. Wirt's work is being imitated in many other cities of the country.

COLLEGIATE, TECHNICAL, AND MILITARY EDUCATION

FREQUENTLY I have been asked whether I think a college education is worth the time and money necessary to obtain it. This depends on what is meant by a college education, and also on the standard of value by which it is to be judged. It is a pleasant thing to have, and if one is young enough and has time

and money enough, a very desirable thing. But considered solely as a money investment with a view to adding to the earning power, I rather doubt if the average college course in the liberal arts is entitled to all the credit it sometimes receives, tho it is important and should have consideration.

The case is different with the technical education obtained in the scientific departments of many of our larger universities and in such institutions as Lafayette, Pittsburgh University, Stevens, Lehigh and the Massachusetts Institute of Technology. Their graduates have a highly specialized knowledge that is immediately saleable, and if a young man can by any means obtain such a technical education I should say that he would be well-advised to do so. In fact I believe that this kind of specialized training will in increasing measure become the quickest road to success in practical business of the future.

It seems clear that the future safety of our country will require that a far greater number of our young men should have some degree of military training. In this connection I may say that from the standpoint of an employer I am a thoro believer in the value of such training. It teaches discipline, resourcefulness, order, and system, and one learns to be a gentleman. It tends to make one an honorable citizen. I would, therefore, add to the ideal education for the young business man of the next generation some degree of military training.

Let us now sum up the qualifications with which our young man will enter upon his business career. He will, or should, have had the ground work of a good up-to-date public school education. The elements which are practical to everyday business life, including spelling, writing, grammar and arithmetic, should be emphasized. He will have had enough vocational training to enable him to decide upon the line of business that will give the best scope to his natural talents. He will have had the specialized technical education that will best fit him to succeed in that particular line. He will have the soldierly virtues of order and system, and a habit of prompt obedience to discipline.

Is there any prominent employer who would not be glad to have such a young man enter his service?

This, of course, represents my conception of the ideal educational

THIS is the third in The Independent's series of articles by men and women of large achievement on "The Next Generation in American Life." The next to come will be published in the Easter Number, April 10, when Shailer Matthews, D.D., dean of the Divinity School of the University of Chicago and president of the Federal Council of Churches, will write on RELIGION, THE CHURCH AND THE PEOPLE.

training for business which, unfortunately, comparatively few young men of today have an opportunity even to approximate. But it marks the educational goal of what we of the older generation should strive to give and they of the coming generation to obtain.

BIG BUSINESS IS HERE TO STAY

FOR, be it remembered, that for good or ill, we have become a great industrial nation, and among the most important problems which the next generation will have to solve are economic and industrial problems. Upon the common sense and breadth of vision of the business men of the next generation much will depend. We cannot turn the hands of the clock backward. Coöperative organization and large scale production are here to stay because they mean greater economy of production and greater and more successful business. Yet the great opportunities given to large aggregations of wealth to succeed, to prosper, to construct and to benefit entail equally great opportunities to do harm, and this necessarily means that there should be in this country such governmental regulation as will protect business men in anything they do that is good and prevent them from doing anything that is harmful. It is easy to state such a theory of governmental regulation in broad and general terms, but much more difficult to work out the specific and practical applications of that theory. However, the subject should have the best thought of all thinking men.

It is because the future offers such great opportunities for work of national importance in solving these and other similar problems that I believe the service of the great corporations will become increasingly attractive to young men of the coming generation. Even in the past few years it seems to me that we have seen the leaven working. People are not so eager as they once were to make the standards of modern industry the rule-of-thumb of a past generation. Of recent years there has been a very much better feeling between capital and labor. More and more the corporations are disposed to deal fairly and generously with their employees, and perhaps conditions in this respect may still further improve.

The alert and enterprising young man of today is coming more and more to realize that the service of the large corporation offers the greatest facilities and opportunities for a man's progress and advancement, that his association with other keen and ambitious men makes for his own development—in a word, that competition in this respect is desirable. And I can truly say from my own experience that I believe the men connected with the United States Steel Corporation have done better for themselves on an average than they could possibly have done by going into business for themselves.

One of the most satisfactory developments of recent years in the business of our own corporation has been the success that has attended our profit sharing plan and stock ownership by employees. I look to see a great development of this idea in American industry of the future, and I believe it will bring with it a continuous improvement in the relations between capital and labor.

This, then, is a brief outline of what seem to me to be the problems and opportunities that lie before the business men of the next generation. I think there has never been a time when the young man entering business has had greater opportunities for his own development and for service to his fellow men. We have here the greatest country in the world

with the greatest natural resources and the greatest possibilities of development. The young men of the next generation in American business have every right to be both hopeful and confident. Success or failure depends upon themselves.

New York City

A BIT OF SPRING

BY MARGARET L. FARRAND

*A river flowing swift and blue and still;
Brown fields just touched by finger tips of spring;
Soft, drifting clouds above a little hill;
Then hark! I hear the first song-sparrow sing.*

HOW I SWUNG BACK TO TEDDY

BY A YOUNG BUSINESS MAN

I HAVE swung back to Teddy. I have completed the circle, or nearly completed it, and am back again almost where I started. I have passed thru every stage of feeling toward him — hero worship, admiration mingled with mild criticism, severer criticism, impatience, distrust, bitter criticism—almost hatred—then indifference, a slowly growing confidence, finally new admiration and respect. I can never worship him again as I did in college: but I am ready to give him the White House for four years more.

The only excuse for writing this is that thousands of other young fellows like me must have gone—are now or going—thru the same process. I have an idea that by June there may be enough of us to put him at the top of the ticket again.

I REMEMBER the first time I ever saw him. I was a Sophomore. Our little New England college was stampeded by a scarlet fever scare and the authorities decided to close up for two weeks until everything could be thoroly fumigated. I went to Boston; and that evening the papers announced that Teddy would arrive at the Back Bay Station next morning. He was coming to visit Theodore, Jr., at Harvard and his train was scheduled to arrive at 5:45.

At 5 o'clock I got out of bed and started for the station. It was bitter cold, eight below zero; yet the station was already full of people when I arrived, and I was prest out into the street. There I stood for forty minutes—and finally Teddy arrived.

He stepped out of the station and into a waiting carriage, waved his hat to us, and vanished—all in a minute. I was left with nothing to show for my forty minutes' wait but an incipient case of chilblains; yet I felt repaid. "Lord, what a man!" I kept saying to myself, "What a ruler! Line up the kings and emperors of the world beside him and he would stand out among them like a giant among pygmies. He's the best we've got, and we don't need to be ashamed of him anywhere. He typifies us: he represents us to the world the way we like to think of ourselves — big, and strong, and square, a little loud maybe, but absolutely self-confident and able to stand up with the best of them." I threw back my chest, and all that day I had a curious warm glow around my heart at the thought that I was an American.

I have seen Mr. Taft and Mr. Wilson several times, and neither of

them ever left any such feeling with me. Perhaps it is because I am older; perhaps I can never feel the same about any President as I did about my first; perhaps I know too much now about the way Presidents are made, and the influences that act on them. And yet I don't know—I passed Teddy again on Madison avenue, New York, last week, and—but that comes later.

BUT during Teddy's last year in the White House my enthusiasm began to wane. He was terribly loud and overbearing, it seemed to me, forever running out onto the front porch and denouncing some one as a "liar" at the top of his voice. I began to be a bit glad that his time was almost thru. "He's done a big work," I said to myself, "but he's getting tired; it's time for him to step down and discover that the country can, somehow, get along without him."

And then he did the one thing for which I can never forgive him. He had fought our battles, he had spent his life in telling us how highly he regarded us common people, but when it came to a showdown he failed us. He was willing to fight our battles, but he didn't trust us to select a President for ourselves. If there was any other man in the United States who had thought of Taft for President—except Brother Charlie—I never heard of it. Most of the folks out in my section were getting ready to cheer their heads off for Hughes. Then Teddy stepped in to tell us that we couldn't have Hughes or anybody except Taft. I went out to Chicago to the convention and got appointed an Assistant Sergeant-at-Arms along with a thousand others. And the cheers of those delegates for Taft reminded me of a crowd of medical students at an inquest. There was just about the same unbridled enthusiasm.

Teddy's stock was pretty low with me when he sailed for Africa. But when he came back across Europe, the old feeling of pride surged thru me all over again. I just chuckled when he told the French that they ought to raise larger families; when he lectured the English on their bull-headed muddling in Egypt, and I could picture to myself those polished gentlemen leaving the hall and saying, "Extraordinary, y'know. A quite impossible person—quite." But none of them ever said it to his face. They may have grumbled about him after he left, but while he was there he was the whole show. He was Us

typified—all our brashness and rudeness, and bluster, but all our straightforward hard-hitting sincerity, too. I never liked him more in my life.

Then came the 1912 campaign, and his stock sunk out of sight with me. I was at that Chicago convention, too. I didn't like the stuff the Old Guard pulled, but I didn't think his managers covered themselves with glory either. They brought in a couple of hundred contesting delegations and admitted afterward that only a score or so of the contests had any merit whatever. They were fighting the devil with fire, and both sides disgusted me.

Then when Taft and Teddy started beating each other around the country, dragging the presidency thru the mud, I cried, "A curse on both your houses," and voted for Wilson. It wasn't that I loved Woodrow more, but that I felt that the whole Republican outfit was spoiling for a good sound beating—and I did all that the Constitution allows any one citizen to do.

SINCE the day the warships sailed for Vera Cruz, my respect for Teddy has been coming back. Apparently no one in Washington knows just why the warships did sail; nor why, being down there, they turned around and came back. But the Mexicans know. They say that the reason we never ventured beyond Vera Cruz was because we were afraid. And all South America thinks the same. We may have gained "friendship" by our "What do you think we ought to do about this?" policy, but we have certainly sacrificed respect. And in dealing with the Latin races I would feel safer with a little less protestation and a little more of the fear of a righteous wrath.

Teddy knew how to deal with them. I have been reading the diplomatic history of his presidency during the past year; and I've just finished it off by reading the "Life of John Hay." The most heeded voice in the world in 1904-8 was the voice that spoke for America from Washington, D. C.

John Hay's life tells of the time when Germany was ready to seize the ports of Venezuela and hold them until certain claims were satisfied. Teddy called the German ambassador in and said to him:

"I should like the Kaiser to invite me to arbitrate between Germany and Venezuela."

"Oh, impossible," said the ambas-

THE COLONEL ON THE CAMPAIGN

From a Statement Issued at Trinidad on March 9

I WILL not enter into any fight for the nomination and I will not permit any factional fight to be made in my behalf. Indeed, I will go further and say that it would be a mistake to nominate me unless the country has in its mood something of the heroic; unless it feels not only like devoting itself to ideals, but to the purpose measurably to realize those ideals in action.

This is one of those rare times which come only at long intervals in a nation's history, when the action taken determines the life of the generations that follow. Such times were those from 1776 to 1789, in the days of Washington, and from 1858 to 1865, in the days of Lincoln.

It is for us of today to grapple with the tremendous national and international problems of our own hour in the spirit and with the ability shown by those who upheld the hands of Washington and Lincoln.

Whether we do or do not accomplish this feat will largely depend on the action taken at the Republican and Progressive National Conventions next June. Nothing is to be hoped from the present Administration, and the struggles between the President and his party leaders in Congress are today merely struggles as to whether the nation shall see its Governmental representatives adopt an attitude of a little more or a little less hypocrisy, and follow a policy of slightly greater or slightly lesser baseness. . . .

We must clarify and define our policies. We must show that our belief in our governmental ideas is so real that we wish to make them count in the world at large and to make the necessary sacrifice in order that they shall count surely.

sador. "The Kaiser has made up his mind, and cannot change."

"All right," said Teddy, "you might tell him in that case that if he does not invite me to arbitrate within ten days, I shall have Admiral Dewey sail for Venezuela ten days from tomorrow."

The ambassador blustered, but Teddy was firm.

"I am not arguing the matter," he said, "for we have had arguments and they got us nowhere. I am simply giving you some information that you may want to pass on to Berlin."

A day or two later the ambassador called again; he talked of various things, but said nothing about Venezuela. As he rose to leave Teddy said, "What about Venezuela?"

"I have had no instructions," the ambassador replied.

"In that case," said Teddy, "you might inform the Kaiser that if within thirty-six hours I receive a request from him to act as arbitrator, I will the following day publicly praise him to the world as the friend of peace. If I do not receive such a request I shall have Dewey sail three days earlier than I told you last. Good day."

The next afternoon the ambassador called with a formal request from the Kaiser that Mr. Roosevelt consent to arbitrate the difference between Germany and Venezuela, and the morning papers of the following day contained Teddy's wholehearted praise of His Majesty, the friend of peace.

Some newspapers have said that if Teddy had been President he would have settled the "Lusitania" matter within forty-eight hours. It may be a foolish idea, but I believe that if Teddy had been there the "Lusitania" would never have been sunk. I have an idea that when that German warning appeared in the newspapers, Teddy would have had Bernstorff in and said, "If any passenger ship is torpedoed, without warning, and Americans are killed, you may call here at once for your passports. They will be ready."

Maybe not; but I think so.

I MISS the *esprit de corps* that used to be in Washington when Teddy was there. The fellows he appointed would have died for him. The Congressmen hated him in secret, and denounced him in the cloak-rooms, but they redeemed the party's pledges and got thru with the public business just the same. There was an atmosphere of efficiency and achievement; you felt it as soon as you got off the train. Now—perhaps I imagine it—but Washington seems to me a dreary sort of place. Nobody sees the President; he has no friends. He draws himself off into a closet and there decides the country's fate alone. And Congress meanwhile muddles about, introducing pension bills—without plan, without leadership, without vision.

I may be wrong. I am not "on the inside." I merely give the impression of a business man whose busi-

ness takes him frequently to the national capital.

I am for Wilson in all his effort to stir up a national defense sentiment; but I think he is nine months late. When we took Mason and Slidell off that English ship in the Civil War, England demanded that we release them at once; and in the same breath gave orders to her army and navy to strip for action. We gave them back, too.

When the "Lusitania" sank, it would have been easy to put us in shape to guard our own rights and the rights of the neutrals of the world. And we would not have been compelled to fight either. But now—the President's speeches seem to me somehow pathetic. "I'm at the end of my rope," he says in effect, "I don't know what to do. I can't make Congress act, and you must help me." I'm for him in his effort: I certainly will do my little share to boost along his preparedness efforts. But he talks and acts to me like a man who was in about as deep as he could go. I'd like to see some one in Washington who never discovered that he had any limitations; who knows how to handle men as well as a pen.

I passed Teddy on Madison avenue the other day. He has grown fat; he dresses a little better than he used to—but he looked wonderfully fit. If there were a younger man in the Republican party I would prefer him. But—and this seems to me the disheartening, almost disgraceful thing—I don't see a single other man of presidential size in the whole party, barring Hughes, who has barred himself. Perhaps that's the price we pay for democracy, for the direct primary, and all the rest. I do not know. But this I do know, that if ever we needed a super-man in Washington we shall need him during the next four years. I get the feeling in Washington now of a lot of mediocre men running about in circles because they do not hear their master's voice.

And I've swung back to Teddy again. It makes me blush with shame to think that there is not another masterful American to whom we can turn. But who is there?

THE Independent prints both sides. The Independent also prints the opinions of national leaders straight from headquarters. We are therefore glad to announce that William Jennings Bryan will contribute to the issue of April 3 an article entitled, **THE DEMOCRATS SHOULD WIN**. It will be followed at intervals by articles from other leaders of all parties.

THE DELEGATES AT THE CANAL

PAN-AMERICAN CHRISTIANITY

BY CHARLES CLAYTON MORRISON

EDITOR OF "THE CHRISTIAN CENTURY"

A GATHERING that now promises to take its place in the history of Christian progress as the most significant and far-reaching ever held by the religious forces of the Western Hemisphere came to its close in the city of Panama on February 20. It was called a Congress on Christian Work in Latin-America. Representatives of the religious life of every republic of the hemisphere were present, as well as of Great Britain, Spain and Italy—304 all told. There were 145 Latin-Americans, and 159 from the United States, Canada, England, Spain and Italy. Twenty-one nations were represented. The Congress was tri-lingual, delegates speaking in Spanish, Portuguese or English as they preferred. These men and women were the most prominent leaders of the Christian denominations of the United States and the Latin-American Republics. Their purpose was to consider the moral and religious conditions of Latin-America, with a view to bringing into co-operation the religious forces of the whole hemisphere.

No such undertaking was ever projected before. It rose above denominational and merely national lines. It took into account the fact—a new fact since the opening of the Panama Canal and the demoralization of overseas commerce by the European war—that the Americas of both Latin and Anglo-Saxon culture are to be drawn, in the near future, into most intimate commercial, economic and political relationships. This fact brings to religion both an opportunity and a duty. Tho the idea of this gathering originated with the leaders of the missionary work of

Protestantism, the invitation calling the Congress together was not limited to Protestant churches, but was formulated so as to include Roman Catholicism as well, should representatives of that communion choose to attend. "All communions or organizations which accept Jesus Christ as Divine Saviour and Lord and the Holy Scriptures of the Old and New Testaments as the revealed Word of God, and whose purpose is to make the will of Christ prevail in Latin-America, are cordially invited to participate in the Panama Congress and will be heartily welcomed"—thus ran the invitation. It was stated yet more definitely that, "In the matter of Christian service we will welcome the coöperation of any who are willing to coöperate in any part of the Christian program. We should not demand union with us in all our work as the condition of accepting allies for any part of it."

THE time and place of the Congress were psychologically strategic. Panama with its marvelous canal is in the eye of the world. One was struck at every turn with obvious analogies between the thing that man's genius has wrought on this Isthmus and the thing that the Church of Christ now undertakes to accomplish in Latin-America.

It was the idea of the spiritual coöperation of all the Americas that lay at the basis of the deliberations of the Panama Congress. The assumption of racial superiority that is implicit in much of our Anglo-Saxon missionary work was consciously and expressly disavowed. Indeed the word "missionary" was used

very infrequently. The republics of Latin-America are, of course, nominally, at least, Christian lands, tho the word Christian has not quite the same significance that it has in Protestant countries. In Latin-America the word is almost synonymous with human being. The antithesis of Christian is "dog." It was felt that the conventional nomenclature of the missionary enterprise would both affront and needlessly wound the sensibilities of Latin-Americans, and make them yet more inaccessible to the truth of the Christian Gospel. Upon the minds of the delegates themselves the reflex action of their effort to state their purpose in terms that would do full justice to the people whose coöperation they desired cannot but result in an increase of tolerance and interracial sympathy—two qualities which Anglo-Saxon Christians seem able to attain only with a great deal of difficulty.

For ten days the Congress held three sessions daily, discussing eight elaborate reports submitted by as many commissions, and covering the many problems related to the moral and religious progress of the lands of Latin-America. These commissions were composed of leading scholars of Latin-America and of North America—men like President Henry Churchill King, of Oberlin College; Professor William Adams Brown, of Union Theological Seminary; Professor Ernest DeWitt Burton, of the University of Chicago; President Charles T. Paul, of the College of Missions, Indianapolis; President William Douglas MacKenzie, of Hartford Theological Seminary; Professor Erasmo Braga, of the Presbyterian Theological

Seminary and the State Gymnasium of Brazil; Professor Eduardo Monteverde, of the University of Montevideo; Professor Eduardo Pereira, of the Independent Presbyterian Theological Seminary of Brazil; Principal Webster E. Browning, of the Instituto Ingles of Santiago, Chile—to mention only a few names. The field was divided into eight sections—General Survey, the Message and Method of Evangelical Christianity, Literature, Education, Women's Work for Women, the Coöperation and Unity of the Christian Forces, the Evangelical Church in the Latin-American Field, and the Church at the Home Base. The reports of these eight commissions represent a year and a half of the most thoro study of social and religious conditions in the Latin countries of this hemisphere that has ever been undertaken.

THERE are four features of first-rank significance which, in my opinion, give historic distinction to the Panama Congress. First, this gathering has, for the first time since the Reformation, brought into the consciousness of the Protestant churches the need of defining a constructive attitude in relation to Roman Catholicism. Protestantism has always been more or less belligerent in its attitude, continuing the heritage received from the days of the great Protest. This has been partly responsible for a certain narrowing of the spirit of the evangelical churches, as any negative temper is bound to do. But now, facing a continent of entrenched Catholicism, the Protestant forces have been thrown back upon their basic principles and compelled to construct a positive method of procedure by means of which their missionaries might enter this already preëempted field, and carry to a progressive consummation the ends and aims of New Testament religion.

A beginning at such a constructive program was made at this Congress, but not without difficulty. A few delegates came breathing out the usual threatenings and slaughter against the Catholic institution. Other representatives of the evangelical churches, mainly missionaries from the field, declined to attend the Congress because they conceived the constructive path chosen by the preparation committees as a path of compromise with Rome. The whole spirit of the ten days' sessions apparently satisfied all who came with this conception in their minds that it was groundless. Few left Panama who had not been convinced of the more excellent way.

The Congress gave evidence of the beginning and growth of a science of missions. The need of such a science is being constantly felt by all Christian leaders who have been trained in the use of scientific methods in other departments of research and practical life. In the past the work of missions has been conceived as a very simple task, calling mainly for consecrated preachers to go forth among the non-Christian peoples, telling the story of the Gospel as it was revealed in the Scriptures, and offering salvation to those who believed it. This, of course, is mission work in its essence. But with the doing of this essential and simple thing there have grown up a complex body of problems and tasks which have not until now begun to be grouped together in any systematic fashion. The World Missionary Conference at Edinburgh in 1910 was the first conscious attempt made to systematize in any scientific way the work of missions. Basing its study upon the results attained at Edinburgh, the Panama Congress has carried the process several very positive steps further. The method of the Panama gathering was that of a comprehensive induction of the facts and a fair facing of them. It analyzed and tried to understand the Latin-American mind that it might find the natural and most direct way of approach for the utterance of the evangelical message. And it brought to the point of clear definition the end and aim of all Christian mission work—the development of a free, indigenous Church of Christ in the countries where mission work was done. The implications of this conception of missionary purpose are many and very significant.

A THIRD feature of the Congress was its marked sympathy with modern scholarship. This was a characteristic which no observer could fail to see. The most influential speakers in the Congress were men of the modern spirit. Probably President Henry Churchill King's frank criticism of those missionaries who declared that no one who has anything to do with evolution or historical criticism can be a Christian brought as pronounced a response from the delegates as any utterance from the platform. And when Dr. King went on to say that he knew of nothing in modern science that need stand in the way of the heartiest acceptance of Christ, his words were greeted with the kind of applause that showed that many of his hearers had deep convictions on the subject.

This feature of the Congress con-

trasted sharply with the still too-popular notion that mission work can find its motives only in the dogmatic theology of the older orthodoxy. It is becoming clear that there are rich missionary motives of ample power implicit in the view of the world and of life which modern scholarship is inculcating.

FINALLY, the Panama Congress, like the conference at Edinburgh, brought into bold relief the weakness and shame of the Protestant sectarian divisions and the need of Christian unity. Most of the problems discussed came back to this. The presence of overlapping and competing denominational activities in parts of the mission field, while great sections were entirely neglected, was again and again characterized as a scandal and a sin. More than one speaker pleaded for the right of the young Church in the Latin-American nations to divide—if it must divide—on issues of its own choosing rather than to have our Anglo-Saxon divisions thrust upon it. Efforts will be made as a result of the Congress to unify the various evangelical forces in the various countries, by merging those now divided, by partitioning the territory among the various denominations, and by other means. Already a partitioning of the territory of the whole of Mexico has been agreed upon, and it is expected that future work in that country will follow the lines of the new arrangement.

The perception of this obvious weakness of denominationalism on the field of missions is bringing to the mind of churchmen an answering awareness of the weakness of denominationalism in the Church at home. One speaker, in discussing the question of Church unity, turned to the chairman, Dr. Speer, reminding him of a statement he had heard him make some two years ago to the effect that by the end of the century there would be no Presbyterian Church at all. He asked the chairman whether he was still of the same mind. "I am," promptly replied Dr. Speer, "except that I would now shorten the time."

This feeling that our present denominational order of the Church must give place to another order wherein the prayer of Christ for the unity of His followers may be answered, was one of the most pervasive sentiments of the Panama Congress, as it is of any meeting of present-day missionary leaders. For the conviction is steadily deepening that only a united Church can evangelize the world.

On board S. S. Huallaga

OUR BIGGEST NEED IN MEXICO

BY HENRY WOODHOUSE

EDITOR OF "FLYING," GOVERNOR OF THE AERO CLUB OF AMERICA

THAT the American Eagle needs wings—a substantial aeronautical service—is a matter in which both preparationists and pacifists agree. It is about the only thing on which the different factions of the present Congress do not disagree, and the only reason why the military programs proposed for this year do not include an appropriation of \$25,000,000 for aeronautics is undoubtedly that the shortage of officers in the Army would make it impossible to get the necessary officers.

Coming down from what ought to be to what is, we find with a shock that there are only eight aeroplanes available for service at the Mexican border, at a time when 100 aeroplanes could quickly do the work which it may take 25,000 soldiers to do. It is evident from the statement of General Funston that a large number of aviators are needed as soon as operations begin. Only aviators can scout over Mexican territory with little danger. Others, General Funston states, will face death.

The Secretary of War has ordered General Scott to instruct General Funston to use as far as possible the squadron of aeroplanes of the Army. This consists of eight biplanes, equipped with ninety horsepower motors, which, on account of their low power, could not climb fast enough in case of emergency, the Mexican atmosphere being so rare as to require high-powered aeroplanes.

Mr. Alan R. Hawley, president of the Aero Club of America, at 297 Madison avenue, New York City, very aptly summarizes the need thus:

An immediate appropriation of \$1,000,000 to at once properly equip four aeroplane squadrons with the necessary high-powered aeroplanes may save the lives of 10,000 American soldiers on the Mexican border. There should be three aeroplanes available for every aviator now at the Mexican border, which is the number of aeroplanes allowed to each aviator in Europe, and three more squadrons should also immediately be put in readiness. A hundred high-powered aeroplanes would make it possible to round up Villa and his band in a very short time, where it might take thousands of men a long time with considerable losses to attain the same end.

Every aeroplane being worth a thousand soldiers in the Mexican campaign, the Aero Club of America is mobilizing the licensed aviators available, equipping them with high-powered aeroplanes, and keeping them in readiness to answer the call of the War Department, which will gladly avail itself of this reserve in case of need. It will cost between \$400 and \$750 to train each aviator, and \$8000 or \$10,000 each for the high-powered military aeroplanes.

Eight trained aviators have already been mobilized, and are being trained on high-powered aeroplanes. One hundred thousand dollars is now being raised by public subscription to buy suitable military aeroplanes, which will be turned over with the aviators to the War Department, to be given to the militia of different states after the Mexican campaign.

The officials of the club are quite frank in stating that Congress should be the agency to do this. But they realize that if they wait for Congress to do its duty, they may find that

thousands of American lives will be lost first for lack of adequate protection. There are no funds available at present for this purpose for the Army, and the next appropriation, not yet sanctioned by Congress, will not become available until June 30!

The most unfortunate situation is also that the Army is so extremely short of officers for all branches of the service that it cannot increase the air service without hampering other arms. Last year Congress allowed sixty officers for aviation, but it was impossible to obtain them. Until Congress authorizes a substantial increase of the Army, the only relief can be had by equipping the militia with aeroplanes, and that is what the National Aeroplane Fund was instituted to do.

Unfortunately, the Navy is no better off. It has only about a dozen aeroplanes available, and twenty or so ordered, many of which will be needed to replace the machines which are now in commission.

In the short period of eight months, the Aero Club of America has succeeded in supplying funds for twenty-four states to begin to organize aviation detachments in the militia. In some states, as in the case of New York, the National Guard and the First and Second Battalions of the Naval Militia have already been presented with aeroplanes and means for training aviators. The American Eagle is growing wings—but money raised thru public subscriptions, not appropriated by the nation, is paying for their growth.

M. William Shak-speare:

EIGHT PAPERS BY FREDERICK HOUK LAW
IN OBSERVANCE OF THE THREE HUNDREDTH
ANNIVERSARY OF SHAKESPEARE'S DEATH

Shakespeare Today

EARLY a hundred years ago John Wilson, a celebrated professor of Moral Philosophy in the University of Edinburgh, spoke of England's great poet in words which we can echo today:

Shakespeare is of no age. He speaks a language which thrills in our blood in spite of the separation of two hundred years. His thoughts, passions, feelings, strains of fancy, all are of this day as they were of his own; and his genius may be contemporary with the mind of every generation for a thousand years to come.

Thomas Carlyle, in *Heroes and Hero Worship*, says much the same thing in even more forceful language:

This king, Shakespeare, does not he shine in crowned sovereignty over us all, as the noblest, gentlest, yet strongest of rallying signs; indestructible; really more valuable in that point of view than any other means or appliance whatsoever? We can fancy him as radiant aloft over all the nations of Englishmen a thousand years hence.

Our own great American essayist, Ralph Waldo Emerson, likewise bears witness to the importance of Shakespeare's contribution to life:

Far from Shakespeare's being the least known, he is the one person, in all modern history, known to us. What point of morals, of manners, of economy, of philosophy, of religion, of taste of the conduct of life, has he not settled? What mystery has he not signified his knowledge of? What office, or function, or district of man's work, has he not remembered? What king has he not taught state, as Talma taught Napoleon? What maiden has not found him finer than her delicacy? What lover has he not outloved? What sage has he not outseen? What gentleman has he not instructed in the rudeness of his behavior?

The words of such great men are impressive evidence of the value of Shakespeare's gift to the world. To their testimony might be added that of thousands upon thousands of others who have felt Shakespeare's power. In fact, the opinions of three

hundred years unite in extolling the work of the great English dramatist.

For many years thoughtful people have called Shakespeare and the Bible the two greatest literary influences that have entered into the lives of the race. While the influence of Shakespeare, like that of the Bible, is to be felt rather than measured, there are many tangible proofs of his vitality as a present-day force.

In the drama Shakespeare has surpassed all other influences. Out of 1500 new plays produced in the Elizabethan period, his plays are practically the only ones that are produced today. In view of all the changes that have taken place in the last 300 years it is astonishing that any play written so long ago should still have stage-life. How much more astonishing is it that at least twenty-six of the thirty-seven plays commonly attributed to Shakespeare have been acted within the last quarter of a century! Some of these plays have been presented repeatedly, "The Merchant of Venice," for example, appearing on the stage over 100,000 times and producing receipts of over \$35,000,000!

The drawing power of Shakespeare's plays is remarkable. In one year Sir Henry Irving played Hamlet 200 successive times, and in another year, 108 times. The same actor gave 250 consecutive performances of "The Merchant of Venice"; 212 of "Much Ado About Nothing"; and 130 of "Romeo and Juliet." Since no year passes in which it is not possible to see elaborate productions of Shakespearean plays, as well as a great number of amateur presentations, it must be true that actors and managers alike recognize public interest in the plays of Shakespeare.

In spite of the frequency with which the plays are presented the rewards are great. Edwin Booth, with a repertory of eleven Shakespearean plays and five others, made great expenditures and endured various losses, but left a fortune of \$605,000!

Between 1887 and 1899 Daly's Theater produced nine Shakespearean plays, from which there was a gross income of \$2,000,000! Between 1878 and 1905 the Lyceum Theater, one-third of whose plays were Shakespearean, had a gross income of \$10,500,000! In 1910 the Shakespearean productions in which Julia Marlowe and E. H. Sothern took parts had average gross receipts of \$16,000 per week! In four weeks at the Academy of Music the Shakespearean plays in which Robert Mantell took the leading part brought in an average gross income of \$10,000 per week!

If Shakespeare has been a maker of money for actors and managers he has been an even greater maker of reputations, for the greatest fame in the world of acting has gone to those who have made successes in Shakespearean parts. The list of names that might be mentioned is astonishingly long. In the past are the great names of Robert Burbage, Colley Cibber, Mrs. Siddons, David Garrick, John Philip Kemble, Edmund Kean, Junius Booth, William C. Macready, Edwin Forest, and Edwin Booth. In recent times Henry Irving and Johnston Forbes-Robertson were knighted for excellence in Shakespearean parts. Among other recent actors to gain fame in Shakespearean parts are Herbert Beerbohm-Tree, John Drew, Richard Mansfield, Robert Mantell, E. H. Sothern, Tyrone Powers, William Faversham, and Ben Greet. The number of Shakespearean actresses is even greater, among them being Charlotte-Cushman, Mary Anderson, Mme. Modjeska, Sara Bernhardt, Mrs. Patrick Campbell, Ada Rehan, Ellen Terry, Julia Marlowe, Viola Allen, Henrietta Crossman, and Margaret Anglin. It is a notable fact that so many actors and actresses should wish to present Shakespeare's characters.

In the world of books Shakespeare has gained an equally important place. The last edition of the *Encyclopedia Britannica* gives fifty col-

Splitting Headaches— For No Reason At All

THESE puzzling headaches are due frequently to intestinal absorption of toxic substances (auto-intoxication) *without apparent constipation.*

Nujol is particularly valuable in such cases, because it has the property of absorbing and removing intestinal toxins, besides giving safe and effective relief in most cases of periodic and chronic constipation.

Nujol is not a purge nor a laxative. It acts in effect as a mechanical lubricant. It prevents the intestinal contents from becoming hard and so facilitates the normal process of evacuation.

Most druggists carry **Nujol**, which is sold only in pint bottles packed in cartons bearing the **Nujol** trademark. If your druggist does not carry **Nujol**, accept no substitute. We will send a pint bottle prepaid to any point in the United States on receipt of 75c.—money order or stamps.

Write for booklet, "The Rational Treatment of Constipation." Address Dept. 12.

umns of fine print to matter concerning Shakespeare. *The United States Catalogue*, in its list of Shakespearean books now on sale in the United States, prints thirty-five columns of fine print with an average of fifty books to a column! Magazines and newspapers print hundreds of Shakespeare articles. All this shows an immense public interest in Shakespeare. In fact, the demand for Shakespeare's works is so great that there are now on sale in the United States alone no less than 130 editions of his complete plays and poems, besides a great number of editions of separate plays, abridged plays, adaptations of plays and special versions.

The interest, instead of being confined to English-speaking people, is world-wide. Shakespeare's plays have been translated into the languages of the civilized world, and exert a powerful influence in disseminating the ideals of the English race. They are read with the greatest interest in Germany, France, Italy, Spain, Greece, Holland, Russia, Poland, Finland, Denmark, Norway, Sweden—in fact, in every land where there is literature at all. The plays have been acted in China and in Japan, and they have been translated into such strange languages as Marathi, Urdu, and Canarese.

In Germany especially the influence of Shakespeare is very great. Goethe, the foremost German writer, once wrote:

I do not remember that any book or person or event in my life ever made so great an impression upon me as the plays of Shakespeare.

Some of the most painstaking studies of Shakespearean subjects have been made by German scholars, and the number of books written in German concerning Shakespeare is remarkably great. The plays are acted very frequently in Germany, twenty-six of them being put on the stage in 1911, and "Othello" being presented 158 times!

One of the powerful influences that makes Shakespeare a leader in present-day thought is the attention given to his works in educational institutions. Practically every school and college in the United States includes Shakespeare in its course of study. Every year this immense army of young students gains mental and spiritual strength from Shakespeare's plays, a strength that is carried out into the thought and action of national life.

Books of quotations, such as Bartlett's, Bennett's, or Hoyt and Ward's, and such special books as Routledge's *Quotations from Shakespeare*, Morgan's *The Mind of Shakespeare*,

The GLEN SPRINGS

OPEN ALL THE YEAR

and Stearns's *The Shakespeare Treasury* show how thoroly Shakespearean phrases have permeated our common speech.

In the world of music Shakespeare has given inspiration to some of the world's greatest composers, Rossini writing "Otello," Schubert giving music for such songs as "Hark, Hark, the Lark!" Mendelssohn composing his beautiful "Midsummer Night's Dream," Schumann planning a "Hamlet," Verdi producing "Macbeth," "Otello," and "Falstaff," and Saint-Saëns his "Henry VIII."

Many great painters have devoted time to Shakespearean subjects, among them being Sir Joshua Reynolds, Hogarth, Romney, Sir John Gilbert, George Cruikshank, Sir John Millais, Holman Hunt, Sir Frederick Leighton, Washington Allston, Eduard Grutzner, Frederick Barth, Walter Crane, and Edward A. Abbey. Thousands upon thousands of pictures and engravings of all kinds have been made by artists more or less distinguished. John Boydell spent \$1,750,000 in preparing a collection of Shakespearean engravings!

Great sculptors likewise have turned their attention to Shakespeare as a theme for art, among them being Roubillac, John Bacon, Lord Ronald Gower, William R. O'Donovan, J. E. Carew, P. J. Chardigny, of Paris; M. Paul Fournier, of Paris; Augusto Possaglio, of Florence; R. S. Greenough, Frederick MacMonnies, J. Q. A. Ward, and William Ordway Partridge.

Important statues of Shakespeare stand in various cities of the world. They are to be found in Stratford-on-Avon, in London, in Birmingham, in Central Park, New York; in Lincoln Park, Chicago; in the Library of Congress in Washington; in Paris, France; in Weimar, Germany, and in the Castle of Kronborg in Denmark.

It is by no means necessary that a person shall have read Shakespeare

"Remove the Blindfolds!"

Your men blindfolded—how much work, what kind of work could they do? Yet do you realize that *to an extent* you blindfold them, when you compel them to work in a dark plant? If your plant were flooded with daylight, your employees would then work at maximum efficiency. Simply because they could see better, they could do more work, and better work. Tests of the most stringent kind prove this. Enlightened self-interest, not philanthropy—the certainty of increased dividends, this alone should impel you to give your employees **more light**.

Send for This Free Book "More Light"

This book will open your eyes to the close connection between *daylight* and *your profits*; shows how you can increase your daylight 19% to 36%. It tells how over 3000 of the biggest plants in the world now do this. It tells the story of Rice's Gloss Mill White; how Rice's helps increase the output of workmen—how it de-

creases accidents—how it saves large sums of money because it remains white longer—how it makes ceilings and walls sanitary, because they can be washed like tile—how it saves as much as three-quarters of an hour electric lighting every day in a huge plant!

Rice's is the only oil paint giving a glossy, tile-like, white finish. *By the Rice Method, it can be applied over old*

cold-water paint. It is made by a special process, discovered and owned exclusively by the makers. There is no substitute. Repeated tests have shown, without a single exception, that Rice's remains white longer than any other gloss paint. Users are protected by the Rice Guarantee.

On Concrete Surfaces—On inside concrete Rice's Granolith makes the best possible primer for a second coat of Rice's Gloss Mill White—giving a glossy, tile-like finish at no more expense than lead and oil paint. **RICE'S GRANOLITH.**

The New Books

IN JAPAN

From Japanese presses have recently come to this country two interesting specimens of book making. One, *Suiko-iko*, is the memorial volume of the writings and speeches of Mr. Midzumo, for seven years consul general at New York, whose American friends will be interested in the photographs that illustrate the pages, even tho all they can read will be the few addresses delivered in America and printed in English at the close of the volume. The other, an attractive little book illustrated by a few colored prints, is the *Imperial Japanese Poems of the Meiji Era*. These Royal poems are for the most part single stanzas, each gracefully expressing a sound moral. The English translation is printed opposite the decorative Japanese characters. Less charming than these books in silk and crêpe is Ernest Wilson Clement's *Short History of Japan*, but it gives swiftly and clearly an account of what is known of the centuries before the Meiji Era and of the changes that have taken place under the late Emperor. *The Mikado, Institution and Person* is at once a more detailed and less complete study. William Elliot Griffis considers the legendary period, but leaving out the Samurai, who were for centuries the actual rulers, he treats of the active life of the kingdom only after the middle of the nineteenth century and the fall of the Samurai. The accounts of the internal affairs from that time on and of the personality of the late Mikado are full and enthusiastic. *The Working Women of Japan* is a sad enough description of piteous and shocking conditions by Sidney L. Gulick, of Doshisha University, who is in a position to know whereof he writes. The little leaven that begins to lighten this heavy mass of human misery comes from the efforts of one poor workman, Shinjoro Omoto. There is a chapter on the Geisha girls, on the rural workers and on recent legislation. Worlds away from these somber pages is the *Flower Art of Japan*, by Mary Averill, a delightful book on a fascinating subject. Its explanations of combinations and symbolism are clear and simple. Its hundred illustrations, mostly in line, show the methods of preparation and arrangement. For a beginning in the study of line and composition one could hardly find a better introduction than this Japanese flower art.

In *The Students of Asia*, G. Sherwood Eddy gives accounts of the educational movements in India, China, and Japan started by the work of Christian missionaries and fostered by contact with western civilization. The

A High School Course at Home

Four years' high school work can be thoroughly covered in half the time by our simple method of home instruction. Prepared by members of the faculties of leading universities and academies—meets all college entrance requirements. Credits accepted from many high schools. Write the American School, one of the world's largest educational institutions, for catalogue.

AMERICAN SCHOOL OF CORRESPONDENCE
5789 Drexel Avenue Chicago, U. S. A.

extent of the western spirit in Oriental education will astonish those who have not kept track of the swiftly changing East. Mr. Eddy was Mr. John R. Mott's companion in the recent journey for the Y. M. C. A. to the student bodies all over the world and his analyses of conditions and tendencies are made upon broad and thoro knowledge of conditions in Eastern lands.

The Japan Society of America has published a symposium of addresses by various eminent Japanese setting forth the ideals and the policies of Japan and entitled *Japan to America*. The topics cover a wide range from commercial methods and international ambitions to translations from Eastern literature and Christianity in Japan. An especially interesting paper is that on the moral code of the great Japanese educator, Fukuzawa.

Tho there has been a guide for travelers in Japan, there has been none for China, Korea and Manchuria till the publication of the four volumes of the Official Guide to Eastern Asia, *China, Manchuria and Chöen*, and *Northeastern and Southwestern Japan*. Tho stout and handy like our Baedekers, even a guide book made in Japan has charm. The smallest illustrations are clear, the colored frontispieces delightful, and the maps are beautiful instead of garish.

A Short History of Japan, by Ernest Wilson Clement. Univ. of Chicago Press. \$1. *The Mikado, Institution and Person*, by William Elliot Griffiths. Princeton Univ. Press. \$1.50. *Working Women of Japan*, by Sidney L. Gulick. Missionary Education Movement. 50 cents. *The Flower Art of Japan*, by Mary Averill Lane. \$1.50. *The Students of Asia*, by G. Sherwood Eddy. Student Volunteer Movement. 50 cents. *Japan to America*. Putnam. \$1.25. *The Official Guide to Eastern Asia*, 4 vols. Tokyo: Imperial Japanese Government Railways.

A LEAGUE OF PEACE

Mr. Hobson is one of that masterful little band of English federationists who, with Lord Bryce, A. Lowes Dickinson, Aneurin Williams and others, is now devoting his time to working out the basis for a durable peace when the Great War ends. *Towards International Government* is a plea for a League of Peace, with legislative, judicial and executive branches all backed up by force. Altho the idea has already been treated in several striking magazine articles both here and abroad, this is the first book to be published on the subject.

The author presents a well thought out and detailed plan. He sees the coming of the new order and urges it with all the charm and erudition that a cultivated Englishman can bring to such a task. He has the enthusiasm of the devotee and yet is not blinded to the tremendous difficulties to be overcome before the goal is reached.

Mr. Hobson's League is strikingly like the proposals of the American branch of the League to Enforce Peace, promulgated a Declaration of Interdependence at Independence Hall, Philadelphia, last June. All of which goes to show that when the time is ripe for an idea to be born whether in the realm of science or government, the light is vouchsafed almost simultaneously to

Reduce Your Office Work!

Office work doesn't *make* profits; it *consumes* profits. And when it drags it holds back other *more important* work. Speed and simplicity make for progress and profits. Every *job* you can *simplify*, every *move* you can *save*, means pushing *ahead* instead of holding back. With our new methods and the

Commercial DUPLICATOR

you can reduce office work and—speed up other departments, get orders out quicker, give better service to customers, save money.

Shrewd Men in 153 Lines of Business Have Proved It For You

We can show you hundreds of manufacturers and jobbers who have saved by our methods as high as 5% of the time formerly used in many kinds of office work. This speeding up in the office has increased production, reduced costs and other expenses, smoothed out trouble, taken up lost time between departments, increased net profit. Ask us to lay these facts before you—show you what others in *your* line have accomplished by Duplicator methods. The evidence is ready for you. Tear out our name and address now and write for it.

Duplicator Mfg. Co., 742 Monon Bldg., Chicago, Illinois

New York

different men working independently in different places.

Nobody who is seriously interested in seeing that this war ends all war can afford to ignore this scholarly and statesmanlike volume. Altho it is the pioneer work in the field, it is pretty nearly the last word on the subject, at least as far as the theory of the League of Peace is concerned.

Towards International Government, by J. A. Hobson. Macmillan. \$1.

THEORIES AND THRILLS

Marriage, thinks Henry Kitchell Webster, is *The Real Adventure* of life, "the essential adventureness of which no amount of cautious thought taken in advance could modify." And he proceeds to prove the theory in an entertaining story of how one woman tried it, forced by the circumstances of the adventure to win her way successively as the perfect hostess in high society; as a chorus girl; after the show left her stranded "on the road," as a small town milliner; and at length as a successful costume designer in New York.

All of which is due to her insistence on economic independence, theoretically accepted and practically denied by her husband. Only after she has "made good" as an individual does she come to the realization that "there's a real job just in being successfully the wife of a successful man." It is a tale full of real people who are trying life from nearly every angle and whose comments on their experiences offer keen suggestions for a fairly workable philosophy. The conclusions it reaches ring true, and the intrinsic interest of the plot holds the reader's close attention in spite of the rather excessive length of the story, somewhat overgarnished with adjectives and author's digressions.

The Real Adventure, by Henry Kitchell Webster. Indianapolis. Bobbs-Merrill. \$1.50.

THE CRITICAL YEARS

The years during which a human animal becomes civilized—or not, as the case may be—are coming to receive an increasing share of attention from all who have to do with human beings in the process of development. The reprinting of Dr. Slaughter's *The Adolescent* from the English edition of five years ago should be of great benefit to those who have to do with young men and women in the *becoming*. Dr. Slaughter has succeeded in doing two unusual things: he has condensed the significant facts about the mental and moral characteristics of the adolescent into a small book of a hundred pages; and he has presented his concentrated extract in a most readable, and sometimes even entertaining way. There are shreds and remnants of a lingering Darwinism thruout the text, but the essentials are up to the best thought and scholarship on the main subject.

The same period of life is discussed from the physician's point of view in Dr. Louis Starr's *The Adolescent Period*. The emphasis is here naturally on the physical side—growth, the development of the muscular system,

Joy just hangs on every puff

How a pipe of "Tux" does bubble over with good cheer and sunny comfort! There's something about the mellow taste of "Tux" that stirs a smoker's soul. It gets into his inside works, sweetens his disposition, and gives him that perky, chesty feeling, like a high-stepper trotting down the avenue.

Tuxedo

The Perfect Tobacco for Pipe and Cigarette

Men who never smoked a pipe before are now smoking Tuxedo, because they have found that Tuxedo is the mildest tobacco made, and that it is the one tobacco that never irritates mouth, throat or nerves.

You simply *cannot* get another tobacco made by the "Tuxedo Process"—and that's the original of all processes for removing every trace of harshness and bite from the tobacco. It has been widely imitated, but never duplicated.

Try Tuxedo for a week, and you'll get acquainted with the sweetest, mildest, mellowest smoke in the world.

physical education, the diseases of adolescence, etc. There is a brief discussion of the "faults" of adolescence, in which some of the normal symptoms of youth are treated from the point of view of the offensive and criminal and otherwise undesirable forms that they may take. These two books supplement each other in a practical way.

The Adolescent, by J. W. Slaughter. Macmillan. 60 cents. *The Adolescent Period*, by Louis Starr. Philadelphia: Blakiston. \$1.

TOMMY ATKINS

Ian Hay has written a delightfully witty account of the life in a training camp of Kitchener's first army, *The First Hundred Thousand*. The writer, who before he became an officer in a Scotch regiment was a novelist describes his own experiences, and there is a smile in almost every paragraph and a laugh on every page, so keen is his eye for the amusing side of their troubles and privations. One gains a vivid idea of exactly what happens to the recruit thru the long months of training before he is sent to the front. The reader lives with Tommy Atkins in camp, on parade, on the march and in sham battles, and then he goes to the front, where the fun suddenly ceases and he is face to face with real war. It is a most illuminating and interesting book, with true literary value—a book to read and to keep.

The First Hundred Thousand, by Ian Hay. Houghton, Mifflin. \$1.50.

SOCIALISM AND THE CHURCH

John Spargo, one of the most persuasive and tolerant of all the expounders of Socialist thought, extends the olive branch to the Christian churches in his recent study of *Marxian Socialism and Religion*. He does not attempt to minimize the magnitude of the historic quarrel between the party and the church. "In the average religious paper," he admits, "the most bitter, brutal, stupid and false charges against Socialism and its advocates are to be found with a frequency which precludes the suggestion of accident as an explanation. In the Socialist papers, with equal frequency, charges just as brutal, stupid and false are hurled against religion and all its associations." But this unfortunate state of affairs is due, Mr. Spargo thinks, not to anything inherent in Socialist doctrine, but to the unwise political attitude of some established churches, notably the Roman Catholic, and the coincidence of the rise of Socialism with the materialist trend of thought among the educated classes in the middle of the last century. With great ingenuity he shows that even the materialistic conception of history, the only Marxian dogma which seems on the face of it irreconcilable with Christian teaching, may be made to bear a religious interpretation. Why should not the progress of industry and the shifting phases of the class struggle be God's way of working out the evolution of humanity? The query thus put Mr. Spargo regards as unanswerable. It is certainly most strange that every right or wrong attempt to explain how things come about should be regarded, equally

"A Train Load of Books" What Clarkson is Doing for the Book Buyer

IN several hundred thousand libraries in the homes of people in every walk of life—from the day laborer to the college professor and high government official, from the persons who buy a few books of popular fiction to the persons who pride themselves on having

the complete works of all the standard authors in the Luxe Editions artistically printed and bound—almost every book was bought from me. WHY? Because, I have no agents and sell you just the books you want—all new—many at saving of from 50 to 90 per cent—you examine the books in your own home for five days before paying for them. If not satisfied, return at my expense—and owe me nothing.

Sample Prices:

Five Little Peppers and How They Grew. My price, 24c.	Koran of Mohammed. Publishers' price, \$1.50. My price, 48c.

by those who champion the new theory and by those who attack it, as a denial that the newly explained law of nature may be also a manifestation of the will of God.

Marxian Socialism and Religion, by John Spargo. Huebsch. \$1.

EFFICIENCY INVESTMENT

Eight minutes a day to keep in condition! Dr. W. J. Cromie in *Keeping Physically Fit* gives single stick, towel and no apparatus exercises for busy men, nervous women, and growing children.

Macmillan. \$1.

NEW ENGLAND STORIES

Annie Trumbull Slosson's work is sure to be delicate, full of mystical meaning, of pathos and yet of hopefulness. In *Puzzled Souls* the opening dog story is too pathetic, but *Old Home Day* is a fine, weird fancy, and the tale of the boy who became an infidel is an interesting study in child psychology.

Philadelphia: S. S. Times. 75 cents.

THE SPIRIT OF ENGLAND

The Spirit of England, by George W. E. Russell, would seem to be mainly a political apology for his passing from a convinced pacifist to a volunteer militarist. To satisfy this end he wanders into every land, and calls to witness a host of authorities. Directness is hardly one of his gifts, and clarity shines none too brilliantly thru the bewildering maze of his pages.

Dutton. \$1.25.

AN ANTHOLOGY

In striking contrast to the war poems of the day is *The Quiet Hour*, a collection that has been selected and arranged by FitzRoy Carrington under the seven headings, Cradle Songs, Infancy, Childhood, Night, Sleep, Charms, and Dirges. Mr. Carrington gleans not from the great poets alone, but gives us much worth while from minor singers.

Houghton, Mifflin. 75 cents.

THE BEAUTY OF WONDER

Superficially reminiscent of Kenneth Grahame, but with more of philosophy and of mystical fancy. Algernon Blackwood's story of children, but by no means for children, *An Extra Day*, is full of beauty and originality. It should be loved of all child lovers and indeed of all, for whom the poetry of life is as real as its tasks and its pleasures.

Macmillan. \$1.35.

ETHICS IN SERVICE

The Page Lectures at Yale, delivered last year by Mr. Taft, are now published under the title, *Ethics in Service*. Two of these explain his convictions as to various political and social reforms, one is a genial discussion of the Presidential office. Those most valuable are on the bar, its history and its standards, giving the ideals of the profession as they appear to this high-minded and able member of the profession.

Yale Univ. Press. \$1.

EUROPA'S FAIRY BOOK

Joseph Jacobs, whose untimely death took place in January, had collected and retold certain selected European Folk-Tales that he had found practically identical in all continental countries, under the title of *Europa's Fairy Tales*. In them he followed in general the admirable plan used in his "English Fairy Tales." The Master Thief, Beauty and the Beast, Androcles and the Lion, and others, less familiar, appear in the present collection. The illustrations are by John D. Batten.

Putnam. \$1.25.

A ROMAN SKEPTIC

The second of the seven volumes of the works of *Lucian* in the Loeb Classical Library is now out. This contains the dialogs which gave Lucian the reputation of a skeptic and in which he ridicules the gods. In one of them a philosopher cross-questions Jupiter and shows that he is a helpless pretender. His arguments on fate and destiny and the prevalence of evil and

The Value of Sanatogen to The Man who Works His Brain

"Without albumen, no life: without phosphorus, no thought"—so runs a famous saying.

True, the healthy body gets enough albumen and phosphorus from the daily food, but an overtaxed brain and nervous system will run short of these vital substances because the demand outruns the normal supply. Then we have fatigue, depression—and worse, if nothing be done.

It is then that Sanatogen is of splendid aid. Combining purest albumen and organic phosphorus in chemical union, Sanatogen takes to the fundamental sources of nervous and mental efficiency just the elements needed. It supplies these elements quickly and without strain upon digestion, giving the depleted cells real nutriment, real sustenance and no false stimulation.

The result of this is well epitomized by Sir Gilbert Parker when he writes, "Sanatogen to my mind is a true food- tonic, giving fresh vigor to the overworked body and mind." And by Arnold Bennett, who tersely reports, "The effect of Sanatogen upon the nervous system is simply wonderful."

It is good to remember that the medical profession has set the seal of approval upon the value of Sanatogen—no less than 21,000 doctors have written letters endorsing its value.

Should not the knowledge of these facts create the conviction that *Sanatogen will also help you?*

Grand Prize, International Congress of Medicine, London, 1913.

Sanatogen is sold by good druggists everywhere, in sizes from \$1.00 up

Sanatogen

wrong in the world under the permission of Heaven have a very modern sound. The visits to Hades and jollying of Charon and Hermes are quite a contrast to the interviews of Ulysses and Aeneas in the lower world.

Macmillan. \$1.50.

BONAPARTE

Most vividly written is James Morgan's *In the Footsteps of Napoleon*. It enters little into the discussion of details of campaigns, or the causes and results of that marvelous career. It is rather the story, dramatically, but not sensationally told, of the man Napoleon, with especial regard to the setting of the critical events, for which setting the author has journeyed to all the scenes of the Napoleonic drama.

Macmillan. \$2.50.

AN IRISH JAUNTING-CAR

"'Tis a quare woruld, an' judgin' from the preparations they're making for it, the next wan will be quarer," says Jerry of Alexis Roche's *Journeys with Jerry the Jarvey*. His stories of the "quare" people he has known in this "quare woruld" are Irish thru and thru, and hence delightful. Filled with excellent material, the book is marred by unskillful handling. A judicious omission of the broader bits of humor would also be an improvement.

Dutton. \$1.35.

BELGIAN LEGEND AND BUILDING

The most attractive book on Belgium out lately seems to us Mrs. Champney's *Romance of Old Belgium*. The first stories purport to be from a hidden manuscript of Froissart, discovered on the destruction of a monastery by German shells. Later tales are historical. There is a chapter by Frère Champney on the characteristic architecture of this land. The illustrations are peculiarly apt to the text, varied and delightful.

Putnam. \$2.50.

THREE PLAYS

In the three plays included in the sixth volume of Hauptmann's works is shown again the dramatist's tremendous grasp of human nature. In *The Maidens of the Mountains* he shows a group of people who live and love and dream, and being modern, know that they dream. *Griselda* is the medieval legend retold with the keenest psychological insight, yet subtly touched with poetry. *Gabriel Schilling's Flight* is a brilliant analysis of the relations of the sexes.

Huebsch. \$1.50.

NOT FOR LAYMEN

Consumption and Its Cure by Physical Exercises propounds a theory directly at variance with the methods that in the past twenty-five years have made such progress in combating this frightful disease. The author, Filip Sylvan, M.D., is an English doctor, and his record of cases extends over five years, so that the book will be of interest to physicians, but patients cannot be too strongly warned against trying without medical advice to treat themselves by its suggestions.

Dutton. \$1.25.

A ROMANCE OF LABOR

In the third part of *Pelle the Conqueror*, *The Great Struggle*, Martin Nexö depicts the development of the social conscience in Pelle, and his work in Copenhagen as a labor leader convinced that the salvation of the poor lies in their consolidation. Despite a somewhat unnecessary coarseness, despite the exceeding badness of the translation, the book is worth reading for its exposition, from the workingman's point of view, of the methods and purposes of organized labor.

Holt. \$1.40.

MEXICO

Adventures in Mexico is an Englishman's account of his journey thru that country in 1846. George Ruxton gives lively and picturesque descriptions of the country and people, descriptions which might have been written today so little have conditions changed. He admires the women and the natural scenery, but cannot say enough in

disparagement of the men and the towns. The book abounds in hairbreadth escapes and doughty deeds on the part of the hero-author.

Outing Publishing Co. \$1.

AROUND THE MEDITERRANEAN

The new edition of E. Reynolds-Ball's *Mediterranean Winter Resorts* is revised and in part rewritten. This is an excellent practical guide book for Egypt and northern Africa as well as the Riviera and Italy.

Dutton. \$1.75.

TURKISH WOMEN

Much romance regarding the Oriental harems is exploded in Elizabeth Cooper's present book, *The Harem and the Purdah*. Into its pages she has crowded much of first hand information. The manners and social ideas that have led to the harem as an institution are considered and much new light is incidentally but entertainingly shed upon the social East.

Century. \$3.

COMPETENT OFFICE WORK

Business psychology, in so far as it concerns the employer, and the running of the well-ordered and systematic office, is admirably presented in *The Efficient Secretary*, by Ellen Lane Spencer. Its terse and lucid manner, its special reference to the so-called unessential details, and its direct appeal, make it of value to those who aspire to "success and financial reward."

Stokes. \$1.

A LAPSE INTO THE VICTORIAN

It is hard to associate the Compton Mackenzie of "Youth's Encounter" and "Carnival" with the anemic *Plushers Mead*. Abandoning the gay adventuring into life which made the earlier novels fascinating, he has here lapsed into the silly, idyllic love story, a story, says the publisher's notice, "enhanced by the perfect setting of an incomparable English landscape"—and about as lifelike.

Harper. \$1.35.

HOKUSAI IN NEW YORK

A noteworthy exhibition of old Japanese color prints, of the so-called Ukiyo-e School, as executed by the great and incomparable Hokusai, and which took five years to assemble, has just been held at the Yamanaka Gallery in New York City. The work of some of the master's pupils was also included.

There is a growing appreciation of Oriental art in this country, and particularly that produced by the Japanese artist. It makes a strong appeal to connoisseurs and fine impressions of chromoxylographic work, the cost of which, when issued, was but trifling, now often fetch hundreds, and sometimes thousands of dollars at the great sales.

The Japanese myth and legend, the folk tales, with which Hokusai and his brother artists love to deal, are so violently unlike the Occidental myths that the color prints of Japan take on a charm that is all their own. This applies with special force to the pictures by Hokusai, whose sense of humor was very strong.

The wide range of subjects that occupied this Japanese master during his long and busy life (1760-1849) was highly interesting. His famous "Wave" print was represented by a magnificent example, in fine color and in clear impression. His various prints of Fuji (sacred mountain), his waterfalls, his bridges, his fishes and birds, his genres, and his flower pieces were all selected gems.

Extraordinary Prices on These Oliver Typewriters

Here's Your Chance!

Must Sell a Thousand Machines Quick

No. 5 OLIVER

The great European War makes it impossible to ship typewriters to Europe. We have 1,000 No. 5 Oliver machines which we must sell quick. And we are determined to dispose of them in this country at prices which defy competition. These grand typewriters must be sold at once. Here is a great opportunity to secure an Oliver at bed-rock prices. You will never have another chance like this, as the small number of Olivers at this ridiculously low price will be sold to the first thousand readers sending in the coupon. Are you going to be one of these fortunate people? Act now if you want a good typewriter. Investigate today.

Genuine Oliver Typewriter
Guaranteed a Lifetime

These machines come to us fresh from the factory. Money will not buy greater typewriter value. They have all the wonderful Oliver advantages—visible writing, U-shaped type bar, built-in tabulator, marginal release, universal keyboard with six extra characters, etc., etc. Each full standard size, complete with every accessory and full instructions for operating.

The Oliver has the lightest touch and greatest durability of any typewriter made. Anyone can operate the Oliver successfully.

We will sell you one on the easiest terms ever known. Better still, we cover every single machine with a lifetime guarantee. Other machines are guaranteed for one year. But we have such confidence in the No. 5 Oliver that we will guarantee it for life. When you buy an Oliver you buy "for keeps."

Half the Price of Other Machines
Payments Just Like Rent

These 1,000 machines must go at once. And the price we make is so low that we do not dare even publish it. We can quote this price only in a confidential letter. Ask for it, if you need a machine. Don't wait until they are all gone before investigating. Mail the coupon or a post card today. Our price and terms will surely astonish you.

And remember that this is a regular \$100 machine, with many thousands in use all over the world right now. We can always undersell manufacturers, because we have no salesmen with their big salaries and expenses. All of our machines go direct to the consumer, and he gets the saving.

And right now we are going to cut our own low price clear to the bone. Seize this opportunity while you may, for we doubt if it ever can be repeated. At the astonishingly low price we are quoting, these thousand Oliver Typewriters will all be disposed of in a very short time.

Get Our Amazing Price and
FREE Trial Offer!

Send for our offer today. Use the coupon or a post card. Find out all about our sensational cut in prices. A few cents a day will buy your Oliver. And we will let you try one free, without sending us a single cent. Mail the coupon now, whether you're ready to buy or not. Then you will know whether you can afford to do without a standard No. 5 Oliver any longer.

THE MARKET PLACE

A REVIEW OF FINANCE AND TRADE

THE NEW YEAR IN FINANCE AND TRADE

BY FRANK D. ROOT

INDUSTRIAL conditions in the United States at the beginning of the present year were highly favorable. In 1915 there had been a notable revival of activity and a great increase of trade profits. The output of pig iron had been doubled. Steel mills, only sixty per cent of whose capacity was in use during the year's first month, were overwhelmed with orders in December, and their output was sold far ahead. Net earnings of the great Steel Corporation had risen from less than \$11,000,000 in the last quarter of 1914, and only \$12,500,000 in the first quarter of 1915, to \$51,000,000 in the fourth quarter, and the suspended dividend on the common stock was about to be restored. The price of copper had advanced from 13 to 20 cents a pound, and that of cotton from 7¾ to 12½ cents. For about four months the railroads had been carrying so much freight that a remarkable congestion of loaded cars was to be seen at our north Atlantic ports. Unprecedented exports were making a great trade balance in our favor. Crops had been very large. Our gold imports

had exceeded exports by \$420,000,000, and we had loaned more than \$1,000,000,000 to foreign nations.

In the first two and one-half months of the new year this prosperity has continued. There has been no change to our disadvantage in the conditions prevailing at the end of 1915. The earnings of our railroads have been growing. New high records have been made in the iron and steel industry, where there have been additions to prices every week. The net earnings of the Steel Corporation are at the rate of about \$240,000,000 a year. The daily average of output at the iron furnaces in February had never been equaled. Exports are still making a great excess in our favor. Many companies that are at work on war orders have declared large extra dividends. Fifty industrial corporations have reported, for the year 1915, earnings of 31.4 per cent, against ten per cent in the preceding twelve months, and this list does not include several whose gains have been extraordinary, because their reports have not yet been given to the public. Our ship-

nine for the Government—and orders for forty-three have been given since January 1. Many are for foreign owners. The price of copper, 27½ cents a pound, is the highest in forty-three years, and if it is maintained our producers of this metal will receive this year \$200,000,000 more than was paid to them in 1915.

But the gains have not, as a rule, been accompanied by higher prices in the market for securities. At the close of last year, large additions had been made (as our tables show) to the market values of railroad stocks, and there had been extraordinary advances for the shares of war order companies, with Bethlehem Steel and General Motors at the top of the list. In the first two and one-half months of 1916 the leading railway stocks have shown net losses ranging from 3½ to 5¾ points, and in the field of war order shares there has been no uniformity of movement. Losses are seen there as well as gains. A revival of speculative activity on the Stock Exchange during the last two or three weeks tends to make higher prices.

IRON AND STEEL

The output of pig iron, which in 1915 had grown from an average of about 1,500,000 tons a month in the first two months to 3,203,000 in December, was 3,188,000 in January and 3,087,000 in the short month of February, when, as has been said, the daily average at the furnaces was the largest ever known. The United States is now making iron at the rate of nearly 40,000,000 tons a year. The average price of steel prod-

Permanent Charity Fund

BOSTON SAFE DEPOSIT & TRUST COMPANY, Trustee

Permanent Charity Fund is the name given to a Declaration of Trust executed by Boston Safe Deposit & Trust Company to furnish a means by which gifts may be made in trust to charity without fear that changes in charitable needs or in the management of charities will destroy the usefulness of the gift or impair its ability.

The Trust Company will forever hold in trust gifts made to it as Trustee of Permanent Charity Fund and safeguarding the principal will distribute the income in accordance with the terms of the Declaration of Trust either to the charities designated by the giver, or, if such charities are given up or become outgrown, to those designated by a committee provided for in the Declaration of Trust and qualified to pass upon charitable needs.

A pamphlet containing a copy of the Declaration of Trust and an explanation in detail of its purposes and advantages will be mailed on request by

ucts is \$49 a ton, against \$30 one year ago. For some of them the advance has been more than 100 per cent. Bessemer billets at Pittsburgh are now \$45, and last week's addition was \$5. One year ago the price was \$19.50. Sheet bars have risen from \$20.50 to \$45. Many enlargements of plant have been ordered, and there are to be 91 new open-hearth furnaces, with an annual capacity of 4,250,000 tons of ingots.

After an official report had shown that the Steel Corporation's net earnings for the December quarter were \$51,232,000, the 5 per cent dividend on the company's common shares was restored. It was decided in that quarter that \$70,000,000 out of the earnings should be expended for new construction, including \$25,000,000 for a mill at Gary, Indiana. The number of the Corporation's employees increased from 141,000 in January of last year to 227,000 in December. A wage increase of 10 per cent, ordered for February, adds \$14,000,000 to the annual cost of labor. Net earnings at the rate of \$240,000,000 a year will leave \$130,000,000 free to be used for improvements or in other ways. It is expected that the Bethlehem Steel Company will expend \$25,000,000 upon the Sparrow's Point plant of the Maryland Steel Company, which it recently acquired, and that the new Midvale Company will devote \$10,000,000 to improvements and extensions.

RAILROAD GAINS

Notable gains for the railroads began to appear in the first weeks of last September. Up to that time the roads had not been doing well. New construction for the year was only 933 miles, the smallest addition made since 1864, and in October 41,988 miles of road, or about one-sixth of the whole number, were in the hands of receivers. But there was a reduction to 36,661 miles before the year closed. In the last four months of 1915 the roads handled more freight than ever before. Their earnings, of course, have shown large increases. No complete report for recent months can be obtained, but such official statements as have been published are in agreement as to the growth of business and profits.

In November, about one-third of the mileage, according to the Interstate Commerce Commission's returns,

showed an increase of 31 per cent in gross revenue and of 84 per cent in net earnings. In the East the net advanced from \$351 to \$713 per mile. The New York Central's net rose from \$5,067,000 to \$11,461,000. In December returns from a large part of the mileage pointed to a gain of 27 per cent in gross and \$44,000,000, or 73 per cent, in net. January gave the Pennsylvania road a gross increase of nearly \$8,000,000, or 31 per cent, with a remarkable gain in net, which rose from \$1,931,000 to \$7,048,000. In the same month the New York Central's net earnings advanced from \$4,274,000 to \$8,903,000. For those roads whose reports for February have been made known, the increase of gross receipts has been about 21 per cent.

Prices of shares in the stock market have not been in accord with such an exhibition of profits, for, as has been said, these prices have been reduced by several points. This downward movement has had several causes. As the great growth of freight traffic is due mainly to the transportation of war supplies, it would be checked sharply if the war should suddenly and unexpectedly end. This is not overlooked in the stock market. And there is the menace of a great strike if the demands of the 400,000 members of the four unions are rejected. The companies say that compliance with these demands would cost the roads \$100,000,000 a year. As at least a part of the desired wage increase will be granted, by arbitration or otherwise, a considerable addition to the roads' expenses cannot be avoided.

Congestion of unloaded cars is most noticeable at New York. For several reasons that port is attractive to those engaged in the foreign trade. It offers a comparatively short route, its banking facilities and provisions for foreign credits are unequalled in this country, and it has been the foremost port for the reception of imports, which are nearly six times the quantity taken in at any other place. Its exports have risen from \$864,000,000 in 1914 to \$1,785,000,000 in 1915, which is more than one-half of the entire shipments from the United States. But many of

Have You Made a Will?

Do you realize that if you do not dispose of your property *by will* your estate may be disposed of by law very differently from the way you would wish? Unless a will is made, the law can take no account of the special personal needs of any heir.

When you make your will, why not insure efficient and economical management by appointing the Bankers Trust Company as executor and trustee?

This Company will scrupulously guard the interests of your heirs, and will give your estate the benefit of experience gained in the management of many estates, of large and of only moderate size.

Our officers will be glad to correspond with you regarding any trust or banking business.

Get the Saving Habit

The habit of saving has been the salvation of many a man. It increases his self-respect and makes him a more useful member of society. If a man has no one but himself to provide for he may be concerned simply in accumulating a sufficient sum to support him in his old age. This can best be effected by purchasing an Annuity or an Old Age Income Policy as issued by the Home Life Insurance Company of New York. The Annuity will yield a much larger income than can be obtained from any other absolutely secured investment. The Old Age Income commences at age 60, but in case of prior death the monthly income immediately accrues to the beneficiary. For a sample policy write to

the ships now taking cargoes there are not well fitted for the trade, and the work of loading them from cars is done slowly. Ships ordered to take cargoes have been suddenly withdrawn by foreign governments for other service in the war. Our own munition companies, not fully equipped for the increase of their production, have been very slow in unloading the cars carrying their raw material, and some of them, fearing a strike of coal miners, have used many cars by their large orders for coal. Western railroads have only 90 per cent of the cars they own. In the East there is an excess of 13 per cent, which is increased to 44 per cent in New England. And so the American Railway Association has ordered that Eastern roads deliver to roads in the West 20 per cent more freight cars than they receive from them. But this has not solved the congestion problem, as to which the Interstate Commerce Commission is now taking testimony.

FOREIGN TRADE

Our exports in the calendar year 1915 exceeded our imports by \$1,768,000,000, which was not far below the entire exports, \$2,113,624,000, of 1914, and may be compared with an export excess of only \$325,000,000 in that year. December's exports and excess made new high records. Our imports have been only slightly affected by the war. Last year they were only a few millions below those of 1914 or 1913. The reduction was less than 1 per cent. The excess of exports over imports for the seven months that ended with January was \$1,084,333,000, or two and one-half times the excess in the corresponding period one year earlier. Our net gain in gold imported was \$420,000,000 in 1915, against a net loss of \$165,000,000 in 1914. Shipments of war supplies have recently been very large, despite the delays for which the railroads are criticised. And on several of the largest orders there have been no shipments. Exports of food have been nearly equal to those of war material. Our sales of breadstuffs and dairy products to foreign countries rose from \$330,000,000 in 1913, which was a normal year, to \$760,000,000 in 1915. Our trade with South America, China, the British East Indies, Australia and New Zealand has been growing. Both exports to and imports from South America show an increase of about 40 per cent. Probably this gain can be retained after the war only by satisfying local preferences concerning goods, accepting South American credit customs, and investing United States capital in South American undertakings.

THE STOCK MARKET

Prices of securities on the Stock Exchange have not moved in accord with the prevailing favorable financial and industrial conditions. In January the market was not a broad one. There were signs that the outside public's speculation in war order shares had been checked. The market was not stimulated by the resumption of the dividends on United States Steel common, the declaration of a dividend of 30 per cent

on Bethlehem Steel common (with a wage increase of 10 per cent), the increase of the St. Paul dividend from 4 to 5 per cent, or the good reports of railroad earnings. Bethlehem common sold at 46 in January a year ago, and at 600 in October last. The price is now in the neighborhood of 530. Some traders were nervous and apprehensive on account of President Wilson's utterances during his tour in the West. Restraint was caused by the railway employees' demand for higher wages, and the sale of American securities day after day by English owners. Since the beginning of the war the number of Steel common shares held abroad has been reduced from 1,285,626 to 696,631, the sales amounting to about \$51,000,000. American securities were coming across the Atlantic every week, and sales were made by the British Government of those taken from owners under the provisions of the mobilization plan.

In February the market was even more narrow. The course of prices was affected by the submarine controversy with Germany and by indications that President Wilson might not be supported by his party in Congress. The downward tendency was not checked by many extra dividends which munition and copper companies announced. But in March, after the warning resolutions had been tabled in Congress, the market broadened, and the 14th was a million-share day. There were some signs that the public was again buying war order shares. Villa's raid in Columbus, and the sending of a punitive expedition into Mexico by our government, exerted no depressing influence, and, as a rule, no one ventured to predict the effect of the Verdun battles or any international complications that might appear.

The price of wheat has declined at Chicago since January 1 from \$1.25 to \$1.08. Exports for the seven months ending with January were much less than those of the corresponding months a year earlier. Farm reserves are unexpectedly large, 241,000,000 bushels, against 153,000,000 one year ago.

Our new loans are \$5,000,000 to Norway and \$15,000,000 to Argentina, making a total of \$79,500,000 to the latter country. The supplementary Anglo-French credit of \$50,000,000, arranged by groups of banks and based upon collateral deposited in the Bank of England, is now effective. A syndicate of bankers in New York will loan \$75,000,000 to Canada. There may be a French loan, but the proposed loan of \$60,000,000 to Russia appears to have been laid aside.

Reports concerning general trade are favorable, the iron and steel industry is breaking all previous records, metal prices are high, railroad traffic is large and profitable, the woolen and cotton mills are busily employed, and the encouraging conditions seen at the end of last year have not been impaired. The approaching wage controversy on the railroads may cause disturbance, and the situation may be unfortunately affected by international disagreements.

On the first policies issued by the Hartford Fire Insurance Company there is a quaint steel engraving that gives an interesting picture of the primitive fire-fighting methods of 1810. A crude, hand-operated pumping apparatus stands before a blazing three-story dwelling, while a bucket-brigade of 50 men is required to supply the water for one feeble stream.

Rather a contrast to the modern 100 horse-power auto engine rushing at express train speed to the scene of the fire, there to supply a dozen hose lines with inexhaustible, high-pressure streams. Yet this contrast is no more striking than the difference between the first hesitating steps in the development of the Hartford Fire Insurance Company and the present complete and comprehensive

INSURANCE SERVICE OF THE TWO HARTFORDS

The Hartford Fire Insurance Company in all its 105 years' history has been in the forefront of every sound, progressive movement for better fire insurance protection. As a result it does today the largest fire insurance business in the country.

The Hartford Accident & Indemnity Company carries into the field of casualty and bonding insurance the same progressive methods, unquestioned financial strength and business integrity that have marked the history of the parent company.

The two companies, between them, write practically every form of insurance but life insurance.

Independent Opinions

A part of the British press is urging that German ships and German goods be permanently debarred from the entire British empire. A pledge of perpetual boycott against Germany is reported to have received millions of signatures. The business manager of the Pasadena Water Department sees danger in this policy:

The talk by the Allies of demolishing German militarism is entirely reasonable, but they go further and propose a system of tariffs that would shut out Germany from the fields of commerce to a very large extent. The peace-loving industrial element in Germany has been made to believe that they are fighting not an offensive war, but a war in defense of the national existence, and it has been concealed from them that the present great war was brought about by the Kaiser and other militarists thinking conditions were ripe to conquer Europe and later the world. This talk of barring out Germany from commercial business after the war will only confirm industrial Germany in their present belief as stated above, and will weld the nation into a more solid mass, if possible, than now.

On the other hand, if it was published abroad that only German militarism was to be blotted out and that German commerce was to have a fair field with no handicap, I do not doubt that very many Germans who are already quite tired of the war would heartily endorse the program. Threats against the commercial life of the nation can only prolong the war.

WILLIAM SELBIE

Pasadena, California

That article in The Independent of January 24, on "Shall the United States Protect Its Citizens?" is certainly "the limit." Send an army into poor, bleeding Mexico because a few adventurers have been killed—or because Mexico is a weak nation? but let Germany kill American citizens by the score and keep on sending another friendly remonstrance! And in The Independent!

R. S. LINDSAY

Congregational Manse, York, Nebraska

Nevertheless we still believe that it is the business of Uncle Sam to police Mexico rather than to police Europe.

In regard to the question of immigration and assimilation discussed in our editorial of January 17 on "No Disunited States," we have an interesting communication from the editor of *Il Carroccio*, the only Italian monthly magazine published in the United States:

Don't you think that the political and educational problems of the United States which embrace the naturalization question would be better resolved than the artificial change of nationality, by means of a more just treatment of the foreigners in whom the Americans see nothing else but an inferior element to be educated, to be protected, to serve afterward, with their number and labor, in constituting a large American body without soul? If the Americans would treat the foreigners as their equals—if they would respect their nationality—if their high principles of democracy, of humanity and of education, added to the economic fortunes by them possessed, would aid and elevate the less fortunate foreigners—if they would see in them instead of American Citizens prey of political

parties—foreign citizens respectful of the laws and of the customs of their adopted country (because a citizen is a *good citizen* either in New York, London, Paris or Rome)—then, among *true Americans* and foreigners, political and social ties would be more sincere and stronger than the present, founded on friendly relations, on the coöperation of labor and on the reciprocal help for their own common welfare and that of humanity.

The American institutions would not walk on the mined territory of the *hyphen* and the foreign collectivity would be spared the suffering, the tragedy which now troubles the soul of the German-Americans.

I think that among the immense horrors, the European war has been a great lesson to the United States. It has placed them before the abyss in which they were precipitating and which has been excavated by their own hands: that of proceeding to denationalize the people who can never abandon their *most obscure impulses, the original qualities of their mind* and in which the spirit of superiority shown by the Americans and the differences of treatment at disadvantage to the foreigners, exasperate their nationalism to a fanatic pitch. Better few good Americans of certain, immovable faith, than many *naturalized* on which you cannot depend in the hour of defense.

New York City AGOSTINA DE BIASI

We never expected to hear Oklahoma disclaim credit for any legislative innovation, as in this letter:

In your able and interesting "Both Sides of a Debate," in The Independent for January 24, occurs this statement: "The first state to establish the office (of Public Defender) was Oklahoma, in 1911."

This is "news" to your Oklahoma readers. It is true that Dr. J. H. Stolper, in 1911-12, attorney for Kate Barnard, Commissioner of Charities, assumed this title, but it was mere assumption. The office of Public Defender has never, nor does it now exist, in the state of Oklahoma.

Okmulgee, Oklahoma E. RISOR

Our correspondent seems to have overlooked the fact, however, that in March, 1911, the Legislature of Oklahoma did pass an act creating the office of Public Defender of the State of Oklahoma to be appointed by the Commissioner of Charities and Correction (Section 8101 of the Revised Laws of Oklahoma as amended by chapter 25 of the Laws of 1911). The bill was vetoed by the Governor, but it was claimed that the veto was too late, and that the bill became a law without the Governor's approval. The existence of the office has, in fact, been recognized by the County Court of Okmulgee County, by the Criminal Court of Appeals, and by the Supreme Court of the State (33 Okla., 526).

It is true that the office as constituted in Oklahoma differs widely from the familiar type seen in Los Angeles, for it deals only with suits involving "minor orphans, defectives, dependents and delinquents" and with "such other duties as the Commissioner of Charities and Corrections may authorize."

A letter which we quoted in this department on January 17 included the sentence: "If he is sincere we can respect the antagonist quite as much as the contagonist." But the rector of Saint Mary's School objects to the way our correspondent coins the word.

If you must do it, please do not hybridize. Try synagonist. GEORGE W. LAY

W. G. McCUNE, Treasurer.

INSURANCE

CONDUCTED BY W. E. UNDERWOOD

BRIEF REVIEW OF FIRE INSURANCE

One hundred and thirty-five American and sixty foreign fire insurance companies reporting to the New York Insurance Department, representing a combined capital of \$106,500,000, closed the year 1915 with combined total assets of \$701,515,432, a gain in that item of \$36,654,826; and a combined total net surplus of \$231,329,493, representing a gain of \$30,891,575.

During the year 1915 these 195 companies received total premiums of \$353,919,023, a sum larger than the year before by \$17,260,484; a total income of \$382,860,875, a gain of \$14,667,882—indicating, however, a decrease in income from sources other than premiums of \$2,592,602. The total losses paid were \$193,515,307, an increase over 1914 of \$2,173,970. The total disbursements were \$333,987,732, less than the previous year by \$5,221,515.

There are perhaps 250 stock companies in the United States. That the average experience of those, the figures of which are quoted, is applicable to all it is impossible to assert, but the chances are rather in favor of than against that assumption. It is a vast improvement on the record of 1914, when the net surplus fell off nearly \$6,000,000, and the ratio of losses paid to premiums received was between five and six per cent greater.

After paying \$14,440,153 in dividends to stockholders, the total disbursements, including the losses as noted, were \$333,987,732, as against a total income of \$382,860,875, showing an excess of income of \$48,873,143. Losses and dividends absorbed a total of \$207,955,460, indicating that the total general expenses were \$126,032,272, or about thirty-five per cent of the premium income. While this ratio of management expense will probably be found on more detailed calculation to show a decrease as compared to previous years, it is yet too high, due mainly perhaps to the inherent defects of the agency system as now organized and operated.

Thus far, 1916 has not opened auspiciously for the companies, if we are to judge their experience by such records as are kept of the general fire waste. According to the figures compiled daily by the *Journal of Commerce and Commercial Bulletin*, the fire loss in January this year exceeded that of the same month last year by \$1,362,750, while the excess of February, 1916, over February, 1915, aggregated \$11,670,000, the total of the two months, each year, being: 1916, \$46,203,220; 1915, \$33,161,370. This unevenness of experience, one year with another, is seemingly an ineradicable difficulty in the business of fire insurance, one which renders it more completely dependent on the laws of average than perhaps any other branch of insurance.

Out of these erratic fluctuations, in part, arise many of the insoluble problems of rate-making. There is no sort of dependable constancy in the loss factor. As may readily be concluded the only safety in computing premium income lies in using an experience covering the longest practicable period; the greater the number of years contributing it the better. The older and larger companies are better equipped to withstand these sudden and sometimes disastrous rises in the loss ratio. The income from their great invested assets is a second line of defense against violent assaults by fire, and enables them at the same time to pay good dividends to their stockholders and pile up heavy reserve and surplus funds. It is the lack of this resource which renders the success of new companies so precarious and places almost within the realm of speculation investments in their stocks.

A GLANCE AT THE LIFE INSURANCE FIELD

It is quite probable that the volume of new life insurance written this year in the United States will not only exceed the figures of 1915, but will greatly surpass all previous records, even those of the years immediately preceding 1905, when the Armstrong Committee investigation brought it close to a dead stop. Prior to that event, under the stimulus of extravagant commissions to agents, rebating and fascinating estimates of ten, fifteen and twenty-year deferred dividend bait, the year-end totals soared, the biggest companies leading the way with between \$300,000,000 and \$400,000,000 each. There were not so many companies then, but all save a few were operating under tremendous pressure and rolling up big totals.

Present conditions are immeasurably better. Business is more carefully written and will remain in force longer. Net gains in insurance in force now, regarded from a commercial viewpoint, should be worth two or three times their former value.

Before me lies a compilation of the principal items of 188 life companies

for the year ending December 31, 1915. Of these only six issued and were paid for more than \$100,000,000 each. The companies and round amounts follow: Metropolitan, \$256,000,000; New York Life, \$228,000,000; Prudential, \$195,000,000; Equitable, \$164,000,000; Mutual Life, \$160,000,000; Northwestern Mutual, \$132,000,000. In addition, it must be noted that the Metropolitan and Prudential figures represent Ordinary business only, and that their Industrial totalled, respectively, \$327,000,000 and \$385,000,000.

Lacking sufficient time on this occasion to make a detailed computation of the figures of all the companies, I have been able to approximate the total and find that the 188 companies wrote new business in 1915 aggregating about \$2,623,000,000. Large as this seems, it is equal to but \$26.23 per capita of the population. If we estimate the insurable adult population at one-fifth the whole, it represents an average of but \$131.15 apiece. From these facts one may easily imagine the acreage, as a farmer would say, yet open to intensive cultivation by our enterprising and ubiquitous friends, the insurance agents.

Many of the companies included in this résumé are superfluous. Perhaps three-fourths of them are under ten years of age. The greater number of them wrote between \$1,000,000 and \$2,000,000 new business, which means new premiums of from \$30,000 to \$60,000 a year. They are generally of the class using what are known as "first-year preliminary term" or "modified preliminary term" reserves, which, though entirely safe, are below standard and only resorted to as a means of increasing the amount available for first-year expenses. It is difficult to believe that a large number of them will not be eliminated during the next ten years by competition, plus their own mediocre managements. It is my observation that there are many men connected with the lesser and newer life companies who have much to learn about life insurance management, men who will eventually land in occupations better suited to their abilities.

The promotion of new companies was a dull trade in 1915, confirming the impression prevalent for several years past that the investing public was growing cold to that line of speculation. A sum estimated at from \$50,000,000 to \$60,000,000 is alleged to have been lost by the stockholders in companies organized and retired within the past ten years. To this must be added other millions locked up in companies of the same period and class which are destined to failure of one sort or another—by which is meant flat insolvency or retirement by reinsurance.

Business and trade reports made at different times since this year commenced indicate increased activity for at least another twelvemonth, whether

This department of The Independent will undertake to furnish on the request of readers any information respecting the business of insurance and the companies transacting it which we have or can procure. We cannot, however, pass upon the debatable comparative differences between companies that conform to the requisite legal standards set up for all, except in so far as the claims made by any of them seem to be inconsistent with the principles of sound underwriting. Address all communications on insurance subjects to the editor of the Insurance Department.

the European war does or does not cease within that period. The life companies and their agents are redoubling their efforts to improve the opportunities which are afforded by the prevailing trade expansion. They are estimating a volume of new business considerably in excess of that of 1915 and they realized the expectation in January and February.

EVOLUTION OF THE ACCIDENT BUSINESS

The outstanding feature at present in the evolutionary processes of the casualty business involves the changes which are taking place in the accident policy. Readers will understand that the use of the term casualty business is descriptive of that branch of insurance, multiple in its purposes, which provides indemnities by the same company against loss or damage thru accidental causes to the person (accident insurance), all forms of liability, breakage of plate glass, burglary and theft, etc. The personal accident policy has always provided a principal sum against accidental death in addition to weekly indemnities for accidental injuries.

For a number of reasons, the provision of the principal sum against death is losing its popularity with some companies. In some sections of the country losses due to this benefit are and have been inordinate. Much trouble under it is due to deaths by suicide. Compared with the cost of life insurance, \$1000 of accident insurance is extremely small, not more than one-tenth on the average, and it has been satisfactorily settled in many cases that persons have deliberately loaded up with accident insurance preparatory to killing themselves. Generally, the matter has been so managed that the companies could not successfully defeat the claim.

Another impelling motive for the exclusion of the death indemnity from the accident contract results from the inclusion of that benefit of late in the policies of a number of life companies. Some of the latter are now doubling the amount of the life policy if death occurs as the result of violent and accidental means, the simple face being payable for natural death. In short, there are numerous evidences leading to the conclusion that the life companies will eventually cover everything now included in the accident policies.

W. A. D., Deer Creek, Ill.—Without prejudice to the other company you name, which in every respect is a most excellent one, after considering all the circumstances, I am of the opinion the Presbyterian Ministers' Fund would be the better choice. Assuming that you have dependents, I would not advise one in your profession on your salary to take a twenty-year endowment. If you are without dependents who need protection in the event of your death, the endowment is preferable. But if protection now is a consideration take two or two and a half times the amount of the proposed endowment in ordinary life. An endowment in the Fund for \$1000 would cost you about \$46 a year and have a final cash value of \$1000. For about \$44 a year you can get \$2000 ordinary life which in twenty years will have a cash value of about \$560. But you will have had double the amount of protection.

**THE PENN MUTUAL LIFE
INSURANCE COMPANY**

921, 923, 925 Chestnut Street, Philadelphia

FOUR SCORE YEARS AND TEN

THE PENNSYLVANIA FIRE INSURANCE COMPANY was organized January 20, 1825, and from that day to this has been continuously in business at the same location facing Independence Square in Philadelphia.

Permanence and stability are qualities highly valued in any business, but preeminently so in an Insurance Company whose whole purpose and function is to make sure, to afford relief and repair losses after ordinary safeguards have failed.

Nothing demonstrates those qualities quite so well as the actual record of a long term of years. Such a record, 90 years, with ample assets and modern service is the basis of confidence afforded its Agents and the public by

**THE PENNSYLVANIA FIRE INSURANCE COMPANY
PHILADELPHIA, PA.**

A Number of Things by Edwin E. Slosson

One of the best source books in psychology is the personal column of the London *Times*. Here is a sample lesson:

WILL ANY DOG LOVER give **TOWN HOME** to fascinating mongrel-like, small, unshaved **POODLE**, 12 months? Unusually affectionate, intelligent. Follows to heel; sleeps out.—Circumstances only compel mistress to part.—Box R. 908, *The Times*.

One would think that under the circumstances the love and care here lavished upon a mongrel-like poodle had better be bestowed upon a small unshaved Belgian baby who might prove equally affectionate, intelligent and fascinating. But there's no accounting for tastes as the old lady said when she kissed the cow.

The "lost art of letter-writing" seems to be reviving under the influence of the war.

YOUNG ENGLISH WOMAN would be glad to **CORRESPOND** with lonely or wounded officers.—Box D.563, *The Times*.

FIELD OFFICER (in England) lonely, would greatly appreciate **CORRESPONDENCE**.—Box S.926, *The Times*.

A GIRL will Gladly **WRITE** cheerful **LETTERS** to a **LONELY** or **WOUNDED OFFICER**.—Box D.67, *The Times*.

LADY will **WRITE** **CHEERFUL LETTERS** to **LONELY** or **WOUNDED OFFICER**.—Reply L. Y. D., 48, Haymarket, W.

Now which do you suppose the lonely field officer wrote to, the lady, the woman or the girl?

GOLF.—Young wounded Officer desires to stay in country house (**PAYING GUEST**?) and have companion for golf.—Box S.940, *The Times*.

I'm glad that the young officer's wounds do not put him off his game, but what does this questionable paying guest mean by his intrusion?

WOULD any **REGIMENT** like as **GIFT** from a lady a little **TAME WHITE PIG** for a mascot? Two months old; hand fed; very affectionate.—Box D.565, *The Times*.

It's a long way to Tipperary.

Some said I was sacrilegious when in the issue of January 31 I ventured to suggest that Ezekiel might serve as a political platform. This surprised me because I had supposed that the prophets intended their sermons to have a political bearing and that they were not altogether out of date yet. But I am comforted to find that the editor of *Bible Study*, the monthly of the Bible Teachers' Training School, is not shocked by my remarks:

The Bible is a book of affairs. It is able to take care of itself. I like to see evidences that it is being used. I even think that the versatile writer of *A Number of Things*, in *The Independent*, will stimulate many to read Ezekiel for profit, and that

perhaps his "take off" of the recent illustrious interpreters of the passage about Ezekiel's watchman may lead these gentlemen to study the context and discover how wide of the mark they came in their use of the same. Ezekiel does stand for preparedness there. But it is of a kind different from that advocated by the current interpretation. Read for yourself and see.

At a meeting of the authors and artists of France held in the Sorbonne to express their gratitude for the many forms of hospital and relief work supported by Americans, a poem written for the occasion by Mme. Daniel-Lesueur was recited by M. Mounet-Sully, the dean of the Comédie Française. I quote the first half of it, together with a translation which my son, Preston W. Slosson, has made for me.

AUX ETATS-UNIS D'AMERIQUE

Etats-Unis, creuset formidable des races!
Jeune univers, qui fis fleurir en tes espaces
Une nouvelle humanité,
Le monde en tes sillons lança tant d'énergie
Que ton Peuple naissant, moisson bientôt
surgie,

Eut pour premier cri: "Liberté!"

Quel écho! quel frisson sur l'Océan sonore!
Notre France éblouie acclama ton aurore,
Ton drapeau fut notre drapeau.
Avant nos trois couleurs, voici tes treize
étoiles!
Et voici, sur la nef où palpitent les voiles,
La Fayette avec Rochambeau.

Tu n'as pas oublié ton acte de naissance
Signé de ces deux noms. Car la reconnaissance

Pesante au faible, est douce au fort.
Près du grand Washington, notre beau La
Fayette

Avec sa martiale et fine silhouette,
Est sur ton cœur, comme un trésor.

Et tu t'es souvenue hier, quand sa Patrie
La France, menacée, indomptable, meur-
trie,

Luttant pour vivre encor demain,
Reprenait pied à pied sa terre, ses collines,
Ses bois, ses prés sanglants, ses villes en
ruines—

Vers elle, tu tendis la main.

Une main désarmée, une main pacifique.
Car l'équité du Neutre, ô loyale Amérique!

Est intacte en ta bonne foi.

Mais la pitié n'est pas contrebande de
guerre.
Quand nos petits enfants souffrent, ils ont
deux mères:

Une en France, l'autre—chez Toi.

TO THE UNITED STATES OF AMERICA

United States, world's melting pot thou
art!

Young universe, that flowerest in each part
With fresh humanity;

The nations poured into thy furrows all
their strength
That thy people, grown to harvest, might
at length

Choose the watchword "Liberty"!

That cry resounded till the ocean shook,
France cheered thy dawn, and thine own
colors took

In her bright flag to glow.

Leading the tricolor behold the thirteen
stars,

And on swift ships beneath the groaning
spars,

La Fayette and Rochambeau.

Remembrance of these friends cannot but
last;

Only the weak lose memory of the past,

The strong do not forget.

Next to thy Washington, who may hold fa-
vored place

Within thy heart but he, with his fine mar-
tial face—

Our own good La Fayette?

Thou didst recall their homeland yester-
day,
When fair France, menaced, stricken sore,
at bay,

Struggled to breathe and stand;
Reconquering foot by foot her land, her
hills, her wealds,
Her ruined towns, her desolated blood-
drenched fields—

To her didst thou reach out thy
hand.

An unarmed hand in peaceful friendship
proffered;

No insult to neutrality is offered,

By that gesture proud and free.

But pity is not contraband of war. And
thus

Our suffering children find two mothers;
one with us;

The other is with thee.

The Mesopotamian Valley, up which the British expedition from the Persian Gulf has made its way, is, according to tradition, man's first—and last—paradise. But Tommy Atkins, toiling thru the sand under a blazing sun, fighting fleas and flies as well as Turks and Arabs, did not find the country Edenic. One night when the troops were trying to sleep one soldier was heard to say to another: "'Ere, Bill, if this is the Garden of Eden, I wonder what Adam and Eve did with these 'ere mosquitos a-buzzin' around 'em."

Ravenna. O. Feb 29th 1916

Editor of Independent. New York.

Dear Ed. You should have a heart to heart, fatherly talk with that man Slosson.

He certainly was "spoiling white paper and musing up the universe" when he wrote, "Anthology in a country church yard" as a ridiculous criticism of Masters' great work "Spoon River Anthology." He is ashamed of it himself, for he laid it to his defenseless wife, poor thing.

And, Dear Ed. You had better watch out, or he will be trying to break into print with that play he has written, which he is so modest (?) as to confess is not equal to the best of Shakespeares work.

Do! do! head him off Mr Editor if you can, or he will give us "a taste for annihilation."

Hopefully Yours

E. C. CARIS

There! I always get into trouble whenever I tell the truth. Nevertheless I stick to both points. My dream play was *not* equal to Shakespeare's best and my wife *did* dream the Spoon River poem. But I would remind the indignant correspondent that it was published, not as a literary criticism, but as a psychological curiosity. If "dreams go by contraries" we should infer that Mrs. Slosson's real opinion of Masters' masterpiece was quite the opposite. But what man can fathom a woman's mind, let alone her subliminal?

The Germans claim to be the true disciples of Shakespeare. I wonder if they have read "Henry V."

When lenity and cruelty play for a kingdom, the gentler gamester is the soonest winner.

I notice that the chauffeurs are more careful to blanket their engines in cold weather than the drivers are their horses. The machine does not arouse compassion like the animal, but somehow it gets more care.

REMARKABLE REMARKS

SENATOR NEWLANDS—"Uncle Sam" is a myth.	
GEN. FUNSTON—I don't believe in swivel chair campaigning.	
BILLY SUNDAY—The world needs a panic in religion.	
SIR EDWARD CARSON—The real Irish- man loves peace.	
SENATOR THOMPSON—There are no idle men in Kansas.	
HERBERT KAUFMAN—Quit thinking with dead men's minds.	
JESS WILLARD—I am pretty well fixed in this world's goods.	
DAVID LLOYD-GEORGE—What you spare in money you spill in blood.	
THEODORE ROOSEVELT—Nothing is to be hoped from the present Administration.	
WOODROW WILSON—It is very difficult to think when so many people are talking.	
SENATOR CHAMBERLAIN—After this war is over we shall not have a friend in the world.	
MAYOR MITCHEL—New York has been too self-centered to have a real commun- ity spirit.	
BONAR LAW—The Mother Country is old, but the spirit of the British Empire is young.	
RUTH ST. DENIS—To be a good dancer a man must have a certain amount of the feminine in him.	
PROF. BRANDER MATTHEWS—A high- brow is a person who is educated beyond his intelligence.	
PROF. J. McKEEN CATTELL—When we embroider with gold braid we are likely to bind with red tape.	
ED. HOWE—The King of Belgium amounts to about as little now as the king in a pack of cards.	
JUDGE JOHN S. SNOOK—My experience in hearing divorce cases is that half the trouble comes from money.	
MARTIN W. BARR, M. D.—There are in this country at least 328,000 mental and moral defectives at large.	
LORD NORTHCLIFFE—I never have hesi- tated to state my profound admiration for the Germans as domestic servants.	
VICE-PRESIDENT MARSHALL—As the present writes of Abraham Lincoln, the future will write of Woodrow Wilson.	

MR. PURINTON'S EFFICIENCY QUESTION BOX

227. Mr. R. B. S., Washington. "Can you tell
me where I can get the necessary training to
become an efficiency engineer, so as to be the
best in my profession? This is what I most want
to become. I am a high school senior, nineteen
years of age."

The profession of efficiency engineer
is so new that methods for learning
it have not been standardized. Most of
the experts are men past thirty-five, who
have gradually evolved thru experience in
advertising, salesmanship, accountancy, or
other branches of business. You might fol-
low this course; or else connect with a
firm of good experts in New York, Chicago,
or some other large city—see classified
business telephone directory for names, un-
der title "Engineers" and sub-title "Effi-
ciency."

Other suggestions. Write Efficiency Press
Syndicate, Woolworth Building, New York,
for a list of a dozen modern books on
Efficiency. Look over *The Efficiency Maga-
zine*, 260 Broadway, New York. Investi-
gate the Efficiency Society, 41 Park Row,
New York. Read my book, *Efficient Liv-
ing*, obtainable from the Independent.
Watch these columns for future announce-
ments.

228. Mr. R. E. O., New Jersey. "Is it possible
to develop leadership? I find that I am a very
good follower, but am never able to get my
views adopted. When I am with other men, I
follow their suggestions. Why can't I be a
leader?"

Perhaps you were not meant to be a
leader. Think what a bedlam this world
would be, if every man were a leader.

Never mind about getting your "views
adopted." Think rather, how to act on your
own convictions. Get a copy of my "Tri-
umph of the Man Who Acts," carry it with
you, read and re-read it till you make it a
part of you. Study also Dr. Katherine
Blackford's book, *Analyzing Character*,
and find where your weakness lies. The
books can be had from the Efficiency Press
Syndicate, 233 Broadway, New York City.

229. Miss A. H., New York City. "Your arti-
cle of some months ago on 'The Efficient Man's
Money' so interested me that I should like to
get on an efficient financial basis myself. Will
you kindly suggest a proper division for a \$1400
income? I am a college graduate, have few so-
cial duties, no one dependent on me; am obliged
to dress well during business hours."

Local and personal conditions always
preclude an exact standardizing of a yearly
budget. We should say, however, that yours
might be, roughly, as follows:

Clothing, \$300; board, \$260; lodging,
\$180; church and philanthropy, \$140; sav-
ings and insurance, \$350; books and mag-
azines, pleasure and recreation, \$70; car-
fare, laundry, upkeep and incidentals, \$100.
Total, \$1400.

230. Mr. O. A. S., Texas. "(a) Should a boy
decide what he wants to be and do in life before
he leaves high school? (b) If so, how shall he
come to a decision?"

(a) Vocational experts differ on this
point. Some boys know intuitively their
life work, at ten years of age; and certain
great men did not find their life work till
they were past thirty. The best course seems
to be for a boy to learn all there is to learn
about vocational guidance, and make such
tests for himself as are practicable, while
still in the high school; then to have some
trial experiences in real life before deter-
mining finally what his career shall be. Get
three or four good books on vocational guid-
ance, study them carefully—then ask us
more questions if you like.

(b) See answer to query No. 197 in Effi-
ciency Question Box for January 31, 1916.
Write these experts, and consult with any
that appeal to you.

THE ETRUSCAN

A distinctive Gorham design
in solid silver

THIS design, with its Greek fret, or key *motif*, is a pattern of singular simplicity and strength.

It embraces a complete assortment of Table Silver, Dinnerware, and Tea and Coffee Services

A silverware pattern of such merit and distinction is not to be limited in its uses, but is worthy to officiate in all departments of the table.

Best of all, it is a pattern of which you will never tire, for the Etruscans flourished 1000 years before the Christian era, and after 25 centuries the world still does honor to Etruscan art.

The art which has survived 25 centuries of change is a safe choice in period silverware.

It is Gorham made and
bears this indenture

TO SWEEP OUT THE MEXICAN CANYONS

A PORTABLE MACHINE GUN OF THE SORT THAT THE PUNITIVE FORCES IN MEXICO WILL USE AGAINST VILLA AND HIS BANDIT TROOPS. THE VICKERS
MERCIER GUNS NOW IN USE, ONE OF WHICH "JAMMED" AT COLUMBUS, ARE TO BE REPLACED BY A MECHANICAL-RECOIL
TYPE, THE VICKERS GUN, BUT THE WAR DELAYED DELIVERY TO THE UNITED STATES ARMY

NO INTERCOURSE WITH PLEDGE-BREAKERS

IF the Channel steamer "Sussex" was struck by a German torpedo, how can we trust Germany longer?

The "Sussex" is purely a passenger vessel. She mounts no guns, carries no munitions. Her 436 passengers were largely women and children.

The "Sussex" was not warned. She was not ordered to stop. The noncombatants on board were given no opportunity to seek safety.

If she was struck by a torpedo—and the evidence all points in that direction, tho the German evidence should be heard before the question is finally adjudged—there are no extenuating circumstances. None of the excuses that the German Government has concocted from time to time in defense of its submarine warfare is here present. The attack upon the "Sussex" is a plain violation of the principles of international law and the rules of war as interpreted by the rest of the world. But it is

more than that. It is a clear infraction of the rules which Germany has agreed to in the course of the submarine controversy with this country.

If it was a torpedo, Germany has broken her pledged word to the United States. It makes no difference whether any American life was lost or not. There were Americans on board. As President Wilson has repeatedly pointed out to the German Government, putting American lives in jeopardy is a violation of American rights just as much as the taking of American lives. It is only a matter of degree. Murder is one crime; but attempted murder is another.

When one nation does not keep its word solemnly given to another nation, by that act the fabric of friendly intercourse is torn asunder.

We can have no intercourse with those who pledge us their word and falsely break it.

PEACE—ON WHAT TERMS?

THERE are rumors of coming peace in the air. Where their source and what their authority nobody knows. But we know that they spring from the secret wish of all the peoples that this awful era be brought to an end. The war is so disastrous to all concerned that there will be but comparatively little difference in the long run between the victor and the vanquished. Neither side can possibly gain enough to pay for another year of war. Any reasonable peace terms accepted now would be better than any future triumph.

In every belligerent country the people are beginning to ask the question, which should have been answered at the beginning, "What are we fighting for?" No definite answer has been vouchsafed by any government, so the people are beginning to answer it for themselves, and they answer it so variously that their peace terms sometimes overlap their enemy's. That is to say the most moderate factions of both sides have not merely met, but passed each other. For instance, some Germans are willing to concede more favorable terms than some Englishmen are determined to demand and *vice versa*. On the other hand, the extremists on both sides are getting more extravagant in their demands and so further apart every day.

Let us consider some of the peace terms which have been voiced in England and Germany. Disregarding extravagant and irresponsible utterances, let us take as a specimen of the extreme British terms the demands formulated by the *National Review* as the minimum to be imposed on Germany in case she is defeated. These are in brief that Belgium be fully compensated for all losses direct or indirect, and granted \$2,500,000,000 besides; that Russia, France and Serbia be fully compensated on the same scale; that all territories acquired by Germany anywhere in the world be confiscated; that Prussia be permanently crushed and crippled; that German trade be rigidly restricted, and that those responsible for the war be publicly executed.

Now whether these demands are just or unjust need

not concern us because they are obviously incompatible and impossible. No one nation even in the light of its prosperity could pay for all the losses, direct and indirect, of all the belligerent countries, and certainly not Germany if deprived of both her colonies and commercial privileges. It will be impossible to get any money out of Germany unless she is allowed to make money either thru foreign commerce or by the development of her African possessions. There is not enough gold in Germany or the world to pay such an indemnity. It could only be paid in goods, that is, thru foreign commerce.

The permanent restriction of German trade is the question that receives most attention in the British press. It is proposed, for instance, to shut out German shipping from any ports of the British empire, to prohibit the importation of any German-made goods even thru neutral countries, to require passports of all travelers so that Germans may be "treated like lepers" wherever they go, to confiscate German patents and the funds left by Cecil Rhodes to educate German boys at Oxford, etc. The movement has received official recognition and delegates of the British Government are now conferring with the representatives of France to devise some form of commercial alliance to follow the present military alliance. This action has alarmed the free-traders, but Premier Asquith has endeavored to allay their anxiety by stating that no measures involving a break with England's traditional policy will be taken without parliamentary approval. It will be interesting to see what measures can be devised that will not violate the principle of free-trade.

It will in any case be difficult for the Allies to cripple German trade without crippling their own. To take only one instance, Antwerp has been brought to rank as one of the world's greatest seaports largely thru German money and German trade. If these were shut out from Antwerp it would be a greater financial blow to Belgium than the German invasion.

When Premier Asquith was recently questioned in

Parliament by Mr. Snowden and Mr. Trevelyan as to the British terms of peace he replied by repeating what he had said at the beginning of the war:

We shall never sheath the sword, which we have not lightly drawn, until Belgium recovers in full measure all, and more than all, that she sacrificed; until France is adequately secured against menace of aggression; until the rights of the smaller nationalities of Europe are placed upon an unassailable foundation, and until the military domination of Prussia is wholly and finally destroyed.

This naturally was too indefinite to satisfy his interlocutors, who wanted these aims translated into concrete terms. In default, then, of any official interpretation of the Premier's statement we may consider that given by the Right Honorable C. F. G. Masterman, who is believed to express the government's views. According to Mr. Masterman the British minimum must include the following: Germany to pay an indemnity to Belgium sufficient to rebuild her cities, restore her industries and compensate for her disabled and dead; France to receive Alsace-Lorraine, and all territory up to the Rhine as well as an indemnity; Denmark to get back Schleswig; German, Austrian and Russian Poland to be reunited under the Czar; Italy to get the whole of Italia Irredenta; the Turkish empire to be partitioned; Bosnia and Herzegovina given to Serbia; the German fleet sunk or divided up among the Allies; all the Zeppelins to be burned; and the German colonies to be given to those who have conquered them, Australia, New Zealand and South Africa.

These demands are certainly moderate compared with some we have mentioned, but there are Englishmen who would offer their beaten foe more generous terms still. They talk of the necessity of England's coming out "with clean hands" without acquiring any territorial or trade advantages, and they would have Germany given back her colonies and her shipping admitted on equal terms to British ports.

This group of British conciliationists may be matched on the other side of the fence by the *Bund Neues Vaterland*, which is opposed to the annexation of any conquered territory by Germany and ridicules the idea that any permanent weakening of England and Russia would be an advantage to Germany. The New Fatherland Union petitioned for the suppression of the annexationist movement that is championed by a combination of six agricultural and industrial associations. These associations protest against a premature peace and assert that, since the enemies of Germany declare that she must be wiped out from the list of great powers, the safety of the empire can only be assured by the extension of its bounds to include territory of strategic and economic importance on each side. In order to secure an outlet to the Atlantic they desire the acquisition of the French coast as far as the Somme, also the fortresses of Verdun and Belfort, the chief coal and iron districts of France would thus pass into the hands of Germans and France would be left to indemnify the proprietors. Belgium is to form part of the same economic, postal and financial system as the rest of the empire. This would ensure the prosperity of German industries. To satisfy her agricultural needs Germany must annex the Russian border provinces on the Baltic and to the south.

Some of the German papers go beyond this and demand the annexation of Belgium; the surrender by England of Egypt, Uganda and Nigeria; India to be-

come a German protectorate; Russia to lose Finland, Poland, Bessarabia and Crimea.

Such extreme demands as these are, like those of the *National Review* on the British side, not to be taken seriously. The real German minimum is undoubtedly much more moderate. What it is cannot of course be told exactly, but it has been pretty clearly intimated more than once that the German Government is willing to make peace on some such terms as these: the evacuation of Belgium and France; the cession or purchase of Belgian and French Congo; the restoration of the Kingdom of Poland under a German prince; the transfer to Germany of the Russian debt to France; the establishment of the freedom of the seas for commerce, travel, mails and cable communication in time of peace and war under international guarantee; and equality of trading rights in all ports and colonies. It has been recently rumored that Germany is willing to cede part of Lorraine to France, to grant autonomy to Alsace and to pay an indemnity to Belgium.

Such, then, are opposing demands in both their extreme and more moderate forms. On their face value of course they seem irreconcilable, but we must remember that "nothing is ever served as hot as it is cooked." Besides it is apparent that the objects which the opposing parties most earnestly desire are not the same. The Allies are most intent upon getting the Germans out of France and Belgium. Germany is most concerned over her future opportunities for commercial and colonial expansion.

But so long as neither party is clearly victorious and both parties fear that it will be taken as a sign of weakening to mention the conditions of peace, there seems to be no hope of getting them even to consider the possibility of coming to an agreement.

NO TASK FOR CONGRESS

THE United States Government is a big shipper on American railroads. What it ships is not freight, but mail matter. This is a distinction, but hardly an essential difference. Why should there be any difference in the manner of fixing the rates to be paid for the transportation of the two kinds of matter?

In the old days, the railroads themselves determined how much the shippers of freight should pay for the carriage of their freight. This came in time to be recognized as manifestly unfair to the shippers. For there was a perfectly natural tendency on the part of the railroads to charge "all that the traffic would bear." The Interstate Commerce Commission was accordingly entrusted with the final determination of freight rates.

But in the case of mail matter the old condition remains, tho in even more unfair form. For the rates are determined by the shipper. The railroads have nothing whatever to say about it. The rates of railway mail pay are decreed by Congress.

This is flagrantly unjust. The party that pays the bills should not in fairness and good conscience be the one also to make the prices; any more than the public servant should be the one to set the price upon the service it renders to the public.

The matter is brought concretely before the country by a rider upon the Post Office Appropriation bill now before Congress changing the basis of fixing the compensation of the railroads for carrying the mails from

one of weight to one of space. The purpose of it is to cut down the amount paid to the railroads. That the change would be an unfair one is one good argument against the rider. But a more fundamental argument against it is that Congress ought not to fix the rates at all.

The case was set forth convincingly before the Senate Committee on Post Offices and Post Roads by President Rea of the Pennsylvania Railroad:

Turn the whole matter over to the Interstate Commerce Commission. Let the commission study it carefully and then advise Congress as to what changes are required in the method of pay or the rates in order to do justice to both the railroads and the Post Office Department. The question of pay for carrying the mails and parcel post has become a most intricate study in rates. The Interstate Commerce Commission is the nation's expert body on rates, and was created by Congress to serve that purpose. It is better fitted than any other branch of the Government to reach a fair conclusion. Both the railroads and the Government, I am sure, would be willing to abide by its judgment.

Another aspect of the case was presented by President Smith of the New York Central Lines:

The Government is all powerful. It can inflict upon the railroads rates that will be unprofitable to them. It can compel the roads to carry business at a loss. Whatever losses are forced upon the roads, however, will be felt by the travelling public, the shippers and the stockholders. The railroad managers are merely trustees. We are here to protect thousands of owners of these properties. If the Government insists upon getting service below cost to the railroads, this money, taken out of the funds of the roads, must be met somewhere and somehow. Either the freight or passenger service must bear the burden, or else the stockholders. All that we ask is fair play. The Government has intrusted other problems of railroad management to the Interstate Commerce Commission and it should, we think, entrust this one to that body for fair consideration.

The request of the railroads is reasonable, logical and fair. Congress ought not to fix railroad rates—even for the carriage of the mails.

CALIFORNIA REPEATS

CALIFORNIA refuses to be silent about one absorbing topic—California.

The Great Northwest, the Prairies, the Electric City, the Historic South, gather themselves together, burst forth in a gigantic fair, dominate for a few months the papers and magazines and travel bureaus, flood the land with pictures and real estate pabulum, and then, lingering for a little time in the movies and Chautauquas, sink back into that comparative obscurity which, in this land of universal self-exploitation, overtakes everything which does not advertise extravagantly.

Not so California.

Not only did she insist on the double-barreled publicity of two expositions in 1915, but she has now begun all over again. The Panama-California Exposition at San Diego, adding "International" to its name and inheriting some of the finest exhibits from the defunct Panama-Pacific Exposition, has been reopened, with more of the gala excitement which seems to be a habit on the coast, to run thruout 1916.

Perhaps the city by the Harbor of the Sun hopes thus to come fully into its heritage, now that the competition of its big neighbor to the north is ended. But will Los Angeles sit supinely by and let its little rival take the lion's share of the nation's attention for another year? We begin to suspect that 1915 saw the beginning of an endless series of expositions, and that California will never break her habit of inviting the world to peek into her mirror.

ON THE CONTRARY, GENTLEMEN

WILLIAM H. TAFT, Elihu Root, Joseph H. Choate, and Simeon E. Baldwin do not approve of the appointment of Louis Brandeis to the United States Supreme Court. They feel it their painful duty to declare that in view of his "reputation, character and professional career" he is not a "fit person" to sit on that exalted bench.

We respectfully dissent—and vigorously. Louis Brandeis is an eminently fit person to be a member of the highest court in the land. And for three reasons:

Because of his reputation for fearlessness, sanity and clear-headedness.

Because of his character, notable for integrity, unselfishness and human sympathy.

Because of his professional career, marked by antagonism to predatory special interests, devotion to the public welfare, loyalty to the interests of the weak and the oppressed.

It is true Mr. Brandeis is not a conservative (which is probably what his distinguished critics really meant). But just for that reason he will find himself thoroly at home side by side with such men as Mr. Justice Holmes and Mr. Justice Hughes. The Supreme Court needs just such a man.

A REPUBLIC AGAIN

IN our editorial of December 20 last on "The Betrayal of the Republic" we express the opinion and the hope that the Chinese republicans would not tamely submit to Yuan's usurpation of the throne. We are glad to see that they did act quickly and effectively. With six provinces in open revolt and a republican army marching toward Peking, Yuan Shih-kai has discovered that he had misinterpreted the will of the people—as expressed by his sycophants—so he cancels his former decree restoring the monarchy and signs himself president instead of emperor.

As a matter of fact he is neither president or emperor. He is plain dictator, or, in the primary sense of the word, a tyrant, that is, an illegal autocrat. This would not necessarily imply that he is a bad man or the wrong man for the place. The Greek tyrants were often true patriots. "The tyrant of the Chersonese was Freedom's best and bravest friend," says Byron. But for most of them the possession of unlimited power proved too much of a temptation, so they exercised it "tyrannically" and tried to pass it down to their descendants. This, we fear, is the case with Yuan Shih-kai. To oppose him is to risk one's head if within his reach, and his assumption of imperial state is meaningless unless he designed to fasten upon China a new dynasty.

If Yuan were only trustworthy he would be just the man to guide China in her transition stage from despotism to republicanism, for he is possessed of remarkable administrative ability and political skill. But his shifty past will prevent any one from putting confidence in the sincerity of his new turnabout.

The one encouraging feature about it all is that Yuan both in assuming and in relinquishing the crown takes pains to explain that he is acting in accordance with the will of the people as he understands it. He does not claim, like the Kaiser, to rule by divine right, nor does

he question the right of the people to depose him for unfaithfulness to duty.

The Chinese revolutionists have the best of authority for their revolt. The ideal of government, according to Confucius, is

The display of justice, the realization of sincerity, the exposition of errors, the exemplification of benevolence and the discussion of courtesy and the manifestation of all the fundamental virtues. If any ruler, having position and power, will not follow this course he should be driven out by the people as a public enemy.

A people in whom such principles are thoroly engrained ought to make good material for a republic. We hope that they will continue without faltering along the road they have entered upon until finally they realize the Golden Age prophesied by Confucius, when the people shall rule, police be unnecessary, and peace reign thruout the world.

THE RUSSIAN DRIVE

ON the western front the spring campaign began with a German offensive. On the eastern front the Russians have taken the offensive. In France the Germans are confining their attack to the fortress of Verdun, but on the other side the Russians have assaulted the German entrenchments at no less than four points of the 700-mile line between Riga and Rumania. This line represents the high-water mark of the German invasion of Russia last fall. It was evidently chosen in advance as the most defensible position attainable, and each army halted as it drew up on the line like a company of soldiers forming for inspection. At points where some German troops had got ahead of the others they were drawn back to the lines. This line, except for local irregularities, runs almost straight north and south from the Dvina to the Pruth. It is therefore very nearly the shortest distance between these two points, and is shorter by a third than the line which the Germans and Austrians would have had to defend if they had stayed within their own national boundaries. That is to say, they have shortened their front instead of lengthening it by their invasion of Russia, notwithstanding the fact that the upper end has been extended 200 miles northward. The German line was so drawn as to include most of the railroad running north to Petrograd, so they have a railroad not far behind their front, while on the Russian side the only north and south railroad is 150 miles east of their front.

But while the line along which the Germans established their winter quarters was, on the whole, excellently adapted for defensive purposes, they failed at two points to secure strategic positions, as may be seen from the map upon another page. These weak places are near the ends of the line. At the southern end the Austrians were not able to free their country altogether from the invaders. The Russians held on stoutly to the corner of Galicia north of Dniester and to the fortress of Rovno, just inside the Russian frontier. On the northern end of the line the Germans were not able to capture the important cities of Riga and Dvinsk. The German front makes a curve around these cities, tho between them the line reaches up to the Dvina River at Jacobstadt and Friedrichstadt.

Now, what the Russians have done is simply to strike at these two defective sectors in the German line of defense. They have attacked on the southern end in Galicia

and on the northern end at Jacobstadt as well as south of Dvinsk. If the Russians succeed in the South they may be able to reinvade Bukovina and Galicia, in which case Rumania might join with them in an attack upon Hungary. If the Russians succeed in the north the Germans may be compelled to evacuate the Baltic provinces.

It is, of course, too early to determine the strength of the Russian offensive. They have gained at all points, but that simply demonstrates that the German front trenches, like any other, can be taken if enough men and ammunition can be brought against them. Of men Russia has no lack, and her supply of ammunition has been replenished during the winter from Japan and the United States.

On the other hand, the Germans have presumably withdrawn from the Russian front for use in France all the men they think can be spared without letting the Russians thru. But unless the Germans have changed their tactics they will not remain behind their entrenchments until they are routed out by the Russians, but will prefer to take the offensive even against heavy odds, because this enables them to choose their own time and battlefield. If their attack on Verdun, whether successful or not, has sufficiently disarranged the plans of the Allies, so that their spring drive has to be postponed, the Germans will have a chance to make an attack on the Russian side or at some other point in the French line. According to the military correspondent of the *London Times*, the Germans have 118 divisions on the western front. Now there have been reported as engaged at Verdun only eighteen or twenty divisions. Where the rest are or what they are held in reserve for, is a matter of surmise.

So far the campaign of 1916 opens in the same way as the campaigns of 1914 and 1915, that is, with the Germans on the offensive in the west and on the defensive in the east. If the present campaign follows the same course as the others, we may expect to see the Germans shortly becoming less active in France and more active in Russia. Formerly they were able to shuttle their troops back and forth from one front to the other as needed, because there was no coördination between the Allies. Now, however, the operations of the Allied armies are conducted in accordance with the plans of a joint staff at Paris, so they should be able to combine their efforts and exert a crushing pressure upon the Central Powers.

NEXT YEAR!

THE half million men of New York state who voted for woman suffrage last fall are likely to have another chance next year. The bill providing for another referendum on the constitutional amendment has already passed the Assembly by a vote of more than three to one. It has been withheld from vote in the Senate by a recalcitrant party leader. But this Mrs. Partington can hardly sweep back the sea. Suffrage is becoming too popular a cause to make it healthy for politicians to oppose it.

The bill must pass one more legislature, after this one. Then the people—no, the men—will have a chance at the question.

There is no doubt of the outcome. The tide is making fast.

THE STORY OF THE WEEK

The Pursuit of Villa

It was asserted at the beginning of last week that Villa and his band were surrounded and would be captured within a few days. They were in the vicinity of Namiquipa, with Carranza forces on the east and on the south, while our troops were advancing from the north. The bandit leader could escape only by way of passes thru the mountains westward. General Calles had promised to guard these. On his way southward Villa had left thirty of his wounded men, who were found by our troops. His forces were in several bands. One of them held up and robbed a train at Moctezuma, eighty-five miles northeast of Namiquipa. Another was attacked and defeated by General Cano, of the Carranza army. At the end of the week it was expected at Washington and by Carranza's War Minister that Villa would soon be forced to surrender. He had withdrawn westward into a canyon. But it was admitted that the country was one with which he had been familiar for many years, and that it presented many difficulties to a pursuing force. Two of the eight aeroplanes that started from Columbus with our troops went astray, but both aviators were rescued. One of them had been alone in the desert for eighty-four hours.

For a time there was much anxiety because of reports and apparently authoritative assertions that parts of Carranza's army had revolted and gone over to Villa. It was known also that many of the Carranza soldiers in the north were recently under Villa's command, and had come to Carranza in response to his offer of amnesty, a

small sum of money for each man, and free transportation to his home if he should choose to go there. Some were deserting because they were paid in Mexican money which is now worth, in gold, only 6 per cent of its face value. On the 22d it was declared in reports from Columbus and elsewhere that General Luis Herrera, with 2000 men, had turned from Carranza and joined Villa. Herrera was recently military governor of Chihuahua, but had been removed from this office for misbehavior. He is well known in the north, where he and his brother, Maclovio, served under Madero and for a time were with Villa. When our forces took possession of Vera Cruz, he issued a bitter anti-American proclamation, urging all Mexicans to drive out the invaders. The story about his alleged revolt said that it followed a banquet in Chihuahua City, at which he read the old proclamation and remarked that he had not changed his mind.

But other Carranza officers promptly declared that Herrera was still loyal to the First Chief. Such testimony was given by Enriquez, the civil governor of Chihuahua, and on the 23d Herrera, in a telegram to General Gavira, at Juarez, asked that officer to deny emphatically in his name the "rumor circulated by reactionaries" that he had gone over to Villa. There were reports, however, that he opposed the admission of American troops, and it was thought at Washington that his attitude was not wholly satisfactory.

Along the border there was some uneasiness. The people of Presidio, Texas, across the line from Ojinaga, appealed to our forces for protection. And tele-

grams were sent to members of Congress from Douglas, on the border in Arizona. Disquieting reports from Tampico led our government to send the battleship "Kentucky" to that port.

The Question at Washington

On the day when the report about Herrera was denied, Mr. Johnson, of South Dakota, read in the Senate a telegram from a constituent who offered 100 volunteers for service in Mexico. Senator Stone said that this action was ill-advised, as the situation in Mexico was somewhat critical. Men who sent such telegrams ought to know that the enlistment of 20,000 men, for the regular army, had recently been authorized. The telegram should, in his opinion, have been turned over to the War Department. Senator Smoot said he had sent to the department several of the same kind which he had received from Utah. Senator Sherman, of Illinois, who had introduced a resolution authorizing the President to call for 50,000 volunteers, complained when objection to consideration of it was made, saying that if the blood of our soldiers should hereafter cry to us from the sands of Mexico we should remember this delaying action in the Senate. On the same day Mr. Scott, of Pennsylvania, introduced in the House a resolution calling for an appropriation of \$50,000 to be used in offering a reward for Villa's body.

Mr. Wilson and the Cabinet decided that it was not necessary to seek the aid of the militia. Secretary Lansing said to the press that alarming stories had been circulated by persons who desired intervention. They could have no other purpose than to inflame the minds of the Mexican people. It was known in Washington that our government believed that these tales were spread abroad by persons having property interests in Mexico. Secretary Baker said that no hostile shot had been fired at our troops. Some said that the story about Herrera had been started by George C. Carothers, who for two years was with Villa as a representative of the State Department, but Mr. Carothers, now in El Paso, published a denial.

In the Senate on the 24th there was a bitter debate. Mr. Borah read a telegram from an attorney in Douglas, Arizona, named Richardson, saying that Carranza had 3000 cavalry and forty cannon very near that town, with 7000 more not far away. The place was not defended, and he called for help. Mr. Stone denounced the Sherman resolution for 50,000 volunteers, and criticized the reading of such telegrams, remarking that if a man were obsessed with the idea that he was running for the Presidency he was apt to indulge in vain delusions. Many persons in and out of Mexico were trying to excite and mislead the Mexican people by inducing them to believe that

STILL FARTHER INTO MEXICO

Using Casas Grandes as an advanced base, the American troops in pursuit of Villa have been thrown out in fan-shape to the south in the attempt to catch the outlaw before he can reach the mountains. He was thought to be trapped near Namiquipa, but seems to have defeated the Carranzistas there and to have broken thru the ring of pursuers. Col. Dodd is keeping his cavalry hot on Villa's trail

the United States would attack the sovereignty of Mexico and take its territory. But the President by proclamation, and Congress by resolution, had disavowed such a purpose. Mr. Sherman, in his opinion, ought not to have introduced a resolution which was virtually a threat. He believed, as the President and Secretary Baker did, that our troops were not in danger.

That night, the President, over his signature, issued a statement. He had asked the news agencies, he said, to assist the Administration in keeping before the people of this country and the distressed and sensitive people of Mexico our agreement with Carranza and the sole purpose of the expedition. He desired to impress upon both peoples the fact that the expedition was simply a punitive measure, aimed solely at the elimination of the marauders who raided Columbus. He warned our people that there were persons all along the border actively engaged in originating and circulating rumors of the most sensational and disturbing character, wholly unjustifiable by the facts. The object of this traffic in falsehood was to create intolerable friction between the two governments, and to bring about intervention in the interest of certain American owners of Mexican properties. They could not be successful so long as sane and honorable men were in control of our government, but unnecessary bloodshed might result and the relation between the two governments might be embarrassed. Our people should know the sinister and unscrupulous influences that were afoot, and be on their guard against crediting any story coming from the border. Those disseminating the news should test the source and authenticity of every such report.

The Republican senators in conference considered a resolution declaring that no effort to protect Americans on the border should be spared, but took no definite action. Mr. Richardson's telegram from Douglas has been denounced by the Mayor of Douglas and the local Chamber of Commerce as a falsehood.

Passage of the Army Bill

The House bill for reorganizing and enlarging the army, known as the Hay bill, was passed last week by a vote of 402 to 2, the two members in the negative being Meyer London, of New York, Socialist, and Frederick A. Britten, Republican, of Illinois, who explained that, in his opinion, the bill did not go far enough. Mr. Kahn's amendment, making the enlarged army 220,000 men instead of 140,000, which had been lost in committee of the whole by a vote of 103 to 183, was rejected again, but the final and decisive vote of 191 to 213 showed so small a majority against it that the coming compromise in conference (after the passage of the Senate bill) will probably provide for more than 140,000 men. The number in the Senate bill is 178,000. Party lines were not observed, for on this amendment 34 Republicans voted against an army of 220,000, and 33 Democrats for it.

THEY'RE FOOT-SLOG-SLOGGING IT THRU MEXICO

The first part of the march thru Chihuahua was over country like this, hard going for both men and horses. Rutted rails thru the sand are the only roads for the motor trucks which bring up supplies from the base at Columbus

By an amendment the Hay bill's term of enlistment was shortened. It provides that after one year of honorable and efficient service an enlisted man may be furloughed to the regular army reserve for six years. In the Hay bill the term was three years, with four in the reserve. There is also a new provision authorizing the President to call out this reserve (which in four years will amount to 60,000 men) without first getting the consent of Congress. By another amendment authority is given for detailing officers of the regular army as instructors at any school or college where a cadet corps of more than 100 students is maintained. The conditions are that the student shall have three hours a week of training for two years, and five hours a week for the succeeding two years. After graduation he serves for six months with the regular army and then is placed in the officers' reserve, bound to respond to a call at any time within ten years. It is estimated that in this way an officers' reserve of 50,000 will be created. Our government is authorized, by another amendment, to procure a supply of tools and drawings that would be required for the immediate manufacture of arms and ammunition sufficient for the army, and to keep a list of manufacturing plants available for the production of such supplies. All provision for appropriations or inquiry relating to a nitrate plant were stricken out, and the Senate's plan for a volunteer army, resembling ex-Secretary Garrison's Continental Army of 400,000, was rejected.

The Senate, with only two dissenting votes, has passed a bill which doubles the number of West Point cadets. Senator Works, in a speech last week, opposed any increase of the army or the navy, saying that the plea for increased defenses came from capitalists and the newspapers they had subsidized. By a vote of 58 to 23 the Senate has passed a bill authorizing the expenditure of \$11,000,000 for the purchase or construction of a government armor plate factory.

Fires and Storms Fires in southern cities last week caused a loss of not less than \$11,500,000 and deprived 14,000 persons of their homes. On the 21st, at Paris, Texas, a fire that started in a cotton compress quickly made a path three or four blocks wide to the residential district. Thirty blocks of buildings were burned, and of 140 business structures only fifteen were left standing. Virtually the entire business section was destroyed, and with it the main part of the residential section. Only one life was lost, but the property loss was \$5,000,000. Their homes were taken from 8000 persons. The care of these presented a difficult problem, because all the hotels, restaurants and grocery stores had been burned. Paris takes its water from a storage lake, six miles away. It is brought to the city by electrical force. But the electric power plant was burned, and with it the central fire station.

On the following day, a fire in Augusta, Georgia, starting in the elevator shaft of a drygoods store, swept over an area of one and one-quarter square miles, destroying ten business blocks and twenty blocks of residences. Among the buildings burned was St. Paul's Episcopal Church, 135 years old, and the homes of the two local newspapers. One life was lost, and the property loss was \$5,000,000, including \$2,000,000 worth of cotton. There are 3000 homeless residents.

In Nashville, Tennessee, on the 22d, a burning ball of yarn thrown by a boy into dry grass on a vacant lot started a fire that swept over thirty-five residence blocks, destroyed 600 buildings, and caused a loss of \$1,500,000. Here 3000 persons lost their homes. The 1400 pupils in a school were saved by the fire drill only a short time before the destruction of their school house. Four churches were burned.

It was also on the 22d that a hurricane swept across four states in the Middle West. At first there was an electric storm. This was followed by sleet and snow. Ten persons were

THE RUSSIAN FRONT

All winter the Russian battle line has stood as here drawn on the edge of the shaded area. Now the Russians are attacking the German entrenchments at the points indicated by arrows

killed, five of them in Northern Indiana, where a railway train was blown from the track. Churches and houses were destroyed, and the losses were about \$3,000,000.

Orders for War Supplies

The largest war order recently placed on this side of the Atlantic is one for \$91,000,000 worth of beef stew, in 600,000,000 one pound cans. It was given by the British Government to The Imperial Canneries, Limited, of Montreal, a new company, but the greater part of the material must be supplied in the United States. Contracts for 490,000,000 pounds have already been made, and only 60,000,000 are held by Canadian companies. In this country there is a wide distribution, the largest assignment being to a Philadelphia company, which undertakes to deliver 125,000,000 pounds within twelve months. The price paid is about \$1.75 per dozen cans, and the profit is said to be 60 cents. The 300,000,000 pounds of beef required will be supplied by three Chicago companies, the Armours and Swifts included, and nearly all the cans will be procured from the American Can Company. About 10,000,000 cans will be delivered every week for the use of the British army.

It is estimated by the Canadian Bank of Commerce that the war orders given to Canada this year will amount to about \$600,000,000. But much of the material will be supplied in this country. Canada's Munitions Board placed orders for \$200,000,000 last week. In a circular letter the bank says:

War has made many homes desolate, but it has filled the bread baskets of our workers. It is extremely difficult to estimate the economic results of the long struggle in Canada. Had it not been for the war many of our plants would be idle, as the result of the world-wide depression, which included Canada in its sweep. Those plants which were able to make war supplies not only weathered the storm, but made enormous profits and have made themselves secure for the future by building up large cash reserves.

At the Pittsburgh steel mills there is a continuous demand for the forms of steel that are used in making shells. This demand comes from neutrals as well as belligerents. Large quantities are sought by Spain and Rumania. The orders in sight call for more than 400,000 tons of steel. There is great congestion at the northern Russian ports of Archangel and Kola, with no prospect of relief in the immediate future. At or near Archangel about 100 ships carrying war supplies are frozen in, waiting for spring to permit unloading. At Vladivostok, on the Pacific coast, there is also great congestion, but a part of the war supplies will hereafter be diverted to the port of Nikolayevsk, at the mouth of the Amur River.

The Sinking of the "Sussex"

Before the war it was anticipated by both the British and German experts that the German torpedo boats would make the Channel crossing perilous if not impossible. But the British Admiralty have succeeded in preventing this some-

how, whether by steel nets, patrol boats or mines is not known to the public, so that millions of troops and passengers have been carried back and forth for the past twenty months with almost no losses.

But in their new submarine campaign the Germans are more successful in interfering with cross-Channel traffic. Their latest victim is the British steamer "Sussex," which was torpedoed in mid-Channel on the afternoon of the 24th on her way from Folkestone to Dieppe. She had on board about 380 passengers, mostly French, but with many British and some thirty Americans. The explosion shattered the fore part of the vessel and brought down the mast, thus putting the wireless out of commission. Some fifty persons lost their lives, among them probably one or more Americans. Several of the passengers were killed or wounded by the explosions. Others were drowned. Five boats were launched, but after an hour, as the ship did not seem to be sinking, these people were taken on board again. About midnight a French trawler happened to sight the "Sussex" and took off most of the surviving women and children, and a British destroyer took the other passengers back to Dover. Among the prominent Americans on board were Prof. J. Mark Baldwin, the psychologist, with his wife and daughter; Edward Marshall, journalist; J. D. Armitage, treasurer of a cotton goods manufacturing company; E. H. Huxley, president of a rubber company, and Wilder G. Penfield, Rhodes scholar from Wisconsin.

The British Admiralty announces the loss of the Dominion liner "Englishman" by a torpedo, but does not state where or when the disaster occurred. She was carrying horses for the Northwestern Trading Company of New York. There were 111 persons on board, among them four Americans in care of the horses. Eighteen persons are still unaccounted for.

The Russian Campaign

The Russians opened the spring campaign by attacks upon the northern and southern sections of the German line and appear to have made gains at several points tho so far there is nothing to indicate that the German position is seriously endangered. In the south their object is to take Czernovitz, the capital of the Austrian duchy of Bukovina. Twice already in the present war the Russians have captured Czernovitz but have later been driven out. It is not a fortified city and both parties have promptly evacuated it whenever the surrounding defenses have been taken. Czernovitz lies just south of the Pruth River, eleven miles from the Russian border and only eight miles from the Rumanian.

On the northern side Czernovitz is protected by the Dniester River, which the Russians are now trying to cross. The first step in this direction has been taken in the capture of the bridgehead at Usciezko by a vigorous Russian attack. This position on the northern bank of the river was strongly fortified

THE GREAT WAR

March 20—Russians oust Austrians from Dniester bridge-head. Sixty-five Allied aeroplanes raid German naval base at Zeebrugge.

March 21—Germans take Avocourt wood. British and German destroyers fight off Belgian coast.

March 22—Germans gain Haucourt Hill, west of Meuse. Russians attack south of Dvinsk.

March 23—Russians penetrate German line at Jacobstadt. China becomes again a republic.

March 24—Channel steamer "Sussex" torpedoed. General Murray succeeds General Maxwell in Egypt.

March 25—Dominion liner "Englishman" reported torpedoed. Five British seaplanes raid Zeppelin base on Schleswig coast.

March 26—Russians advancing toward Sivas, Armenia. Socialists in Reichstag favoring peace.

and had resisted the Russians for the last six months. But on Sunday morning a breach 400 yards wide was made in the Austrian trenches by mine explosions. The garrison, tho said to have been outnumbered eight to one, held out all day and then began to withdraw to the southern bank in boats. But the Russian artillery was brought to bear upon the transports and cut off the garrison from retreat in this direction. So the commander, Colonel Pflanch, took the daring alternative of cutting his way thru the investing troops. In this he was successful and with the remnants of the garrison he joined the Russian forces on the hills to the northwest.

In the Riga region the German advance in the direction of Petrograd was halted on the Dvina River. Here they hold the southern bank for about twenty-five miles between the old German cities of Jacobstadt and Friedrichstadt. The strategical importance of this position may be seen from the map and from the editorial on "The Russian Drive." To push back the German salient on the Dvina is manifestly the first step toward the relief of the two cities on each side, Riga on the west and Dvinsk on the east. The Russians attacked here with fresh Siberian troops and an abundance of artillery as well as projectiles containing asphyxiating and poisonous gases. At first it seems the Russians made some inroads upon the German entrenchments, but their later efforts, according to the Berlin account, were unsuccessful and they suffered heavy losses.

South of Dvinsk, in the neighborhood of Vidzy and Lake Narotch, the Russians began attack on March 19. The Germans say that more than 50,000 shells, mostly of large caliber, were showered on a short front and that the Russians captured a hundred yards of trenches which were regained by the Germans.

The Germans continue
On the Meuse to make gains in the vicinity of Verdun. Their latest attack is directed still further to the west than their last week's operations. Their first efforts were di-

rected against the northern and eastern fortifications of Verdun. Then they turned their attention toward the defenses on the western side of the Meuse River. Here they penetrated Crows' Wood and then, according to their reports, captured the hills that stand on either side of the forest, Goose Ridge and Dead Man's Hill. The French, however, deny that the Germans hold or ever did have possession of Dead Man's Hill. The dispute seems to turn upon which particular crest is entitled to that ill-omened designation.

The point now attacked by the Germans is about three miles to the west of Dead Man's Hill. Here they have taken the wooded hills which lie between Malancourt and Avocourt. This advances their line about two miles and brings them within five miles of the railroad which feeds Verdun. Obviously further gains in this direction might bring about the isolation of the fortress.

By this advance the French forces between Bethincourt and Malancourt are hemmed in on three sides and presumably rendered untenable. The Germans claim that their gains in the Avocourt region brought them in unwounded prisoners to the number of 2914 men and fifty officers. The French claim that the German casualty lists are utterly unreliable and to prove it they allege that the total losses in killed, wounded and missing reported by the Germans from certain corps do not equal the number of German prisoners taken by the French at the time. If this charge is true it would invalidate the estimates of German losses given in the table below.

In their recent attacks the Germans have made extensive use of their *Flammenwerfer*, which throw streams of blazing oil on the opposing trenches. These are operated like a portable fire

extinguisher and carried by men who move forward with the charging line. But a shell from a French 75 striking one of the reservoirs scatters the flaming fluid over the German soldiers and burns them alive. For protection against the fire-throwers the French wear masks and shelter themselves behind big oblong shields of wickerwork coated with clay.

Chinese Republic
Restored

On December 11, President Yuan Shih-kai announced

that in obedience to the will of the people, as exprest by the provincial dignitaries whom he consulted, he would assume the throne as Emperor of China. But this announcement was the signal for a revolt which originated, like the revolution which overthrew the Manchu dynasty, in the southern provinces. The official reports have announced successive victories of the government troops over the rebels, but nevertheless the insurrection spread until, according to the statements of the Chinese republicans in the United States, six provinces became involved. At the head of the republican army is General Tang Chi-yao, Governor of Yunnan province.

The real forces and motives concerned in these sudden reversals of Yuan's attitude are impossible to determine from what has been made public. It is known that Japan has strongly opposed the restoration of the empire. It is surmised that Germany has secretly favored it. Yuan, in his edict of March 23, reestablishing the republic, explains that he consented to become Emperor with great reluctance and misgivings at the urgent solicitation of the Council of State. We quote from his explanation:

The representatives of the convention unanimously decided on a monarchical gov-

EVEN THE MULES GO WRONG IN MEXICO

The driver of this field piece is having trouble with his team. But Battery B of the South Field Artillery, forming part of Pershing's flying column, covered the first 110 miles of the march thru Chihuahua brilliantly, reaching camp only an hour and a half after the cavalry, which made the distance in twenty-two hours' marching time.

ernment and elected me Emperor. Since the sovereignty of the country was vested in citizens and the decision made by the entire body of representatives, there was no room left to me for further discussion.

Nevertheless, I was convinced that my sudden elevation to the throne would constitute a violation of my oath, leaving me unable to explain myself. The Council of State, however, was firm and stated that the oath of the chief executive was based on his position and should be observed or discarded according to the will of the people. Their arguments were so irresistible that there was no excuse for me to decline their offer. Using preparations as a pretext, I took no steps to carry out their program actually.

When the trouble in Yunnan and Kweichow arose, I issued a mandate postponing the measure and forbidding the presentation of petitions praying for my enthronement. Then I hastened the convocation of the Council in order to secure various views, hoping to revert to the original state of affairs. Being a man of bitter experiences, I cared for nothing but the salvation of my country. A section of the people, however, suspected me of harboring a desire for great power and privileges. Thus difference in thought has created an exceedingly dangerous situation.

I have myself to blame for my lack of virtue. Why should I blame others? The people have been thrown into misery. The soldiers have been made to bear hardships. Commerce has declined. Taking this condition into consideration, I feel exceedingly sorry.

Thus I hope to imitate the example of the sincerity of the ancients by shouldering myself all the blame, so that my action will fall in line with the spirit of humanity, which is the expression of the will of Heaven.

In this self-deprecatory phraseology Yuan is merely following the traditional custom of China according to which the Emperor always assumes the blame for anything that goes wrong in the country, even earthquakes and floods.

An Estimate of the Armies For the benefit of the many readers who write to us asking about the losses of the war and the number of men now available we publish the accompanying table. It appeared in the February number of the journal of the Union of Democratic Control, London, and seems to have been calculated with care. It must be remembered, however, that no government

gives out the number of its troops or of its net losses. The British and German governments alone publish casualty lists, but it is not known how many of the wounded and missing return to the ranks. The compiler of this table assumes that twenty per cent of the wounded die or are permanently disabled. It is also assumed that five per cent of the army are sick or temporarily incapacitated. These estimates added to the killed and missing give the figures in the column headed "Wastage." According to this the percentage of wastage to the original number of troops is for the various nations: Russia, 47; Austria, 42; Germany, 36.2; France, 33; Turkey, 26; Britain, 23; Italy, 16; and Bulgaria, 10.

Comparing these with the estimates from various sources published in The Independent of February 21, we see that the compiler of the U. D. C. table has added 275,000 to the German losses as estimated by the British War Office from the German casualty lists. The reason given for this increase of the estimate of the German losses is that the lists issued by the other German states outside Prussia are belated. If, however, we take the British War Office summation of the German casualty lists without making this correction, the German wastage up to the first of January would be 1,423,000 instead of 1,659,000 and the percentage of wastage would be 29.3 instead of 34.2. These figures seem more probable than those given in the table, for the March statement of the British War Office gives the total German losses during January and February, according to the German casualty lists, as 131,430. If this is correct the addition of 275,000 to German losses on the ground of belated lists is far too great.

On the other hand, the compiler of the table has not used the statement of French losses made by M. Longuet, member of the Chamber of Deputies for Paris, at the Bristol Labor Conference. According to this, which is the nearest to an official estimate that we have, the French losses have been 800,000 dead,

© International Film Service
THE SUCCESSOR OF VON TIRPITZ
Admiral Edward K. von Capelle, now in charge of the German fleet and directly responsible for the action of German submarines

1,400,000 wounded and 300,000 prisoners. If these figures were adopted the French wastage would be 1,560,000 instead of 1,188,000 and the percentage of wastage would be 43.3 instead of 33.

In the absence of more authentic data we should mention a report which comes by way of Amsterdam and Berlin purporting to give the figures that General Gallieni presented in confidence at a recent military conference. According to this the Minister of War estimated the total French losses at 2,500,000 up to March 11. Of these 600,000 are dead, 400,000 severely wounded and 300,000 missing. If this is anywhere near correct the French and British have lost more in France than the Germans on all fronts.

It is rumored that a Petrograd compilation of the Russian losses for 1915 made them out as: Killed in battle, 387,918; dead from wounds, 192,300; dead in hospitals, 274,175; wounded, 733,438; missing, including captured, 954,813. This if augmented by the losses in 1914 would not be far from the figure in the table. But it is obviously impossible to make any reliable estimates even in the case of Germany and France, while, of course, for such countries as Russia and Turkey the data is still more indefinite.

According to the table the permanent loss to the belligerent countries is about 8,000,000 men. At the beginning of the war the armies of the Entente Allies stood toward those of the Central Powers as 167 is to 100; at the beginning of 1916 they stood as 142 is to 100, a loss of strength of the Allies relative to the Central Powers of 25 per cent.

THE DEMOCRATS SHOULD WIN

A FORECAST OF THE 1916 ELECTION

BY WILLIAM JENNINGS BRYAN

NO one who has had any considerable experience in politics will risk an opinion on platforms very far in advance of the conventions, especially at a time like this when the situation is undergoing constant change. Who could have foreseen in 1912 the problems with which the Administration has had to deal? And who could have predicted a year ago the changes which have taken place in the opinions of men within the last twelve months? The qualifying phrase, "other things being equal," affords some protection, but, as other things are never equal, forecasts are always subject to discount. If the campaign of 1916 could be fought upon the party's remarkable record of achievement, a Democratic victory ought to be reasonably sure; but even then, it would be necessary to remember that we won in 1912 not because our party secured a majority of the votes cast, but because the opposition was divided into two almost equal factions.

There are three factors which must be taken into consideration in our calculations respecting the outcome of the Presidential election of 1916; first, the impression made by the domestic policies of the Administration; second, the impression made by the foreign policies of the Administration, and third, the unity or lack of unity in the Republican party.

The Democratic party can with confidence submit its claims upon a number of important reforms.

First: The popular election of Senators. This is a reform of the first magnitude; a reform in the methods of government which could not have been achieved a few centuries ago without vast bloodshed. The Democratic party began the fight for this reform in Congress in 1892; it embodied a demand for it in its platform in 1900, 1904, and in 1908, and in 1912 endorsed the amendment which was then before the states for ratification. The Republican party never endorsed this reform in any platform

prior to its submission, and as late as 1908 overwhelmingly defeated a resolution approving it. The people ought to give the Democratic party credit for thus opening the way to other reforms.

Second: The Democratic party reformed the rules of Congress and gave to the House of Representatives real representative government. The people ought to give the party credit for this reform also.

Third: The Democratic party reduced the tariff and put upon the statute books the best revenue law which the country has had in fifty years. The tariff law included an income tax and the Democratic party can claim credit not only for the income tax law, but also for the fact that the Constitution has been so amended as to authorize an income tax. In 1904 a Democratic Congress enacted an income tax law, but the law was declared unconstitutional by a divided court, one judge changing his mind between two hearings of the case. The Democratic party then proceeded to agitate for an amendment

to the Constitution, specifically authorizing an income tax, and, while the necessary amendment was submitted under a Republican administration, it came as a result of Democratic labors and was really submitted for the purpose of preventing an income tax. The Republican leaders who assisted in securing the submission of the amendment did it to defeat a bill providing for an income tax and did not expect the amendment to be ratified; they were caught in their own trap.

Fourth: The Democratic party is entitled to credit for the new currency law. The Republicans had talked currency reforms for twenty years, but did nothing; the Democrats went to work and brought about a change which gives us the best currency law we have ever had. It vindicates the right of the government to issue paper money; it destroys the monopoly which the national banks have held of favor from the Federal Government; it takes from Wall Street its controlling influence as a money center and establishes twelve financial centers in different parts of the country, all linked together at Washington and controlled by responsible government officials. The Democratic party has a right to expect gratitude from the business world, which has been released from the grip of the money trust, and from the political world, which has been set free from the tyranny of a few money magnates.

Fifth: The Democratic party deserves credit for having entered upon a program which contemplates the complete overthrow of the principle of private monopoly; it has already made a start and is building upon the only sure foundation, namely, that a private monopoly is indefensible and intolerable. Its services ought to be appreciated by the smaller corporations which find an added sense of security in the anti-trust laws already passed.

Sixth: The Democratic party deserves credit for the enactment of the

© International Film Service

TWO DEMOCRATS

long promised measure giving to the Filipinos the promise of independence, thus answering the charges that have been made against our national purpose and restoring to us freedom to proclaim to the world the doctrine that governments derive their just powers from the consent of the governed and not from superior force.

Seventh: These are some of the substantial results of harmonious co-operation between a Democratic President, a Democratic Senate and a Democratic House. During the accomplishment of these domestic reforms the Administration has been dealing with diplomatic problems of great delicacy. It deserves credit for having resisted the demands of those who tried to force the Government into intervention in Mexico. The policy of "watchful waiting" has saved us untold loss in life and money, and it is not improbable that by refusing to intervene this nation escaped the awful responsibility of starting the European war.

Eighth: The Democratic party deserves credit also for the fact that it has not allowed the country to be drawn into the European war, altho the course of neutrality has been beset by many difficulties. Our nation has suffered at the hands of both sides, but the injuries were not intended against us, they were incidental to the war.

Ninth: This Administration has very much improved our relations with Latin America. A policy of friendly coöperation has been substituted for dollar diplomacy, the legations in Argentina and Chile have been raised to embassies, the offer of mediation tendered by Brazil, Argentina and Chile was accepted in the dispute with Mexico, important treaties have been negotiated with Nicaragua, Colombia and Hayti, and all South and Central America has been brought to the cordial support of the Monroe Doctrine.

CREDIT THESE ACHIEVEMENTS TO THE DEMOCRATS, SAYS MR. BRYAN

1. Popular election of Senators.
2. Reform of Congressional procedure.
3. Reform of tariff.
4. Currency reform.
5. Anti-monopoly laws.
6. Promise of independence to Filipinos.
7. Avoidance of war in Mexico.
8. Neutrality in the Great War.
9. Improved Pan-American relations.
10. Arbitration treaties.

Tenth: The Democratic party deserves credit for the negotiation, by this Administration, of thirty treaties, on a new plan, providing for investigation by an international tribunal of all disputes of every kind before any declaration of war or commencement of hostilities. These treaties are with nations exercising authority over one billion, three hundred million people, or three-fourths of the inhabitants of the world, and make war between the contracting parties a remote possibility.

On the subject of preparedness the record of the party has not yet been made up. The President has announced a program and made a non-partizan appeal in its behalf. According to present prospects it cannot succeed as a party measure in the form in which he asks it. If he succeeds in securing the appropriations which he asks, it will in all probability be by the aid of the Republicans. The Democratic party cannot, therefore, expect gratitude from those who look upon the policy with favor, or be held responsible for it by those who oppose it.

It is too early to measure the advantage or disadvantage of the program to the party, if the Democrats in Congress secure the President's consent to a modification of his program.

The third element of uncertainty cannot be weighed until the Republican convention or conventions have met. If the two wings of the Republican party unite upon a candidate acceptable to both, the Republican chances will be greatly improved, and it follows that the Democratic prospects will brighten in proportion as there is discord in the Republican ranks. It now looks as if the Progressives were determined to return to the Republican party almost without condition, altho they will, of course, secure as favorable terms as possible. The Democratic party has been so progressive that it ought to appeal strongly to that portion of the Progressive party which acted upon conviction rather than upon personal affection for the Progressive candidate, but the number of recruits thus far won from the progressive Republicans is not encouraging—in fact it is disappointing. The reunion of these elements so bitterly hostile to each other four years ago illustrates anew the strength of party ties and the difficulty of drawing permanently from one of the leading parties any considerable element of its membership.

Man's opinion of what is to be is part wish and part environment, and I cannot claim freedom from the influence of either wish or environment when I construe the prospects to favor Democratic success. Believing that the party has earned the confidence of the public, and should therefore receive it, I believe Democratic success probable. The party has done good where the Republicans would have done harm, and wherever it has failed at all, the Republicans have failed more signally.

Lincoln, Nebraska

EARTH - BORN

BY LOUISE MOREY BOWMAN

Do you think God will make us forget—

When we wake up in Heaven—

All the queer, little, earth-fashioned things

That are sacred as archangels' wings

Or the stars that are seven?

Our books, our green china with posies,

My white wedding-gown with its roses,

The candles we light

In our wee house at night,

Your father's old clock with its wise, friendly face,

And my mother's old lace—

Do you think Love can ever forget?

Yes, count me a lover of Earth

With its tears or its mirth;

Its wine that is bitter or bread that is sweet—

With the pink apple trees and the brown honey bees,

With the far purple lands,

And the warm, golden sands—

And its queer, little, love-hallowed things

That are sacred as archangels' wings

Or the stars that are seven!

Do you think God will make us forget

When we wake up in Heaven?

HOME VS. FAMILY

BY MARTHA BENSLEY BRUÈRE

"MY wife," said a harassed commuter, "wants to live on a street with trees and not too far from the next house. She loves to sit on her veranda and see her friends sitting on their verandas with their embroidery. She is all wrapt up in her home."

And she was! A perfectly domesticated woman!

A slow brook spread out under the arching trees at the edge of their suburb into a vivid green marsh with still pools and cat-tail thickets—an open-armed refuge for rubbish, tin cans, mosquitoes and the village gang. A number of families had recovered their ancestral silver and parts of the plumbing from its depths, and several village boys had been sent up to the state reformatory in consequence. A group of women, impressed by the idea that the village spirit rather than the boys needed reforming, called on the commuter's wife to help convert the marsh into a playground.

Impossible! What time had an "old-fashioned mother" for things outside her home? She was doing her whole duty even as it had come down to her, for on her center table was her treasured *mark of place*—a record of the State Historical Society containing her family tree—showing how her pioneer ancestress made the little white homestead on the road-edge of the farm her husband got from the government, a defense against all the frontier enemies from wolves to wickedness. She had made the family clothes—at home. Prepared their food—at home. Stored supplies for the winter, books for school, seed for the spring planting, entertained her friends, expended her esthetic impulses, developed her powers of invention and energy of accumulation—all at home.

Quite justly the *Ladies' Friend* declared of the women of that day: "If a woman does not know the various work of a house she may as well know nothing, for that is her express vocation."

But that was in 1838. Today it should be rewritten: "If a woman does not know the various work of the community thru which the modern family must be conserved, she may as well know nothing, for that is her express vocation."

But that commuter's wife could not have rewritten it! She had only read the surface fact that her revered ancestress stayed in her home. She had quite missed her democratic gospel of work for everybody thru which the family had been made

In The Independent of March 20, Mrs. Bruère began a series of articles on "The Habits of Women Under Domestication." This is the second paper, to be followed by "The Waste of Saving" and "Pernicious Heirlooms."—THE EDITOR.

into a unit worthy to build into the nation. Most of the work for her family was done thru the community. She earned about a quarter of a meager living by the two hours a day which was the maximum she needed to spend on indispensable housework. The rest of her time she devoted to remaining in a state of domestication, a decoration in her husband's button-hole, a symbol of his prosperity, of his ability to indulge in conspicuous waste.

And if a man cannot afford such a luxury?

Two men were walking behind me.

"Frankly I like it," said one. "She makes a comfortable home for me and I haven't any bother or responsibility about it. If we were married you couldn't tell what I'd let myself in for—there'd be no end to my responsibility."

They passed me at the corner—well washed business men of the class who make three or four thousand a year—were they not the perfect parallel, possibly the resultant, of such as the lady who embroidered? These men knew that marriage to a domesticated woman of their own class meant the permanent support of a home, and of a woman who earned no money "so long as you both shall live" and that all the force of the law and of public opinion would hold them to their contract.

The other day a happy married woman busy serving the family thru the community said to me:

"Do you realize how difficult it is for a really domestic woman to either acquire or retain a husband? Who are the old maids we know? Chiefly the thoroly domesticated women. Who are the unhappy wives and those who sue their husbands for alimony? Women devoted to the home and to nothing else. Any woman devoting herself to Causes or Propaganda, or holding down a steady job, can choose among a dozen men."

And it's true! The woman who expects to make her living in domestication is in a precarious position now that society is offering the material comforts of which she was once the sole dispenser for far less than she can produce them. Not that marriage is to be regarded as an end in itself,

exactly, but it does seem to be a means to the permanence of the community. Certainly a democracy is a most unfavorable habitat for the sort of personal dependent which the domesticated woman has become, for a democracy implies that the consideration in which every one is held—yes, her very life itself—depends on her ability to perform some useful service, not on her willingness to seem busy. And the home-bound woman has forgotten the democratic gospel of work for everyone, and abandoned the Woman's Sphere—which is always in the place where the interests of the family must be served. It is in vain that she thinks to retain her usefulness by any devotion to the new science of household efficiency. Every magazine that tells of easier ways to do housework, every home economics course and domestic science school that teaches not how much work can be coralled on the fireside, but how much can be banished from it, helps to make the home duties behind which the domesticated woman is hiding, so trifling that they wouldn't conceal a cat. Every labor-saving device or increase in public service helps to shift the center of interest from the home to the community, so that democracy may replace domestication.

Not that to discontinue the home is in any sense the work of the undomesticated woman, but to stop canonizing it and to put it in its place as one of many family servants, and to force the woman to become the helpmeet of her husband in making the community, which has become the home of their children, a proper place for them to live in.

In spite of the incredible numbers of such shirkers as the commuter's wife, especially among the middle class, there are signs everywhere that the domesticated woman is laying down her embroidery and taking up her job of family conservation in the only way it can now be done—thru the community. She is making investigations and fighting for laws which will give to all families together what she could never assure her own household by working at home.

All sorts of forward cries are coming from these women in the course of their undomestication—"Rights of Children," "More and Better Babies," "The Solidarity of the Family" and "On to Democracy." But among them all not the most apprehensive ear can detect the faintest whisper of "Back to the Home!"

New York City

HOPEDALE'S GLORIFIED MILL-POND

ANOTHER PRIZE ARTICLE IN THE BEST THING IN YOUR TOWN CONTEST

BY JAMES CHURCH ALVORD

HOPEDALE, Massachusetts, has been "done to death," in the stock phrase of those who write and those who publish. After living in the village for four years I found that it was known by Germans, Italians, Englishmen and Frenchmen for its model homes, its paternal government, its famous strike against some of the conditions appertaining to paternalism. But there is one thing which, strangely, has never been cataloged abroad—this is its glorified mill-pond.

A mill-pond is an ugly spot, God wot. Never was an uglier pond than the bare, bulrush-shored, mucky stretch of bog and water which nestled, up to 1898, right in the heart of this community. From this dingy morass clouds of mosquitos arose each night to swoop down upon the unhappy inhabitants.

But in one famous day and year at the annual town meeting a few progressive souls advocated, as they had for a decade, "the purchase of about five acres for a town park" and succeeded. The town annually appropriates \$2500 for the care of the park, and the sale of trees brings in five hundred or so more. There has always been at the head of the work a scientifically-trained forester. The present man has held his place for thirteen years and is an artist in his

line. His one ambition has been to keep the park with so carefully careless a grace that the casual visitor shall declare "nature did it all." Nature did—mighty little.

The first care of the committee was to attend to the immediate needs of the community; so an extra appropriation of twenty-five hundred was voted. The worst part of the swamp-land, immediately under the noses of the villagers, was drained with catch-basins, a hedge of shrubbery was set about, and a field for football and baseball, as well as a bandstand, was built. An annual field day for athletic and aquatic sports has increased the interest of all in this portion of the park. Gradually too this end, into which a bit of orderly, artificial, decoration was allowed to creep, was fitted up for the recreation of the toilers. There is a bath-house, a shore of imported sea-sand, and wharfs for boats and canoes. Unfortunately a group of small boathouses have grown up, sheds of the shed-iest type; but their days are numbered.

Then slowly with the years began the work of transforming a hideous muck-hole to a lovely plaisance. The lakelet was drained, dead trees removed, boulders blasted; but the artistic sense sufficed and an ancient stone-fence, cutting under the waters, has been left. In a drought it makes

an exciting bit to negotiate in a boat, yet is so lovely, so odd, that nobody complains. Huge lilies, a pink-stained variety and native to the pond, were encouraged; the lotus has begun to bloom in sheltered nooks. The townsfolk gather these blossoms by huge armfuls every morning, every social occasion overflows with them, and the two pulpits droop under their burden every Sabbath; but the supply never fails.

The appreciation of the people for their own work is immense. They own boats and canoes almost to a man—and a woman, and vote enthusiastically for the efforts at mosquito-extirpation, while the attempt to induce the wild natives of the woods to seek refuge here is encouraged by everybody. The result is that squirrel, peasants, quail, rabbits, as well as all the common, and uncommon, birds have learned that in this park is safety from the volley of the gun.

From the nearer end of the water pleasant glimpses show the huge factory looming up like some medieval factory and houses "beside the pond" are in wide demand. Only the very fortunate obtain one right on the shore and, having obtained one, never let it go.

The whole morale of the village is raised and transfigured by Hopedale's glorified mill-pond.

Littleton, Massachusetts

M. William Shak-speare:

EIGHT PAPERS BY FREDERICK HOUK LAW
IN OBSERVANCE OF THE THREE HUNDREDTH
ANNIVERSARY OF SHAKESPEARE'S DEATH

Why Everybody Should Read Shakespeare

It is not necessary to travel, nor is it necessary to read Shakespeare, but who would not come into touch with what, for centuries, has uplifted and inspired the thoughts of men! Who wishes to lead a narrow existence when the door of opportunity is open! A man may stay all his life in some flat region remote from the sea—never once reading the works of the great dramatist—and still be noble at heart. But he will be a wiser and better man if he looks upon the sea and the mountains, and better still if he reads the plays of Shakespeare, for Shakespeare is as great a fact as the Alps or the Atlantic.

Many thoughtful men have said that if a person were to read no other books than the Bible and Shakespeare he would read enough to uplift his mind, and to raise his soul into communion with the heart of life. To neglect either is to shut out two of the world's finest sources of inspiration.

The best reason for reading Shakespeare is his universality, that is, the fact that he is interesting in different ages and to all classes of people. The interest that attracts one may not be the interest that attracts another. To one he may appeal as a story-teller; to another as a writer who pictured all kinds of human character in every imaginable situation; to another as a philosopher who fully understood and expressed the depths of the human heart; and to another as a poet who had wonderful command of suggestive word and phrase, and whose high and beautiful thought declares our own best emotions and aspirations. Shakespeare's many-sided interest, his expression of the common life-thoughts of the world, and the uplift that comes with his work make him a writer whom all kinds of readers instinctively like.

No one has told more interesting stories than Shakespeare. Every plot tells of something unusual, or surprising, that immediately awakens interest; as is indicated if we make use of subordinate titles such as "The Comedy of Errors," or the story of the two pairs of twins who got mixt up; "Henry IV," or the story of the happy-go-lucky prince and the fat rascal; "As You Like It," or the story of two girls and a fool who ran away to the woods; "Much Ado About Nothing," or what happened to the man who said he would never marry; "Macbeth," or the story of the man who wished to be great even if he broke all the ten commandments; "The Merchant of Venice," or the money-lender caught in the terms of his own bond; "Cym-

beline," or how the supposedly dead princess came to life and found her long-lost brothers.

Shakespeare's plays are peculiarly fitted to stimulate the imagination, for they tell us just enough to make our minds creative. As we read, there come before our eyes wonderful scenes such as that of the view from the cliff in King Lear:

Come on, sir; here's the place; stand still. How fearful
And dizzy 'tis to cast one's eyes so low!
The crows and choughs that wing the
midway air
Show scarce so gross as beetles: half
way down
Hangs one that gathers sampire, dreadful
trade!
Methinks he seems no bigger than his
head.
The fishermen, that walk upon the
beach,
Appear like mice; and yond tall anchoring
bark,
Diminish'd to her cock; her cock, a
buoy
Almost too small for sight. The murmuring
surge,
That on the unnumber'd idle pebbles
chafes,
Cannot be heard so high. I'll look no
more;
Lest my brain turn, and the deficient
sight
Topple down headlong.

How vividly, and in a few lines, Shakespeare brings before us a great scene of battle, with the young Black Prince fighting his ever-remembered battle while his father, the king, looks on in pride:

Edward the Black Prince,
. . . On the French ground play'd
a tragedy,
Making defeat on the full power of
France,
Whiles his most mighty father on a hill
Stood smiling to behold his lion's whelp
Forage in blood of French nobility.
O noble English, that could entertain
With half their forces the full pride
of France,
And let another half stand laughing
by,
All out of work and cold for action!

In play after play his magic brings before us the rich interiors of palaces, the depths of castle dungeons, inns and streets and woodland scenes, making our imaginations, as we read, ever more and more creative and able to give

THE WARD STATUE
The work of J. Q. A. Ward, made in 1892. It
stands in Central Park, New York

To airy nothing
A local habitation and a name.

Most of all, Shakespeare makes us intimately acquainted with characters who are so real, so human, that they cease to be "book-people" and become living realities. Some, like Bolingbroke or Macbeth, are men ambitious for power, whose hearts we read

As a book where men
May read strange matters.

Some are great leaders, like Henry V, who, in stress and danger, bound his men to himself like brothers and found victory by spirit rather than by strength:

We few, we happy few, we band of
brothers;

For he today that sheds his blood with
me

Shall be my brother: be he ne'er so
vile,

This day shall gentle his condition;
And gentlemen in England now abed
Shall think themselves accurs'd they
were not here,

And hold their manhoods cheap whiles
any speaks

That fought with us upon Saint Crispin's day.

Some, like Richard III, or King John, are men of evil lives, but gifted with mental power and strength; while others are base villains despised by the very men who make them their tools. Thus Macbeth says contemptuously to the murderers he has hired:

Ay, in the catalogue ye go for men;
As hounds and greyhounds, mongrels,
spaniels, curs,

Shoughs, water-rugs, and demi-wolves,
are clept
All by the name of dogs!

Some, like Faulconbridge in "King John," are heroes of admirable dash and ardor; others, like Hotspur, are men of fire. Some, like Richard II or King Lear, are great sufferers, rousing our hearts to pity. Some, like Rosalind or Viola, are beautiful, laughing, clever young women, fascinating us with an eternal youth. Some, like Cordelia or Imogen, are high-hearted women whose nobility lives forever. There are prattling children like Arthur in "King John"; common people in inns and country towns—like Justice Shallow in "Henry IV"—and all these characters grip us with interest. In their living reality is one of the main reasons for reading Shakespeare.

Shakespeare's humor, more than the humor of any other English author, has awakened laughter. Some plays, like "The Comedy of Errors" and "The Merry Wives of Windsor," are largely farcical. Who would not laugh at "The Taming of the Shrew," or at the comic parts of "Henry IV," of which Johnson said: "Perhaps no author has ever, in two plays, afforded so much delight"? In most of Shakespeare's work humor plays a large part.

There is no author who appeals more deeply to our sympathies. Shakespeare leads us to feel the

pathos of broken lives and to realize that tragedy is not in empty event, but in the fall of a soul. There is a note of kindly sympathy throughout the plays, as when Brutus, in "Julius Caesar," says to his boy Lucius:

Poor knave, I blame thee not; thou
art o'er-watched.

Even in the stern tragedy of "Macbeth" a Messenger, probably no other than one of Macbeth's hired villains, says in warning to Lady Macduff:

Be not found here: hence, with your
little ones!

To fright you thus, methinks, I am too
savage;

To do worse to you were fell cruelty!
The underlying humanity of Shakespeare inevitably softens the hearts of those who read.

There is a world of moral uplift to be gained from reading the great plays. They lead one to a love of the good outdoor world where one may find:

Tongues in trees, books in the run-
ning brooks,

Sermons in stones and good in every-
thing.

Most of all, the plays lead to self-mastery, for they are crowded with precepts based upon the wisdom of the ages.

Love all, trust a few,
Do wrong to none.

Was there ever a better maxim? But Polonius in "Hamlet" has more to say:

Be thou familiar, but by no means
vulgar.

Those friends thou hast, and their
adoption tried,

Grapple them to thy soul with hoops
of steel. . . .

Give every man thine ear, but few thy
voice;

Take each man's censure, but reserve
thy judgment.

Costly thy habit as thy purse can buy,
But not expressed in fancy; rich, not
gaudy;

For the apparel oft proclaims the
man. . . .

Neither a borrower nor a lender be;
For loan oft loses both itself and
friend. . . .

This above all: to thine own self be
true,

And it must follow, as the night the
day,

Thou canst not then be false to any
man.

With over-love of gold, and of drink,
two of the world's besetting sins,
Shakespeare had little patience. Romeo, giving gold in payment for poison, says to the apothecary:

There is thy gold, worse poison to
men's souls,

Doing more murders in this loathsome
world

Than these poor compounds.

And Cassio in "Othello" exclaims:

O, that men should put an enemy
in their mouths, to steal away their
brains! that we should with joy, revel,
pleasure, and applause, transform our-
selves into beasts!

SHAKESPEARE'S BIRTHPLACE AT STRATFORD

It is not known in which half of the double house Shakespeare was born. This old print shows the buildings as they were before they were bought by subscribers and restored to something like their original aspect, in 1847. The two buildings, which Shakespeare's father had thrown together, were separated before Shakespeare's death, one-half becoming an inn, while the other, early in the last century, served for a time as a butcher's shop. Since 1891 the property has been held by trustees on behalf of the nation

Of temperance, Shakespeare has old Adam, in "As You Like It," say: Though I look old, yet I am strong and lusty:

For in my youth I never did apply Hot and rebellious liquors in my blood; Nor did not with unbashful forehead woo

The means of weakness and debility; Therefore my age is as a lusty winter, Frosty, but kindly.

The plays teach one not to regard misfortune as wholly evil but rather as a means to something better. Cordelia, in "King Lear," dies miserably, but she has proved a noble womanhood.

Sweet are the uses of adversity; Which, like the toad, ugly and venomous, Wears yet a precious jewel in his head.

No one can read Shakespeare without being more staunchly a patriot. Old Siward, in "Macbeth," on being told that his dearly loved son had died nobly in battle, said:

Why then God's soldier be he! Had I as many sons as I have hairs, I would not wish them to a fairer death!

Shakespeare's ardent love of country, displayed in so many of his plays, made him awake to the necessity of national defense,

For peace itself should not so dull a kingdom, Though war nor known quarrel were in question, But that defenses, musters, preparations, Should be maintain'd.

To read Shakespeare is to learn reverence for self, and reverence for God. The moral teaching of Shakespeare is summed up in Hotspur's words in "Henry IV":

O gentlemen, the time of life is short; To spend that shortness basely were too long.

The deeply-religious note in Shakespeare is evident to all who read his plays. An overhanging presence of something beyond the world of men is felt in all of Shakespeare's serious work. There is even, at times, a childlike expression of religious faith, as in Richmond's prayer in "Richard III":

O Thou, whose captain I account myself . . . To thee I do commend my watchful soul, Ere I let fall the windows of mine eyes; Sleeping and waking, O, defend me still!

From a mere worldly point of view everyone wishes to read the plays of Shakespeare. There is a volume of information in the historical plays, and of material for thought in all. Knowledge of the plays explains a host of allusions met in daily reading, and in the worlds of music and of art. Shakespeare's marvelous vocabulary of fifteen thousand different words opens up the mines of English. His suggestive phrases, sweeping sentences, glowing rhetoric and lofty poetry reveal the power of language.

Everyone wishes to know an author who is so much a topic of conversation, so great an influence in literature, so supremely the poet of all who speak English, and so loved by the people of all nations into whose languages his works have been translated.

Everyone wishes to know that author, who, by giving to all men—however limited and confined their lives may be—a kind of vicarious experience, has done so much to broaden sympathy and to increase the conception and understanding of life.

THE KESSELSTADT "DEATH MASK"

This cast appeared in 1849 in a rag-shop in Mainz, Germany, where it was bought by Dr. Ludwig Becker. It bears the inscription + A° Dm 1616, and Becker thought it a death mask of Shakespeare. It was supposed to have been the possession of Count Kesselstadt, and is now exhibited at Darmstadt. Its authenticity has never been proved.

G. Moulton; *The Religious Belief of Shakespeare*, by J. Countermine.

LEAD, KINDLY LIGHT

BY LOUISE DUNHAM GOLDSBERRY

Lead, Kindly Light, the bells are softly telling,
Till night be gone;

In many a heart the silent song is welling—
Lead Thou me on;

Oh bells! That sing the hymns my mother sung—
Oh bells! That sing the hymns my mother sung—
Lead Thou me on!

Life's cup I lift, with braver lips to drain it,
For that ye sing;

My cross I kiss nor may I dare disdain it,
Whate'er it bring;

Oh bells! Ye voice the voice of one passed on!
Oh bells! Till night be gone—Till night be gone!

I hear the grasses o'er a dead face growing
Beyond your song;

From out the years, my mother's sweet eyes
showing—

And night is gone;
Oh bells! That sing above the rain and cold!
Oh bells! That sing ajar the gates of gold!

Lead, Kindly Light, the bells are softly pealing—
Lead Thou me on;

A child again against her heart-beats kneeling—
Till night be gone;

Oh bells; That sing the gracious story on—
Oh bells! Till night be gone—Till night be gone!

THE WORLD OVER

Making Parents Efficient

The recent nation-wide celebration of "Better Babies Week"—advertised from the pulpit and at the movies, explained in schools and woman's clubs and newspapers—is due to the efforts of one woman, Miss Julia C. Lathrop, Chief of the Children's Bureau, under the United States Department of Labor.

For over three years Miss Lathrop has directed the Government's campaign against infant mortality, gathering statistics and directing popular education.

"The vast resources of unused information which the Government already possesses," she says, "indicate clearly our national neglect—in a field where it is complacently taken for granted that our emotions and personal interest guarantee our efficient attention."

Miss Lathrop believes in publicity as a sort of general alarm clock. She publishes the facts: that one in eight of all the babies born in the United States dies before it is a year old; that in some parts of the country this proportion reaches one in three. Then she puts it up to the people to carry thru the necessary reforms.

"No city or town should fail to provide instructive nursing service, and to pay constant heed to the problems of hygiene and sanitation, of proper housing and of recreation spaces, since all these immediately affect the welfare of infants.

"In every county there should be a health-teaching center.

"Give the work of the woman head of the household the status of a profession."

These are some of the salient points in the publicity campaign of the Chief of the Children's Bureau; and they make up a platform of revolutionary reforms well worth considering. For Miss Lathrop is not talking at random. Her theories have the weight of thirty-five years of practical experience in social work behind them.

After her graduation from Vassar College in 1880, she returned to her native state and became a resident worker at Hull House, Chicago. For twelve years she was a member of the Illinois State Board of Charities. Her constant emphasis on construction rather than on patchwork made Miss Lathrop's appointment as chief of the newly organized Children's Bureau a particularly fortunate one.

SHE CARES FOR U. S. CHILDREN

Few, if any, of the town people had given the subject any thought. Occasionally a ranchman would plant a patch of potatoes or a dab of oats; but they received practically no attention. Whenever the editor of the *Wyoming Tribune* observed the slightest evidence of farming he "wrote it up," even to flower gardens, irrigated with a hose.

In 1904, as chairman of the program committee of a young men's club, he asked Hon. C. T. Johnston, the state engineer, now professor of irrigation at Ann Arbor, to prepare a paper on the

WYOMING FARMERS THANK THIS MAN

subject "Is Farming Around Cheyenne Practicable?" Mr. Johnston, after an exhaustive study of the Campbell System of Dry Farming, rendered a favorable verdict. The club at once engaged Dr. V. T. Cooke, a practical dry farmer, purchased a four hundred acre tract of land near Cheyenne, and started to work. That was in 1905, when dry farming was a joke and a by-word. But Dr. Cooke never had a crop failure.

Homesteaders began to flock into Wyoming by the hundreds. The result is that within a radius of eighty miles of Cheyenne today there are three thousand small farms. The mean rainfall is 14 inches, but wheat and oats frequently yield thirty bushels per acre. There are ten grain elevators in southeastern Wyoming; a big flour mill in Cheyenne, a large farming community, and the people say it was Deming's faith and vision that did it.

Astronomer of Two Hemispheres

The oldest of our state universities and the youngest of the universities of Argentina have formed a unique sort of partnership to increase their efficiency in astronomical research. The observatories of Michigan and La Plata have been for the last few years under the management of a single astronomer and their telescopes working in harmony command both hemispheres of the heavens.

Professor W. J. Hussey is doubtless the first man to attempt to occupy chairs in two universities nine thousand miles apart. But Professor Hussey is not unused to attempting the unusual. He has been at it all his life. A farmer boy does not work his own way to the front rank of stellar discoveries at the age of forty-nine without exceptional initiative and ability. He started in life with no apparent advantages toward such a career, except perhaps Quaker ancestry and a book-loving father; two factors which appear with significant frequency in the biographies of famous Americans.

He took the engineering course at Ann Arbor, working summers on railroad construction in Wyoming and Kansas to get money to carry him thru the winter. One summer he was ordered to report to the superintendent at Mankato, Kansas, to be sent into the field. Entering the office he found the superintendent out and while waiting his orderly mind was so much distressed by the confusion in the office that he busied himself cleaning up and setting things to rights. When the superintendent came back and saw the transformation he gave the young man a position in the office instead of sending him out on the road. This incident sounds like a story from the Rollo books, but it's true, nevertheless.

At the Lick Observatory on Mount Hamilton he began the discoveries which brought him an international

When the Press Helped the Plow

From a small daily paper in Ohio, W. C. Deming came to Cheyenne, Wyoming, to become editor of the *Wyoming Daily Tribune*—and incidentally to revolutionize the ideas of an entire state.

Very early he became interested in Wyoming's agricultural possibilities.

THE DISCOVERER OF TWIN STARS

reputation. Upon the publication of his work on the double stars observed at Pultowa, Russia, and of his systematic observations of the satellites of Saturn for many years, he was elected to membership in the Royal Astronomical Society of London and awarded the Lalande gold medal by the Paris Academy of Science. He has devoted himself especially to double stars and has discovered 1400 such systems previously unknown. He has found that about one star out of every eighteen is really double. To distinguish between two such stars, which are less than two seconds of arc apart, is as difficult as it would be to distinguish two pinheads placed side by side at a distance of two miles.

From Blackstone to Botany

Frank Pellett was sick of the dull grind of the legal mill, the eternal wrangling over admissible evidence, precedent, and the mass of technicalities that too often obscure justice. Altho he was a successful attorney, his interest was in outdoor things, and whenever he could steal away from his office, he wandered along the shady roads, studying the native wild flowers.

Finally the impulse grew too strong to be resisted. Law seemed like an unendurable burden, and so he simply "chucked" it, leaving a secure profession for the precarious career of a nature student.

His first active work was an effort to conserve the wild flowers of his own

state, Iowa, and he set the example by allowing eleven of the twelve acres that constitute his farm to run wild. It is a veritable flower farm, and is replenished until it includes specimens of nearly all the lovely things that grew there before the pioneers first broke the soil. In this living botanical collection are golden rod, trillium, Virginia water-leaf, Solomon seal, starry campion, and scores of blossoming plants with names that read like a spring lyric.

Fortunately, when a man loves to do a certain kind of work, he can as a rule find a way to make it so useful that the world will pay him for doing it. The ex-attorney discovered so many valuable things in connection with his studies of birds, flowers and insects that he was appointed State Apiarist, and bee culture and the checking of diseases that menace the hives became a prominent feature of his duties.

Valuable results of Mr. Pellett's observation of wild life are the facts he discovered concerning birds and insects that are beneficial to the farmer. His is research work, with all outdoors as a laboratory.

Pit Boy and Prime Minister

Thirty years ago a young coal miner left his home in Kilmarnock, Scotland, for the antipodes, because he had been blacklisted by the mine owners on account of his activity in a strike. Today he has gone back to the Mother Country as the official representative of the Commonwealth of Australia. In the period between he has taken a leading part in shaping the industrial and political system of a country as large as the United Kingdom. Three times since the formation of the Australian federation at the beginning of the century he has been called to preside over its destinies as prime minister, for he is recognized as the ablest statesman in the Labor party.

It was his preparedness policy that carried him into power at the last election, in September, 1914. The campaign was at its height and the Liberal party, then in power, seemed likely to win when the war broke out. This new issue turned the tide, and the Laborites secured such a heavy vote as to give them

THE HIGH COMMISSIONER FOR AUSTRALIA

a big majority in the House and almost a monopoly of the Senate. The reason for this Labor landslide was largely that Fisher and his party had established in 1910 the system of compulsory military training in Australia, and it was felt that the men who had prepared the country for the war should have charge of it during the war.

Those who have feared that the accession of the Labor party to power would bring into office a lot of rowdy and fanatical and impractical agitators would be surprised to find Australia's Labor premier a quiet, self-possessed and efficient administrator, who wins the respect of his bitterest opponents. He began work as a pit boy at the age of eleven and was only twenty-three when he was forced to leave Britain.

He had been for twenty years a miner in Queensland when he first entered Parliament. Since then he has carried out an extensive program of social reform and national development, establishing a national bank, extending the state railroads, providing pensions for invalids and bounties for babies, and founding a federal capital at Canberra. One of his hardest fights has been to check the Australian propensity to borrow money from England even for such purposes as paying the interest on previous loans. He has always insisted that not only current expenses, but also the cost of armament and of public works, should be paid for at the time by taxation.

THE INSPECTOR OF IOWA'S BEES

The New Books

REMEMBERING THE JEWEL CITY

"That was a dream worth building," says San Francisco of her Exposition, in the words of one of the many memorialists, commentators and rhapsodists who are still keeping western—and some eastern—presses hot with exposition literature. It may have vanished like a dream, but there was never a dream more luxuriously perpetuated, and with nearly a hundred and fifty titles already accumulated in a bibliography of the art and architecture of the two California fairs no one who wants a guide for his memories of those sunny courts need go without. The picture, of course, is what one wants to keep, and whatever the text may be these books are sure to have photographs beautifully reproduced.

We have already noticed Mr. Neuhaus' "The Art of the Exposition" and "The Galleries of the Exposition." Paul Elder publishes in similar dress *The Architecture and Landscape Gardening of the Exposition*. Once past the introduction, with its alarming remark that at San Francisco one could see "architecture nestling like flamingoes with fine feathers unfurled within a green setting," there is a wealth of photographs with appreciative and informing captions. A detail of the subject is expanded in a luxurious booklet on the *Palace of Fine Arts and Lagoon*, in which Bernard P. Maybeck, the architect, tells his purpose and method in planning this most beautiful of all exposition buildings. As a thumbnail commentary on architecture this has a more general significance than most of the exposition books.

The passing of *The Evanescent City*, "fleeing as all fair things and, fleeting, dear," is George Sterling's inspiration for a delicate piece of verse under that title; while the beauty of the communal enterprise, rather than its product, interests Louis J. Stellmann, who gives the name *That Was a Dream Worth Building* to his pleasant specimen of that ecstatic English that is California's native tongue.

Christian Brinton's *Impressions of the Art at the Panama-Pacific Exposition* adds to a remarkably good set of reproductions from paintings exhibited in San Francisco critical comment on them and on the two expositions as artistic units, and an interesting essay on "The Modern Spirit in Contemporary Painting." Mr. Brinton confesses that the "congenital penchant for hyperbole which obtains west of the Mississippi" led him to be cautious. The bibliography already referred to is found here.

HARTSHORN SHADE ROLLERS

When you find the house sold out, you want to see the play twice as much.

When they promptly hand you two front seats, you wonder if you want to see it at all. That's human nature. The crowd confirms your judgment.

So with Kelly-Springfield Tires. The demand is so great that loyal users often have to wait. We are sorry to disappoint, but glad that the tires have made so good. Now we're very busy trying to avoid further disappointments.

Kelly-Springfield Automobile Tires - Hand Made

CATCHING up with such a demand as we have had for Kelly-Springfield Tires is not easy.

In 1915 we doubled our output. Still we could have sold twice as many tires as we made. The demand is increasing steadily.

Were we making machine-made tires it would be an easy matter to go out and buy a factory. In a few months' time we could be turning out a multiple product.

But we are not making machine-made tires. If we were we could not give the mileage which is responsible for your extraordinary demands on us. You want the tires only because they have made so good.

It is the hand-made process which is responsible for the service which the tire yields—the care exercised in making them.

We have bought a new factory. We are about to build

another. But it takes time to train hands to make our tires. Ordinary workmen cannot do it.

So time is necessary to effect an increase without lowering the standard of our product.

We are sorry that temporarily you must be disappointed if you wait to buy Kelly-Springfield Tires until you need them.

You can avoid this difficulty if you will anticipate your wants. Order your tires from your supply man a week before you need them and he can have them for you by the time you want them.

You have proved that they are worth waiting for. A little foresight will pay you well.

The Joy of Owning a Boat

MOTOR BOATING is the greatest sport in the world—it's healthful, it's enjoyable—it's invigorating. Again, for 1916, over 100 leading Boat Builders in various parts of the United States and Canada have joined with the Gray Motor Company in issuing a catalog of *specialized boats*, telling where you can buy the kind of boat you want at the price you want to pay—also giving you the name and address of the leading boat builder nearest your locality.

Boats a Girl Can Operate

The boats shown in this catalog are powered with Guaranteed Gray Motors, self-starting, clean and reliable—making motor boating a real pleasure for "Milady."

4-cyl. 20-24 H. P. 4-cycle Model "D"

With this catalog we will send you our big marine engine book showing a complete line of 2 and 4-cycle marine motors—3 to 50 H. P., 1 to 6 cylinders—including descriptions of the two new "D Jr." 4-cycle engines, 2-cylinder 5-6 H. P. and 4-cylinder 10-12 H. P. These motors embody all the latest developments in engineering practice—self-starting, high-power, oil-tight motors, backed by the service and guarantee of the GRAY MOTOR COMPANY, a responsible and long-established concern with agencies all over the world.

These books are sent free on request, write for them today.

THE EAST AND THE WEST

What the reviewer would say of *A City of the Dawn* has already been said by Mr. Arthur C. Benson in his introduction to this most uncommon book by his pupil and friend, Robert Keable, an Anglican priest, for some while missionary in Mombasa. It is a study of that region, of its people, its life, its thought, and the reaction of all these upon the western and the Christian mind. As a book of travel, merely, it has a charm in which most descriptions of foreign lands are oddly lacking. The people are not queer figures hurrying across a movie screen. The barber, the coffee seller, the Vessel Unto Dishonour, Old Sylvester, these are human beings like ourselves, neither curiosities nor souls to be saved. Yet we feel the appalling sense of hopelessness and helplessness that any thoughtful man must feel before the immeasurable mass of brutality and wretchedness; and also sympathy, affection even, for the childlike and fine qualities that show thru sordidness and ignorance. A bit of real literature has been produced out of what we have learned to count, for that purpose, the unpromising material of the missionary experience. Mr. Keable has the eye that sees, the mind that takes nothing for granted, and he has as well the English of the scholar and the poet. But the force and the appeal of his pages lie first in his absolute sincerity and frankness. In the priest is never lost the entirely human English gentleman, with all his fastidiousness, his sense of fitness and his sense of humor.

A City of the Dawn, by Robert Keable. Dutton. \$1.50.

OUR PERILOUS ISOLATION

Professor Roland G. Usher, author of "Pan-Germanism" and "Pan-Americanism," undertakes to show in *The Challenge of the Future* that the nation has come to the parting of the ways and must either maintain its diplomatic isolation by an armament as formidable as Germany's or seek a friend abroad. "A policy of isolation, based upon anachronism and an anomaly, is a living international falsehood, a denial of the plain facts of international relationship, a policy based upon an obvious blindness to realities. The United States is a part of the world. The fact may be ignored, but not changed; we have merely the right to decide the form which our recognition of this re-

Comfort After Eating

Do you have to be careful what you eat? If so, here is good news for you. By paying a little more attention to selecting your foods, getting the right combination, etc., you can get to eat almost anything you want. It is all a matter of care and attention. This has been fully set forth in a book which reduces diet and digestion almost to an exact science. It tells you how to get rid of indigestion, constipation and all other attendant ills—how danger and discomfort from eating may be done away with for all time—how you may eat food without fear of it disagreeing with you. Following the teachings in this book will put you squarely on your feet and teach you how to live every day so that you will feel fit as a king all the time. No more headaches, backaches or other discomforts. All this is accomplished without drugs—by natural means only. The book is thoroughly scientific and the directions are so simple that anyone may understand and follow them. The author is one of the greatest medical authorities living. Tear out and mail the coupon today and this book will be sent you for **free examination**. Take this opportunity **at once**—judge for yourself how this book can benefit you.

lationship shall take." But, not being much of an idealist, Professor Usher does not suggest a general league of peace as the alternative to the continuance of our separate sovereignty; such is for the distant future. He desires an open alliance with Great Britain, not on grounds of sentiment or sympathy, but because that power thru its command of the seas would strengthen our international position and because the diplomatic interests of the two powers happen to harmonize sufficiently to make such an alliance feasible.

Many other suggestions of policy are made in this book, for in no previous work has the author given so much of his own reaction to the facts of the world situation. He would have us abandon the Monroe Doctrine for South America, but establish a very strict control over the international affairs of the backward Central American and insular republics. Japan should be given a free hand to develop the resources of China. The American army and navy should be increased to the point which will rank America as a powerful member of the "concert." Above all, we must prepare economically to meet the fierce commercial competition awaiting us after the war.

The Challenge of the Future, by Roland G. Usher. Houghton, Mifflin. \$1.75.

INTERNATIONAL AGREEMENT

Mr. Lippmann in his *Stakes of Diplomacy* makes some interesting proposals for the avoidance of war. His main thesis is that European questions, even issues like Alsace-Lorraine and Italia Irredenta, are no longer causes of war. Of course there is still the friction of inflated nationalisms, but the conflict comes rather as a result of the commercial struggle to organize the backward places of the earth. The present war, and its immediate predecessors, grew out of the "Balkan question," with their primary cause in the disintegration of the Turkish Empire. Morocco, Tunis, Egypt, the Sudan, China, Persia, all are synonymous with Europe's narrow escapes.

The greatest indictment of the pacifists is their failure to grasp this essential point, and to safeguard these danger zones, just as the failure of the panaceas for war result from dealing with the issues that lead to war only after they have reached an inflamed stage. To avoid war it is proposed to organize the world's danger zones under international commissions on the model of the Algeiras Conference, which, had it been successful, "would have been more important than all The Hague rules about how to fight in 'civilized fashion,' all the arbitration treaties, all the reduction of armament proposals with which the earth is deluged."

In case of Entente victory, organize a "series of local world governments, each charged with some one of the world problems" for Morocco, for the Congo, for the Balkan Peninsula, for China, perhaps for Constantinople, and for certain of the countries on the Caribbean Sea; bind the local governments

A New Bicycle Thrill

AWAY at the touch of your thumb-lever! Safe, care-free, clean! No

pedal work! Over boulevards or country lanes — anywhere your bicycle would take you!

Noteworthy Spring Books

"The greatest book of the war"

THE FIRST HUNDRED THOUSAND

By IAN HAY

The popular English author, now fighting in France, gives here a picture of war such as only a born novelist could give; graphic, absorbing, full of humor, and with bits of superb character-drawing that make the men in the trenches seem like old friends. Called by four leading English papers the greatest book of the war.

"A series of vignettes that make vivid the whole war by brilliantly illuminating a small patch of it."—*Boston Transcript*. Colored frontispiece. \$1.50 net.

THE CHALLENGE OF THE FUTURE

By ROLAND G. USHER, author of "Pan-Germanism"

This notable book is the first real attempt to formulate an American foreign policy that will meet new conditions and save us the burden of huge armaments.

"A book that will also challenge the thought of the whole country with its study of our future problems."—*Boston Transcript*. \$1.75 net.

THEODORE ROOSEVELT

The Logic of His Career
By Charles G. Washburn

A graphic and intimate character study by an ex-Congressman who for forty years has remained a close personal friend in spite of political differences. Illustrated. \$1.50 net.

THE FEDERAL EXECUTIVE

By John Philip Hill

This important volume discusses the creation, development, organization, and function of the Federal Executive; gives a readable account of the growth and present status of the ten cabinet departments and suggests further changes of the executive power in the direction of greater federal efficiency. \$2.00 net.

A revelation of the real McKinley

THE LIFE OF WILLIAM MCKINLEY

By Charles S. Olcott

The authorized biography based upon letters and confidential memoranda and upon the records of his closest political and personal associates. An important contribution to recent American history.

Illustrated, 2 vols., \$5.00 net

Ready in April

JULIA WARD HOWE 1819-1910

By Laura E. Richards and Maud Howe Elliott

"A story of infinite appeal and a revelation of the successive epochs in the life of a woman who believed that woman's place is the world of affairs and ideals as well as the home, and who justified that belief by her own service."—*Boston Transcript*. 2 vols. Illus. \$4.00 net.

CHARLES FRANCIS ADAMS

An Autobiography

With introduction by Henry Cabot Lodge. As publicist, historical writer, and railroad president, Mr. Adams was one of the most influential men of his time. His autobiography throws a flood of light on many important events of the last half century. With photogravure frontispiece. \$3.00 net.

THE WORLD DECISION

By ROBERT HERRICK

"A book of real literary merit, whatever one's war affiliations may be."—*St. Louis Globe Democrat*.

"Every man or woman who sincerely cares for the future of this country should read this book. . . . It has all the charm of diction that has characterized his novels."—*Boston Transcript*. \$1.25 net.

MODERNIZING THE MONROE DOCTRINE

By CHARLES H. SHERRILL

Introduction by Nicholas Murray Butler. An illuminating discussion of our commercial and political relations with South America, together with constructive suggestions for future policies by a former American minister to Argentina. \$1.25 net.

THE PSYCHOLOGY OF RELAXATION

By G. T. W. PATRICK

Shows why we play, drink, swear, fight and joke.

George L. Walton, author of "Calm Yourself" and "Why Worry," says: "This absorbing book is in line with the work of such other real readers of history as Petrie and Brooks Adams. Intelligible to the untutored, it gives the student something to think about. It is a sane and sensible presentation of the most important social and educational problem of the day." \$1.25 net.

MATSUMOTO-DO

Dept. 530 Tokyo, Japan

to this "internation" by the withdrawal of the protection of the national flag of each and by the self-interests of powerful groups, as Professor Beard shows Hamilton rallied the interests of the American colonists 'round the Constitution. Allow the interference of no outside nation in the affairs of the administered territory, such as ruined the Morocco experiment, and Mr. Lippmann believes that most international friction will disappear.

The book is packed full of ideas, handled in an incisive and confident style; unfortunately the author has a habit of laying down as a fact what often needs more than a fiat to make it so. A further criticism might be the lack of historical evidence or parallel. But as a measure of the man, *The Stakes of Diplomacy* casts a much longer shadow than either his "Drift and Mastery" or "A Preface to Politics."

The Stakes of Diplomacy, by Walter Lippmann. Holt. \$1.25.

SCHOOLS AND FAMILIES

A practical school man with a philosophy of education "learned chiefly from Socrates and Plato," yet able to see the defects of the doctrine of general discipline and to find a place for the Courtis tests and Ayres scale, Professor Moore, author of *What Is Education*, shows best his thinking in chapters on "Learning by and for doing," "Learning by problem getting," and "Organization by selection." *Financing the Public Schools*, by Earle Clark, shows that Cleveland in a group of eighteen large cities spends more than the average city for important business purposes and less for important educational purposes. The interpretation of revenue, expenditure, administration and control problems is well made. Mr. Perry's report on *Educational Extension* is more popularly written and its facts and plans serve equally well Cleveland's new Division of School Extension and the citizen anywhere who seeks the meaning and justification of community education responsibilities. Dr. Johnson shows the *Education Through Recreation* of 14,000 Cleveland children on one June day and in habitual play interests from wrestling and fishing to the movies, and makes suggestions for a more satisfactory recreation program.

Elizabeth Harrison's earlier book, "A Study in Child Nature," included a chapter on punishment, which has developed into her new volume, *When Children Err*. This is a helpful interpretation of concrete ethical situations from the author's broad experience back to Plato. Dr. Forbush provides a course of study for classes in *Child Study and Training*, but individual parents, day and Sunday school teachers will find it useful. The periods of childhood, types of children, psychological and social problems are followed in statement by laboratory experiments ranging from hidden longings, play and prayer to the movies and the gang.

A view of *The American School*, public and private, by a master at Groton, presents a reflection on past development and present tendencies leading to

"the school of tomorrow." Mr. Hinchman's central idea is "growth by production." His proposal to reduce beginning salaries in order to increase those farther on is likely to lead to misunderstanding. Allegheny College celebrated its centenary by a program of addresses on the status and future of *The American College*. Five speakers dealt with the curriculum—the old and the new humanities, science, professions, practical affairs. *The Child in Human Progress* is a record of the tragedy of childhood, tracing the line from animal relationships, human marriage and sacrifice, legal protection in Rome, the Napoleonic recognition of state responsibility, the horrors of factory exploitation, to the work of present day child protection. The book's culmination in the honoring of a single society narrows the interpretation of the present period, without, however, limiting the significance of Mr. George H. Payne's historical study.

Dr. Goodsell contributes a much needed background for the discussion of such urgent problems as birth control, divorce, woman's economic status, seasonal occupation, widows' pensions, in *The Family as a Social and Educational Institution*. Even better than the historical treatment of the family is the frank yet fairly conservative comparison of current theories of adjustment and reconstruction of family relationships.

What Is Education, by Ernest Carroll Moore. Ginn. \$1.25. *Financing the Public Schools*, by Earle Clark. *Educational Extension*, by Clarence Arthur Perry. *Education Through Recreation*, by George E. Johnson. Cleveland Foundation. 25 cents each. *When Children Err*, by Elizabeth Harrison. Chicago: National Kindergarten College. \$1. *Child Study and Child Training*, ed. by Wm. Byron Forbush, Scribner's. \$1. *The American School*, by Walter S. Hinchman. Doubleday, Page. \$1. *The American College*, by William H. Crawford. Holt. \$1.25. *The Child in Human Progress*, by George H. Payne. Putnam. \$2.50. *The Family as a Social and Educational Institution*, by Willystine Goodsell. Macmillan. \$2.

SUCCESS

Optimism is, of course, the note of all Orison Swett Marden's Efficiency Books. *The Victorious Attitude* explains the effect produced on one's self and on others by the successful, fearless manner and the hopeful outlook.

Crowell. \$1.

WAR RELIEF

The most beautiful of all the war relief publications is *The Book of the Homeless*, edited by Edith Wharton. It is a brilliant mosaic of story, verse, pictures and music, contributed by Joffre, Maeterlinck, Galsworthy, Bakst, Renoir, Haerter James, Rupert Brooke, Rodin and other famous representatives of the arts of peace and of war in America and the Allied Nations.

Scribner. \$5.

FIFTEEN RULES OF HYGIENE

The service of the Life Extension Institute in emphasizing sane living and especially periodical physical examinations is furthered in *How to Live*, by Irving Fisher and Director Fisk. THE MACMILLAN COMPANY, Publishers, NEW YORK

The Story of an Old Man Who Recovered His Youth

At Fifty, Sanford Bennett Was an Old Man. Today, at Seventy-five, He Is Younger Than Most Men at Thirty. How He Did It.

By PAUL MILLER

MOST of us number among our acquaintances men of advanced age who seem to have maintained their youth to a remarkable degree, but the case of Sanford Bennett is perhaps the most interesting and remarkable on record.

When he was fifty years old, Sanford Bennett was a mere shell of a man. His face was lined with suffering and his body well nigh useless. As he says himself, he was a worn out, decrepit old man. He had even lost most of his hair and his eyes were so weak that he read with difficulty.

Could you see Sanford Bennett today at the age of seventy-five you would believe that a miracle had come to pass.

Big chested, erect, with the step and enthusiasm of a youngster, a face which looks as though it had never known a worry, eyes clear and strong—a full crop of hair, although it is white—Sanford Bennett today is the picture of health. He has forgotten that he ever had an ache or a pain.

Unlike other men who manage to keep young after the fiftieth milestone of life, Sanford Bennett had a doubly hard task on his hands. It wasn't merely a case of maintaining youth—he had to reconstruct a body that had already become old and feeble.

So much attention was attracted by Sanford Bennett's transformation from an old man to a young one, which was accomplished without drugs or medicines of any kind, that

he was induced by his friends to write a book and pass on to others the methods he used.

This he has done under the title of "Old Age, Its Cause and Prevention," in which he outlines exactly how he achieved his return to youth, so that any one can follow his methods which, like most everything else really effective, are in reality very simple and easy.

I cannot go into Sanford Bennett's system at any length here, but there is a brochure that the publishers will be glad to send free to any reader

of this magazine, which describes the book and cites some of the astonishing results others have secured by following Bennett's ideas.

Merely write a letter

or postal saying, "Please send me your Free Booklet describing Sanford Bennett's Book," and address it to Physical Culture Publishing Company, 3424 Flatiron Building, New York, and I am authorized to say they will honor your request at once.

Sanford Bennett has done so much not only for himself but for thousands of others who are following his suggestions that I believe you will find it well worth while to investigate further and at least acquire a knowledge of his remarkable methods for prolonging the health and energy of youth, particularly when sending for the free brochure puts you under no obligation whatever.

Sanford Bennett at 50

Sanford Bennett at 75

larity. However the rescues are the only foreseen occurrences in the highly diverting autobiography of this Child of Enterprize—a tale of fantastic humor and Arabian Nights surprises, told with delightful originality by William Caine.

Lane. \$1.25.

BANTU AND SUDANIAN

A book of curious interest to philologists and of practical use to missionaries and those whom business or adventure lead to the dark continent, is *The Language Families of Africa*, by Alice Werner.

London: Society for Promoting Christian Knowledge. 75 cents.

THE ROMAN CHURCH

In the *Dogmatic Series* of five small books, Roderick MacEachen explains simply and clearly for laymen the Roman Catholic tenets. The work is introduced by Cardinal Gibbons, and, tho written for Catholics, will fit the need of Protestants who want to know precisely what their Romanist brethren believe.

Wheeling, W. Va. Cath. Book. Co. 5 vol. \$2.

HOW WE KNOW

Professor Douglas Clyde Macintosh in *The Problem of Knowledge* gives an exhaustive and systematized classification of modern theories in epistemology, together with a brief criticism and the historical setting of each. The range of subject matter, however, which is covered in detail in 496 pages would be better adapted to as many volumes.

Macmillan. \$2.50.

A SOUTHERN BAPTIST

Dr. William E. Hatcher, for fifty years a leader of the Baptist Church in the South, is one of those fellow-citizens of whom we have reason to be proud, for he made his own way from deep poverty and discouragement to usefulness and eminence. His life, by E. B. Hatcher, shows a lovable man, of strong will, immense energy, humor and sympathy.

W. C. Hall. Richmond, Va. \$2.50.

THE SUPERNATURAL IN THE DRAMA

This unique study of *The Supernatural in Tragedy*, by Charles E. Whitmore, treats the subject from the historical and the critical viewpoints. It tells of the use of the supernatural by tragic writers of all ages, from Æschylus and Seneca thru the medieval period and the Renaissance to Maeterlinck, Ibsen and d'Annunzio, and discusses its general place and value in the drama.

Harvard University Press. \$1.75.

1870—1914

There is a startling similarity between the destruction of Louvain and the bombardment of the Alsatian capitol during the Franco-Prussian War as it is described by Paul and Victor Marguerite in *Strasbourg*. Written many years before the outbreak of the present war, the book has just been translated into English by S. G. Talentyre. The tale is terrible yet beautiful in its portrayal of courage and hopeless patriotism.

Dutton. \$1.35.

VOTING TRUSTS

It is an astute business man who understands corporations and their possibilities. Among these is the *Voting Trust*, whereby a number of stockholders pool their voting power. This is useful, at times necessary, but like all powers, possible of abuse. Harry A. Cushing has written a clear statement of its history, purpose and development, basing his account on leading cases and on many examples of the documents used in this method of corporate management.

Macmillan. \$1.50.

BABYLONIA AND JUDAISM

Babylonian Texts in the Yale Oriental Series contains a selection of fifty-three out of some eight thousand tablets and other Babylonian inscriptions in the Yale collection, translated and edited by Professor A. T. Clay. These inscriptions go back to the most archaic period, and offer new evidence to support the contention of late gaining adherents that the religion and

culture of the Hebrews had their origin not in Babylonia, but in the Amorite region of Palestine and Syria and were imported thence to Babylonia.

Yale University Press. \$5.

HOW TO BUY

Purchasing is a study of the methods of buying intelligently, efficiently and economically, and of keeping track of purchases. The ideas are applicable to a small business, tho written by one who deals with large orders, H. B. Twyford, of the Otis Elevator Company.

Van Nostrand. \$3.

19TH CENTURY LITERATURE

The latest volume of the Cambridge history of English literature, *The Romantic Revival*, is the work of a large group of scholars, each an authority on the subject with which he deals. This composite authorship makes it possible for each phase of the literary history of the period to be treated with a depth of insight and catholicity rarely attainable in the work of an individual. Much valuable new material is presented on heretofore neglected topics.

Putnam. \$2.50.

VERSE TO ORDER

Pretty good are the jingles from all sorts of folk whose notability is their only common characteristic, and the reason for their being asked to contribute to this amusing volume of *Little Verses with Big Names*. Not all the rimes are for children, but so many, and the best, are that the fat book will be no misfit in a youngster's library, while the price will go to help some sick baby.

Doran. \$2.

OVER CROWDS

Of practical application in the matter of understanding and influencing public opinion are the theories set forth in *The Crowd in Peace and War*, Sir Martin Conway's at once popular and thoughtful discussion of the difference between the group and the individual character. If the first chapters leave one feeling the helplessness of the individual before the crowd, one lays down the book with a clearer understanding of the causes of group feeling and action, and of the direction in which one must move to produce effect on mass opinion.

Longmans, Green. \$1.75.

THE MAKING OF CRIMINALS

Seventeen Years in the Underworld is a straightforward narrative of the opportunities society provided for making a criminal out of a promising boy of fifteen. Pool room, jail, reformatory, penitentiary, the lonesome lad and the lure of the underworld are presented without prejudice or bitterness. Wellington Scott, the name assumed for this writing, is at his best recounting the coming into his life of two real men and the place made for himself since that time.

Abingdon Press. 50 cents.

HIGH PRICE OF LIVING

Dr. Fabian Franklin in the *Cost of Living* gives an unusually lucid explanation of the economic factors involved in the fluctuation of prices, and of the effects of such fluctuation upon various classes of people. The quantity theory of money, and that of a multiple standard and compensated money units are set forth with concrete examples that will help many people to a better understanding of these perplexing problems.

Doubleday, Page. \$1.

VIRGIL'S PASTORAL POETRY

Virgil's pastoral poetry represents, in some respects more vividly than the "Æneid," the poet's profound preoccupation with the duties and possibilities of Roman life. Its sublimated and purposeful picture of rural labor receives at the hands of the late Theodore Chickering Williams at once a scholarly and musical translation. The sensitive blank verse of this version of the *Georgics* and *Eclogues* retains to an extraordinary degree the majesty and serenity of the original.

Harvard University Press. \$1.

Improves your skin while cleansing it

Almost any soap will *clean* the skin and hair. Many toilet soaps are pure enough to do so without injuring these delicate textures. But those who want a soap which not only cleanses but actually *helps* the complexion and hair are wise to choose Resinol Soap.

The soothing, healing properties of Resinol enable it to *protect* the skin and scalp from annoying eruptions, keep the complexion clear, and the hair rich and lustrous. This, soaps which are *merely* pure and cleansing cannot be expected to do.

When the skin is in bad condition, through neglect or an unwise use of cosmetics, spread on just a little Resinol Ointment for ten minutes before using Resinol Soap. Resinol Soap and Ointment are sold by all druggists. Trial free, write to Dept 1-D, Resinol, Baltimore, Md.

Resinol Soap

Resinol Shaving Stick gives a rich, creamy lather that *soothes* the face.

Save Your Steps

Makes housework easier. The handy WHEEL TRAY sets full meal on table and clears it in one trip. Useful in kitchen, dining room, porch. Lustrous permanent finish. Two heavy oval trays, double capacity.

\$10 in Black \$12 in White

Express prepaid. Booklet free

Wheel Tray Co., 439 W. 61st Pl., Chicago

Gluten Flour

is prescribed by physicians as a diet for diabetics and cases of Kidney and Liver troubles, Rheumatism, Obesity, etc. The U. S. Pure Food Laws require that Gluten Flour must contain at least 35% of gluten or protein. Our Gluten Flour contains about 40% (a recent analysis showed 42%) and must not be confused with "40 Standard Gluten Flours" which contain 20% only. To be safe insist on getting Farwell & Rhines cross cross brand of Gluten Flour and other cereal specialties. For booklet or samples address:

FARWELL & RHINES, Watertown, N. Y., U. S. A.

The Top of Your Head

should be covered with a natural growth of hair, and it can be if roots are not dead. *Dandruff can be removed* and grey hair

Independent Opinions

So long as we talk about the inhabitants of Mars and the intentions of the Kaiser, we are safe, because nobody knows anything more about such questions than we do. But whenever we get down to solid earth and talk about topics of the common or garden variety we are likely to hear from our readers, some of whom know more than our authors—or think they do, which amounts to the same thing.

May I be tolerated with a couple of heretical statements on the "Vegetable Garden," of March 6?

1. There is a still better sweet corn than Golden Bantam, of the same season. It is the Early Catawba. Planted the same day with Bantam, it is ready for use three or four days ahead. In color when ripe it is exactly like Catawba grapes. When just ready for cooking it is milk white.

2. The best time for using parsnips is not in the spring (I defy the old notion), but in September, October and November. Take them when the size of a fountain pen, even in August, and they are unsurpassed by any other vegetable.

JOHN G. ROBERTS

Syracuse, New York

Here follows a letter which we dare not provide with an "introduction":

Secretary Garrison writes a clear, concise, carefully considered letter of about 1000 words to President Wilson. The President answers with a clear, concise, carefully considered letter of about 600 words. The busy Washington correspondent of a great New York newspaper rips off 3000 words of ill-considered and confusing "introduction," telling us what the letters contain. Then follow the letters themselves. After which the editors, if you ask them, will mournfully tell you that they haven't room for half the interesting news of the day.

Brooklyn

WILLIS BROOKS

An item in our issue of December 20 on what a cent's worth of electricity would do in the way of cooking or work was intended to give the unscientific reader a tangible idea of that indefinite entity, the kilowatt-hour, which he has to pay for, but can never quite grasp. The customary price of ten to twelve cents was assumed, tho not specified. A Kansas City engineer points out, however, that our contributor was neither accurate nor definite enough in his calculations:

In the first place, nothing is stated as to the price or rate at which the current is supposed to be sold, and this may vary for domestic use from 1½ to 2 cents to as high as 15 or even 20 cents per kilowatt-hour, depending on many conditions. Therefore to say a cent's worth will accomplish all these results is like saying that a cent's worth of candy will fill up a white child three years old and a black one five years old, and will just fill a wooden box two by three by six inches, or tin box four by four by two inches.

Notice, please, that raising 250 gallons of water 100 feet means mechanical work, a definite number of "foot-pounds," approximately 208,333. And a unit of work is the

The Highest Choice

Do not let it be merely a question of initial cost when you make your choice of pianos. The matchless music of the Steinway has lifted it above the "price" atmosphere for all time.

It is true, the Steinway does cost a little more. But no one who owns a Steinway has ever a shadow of regret for the price paid. It is but little higher than the cost of other pianos, and the Steinway carries within its perfect mechanism the guarantee of a satisfaction beyond all price.

For more than three-score years it has been the ideal of the greatest music masters of their day. So the Steinway must command your respectful attention before your choice is made.

same whether water or bricks are concerned. Then the ten tons raised twelve feet means 240,000 foot-pounds of work, a much larger quantity, by the same cent's worth. Incidentally the one minute has nothing to do with it. The cent's worth will do just so much *work* regardless of the time.

The price of electricity to raise the ten tons twelve feet with one cent's worth would have to be 11 cents per kilowatt-hour. At 10 cents per kilowatt-hour (a common domestic rate) the ten tons could be raised 13.2 feet, resistance neglected. The rate at which one cent would raise the 250 gallons 100 feet would be closely 12.67 cents per kilowatt-hour.

W. K. PALMER

Kansas City, Missouri

A useful purpose might be served by opening a discussion on the question, "On what terms ought peace to be made?" We all know that peace must be made, and the only question is when and on what terms. Yet on both sides there is a disposition to close the ears to the discussion of terms. "We will not make terms" is a common expression. It can be easily understood that each group of combatants is unwilling to make a proposal lest it should be taken for a sign of weakness. Naturally, also, the Government of the United States is unwilling to make a proposal which might be met with a snub.

But this objection would not apply to an open discussion in *The Independent*. We have heard enough discussion as to who is to blame; we have also heard many proposals as to what ought to be done after the war. But there has been practically no discussion as to how to end the war. If a score of proposals were made as to terms, and compared and discussed, substantial progress might be made. DIPLOMACY

New York City

We started such a discussion on November 29, in the editorial, "What Are You Fighting For?" where we brought together what has been put forward, officially and unofficial, as the terms of the several belligerents. When the more extravagant of these have been eliminated and the rest reduced to concrete terms, they are seen to be not so far apart, after all. Certainly they are not more difficult to reconcile than many an international disagreement that has been settled by amicable negotiation or arbitration. But when both parties are fighting mad, what are you going to do about it? At present the sole aim of each belligerent is simply to lick the other.

The efforts to bring the churches together on a common creed have had little success. Perhaps better results may be obtained if the attempt is made to bring them together on a financial basis. The "federated fair" seems to be a step in that direction.

Most churches have to resort to money-making schemes. In small towns where there are several churches of as many denominations, it is always a difficult matter to prevent their financial projects from conflicting in the matter of convenient dates and places. Sharp competition and even bitter hostilities are aroused and the saying that most American villages have several churches only a stone's throw apart becomes more than a simile.

Middlebury churches are doing away with that sort of thing. Three years ago, as an experiment, the Protestant churches of this town held a federated fair in the town hall. It was such a success financially and socially that the plan has been continued and the churches have established a permanent Fair Association. The

division of profits is on terms of equal shares after expenses are paid.

It may be a far cry from federated church fairs to church federation, but it certainly is a step in that direction. There is nothing more unifying than a common financial interest. We find that we can work together harmoniously and we have become better acquainted socially than we could have, in any other way. The effect has been most wholesome in our community life as an example of federated effort in church life. Years of occasional union religious services have not succeeded in bringing the churches into such intimate friendliness as has the federated fair.

HARRIET G. COCKRAN

Middlebury, Vermont

Your assumption in "The Heritage of Hate" editorial of March 13, that the Catholic Irish—who form 95 per cent of the Nationalist or Home Rule party—are enlisting in great numbers for the defense of the Empire is quite erroneous.

The census of 1911 shows that Ireland contained nine and seven tenths of the population of the British Isles. Since the outbreak of the war 4,000,000 men in the United Kingdom have volunteered for service and of these less than 100,000 enrolled in Ireland. Of these 40 per cent (Protestant Irish) are anti-Home Rule. So that less than 60,000 Home Rulers have joined the colors. Based on 74 per cent (Catholic Irish) of its population, Ireland should have sent 287,000 men to the front, as representative of the Nationalist sentiment.

The population of England proper is 75 per cent of the total population of the British Isles, yet 90 per cent of the new army was born there. Of the first Canadian contingent 70 per cent were born in England.

The man today who is doing the fighting in the British Army is the Englishman born. He has been so modest about it that it is assumed by most Americans that Irishmen, Scotchmen, Canadians, etc., are doing all the dying. Since the beginning of the war I have read in the London Times the daily record of killed and wounded and the vast preponderance of English names clearly shows that the Englishman is in the forefront of battle.

With regard to the navy, the Irish make a still poorer showing—less than 5 per cent being born in Ireland. I do not wish thus to disparage the Irish people, for their valor is well established, but to do justice to those men of the English race who today as never before are freely offering their lives to the service of their country.

JOHN RHODES

New York City

We did not say or assume that the Irish Catholics were enlisting in as great a proportion as the Irish Protestants or the English. The recent meeting at the Hotel Astor showed that there was, as we said, an irreconcilable faction who maintained "The Heritage of Hate." An Irishman recently in London speaks of "the absolute conviction of the Scotch, Irish and Welsh troops, as well as of all the colonial troops, that they are deliberately sacrificed in battle, in order to spare the English regiments." As our correspondent points out, an examination of the casualty lists does not confirm this charge.

Such jealousies and mutual mistrust are unwarranted and unfortunate. After living together for two thousand years, the people of the United Kingdom should be united. However much Ireland has been wronged in the past, she has recently been treated with wisdom and generosity. Her grievances in regard to land and local government are being removed and she should not allow her ancient resentment to interfere with future prosperity.

THE INVESTOR'S SERVICE

The Independent is now offering a Service for Investors in which personal attention will be given to the desires of its subscribers for information in regard to investments of all kinds. We cannot of course decide for our readers where they should put their savings and will not undertake the responsibility of recommending specific securities to any individual. But we ask our readers to write to us frankly and this Department will give them by letter or thru the columns of The Independent such impartial information as may assist them in making a wise decision for themselves.

RAILROAD EQUIPMENT OBLIGATIONS

PRIVATE investors of small means are not so well acquainted with railroad equipment bonds as they are with first mortgage railroad and public utility bonds or with stocks. Bonds secured by equipment have often been regarded in the same light as chattel mortgages on movable property, altho the analogy is not fair, as equipment is highly productive while ordinary chattels are usually not.

Incidentally there is overlooked the fact that cars and locomotives form a *most vital part* of a railroad's property without which it could not operate. It is absolutely essential that a railroad acquire new equipment from time to time as old cars are scrapped or new cars are needed. The most approved method of financing such purchases is by the issuance of bonds maturing in series during the life of the property covered.

The original equipment bond as now known was really the product of the weak financial condition of a few railroads during the early seventies and the absence of proper provisions in railroad mortgages of that time for the issuance of bonds for equipment. Bonds could have been issued under the mortgages, but there were no provisions for depreciation of the equipment and replacement when it had no value for operating purposes. Some prudent railroad men of the period cited saw the advantages of a "pay-as-you-go" policy rather than the issuance of long term bonds for short-lived property, and the equipment bond maturing serially was the result.

The life of a wooden car is estimated at about seventeen years, while a steel car lasts twenty or more. Most cars are now made of steel, or wood with steel under-frame. Having in mind the extinction of the equipment debt prior to the time when the property begins to depreciate, a railroad company wishing to purchase equipment will pay from 10 to 25 per cent of the cost price in cash and issue bonds for the remainder. The bonds usually mature in semi-annual series amounting to 5 per cent of the total authorized issue. In this manner, by the time the property has depreciated 50 per cent the entire issue of bonds will have been re-

tired and the railroad will still have five or ten additional years' use out of its equipment.

There are several plans for the issuance of railroad equipment obligations. One provides for the direct purchase of equipment by a railroad and the issuance of bonds to the extent of 75 to 90 per cent of the purchase price. The bonds are secured by a first lien on the equipment in favor of a trustee. They are a direct obligation of the railroad and mature in series of 5 per cent of the total amount at each semi-annual interest period; title to the equipment remains absolutely with the trustee until the last series of bonds has matured and been retired. At this juncture, absolute title reverts to the railroad company. As the amount of equipment bonds decreases, the equity for the outstanding bonds increases correspondingly. At the time the final payment is made the equipment is worth a much greater sum than that represented by the last series of bonds. These are straight equipment bonds.

Car trust bonds or car trust certificates differ somewhat, the former secured by an agreement of conditional sale and the latter representing a beneficial interest in a lease. Under the conditional sale a manufacturing company will transfer the title to equipment to a trust company, allowing the purchasing railroad use of the cars or locomotives upon payment of interest on the amount of bonds outstanding plus an instalment of 5 per cent of the principal at each semi-annual period. When the amount of instalments paid totals that of the original issue of bonds, the title is transferred to the railroad company by the trustee. Car trust bonds are se-

cured by the contract of conditional sale and are the direct obligation of the railroad issuing them.

Car trust certificates issued under the "Philadelphia Plan" are very generally used for financing a railroad's equipment requirements. Under this plan an agreement is made for the purchase of equipment between a railroad company, a trust company and certain third parties. A lease of the equipment is made by the trustee with the railroad, title remaining with the trustee, and certificates of beneficial interest in the lease are issued to investors. The railroad agrees under the lease to pay semi-annual interest on the certificates outstanding and serial instalments of principal as they mature, usually semi-annually. When the entire issue of certificates has been retired, title is vested in the railroad company. The principal and interest on the certificates are guaranteed by the railroad company by endorsement.

Conditional sales are not recognized in Pennsylvania as a proper means of issuing equipment bonds, so the lease method is used. Car trust certificates issued by a Pennsylvania corporation, trustee or equipment association are free of state taxes in Pennsylvania to resident owners when the railroad issuing the certificates agrees to refund the tax.

As equipment deteriorates and is liable to be destroyed by fire, flood or wreck, holders of equipment obligations must be safeguarded. Provisions are included in the trust agreement to the effect that during the life of the bonds the equipment is to be kept insured against loss and that the railroad company must replace any part or all of such equipment as may be damaged or destroyed. Many indentures provide that the railroad company must furnish a statement to the trustee each year, or oftener if required, setting forth the true physical condition of the

equipment secured by the bonds or certificates. For identification each car or locomotive is distinguished by a plate attached to its side stating that it is the property of so and so as trustee.

While rolling stock usually represents about one-fifth of a railroad's total investment, it is the most important revenue-producing part of the property owned. Equipment includes locomotives, passenger and freight cars, mail cars, baggage cars, crane cars, snow plows, refrigerator cars, tank cars, car ferries, etc. The courts have recognized that a railroad in receivership must not default on the principal or interest on equipment obligations inasmuch as the loss of its equipment would seriously cripple its earning capacity. In most cases on record the interest on such bonds has been paid even when interest on first mortgage bonds was in default. During the crisis of 1893-1896 over 100,000 miles of railroad was in the hands of receivers, yet it is stated that not a dollar was lost by holders of equipment securities.

The mortgage bondholders of a company in receivership recognize, of course, that as the equipment bonds are retired the less interest there is to pay, and their equity in the property increases proportionately. In current reorganizations many mortgage bonds are either being scaled down or else compelled to accept junior bonds, or even stocks, while equipment obligations are nearly always provided for by a cash payment.

On account of their short maturity, rarely over fifteen years, equipment bonds have a very good market and do not fluctuate greatly in price. A favorable factor is that the value of the equipment is known at the outset and the investor can easily figure what equity he has above the total issue of bonds. If, for instance, he purchases a bond of an issue of \$800,000 against equipment costing \$1,000,000, he knows that there is 20 per cent in value over his bonds. Also, that in five years, if his bonds are for a longer term, he will have an equity of 50 per cent and can feel assured that his principal is safe aside from the guarantee or direct obligation on the part of the railroad company.

The most discriminating investors are attracted by the soundness of equipment obligations and large amounts are purchased by banks, institutions and insurance companies. The Equitable Life, New York Life, Mutual Life and Prudential Life are among the prominent insurance companies that report very large holdings of these bonds. The amount held by investors today is placed at about \$550,000,000, while in 1890 there were less than \$50,000,000 outstanding. For the convenience of the investor some of the best issues are listed on the preceding page, together with maturity dates and approximate yields.

The following dividends are announced:
Liggett & Myers Tobacco Company, common, extra, 4 per cent, payable April 1.
D. C. Heath & Co. preferred, quarterly, 1 1/2 per cent, payable April 1.

16,238 Men Joined This Cigar Club

For forty years I've been smoking a cigar made from a tobacco I buy in the Vuelta district in Cuba. I've never found its equal.

My friends and their friends have insisted on my supplying them from my private stock.

So now there are over 16,000 of them ordering together. We keep one man busy selecting only the choicest leaves.

Co-operative Plan Means Mutual Saving

Our Co-operative Club uses over 2,000,000 cigars a year. So we secure quantity prices. We made these cigars for our own use. We have no dealers nor salesmen. Here again is a saving.

We can sell about 100,000 of our present supply. We've put the price at \$5.00 per hundred, \$2.60 for 50—which is about what they cost us. If they could be purchased at a store they would cost twice as much.

First Five Free

We're perfectly willing to have you try a few to decide for yourself that they can't be matched anywhere. We are sure you'll enjoy their rare, mild flavor and delightful aroma.

Merely send us 10c for packing, revenue and postage and try your five free. If they please you, we'll be glad to have you join our club. Don't delay. Write today for trial cigars, but please use your business letter head or enclose your business card.

RESEARCH BUREAU, 500 Fifth Ave., New York

"Hour-Glass Chairs"

From Canton, China, we import these artistic examples of Oriental craftsmanship, suggesting in every line cool and restful repose. Woven of carefully selected rattan by expert weavers, under the supervision of the Vantine representatives in the Far East. Unaffected by water, and greatly improved when occasionally drenched. May be used on the lawn, as satisfactorily as on the porch, as they have no legs to sink into the earth.

Write for Beautiful Booklet

For out-of-town distribution we have published an interesting booklet entitled "Comfortable Summer Furniture," which illustrates and describes our complete collection of this unique Oriental furniture, including chairs, chaise longue, Morris chair, tables, stools, etc. With this booklet, which is mailed postpaid on request, you may shop by mail at Vantine's as satisfactorily as though you personally visited our store. Write today, as the edition is limited. Address Department 37.

PARTICIPATING AND NON-PARTICIPATING LIFE INSURANCE

A request comes from a reader in Indianapolis for my "opinion as to the relative value of participating and non-participating life insurance." In complying, I wish it understood that in expressing a choice of one, I do not in the slightest degree abridge the value or the merits of the other. As between the two, I am a mutualist.

Insurance is a loss-distributing system. That is a fundamental fact. In life insurance we know that the loss will certainly occur, for men always die. In addition to the loss claims, money is required to run the system. The persons insured furnish all these funds. To those interested, then, life insurance is an expense. That being true, it is desirable it should be reduced to a safe minimum.

A capably managed mutual company can achieve that end; a non-participating company cannot. Its expense will be greater than the irreducible minimum to the extent of the sum paid stockholders on their investments in the company's capital.

It does not follow from this that any mutual company has as yet reduced the net cost of the service to the lowest point consistent with safety; nor does it mean that no stock company is furnishing it at a cost below that paid by the policyholders in some mutual companies. The best managed mutuals improve in this respect every year; the best managed stock companies do better than a number of mutuals. But, given managements of equal skill, experience and business ability, one operating a mutual and the other a stock company, the lower net cost rate to policyholders will be attained by the mutual, because the dividends to stockholders will be an expense factor in the latter which is absent in the former.

In considering this question it is essential that the human element involved be kept in mind. In the last analysis, we will find that the interests of policyholders in every insurance company are largely dependent on the personal character of the few men running them. Splendid ability is not enough. They must inherently possess a fine quality of morality and a sense of duty to accepted trusts that is beyond the reach of temptation. As a matter of fact, that is one of the principal differences between companies. The directors, officers and representatives who are concerned too often about their individual promotion or financial gain lack that sturdiness of character necessary to the faithful steward. It is enough for such

a one that he performs his duty with rigid fidelity, without regard to the reward he is to receive. In most cases he will come into all that is justly his. This is not always true, for I have evidence of several exceptions, due to the fact, however, that the faithful man was overruled by associates more powerful and less just than he. In such cases, the latter is feared, distrusted and, as far as may be, forced out of the councils of his fellow-managers, while his participation in affairs is reduced to a minimum.

Personally I prefer, when asked to indicate a choice, participating to non-participating life insurance; but I have no strong objections to urge to the latter when furnished by a company of proper financial condition conducted by men of proved good moral and business character. The policyholder who takes a non-participating policy should understand that the premium he is paying is ten, twelve, sometimes fifteen per cent lower than he would pay for a participating policy; and for that reason he will get no dividends. In other words, that there will never be any reduction in the amount of his annual premium. Beyond that, and the additional fact that the company is controlled by stockholders who have the power, rarely exercised, of inflicting injury on the interests of policyholders, there is no difference requiring consideration.

Mutual companies can be mismanaged and the interests of their members, as we saw by the New York legislative investigation of 1905, can be hurt; but if the state insurance departments, with their unlimited power of visitation and examination, do their duty properly, the irregularities of managements can be quickly detected and promptly suppressed.

Stock companies should be restricted to the transaction of non-participating life insurance, and all mutual companies should be prohibited from issuing non-participating policies. The two classes should never be mixed in the same company. Mutual policyholders are members and owners of the company; policyholders in a stock company are buyers from the owners, the stockholders.

It is not a question of security in either case. Most companies now are good for their death losses at any time. The laws governing reserves and the supervision exercised by the states put that point almost beyond the shadow of a doubt. It is a question of net cost during a term of years; a question of skilful and honest management; a question of permanent immunity against dereliction of duty, incapacity and personal cupidity.

N. C. H., Rolla, Mo.—The market value of stock in a life insurance company is impossible of ascertainment. It is generally held by a comparatively small number of persons and is never listed on any of the exchanges. I judge from such indications as are available in its reports that the Missouri State Life is in a prosperous condition, but am in no position to prophesy the value or future income of its stock to investors.

BOTH SIDES

THE CITY MANAGER PLAN

A DEBATE

Resolved, That all American cities should adopt the Dayton, Ohio, City Manager Plan of municipal government.

The City Manager Plan of municipal government has been developing rapidly for the past few years. Sumter, South Carolina, put it into effect in January, 1913. Since this date twenty-five cities and towns, of which Dayton, Ohio, is the largest, have adopted city manager government. This brief was prepared by R. S. Fulton.

AFFIRMATIVE

I. Dayton Plan offers safest means for municipal government.

A. It approaches nearest to successful German system.

B. Preferable to Mayor and council.

1. Ex-President Eliot and James Bryce call ward system "dead failure."

2. Dayton Plan fixes responsibility.

3. Brings expert men to its service.

4. Establishes continuity in office.

(a) Two members, then three members, of board of commissioners, are elected every alternate two years.

(b) City manager is appointed for indefinite time.

5. Destroys ward lines and patronage.

C. Superior to commission system.

1. Retains and adds to merits of commission system.

(a) Retains idea of responsible elected legislative body.

(b) Retains unification of powers.

(c) Adds expert manager and permanent force of trained executives.

2. Concentrates responsibility for administrative work in city manager.

3. In commission system responsibility for administrative work is divided.

4. Unlike commission system it separates legislative and executive functions.

II. Proposed plan sound in theory.

A. Basic principles of Dayton Charter are sound.

1. Five commissioners elected on non-partisan ballot from city as whole constitute legislative body.

2. These commissioners can be recalled by voters thru initiative, referendum.

3. Administrative functions delegated to city manager.

4. Manager holds universal appointive power over administrative department.

5. Charter provides for scientific methods of business:

(a) Detailed budget.

(b) Accounting system.

(c) Time reports.

(d) Uniform departmental reports.

(e) Service records.

(f) Centralized purchasing.

(g) Modern appliances for street cleaning.

(h) Public welfare department.

B. Makes municipal government like business organization.

1. Citizen represents shareholder.

2. Commissioners represent directors.

3. City manager represents manager.

4. Departmental heads are aids to manager.

C. Eliminates politics.

1. Manager need not be city resident.

2. He is appointed for his merits.

3. Departmental heads are appointed for ability.

4. Commissioners are elected on non-partisan ticket.

D. Manager cannot become autocratic.

1. He is subject to public control thru initiative, referendum, recall.

2. Holds office at will of commissioners.

3. Power of manager to dismiss and

appoint employees is guided by merit system of civil service.

E. May be applied to cities of any size.

1. Functions of municipal corporation, as in Dayton, can be performed by departments in which heads are in direct touch with manager.

2. Council can be large in large cities and small in small cities.

3. Council may be elected at large, or by districts, or by proportional representation by means of short ballot.

4. Corporations regardless of size are built upon principles like in Dayton Charter.

III. Proposed plan has been a success.

A. Successful in Dayton.

1. Given new and efficient service.

(a) In 1914 gave \$140,000 worth of new service.

(b) Regenerated city socially and morally.

(c) New improvements made.

(d) Better city administration.

(e) Reorganized the departments.

2. Has kept expenditures to income.

3. Collected taxes more efficiently.

4. Put municipal credit above par.

5. Saved money for taxpayer.

B. A success in other cities.

1. Floating debts wiped out.

(a) In Springfield, Ohio, \$100,000.

(b) In La Grande, Oregon, \$35,000.

2. Kept disbursements within appropriations.

3. Lowered tax rates.

4. Increased service.

5. Resulted in savings.

(a) In first year under new plan Springfield saved \$50,000.

(b) Cadillac, Mich., saved thirteen per cent of its annual running expenses.

NEGATIVE

I. Proposed plan not most feasible method.

A. Inferior to commission system.

1. None of commission governed cities, except Amarillo, Texas, have changed over to Dayton Plan.

2. Gives too much power to one man.

3. Commission system divides administrative work among commissioners.

4. Greater opportunity for shifting responsibility than commission system.

(a) Commission system places responsibility directly upon commissioners.

(b) Manager plan enables commissioners to shift responsibility.

(1) People hold commissioners responsible for administrative work of city.

(2) Commissioners in turn hold manager responsible.

(3) Recall of manager by people diverts responsibility from commissioners.

5. Its commissioners will give less efficient service.

(a) Commission system gives its commissioners adequate compensation.

(b) Manager plan gives its commissioners little or no compensation.

(c) Commission system requires its commissioners to devote all their time to municipal work.

(d) Manager plan requires only part of commissioners' time.

B. Many American cities have rejected manager plan.

II. Proposed plan not sound in theory.

A. Dayton Charter contains radical provisions.

1. Compels manager to serve two masters.

(a) He is subjected to popular recall.

(b) Holds office at will of commissioners.

2. Gives too much work to manager.

B. Initiative, referendum, recall—integral parts of system are radical.

1. Average citizen has neither time nor training for wise law making.

C. Not democratic.

1. Most important officer is appointed.

D. Faction may elect most incapable member of commission mayor.

1. Charter provides that commissioner who receives highest vote at election when three commissioners are chosen shall be mayor.

E. Contention that manager will remain permanently in office is false.

1. To dismiss a manager, commissioners are not required to prefer formal charges or give him public hearing.

F. Relation between manager and commission will result in friction.

1. Commissioners will interfere unduly.

2. Expert manager may become impatient with amateur commissioners.

G. Argument that proposed plan will eliminate politics is absurd.

1. If commissioners happen to be members of same party, they are apt to appoint partizan managers.

2. Manager in turn apt to appoint men from his party.

III. Proposed plan not a success.

A. Has not been in operation long enough to demonstrate its merits.

B. Saving money no proof of success.

C. In Dayton many reforms secured under new plan are results of additional expenditures.

1. Operating expenditures for first year of new plan were \$77,709 more than for previous year.

D. In many cities there has been friction between managers and commission.

1. In Sumter, S. C., commissioners made first city manager helpless.

(a) In place of coöperating with manager they dealt with subordinates.

2. In Phoenix, Arizona, friction between commissioners and manager threw city government into state of disorder.

TURNING THE TABLES

Teachers are much given to lecturing
their students on intellectual honesty.
But there is, apparently, something to
be said on the other side, and it is said
by *Challenge*, the new intercollegiate
periodical of radical thought and
criticism, published by students of Col-
umbia and elsewhere. A reformed
form of university catalog is proposed
by one of the editors of *Challenge*, Pres-
ton W. Slosson.

CANDOR UNIVERSITY

The president reports to the trustees
another successful year. Owing to the
munitions boom and the death of several
wealthy men during the influenza epidemic
our receipts have been larger than usual
and we have been able to erect two fine
new buildings and even (what is most re-
markable) to spend a little on instruction.
There have been no scandals, and the only
ebullitions of free speech in the faculty
have been such as rather to advertise than
to discredit the university. In the field of
scholarship we have produced many works
of research and instruction. Nine-tenths
of them will serve no useful purpose here or
hereafter, but they look well in the report.
In the more important field of athletics
our unfortunate reverses in baseball have
been more than compensated by a success-
ful season in crew, track and football. In
view of all these facts I feel emboldened
to ask for a lot more money, and if you can't
get it anywhere else, to pay up yourselves.

—President's Report, 1916.

The student must obey the requirements
of the catalog with implicit obedience if
he hopes to get a degree. He must also keep
in mind, however, that the interpretation
of these rules is very elastic, for it is a
poor rule that won't stretch both ways.

—Catalog, 1916.

COURSES ANNOUNCED

Professor Osmosis Foliage offers Botany
99-100 to graduate students. At least eight
students must elect this course, and since
no more than six have elected it any pre-
vious year, he feels safe.

History F3-F4—Professor Joffre Mack-
ensen. This course is supposed to deal with
the Evolution of Law in Modern History.
By April it will have reached only the
tenth century A. D. because the professor's
hobby is Hittite Jurisprudence.

Sociology X8-Y9—This course is to en-
able Professor Malthus Marx (M.A.) to
get material for his thesis in which he
develops a completely new terminology for
quite old concepts. If you like that sort of
thing that's the sort of thing you like.

Greek 1-2—Offered by Professor Jones
and Mr. Smith (Jones's text book used).
It is worth noting that Mr. Smith never
gives anybody marks as high as Professor
Jones gives to half his class.—Verb. sap.
sat.

Philosophy 4-11-44—Comes at 5 o'clock.
Placed at this awkward hour because it
is a snap course and the authorities don't
want everybody to be taking it. For the
same reason it is held on the top floor of
College Hall and nobody is allowed to use
the elevator.

REMARKABLE REMARKS

JESS WILLARD—I draw the color line.
MRS. HENBY SYMES—Never refuse soup.
W. H. TAFT—The general primary is a
fraud.

THEODORE ROOSEVELT—June is a long
way off.

AMY LOWELL—No city is greater than
its poets.

YUAN SHIH-KAI—China is racing to per-
dition.

THOMAS A. EDISON—The instincts of
women are good.

JOHN MASEFIELD—The American is the
Englishman set free.

"BUGS" BAER—Every man has a lot of
influence with himself.

KING PETER—This war is the supreme
last effort of feudalism.

GEORGE W. PERKINS—We as a nation
are unprepared for peace.

THE DUKE OF MANCHESTER—There are
good and bad noblemen.

ED. HOWE—I never knew a retail gro-
ceryman who became rich.

NICHOLAS MURRAY BUTLER—Europe
has been at war for years.

POPE BENEDICT—This appears to us as
the suicide of civilized Europe.

SECRETARY OF WAR BAKER—The Demo-
cratic party is a dismal failure.

ADMIRAL KNIGHT—I am not so sure we
will never have a war with England.

RABINDRANATH TAGORE—Because I love
this life I know I shall love death as well.

LONGWORTH GREEN—I would follow
Theodore Roosevelt into the depths of hell.

G. K. CHESTERTON—The battle of Wa-
terloo was not won on Eton's playing fields.

EMPEROR WILLIAM—Only one is master
within the empire, and I will tolerate no
other.

J. PIERPONT MORGAN—They don't seem
to be suffering from any lack of money over
there.

BILLY SUNDAY—If Martin Luther were
here, he would say: Go to it, Bill, I'm
with you.

GOVERNOR WHITMAN—To say that I
have no thought of the presidency would
be an untruth.

FELIX TUMULTY—It is the expedient
thing for the politicians to get on the suf-
frage band wagon.

PROF. WILLIAM LYON PHELPS—The
greatest compliment an author can receive
is to have his words repeated without quo-
tation marks.

FRANCISCO VILLA—Uncle Sam's beard
and Carranza's whiskers have been plaited
together to make a rope with which to hang
the hopes of Mexico.

PASTOR FRITZ PHILIPPI, OF BERLIN—
On Germany is laid the Divine command
to bring about the destruction of those who
are the personification of evil.

Her Second Childhood

Eating the simple, nutritious foods that keep the mind buoyant and the arteries soft and pliable is the surest road to the bounding, exuberant health of children. You can postpone Old Age through the constant companionship of children and through eating the simple, natural and well-cooked foods.

Shredded Wheat

supplies in well balanced proportion the greatest amount of nutriment with the least tax upon the digestive organs. It contains all the material for replenishing the daily waste of tissue and at the same time supplies a laxative element that keeps the colon clean. A food for all ages—for babies, mothers and grandmothers—for invalids and athletes—for outdoor men and indoor men.

Being ready-cooked and ready-to-serve, it is easy to prepare with Shredded Wheat a delicious, nourishing meal in a few moments. Always heat the Biscuit in the oven to restore its crispness. Serve with hot or cold milk, adding a little cream and salt. Delicious for any meal with sliced bananas, baked apples or other fruits.

Made only by

The Shredded Wheat Company, Niagara Falls, N. Y.

EARTH'S EASTER FAITH

IT is a holy legend that when Jesus was born in Bethlehem of Judea all the demons of war fled in affright to their nether caves. The gates of Janus were shut, for no squadrons passed thru to fight the world over. The angels flocked down and filled the plain with songs of glad peace among goodwilling men, while the very crystalline spheres that bear the stars of heaven rang like cymbals in silver chime, for heaven had come down to dwell forever on earth with men. But Jesus and the virgin mother fled to Egypt and then to Nazareth and thence to Calvary's cross; and cruel Moloch with all his sullen crew recovered courage and remounted their old thrones in their old temples.

Jesus rose from the grave, but earth was slow to know her Easter morn. One said, "The Lord is risen" and another replied, "He is risen indeed and has appeared unto Simon," but Rome knew it not, and Janus opened wider his gates. So the centuries have moved on and the sanctities of heaven still stand thick as stars in their station about the throne of God, for the Easter

hope still lingers while the weary earth waits for the time when heaven shall come down again to take its promised rest with men.

Sight is blind, but faith's celestial hope shines inward and sees things invisible to mortal sight; she sees beyond and thru the cannon smoke the gleam of the New Jerusalem, and above the roar of battle she hears the Easter joy.

Never till now out of the gates of war have such thickset legions hasted before. It must be that two thousand years of wrong are close to their end and the bottomless pit of war will be closed and locked fast, while out of heaven Truth and Justice shall descend to dwell with men, and a scrap of paper with the nations' promises engrossed upon it shall be strong enough to bind the world in one, while bayonets and mortars and sea-planes and Zeppelins and super-dreadnoughts are flung into the scrap-heap of ancient history or fly with monarchies and despotisms and other follies into the limbo at the back side of the world.

WATER POWER, ELECTRICITY AND THE PUBLIC INTEREST

AFTER steam, electricity. After coal, water power. So runs the course of industrial progress.

We are well embarked upon the electrical age. We have only taken the first step into the age of water powers.

Four years ago (unfortunately, no later figures are available), thirty million horse power of electrical power were in use in the United States. Of this less than one-sixth was created by the use of the energy of falling waters.

Nearly five million horse power of electricity were being generated by water power for industrial uses. But the estimated potential water power resources of the whole country were somewhere between a minimum of twenty-eight million horse power and a maximum of fifty-four million horse power. There is available for development from six to eleven times as much water power as was then being used for industrial and commercial purposes.

How shall we go about to avail ourselves of this vast natural resource? No more important problem of national development on the material side lies before us as a people. Power is the prime requisite of modern industry; and as a source of power falling water is unique. It is perennial. You burn coal to make steam to generate electricity to turn the wheels of a mill, and the coal is gone. You must dig other coal out of the earth and begin over again. Some day your coal will be all gone. You harness your electric generator to a wheel turned by a waterfall and generate your electricity;

and tomorrow other water has taken its place, and the day after and next week and next year, and so on forever. The water will work for you and never tire, never give out.

On another page we print an article which describes in graphic style the industrial possibilities of electrical power. They run from the electric range in the kitchen and the electrically driven sewing machine to the extraction of nitrogen from the air for the making of fertilizers for the farm and high explosives for national defense. With such great resources awaiting utilization and such manifold uses to which the power can be profitably applied, the way should be opened as rapidly as possible for their development. To this end new legislation is necessary.

Two bills are now before Congress—the Shields bill and the Ferris bill—looking toward such development. The Ferris bill deals with water powers in national forests; the Shields bill with water powers on navigable streams.

The purpose of both bills is in essence good. But each bill contains provisions which would give away too much that belongs to the public and that ought to be retained in public ownership and control.

The case against these bills as they now stand has been set forth by Gifford Pinchot, the father of the conservation movement:

The Shields bill, now before the Senate, gives to the power interests without compensation the use of water power on navigable streams. The amount of water power these streams will supply is larger by far than all the power of

every kind now in use in the United States. It pretends to, but does not, enable the people to take back their own property at the end of fifty years, for in order to do so, under the bill, the government would have to pay the unearned increment, and to take over whole lighting systems of cities and whole manufacturing plants. Private corporations are authorized to seize upon any land, private or public, they choose to condemn.

Bills which gave away public water powers without due compensation were vetoed by President Roosevelt and President Taft. The Shields bill would do precisely the same thing today.

Another water power bill, the Ferris bill, relating to the public lands and national forests, was in the main a good bill as it passed the House. As reported to the Senate, it encourages monopoly by permitting a corporation to take as many public water power sites as it may please. Under it the corporations could not even be kept from fastening upon the Grand Canyon, the greatest natural wonder on this continent. This bill takes the care of water powers on national forests from the experienced and competent Forest Service, and gives it to the Interior Department, thus entailing duplication and needless expense.

We are not so much concerned as is Mr. Pinchot over the prospect of a monopoly in water powers and electrical generation. As Mr. Easton points out on another page, the electrical power business is a natural monopoly; and the way to deal with a natural monopoly is not to try to prohibit it, but to control it. Aside from this criticism of the bills, however, Mr. Pinchot's points seem well taken. It is a great pity that the praiseworthy attempt to open up this great natural resource to general usefulness should be thus accompanied by an attempt to loosen the public control and to grant undue privileges to private interests. Private capital which is prepared to undertake the pioneer work of developing a new industrial field ought in fairness and in the general interest to be treated with generosity. But such generosity need not be so lavish as to be shortsighted. If we give away in haste now too much in order to encourage the bringing into use of the water powers of the country, we shall repent at leisure when the pioneer period is over.

Legislation embodying the basic principles of the Ferris and the Shields bills ought to be passed by Congress without delay. But the unsound details of both these bills should be ruthlessly cut out. If Congress passes the bills in their present form, much of the splendid work that was involved in the conservation movement will have been in vain.

AN OBSTACLE TO PEACE

LAST week we discussed the terms of peace which had been suggested by various responsible and irresponsible parties in the belligerent countries. Some of them are not irreconcilable, but there is one serious difficulty in the way of coming to terms, and that is the agreement among the Allies that none of them shall negotiate terms of peace without the approval of all of the others. This pact has been signed by Great Britain, France, Italy, Belgium, Japan and Russia. Besides these the Allies must consider the claims of Serbia, Montenegro and Portugal, which have taken part in the conflict, and of Greece, Persia and Albania, which have without resistance permitted the Allies to use their territory for purposes of warfare. Now the interests and ambitions of these twelve nations are quite as much at variance with each other as they are with those of the Teutonic Powers. It is literally impossible to devise a form of settlement which would be satisfactory to all of them even if the Allies should win so complete a victory as to be able to dictate any terms they liked.

Yet, according to the agreement, no peace can be concluded except by the consent of each and every one of the Allied Powers. It would seem, then, that this pact, while it has united and strengthened the Allies, will inevitably tend to prolong the war.

Suppose, for instance, that the French and British succeed in driving the Germans out of France and Belgium. Will they go on fighting for another year or so in order that Russia may gain Constantinople, Serbia may gain Croatia, and Italy may gain the Tyrol? These territories have never belonged to Russia, Serbia and Italy, but they are now fighting for them and would certainly not be content with any peace which did not secure them.

Or, to take another hypothetical case, suppose Germany should declare her willingness without more ado to relinquish and indemnify Belgium, France and Russia, but insisted upon getting back German Southwest Africa. These three Powers would undoubtedly be disposed to accept the offer. England also might think that this arid land was not worth much longer fighting at a cost of \$20,000,000 a day. But how could the London Government induce the Boers to surrender to Germany the country which they have conquered at their own expense in men and money? And if General Smuts succeeds in conquering German East Africa this also will be removed from the available trading stock in case peace has to be made by any kind of bargaining process.

It is easy enough to start a war. A Serbian youth with a revolver in his hand could do it. But to stop a war such as this will puzzle the wisest brains of the world.

PRIVATE ENTERPRISE NOT DOWNED YET

AT a political club luncheon a Wall Street business man, discussing effects of the European war upon the financial future of America, characterized the industrial and economic organization of Germany as the most efficient ever devised by a nation, and a United States Senator, continuing the discussion, suggested that "a most ominous result of this war" may be the nationalization of industry in the German Empire.

These opinions were not pro-German utterances. They were the judgments of men whose sympathies are with the enemies of the nation whose efficiency was recognized. They sound strange in a land where, hitherto, business men and politicians have tirelessly "exposed" the unfitness of government to carry on business, and the mischievousness of governmental "meddling" in industry.

To offset the heresy of Mr. Kies and Senator Burton, Mr. Sydney Brooks has been pointing out the danger of giving over to a government the manufacture of munitions of war, an industry which not a few individualists would surrender to the state, along with the coinage of money and the handling of the mails. Mr. Brooks reviews England's experience since the summer of 1914, and shows that the situation would have been desperate but for the resources of private enterprise, which Mr. Lloyd-George had the wisdom to foster and to commandeer.

There has been a great deal of premature assumption that the war has demonstrated the truth of the socialist contention, or of the Bismarckian state-socialist assumption, that a comprehensive public organization and control of industry and commerce are more economical

and immensely more efficient than an individualistic system.

The war is not over yet, and, above all, the economic recuperation from its devastations has not yet begun. The reliance of France and England is chiefly on the wealth, the initiative, and adaptability of a social order in which private enterprise is largely left free. There is every indication now that this social order as developed in Western Europe and the United States is proving more adequate to the demands made upon it than the paternalism of Germany is.

It will be well to suspend judgment until, as we say at election time, the returns are all in. Perhaps it will appear that in this matter, as in so many other practical affairs, the extremists are unsafe guides. Perhaps the nation which is careful not to destroy the splendid energy, the inventiveness and the fine flexibility of individual enterprise, but which, thru governmental action, coördinates it, regulates it with reference to the conservation of resources, to the needs of different regions and to the just claims of all citizens, and, in time of danger, commandeers its products, may in the long run give the best account of itself.

CONGRESSIONAL AND COLLEGIATE ETHICS

CONGRESS has again voted that we the people pay them the substantial and agreeable sum of 20 cents a mile whenever they travel to and from the capital on our business.

And we once heard of a board of trustees of a certain college (name deleted by the censor) who voted themselves honorary degrees.

SANCTA SIMPLICITAS

FOR religious simpleness, not to say silliness, commend us to a law recently enacted by the New Jersey Legislature and signed by the Governor. It is so grotesque that it might seem that it was a joke perpetrated on the people of the state. A bill was introduced requiring that in the public schools of the state three verses from the Bible should be read every day. Of course that raised a religious row. It was to be presumed that the reading would be from the Protestant version of the Bible and the Catholics objected. It was also thought likely that the verses might be taken from the New Testament and to that the Jews objected. Whereupon the bill was amended so as to take the verses from the Old Testament, and in that form it was passed, so the veracious papers tell us. It would seem then that in politics the Catholics do not count as much as the Jews.

This story illustrates the absurdity of trying to make the state teach religion. The only reason for requiring passages from the Bible to be read in public schools is to teach reverence for the Bible as a book of religion. The public schools are for the children, for all the children, Jew or Gentile, Protestant or Catholic, Christian or Pagan. To impose the religion of one section of the people upon all children would be an interference with parental authority and right worth fighting against. Religion is a matter between man and God, not between man and the state. We would not trust the state to teach religion, not even our own religion. In the very interest of religion we would resent the impertinence of

the state in meddling with religion in the schools as much as in our factories.

What a farce such a law could be made by an irrelevant teacher!

THOSE MUZZLED SEA DOGS

SOME good people are greatly excited because Secretary Daniels will not permit the naval officers to go on the Chautauqua platforms and write magazine articles to accelerate public opinion for preparedness. The country, they say, is entitled to the best expert opinion available on the subject.

So it is. But they seem to forget that Congress every year is accustomed to call the chief officers of the army and navy before it for advice when the military bills come up for discussion. The people and the press have free access to the hearings at the time and to the printed testimony afterwards. They can always learn exactly what the army and navy want.

But it is no more proper, say, for Admiral Fiske to go about the country telling the people how many battleships they should require Congress to authorize, than it would be for Ambassador Gerard to go on the stump to force Congress to appropriate money to erect a new embassy for the American Ambassador in Berlin.

WHAT ARE LUXURIES?

THE British Government, besides its other embarrassments, has now to decide one of the most puzzling questions of economics, namely, where is the dividing line between necessities and luxuries to be drawn? Because the ships are all needed to supply the army and because of the desire to keep money in the country, the British Board of Trade is rapidly extending its list of prohibited imports. Among the commodities which may not be imported even from the British colonies without special license are practically all kinds of china ware, hardware, wooden ware, basket ware, yarns, soaps, playing cards, toys, musical instruments, cutlery and automobiles for private use. War devours theories as it does everything else, so it is not surprising to find free-trade England in this emergency going far beyond the wildest dreams of protectionism.

Besides putting an embargo on imported superfluities the editors and the ministers (both political and ecclesiastical) are preaching the duty of economy and holding up for emulation the almost forgotten virtue of thrift. They even in some cases go so far as to set an example to the commonalty. For instance, Reginald McKenna, who as Chancellor of the Exchequer doubtless realizes better than his colleagues the necessity of cutting down expenses, has given up his motor car and may daily be seen and admired walking to Parliament and council meetings—and in so doing, it would seem, wasting many of the hours for which his country pays him handsomely. But is the reason why he does not take a train or the tuppenny tube that he wants to save yet more money, or to set a still better example?

But in the articles specified as dispensable luxuries in the embargo lists and in most of the exhortations to economy, there is one curious omission, that is, alcoholic liquors. The possible savings and benefits to be derived by a temporary abstinence from these enticing beverages are not talked about much except by certain unfashionable and fanatical sects known as noncon-

formists and certain disagreeable people like Lloyd George. But Lloyd George, when last year he said that drink was as great a danger to the country as the Germans, got speedily squelched. He was hit from both sides—from the laboring classes, who considered themselves insulted, and from the peerage—commonly called the beerage—who thought their craft was in danger. Since then he has kept his mouth shut, no easy thing for him, so evidently he was hard hit.

It did occur to some British statesmen that the country might without serious injury get along for a while on beer and whisky without importing champagne and other expensive wines. But as soon as it was mentioned a great howl came from across the Channel. France gave unmistakable evidence that she would regard it as an unfriendly act if an embargo were put on her most profitable export. So that project was dropt.

One bishop ventured to suggest to his clergy that they might well leave off liquor during the war, but straightway the church papers were filled with letters from indignant vicars and dons, who protested against such an interference with their dietary. The King, who took the pledge for the war and banished all intoxicants from the palace, has relapsed, on the advice of physicians, since his accident, tho why they should think wine would make him stick on his horse better is not clear.

But it does not matter, because his loyal subjects declined to follow his example of abstinence. On the contrary, they spent \$87,480,000 more on alcoholic beverages in 1915 than they did in 1914. Their drink bill for last year was \$909,790,000, and probably they are now spending a billion dollars a year on something which many people in the United States and England manage to get along without. The war has cost Great Britain about \$7,500,000,000. If we subtract from this the loans to other countries, which will presumably be repaid, and the money spent on feeding the soldiers, who would have had to be fed and clothed anyhow, tho not so well in time of peace, we should have left, using the estimate of Sir George Paish, a net loss to the country of about \$2,500,000,000. If, then, Great Britain should go dry, as Russia has, its total war losses could be paid up within the next three years, not allowing anything for the gain in industrial efficiency and the saving from the crime and impaired health which incidentally results from the consumption of a billion dollars' worth of liquor a year.

THE SHIP OF THE DESERT

IT is now in order for one of our modern manufacturers of folklore to write the story of "How the Camel's Nose Was Put Out of Joint." The war has proved that the true "ship of the desert" is the automobile. The arid plateaus of German Southwest Africa were overrun by General Botha with an army on wheels propelled by gasoline. The rapid advance of the Russians from the Caspian to Kermanshah was accomplished by means of the motor car. On the other hand, the British who were to come up from the Persian Gulf to meet them depended on the old-fashioned camel trains. But the camels were stampeded and captured or killed by the Arabs so the British expedition was left stranded while the Russians still sweep on thru the Persian desert. The French have found the Sahara no barrier to their advance toward Timbuktu and the tourist may

now traverse the dead heart of Australia where many a pioneer has laid him down to die.

Poor old camel! He thought he held the record for speed and endurance when he could carry his rider at the rate of fifty miles a day for five days without drinking. But the automobile can go as far in an hour as the camel in a day. Possibly in thick sand a padded foot may have an advantage over a pneumatic tire, but it is evident that the day of the camel has gone. Some three thousand years he has been in the service of man, but nobody loves him and all will be glad to get rid of the ugly, stupid, awkward, vicious and ill-smelling brute. Henceforth his place is in the zoölogical garden, where he may survive to convince future generations that there really was such an animal. The gasoline motor sometimes acts badly and smells likewise, but it is more dependable and lovable than the camel.

IN JUSTICE TO MR. BRYAN

IN a recent editorial in these pages the statement was made that "the story persists, without denial, that when the first 'Lusitania' note went to Germany, signed with the name of Mr. Bryan, then Secretary of State, Mr. Bryan himself told the Austrian Ambassador in private conversation that the stern tone of the note was intended for effect at home and not abroad."

We are in receipt of a letter from Mrs. Bryan, in which she assures us that the statement is not true, and that it has been officially denied not only by Mr. Bryan but by the Austrian Ambassador.

We deeply regret that these denials had escaped our attention, and that in reporting the widely accepted allegation without being more certain of its accuracy we have done Mr. Bryan a deep injustice.

PROFITEERING

CANADA, that "young" country where one can still pioneer, and where there is a nice blend of imperial loyalty and hearty democracy, is having her troubles with a political disease from which we in this country are, we hope, slowly recovering. Graft and rumors of graft fill the newspapers—not in one province alone, nor in small matters. There seems to have been railway graft in Alberta, public building graft in Manitoba, and munitions graft in the Dominion Government.

The *Toronto Globe*, reporting the charges brought against the shell committee which contracted for munitions, calls attention to "damning evidence of profiteering." That is a bad business, but a good word. It means, we take it, something which bears the same relation to legitimate industry that privateering bears to legitimate commerce. To privateer is to make exorbitant profits by capturing loaded ships; to profiteer is to get the same results by capturing loaded contracts.

Perhaps the word has a wider application. There is profiteering whenever by force—economic as well as political—extravagant profits are being made at the expense of legitimate traders, whether the victims be taxpayers, or employees, or consumers. The average man of today will not accept the theory that private profits are wrong; but he does sympathize with those who attack the unreasonable wealth of men who are notoriously getting more than their share. He objects to profiteering, and sooner or later he will stop it.

THE STORY OF THE WEEK

Villa's Band Routed

Villa, on March 27, attacked the town of Guerrero, overcame the Carranza garrison, put to death 172 of his prisoners and held others under guard, intending to kill them. Two days later, at an early hour in the morning, his soldiers were surprized and routed by a flying detachment of American troops, the Seventh and Tenth Cavalry, commanded by Colonel George A. Dodd. There were about 400 of these troopers, and, led by an officer nearly sixty-four years old, who is to go on the retired list in July next, they had ridden fifty-five miles in seventeen hours, over a rough country. Altho they were weary they at once charged upon Villa's force, which exceeded 500, fought a running fight for five hours, and then pursued the bandits for ten miles. Probably they were glad to take a little rest when they knew that the Villa men had been scattered and were seeking refuge in the mountains. Colonel Dodd's cavalymen killed sixty of the Villa band. The bodies of thirty were left at Guerrero, and the bodies of as many more were found at various places in the ten-mile chase. And not one American lost his life. Only four of our troopers were wounded, and their injuries are not of a dangerous character. Among the Mexicans killed was General Eliseo Hernandez, commanding in Villa's place because the bandit chief was disabled.

During the attack upon Guerrero, two days earlier, one of Villa's legs was broken, and one of his hips was shattered by a bullet. When his men were surprized by Colonel Dodd, he was in a tent. At once his guards placed him in a carriage, and he was taken away. On the following day the tracks made by this carriage were found by the pursuing Americans, and it was expected that he would soon be captured. Colonel Dodd liberated the Carranza soldiers who had been held for execution. The scene of this affair, so creditable to our troops, is a broad valley at the head of the Santa Maria River. On the west are the foothills of the Continental Divide, and on the east a trail leads to Santa Ysobel, where, some weeks ago, a party of Villa soldiers murdered eighteen Americans. "With Villa permanently disabled," said General Pershing in his brief report, "Lopez wounded and Hernandez dead, the blow to Villa's band is a serious one." When Colonel Dodd attacked Villa's forces, our troops had been in Mexico just two weeks.

It is now known that Villa had tortured and then put to death at Minaca, ten miles southeast of Guerrero, five Americans, one German and one Englishman. Among the American victims was Dr. A. T. Stell, a practicing physician who had gone to Mexico from New Orleans. Another was the owner of a ranch. Villa had also tortured and

killed a family of five Mexicans because they had been on friendly terms with American ranchmen, to whom they sold supplies.

Other News About Mexico

After long delay, Carranza permitted the use of the Mexican railroads for the transportation of supplies, but under restrictions which forbid the presence of guards on the trains and provide that the supplies must be shipped from one American to another, neither of whom is directly connected with the army. Supplies have been forwarded on auto trucks, of which there are 108 in service, and the government has ordered fifty-four more. Felix Diaz has landed on the Gulf coast of Mexico with a small force. It is said that he has strong financial support and will be assisted by troops from Oaxaca. Large purchases of arms and ammunition for his use have been made in this country, and it is understood that these supplies are to be shipped by way of some port in the West Indies. A considerable number of men in his service have crossed the boundary from Guatemala.

Carranza and his Cabinet are seri-

ously considering a movement for the confiscation of all the property of Catholic priests in Mexico, and the sale of this property to obtain a reserve for the forthcoming new issue of currency. The value of the present currency has fallen to about three cents on the dollar. A decree recently issued says that the goods of merchants who refuse to take it will be seized and sold at auction for the benefit of the government. Merchants who go out of business on account of the condition of the currency will be treated in the same way. A strike of street railway employees in the Mexican capital, for a sixty per cent increase of pay, was suppressed last week by Carranza's troops. The men were forced to resume work, and it is said that fourteen promoters of the strike, now under arrest, will be shot.

The adjourned meeting of the Republican senators at Washington followed the publication of President Wilson's statement about the circulation of false reports along the border designed to bring about intervention in the interest of certain American owners of Mexican properties. At this deferred conference no action was taken, the senators deciding that they would await

THE HAYSTACK

After Villa's forces were fought and beaten by Colonel Dodd's cavalry at Guerrero last Wednesday the American troopers pushed on in a northwesterly direction to find the bandit himself. Abundant rumors of his whereabouts had not led to any definite discovery at the time when The Independent went to press, and nothing was known except that Villa was somewhere in the mountainous country around Guerrero—the proverbial needle in the haystack. The Mexican Northwestern Railroad, passing thru Madera and Temosachic, is carrying American supplies

developments. In a report or statement published by Senator Gallinger it was said that the senators did not intend to interfere with the President, but were anxious that the punitive expedition should be protected and the border guarded, even if it should be necessary to use the militia for that purpose. Our government, Mr. Gallinger added, had not protected American citizens on one side of the line or the other. Mr. Roosevelt published a statement in criticism of the one issued by the President, saying that the charges about American owners of Mexican properties were utterly baseless. Senator Fall, at El Paso, insisted that the President should make known the names of the men he had in mind, as he was misrepresenting the people of the border.

Wages and Strikes

The demands of the four great railroad unions, which have about 400,000 members, were formally presented to all the railroad companies of the United States on March 30, and the companies are required to reply before April 29. They have suggested a conference. The demands are for an eight-

hour day and time and a half for all overtime. It is asserted by the companies that the present rates of pay, fixed by mediation and arbitration, are adequate. They present certain counter-claims which were brought up at a wage controversy in 1914 and then withdrawn by them at the request of President Wilson. These relate to conditions which, it is said, cause double payment for some kinds of work. The companies declare that if the demands should be granted their annual expenses would be increased by \$100,000,000. Prominent representatives of the unions say that there will be "a fight to a finish." Last week the Switchmen's Union joined the other four unions in making the demands.

In the anthracite coal case no settlement has been reached, but the term of the existing agreement has been prolonged until the end of the negotiations. It is understood that the companies will decline to recognize the union or to grant the demanded wage increase of 20 per cent, with an eight-hour day. They may consent to give an increase of 5 per cent, with an eight-hour day, and some say the men would accept 10 per cent. There may be a strike of 50,000 bituminous coal miners in the central Pennsylvania district, as the agreement recently signed for Illinois, Indiana, West Virginia, Ohio and the Pittsburgh district does not include them, and their demand for a wage increase has been rejected.

A strike of 25,000 silk mill workers in Paterson, New Jersey, has been averted by the action of the mill owners. The demand of the employees was for a nine-hour day. At first the owners offered nine and one half hours from May 1, and a reduction to nine hours on November 1. This was rejected. As a strike one week later was promised, the owners yielded. The controversy recalled the memorable strike of three years ago when several persons were killed and the losses of the manufacturers amounted to \$10,000,000. One

of the owners, who has a large and fine mill, offered last week to turn the entire property over to his employees or the local unions if they would guarantee to him 8 per cent on his investment.

Several strikes of street railway employees are in progress. In Toledo the cars were tied up because the company would not permit its men to wear the badges of their new union. A strike in Newark, New Jersey, has not prevented use of the cars. In Wilkesbarre, Pennsylvania, where there has been a strike for a long time, twelve cars were destroyed and seven wrecked last week by mobs of strikers. For two days there was great disorder, but no one was arrested. A bill pending at Albany for the creation of a state constabulary has been opposed by labor leaders, who denounced the constabulary of Pennsylvania, saying that New York ought not to have a similar force of "Cossacks." The bill is supported by the Chambers of Commerce in the state, and by mayors of leading cities.

There may soon be a strike of 200,000 men in the building trades at New York, where 6000 painters are out, demanding an increase from \$4 to \$5 a day. Employers point to the high cost of building materials. A thousand hardware workmen in Torrington, Connecticut, who went on strike for an addition of 10 per cent, were successful at the end of two days. In or near Philadelphia wage advances for about 8000 employees in half a dozen manufacturing plants have recently been granted. The General Electric Company has decided to give bonuses amounting to more than \$3,000,000 in the form of 5 per cent of the annual pay of all employees who have been in its service five years, about 50,000 persons.

The indictments found Trust Cases at Youngstown, Ohio, against the United States Steel Corporation, the Carnegie Steel Company, four other steel companies, and Judge E. H. Gary, chair-

man of the Steel Corporation, have been quashed, upon the defendant's motion. The companies were accused of violating Ohio's Anti-Trust law because they increased the wages of their employees by 10 per cent. This advance having been granted by the Steel Corporation, the other companies took similar action within two days. Here, the grand jury and local prosecutor said, was evidence of a combination to fix wages. Judge Anderson said that labor could no longer be regarded as a commodity, and that the indictments were defective because they were not confined to alleged offenses committed in the state, and conflicted with Federal statutes and authority.

Arguments have recently been made, at New York, in the suit for the dissolution of the Corn Products Refining Company, which makes glucose and starch. The company in its defense asserted that it was not an unlawful combination, and pointed to the fact that while its annual output of glucose had fallen from 414,000,000 pounds in 1907 to 219,000,000 in 1914, that of its competitors had risen in the same time from 34,000,000 to 292,000,000 pounds. The presiding judge said that while the company appeared to have been formed for purposes at variance with the Sherman act, and altho its methods at times in the past had been illegal, he thought these methods had been laid aside. It had failed, he added, to monopolize the production of glucose and starch, and it was impossible to make such a monopoly. His remarks indicated that the judgment of the court would not be a severe one.

In the similar case against the American Can Company, the presiding judge recently withheld a decree of dissolution and permitted the company to carry on its business, future action being conditioned upon its good behavior. But the government now asks for a definite decision, in order that an ap-

peal may be taken if the decision is finally against dissolution.

Immigration Bill Passed

The Burnett Immigration bill, with its literacy test, was passed in the House last week by a vote of 308 to 87. This bill, on account of the test included, was vetoed by President Taft, and again by President Wilson. In the Senate the second veto was overridden, but the majority in the House was less than the required two-thirds by about a dozen votes. The majority on passage last week was so large, however, that a veto this year promises to be ineffective. The literacy test excludes "all aliens over sixteen years of age, physically capable of reading, who cannot read the English language, or some other language or dialect, including Hebrew or Yiddish; provided, that any admissible alien or any alien heretofore or hereafter legally admitted, or any citizen of the United States, may bring in or send for his father or grandfather, over fifty-five years of age, his wife, his mother, his grandmother, or his unmarried or widowed daughter, if otherwise admissible, whether such relative can read or not, and such relative shall be permitted to enter."

To the classes now excluded the bill adds stowaways, vagrants, sufferers from tuberculosis, those who advocate the unlawful destruction of property, Hindoos, and "persons of constitutional psychopathic inferiority." The head tax is increased from \$4 to \$8, and the penalties imposed on steamship companies for bringing defectives are made heavier than they are now.

Other Questions in Congress

In the House Judiciary Committee, by a vote of 10 to 9, consideration of the proposed constitutional amendments for woman suffrage and prohibition has been postponed in-

definitely. The advocates of woman suffrage will now strive to gain support for their amendment in the new national party platforms. The Senate Finance Committee has reported a substitute for the House resolution repealing the provision of existing law which puts sugar on the free list. This substitute provides that the duty be retained until 1920. Mr. Rainey, Democrat, has introduced a bill supported by a majority of the Ways and Means Committee, and approved by the President, for the creation of a permanent and non-partisan Tariff Commission of six members, empowered to make thorough investigations.

By a vote of 3 to 2, the subcommittee which has been considering the nomination of Louis D. Brandeis for the Supreme Court has reported in favor of confirmation.

Russians Repulsed at Riga

The Russian attack on Hindenburg's lines east of Riga, which we mentioned last week, appears to have come to an end after ten days of hard fighting without any material gains. While the eyes of the world have been fixed on France the Russian front has been rather ignored, yet, according to the German account, the operations here have been far more bloody than at Verdun. The German War Office estimates that more than half a million men were engaged in the offensive and that the Russian losses amount to 140,000. Of course, esti-

ON THRU THE MEXICAN CACTUS COUNTRY

The Sixteenth Infantry in the longest march of the campaign, traveling twenty-six miles on March 21 to a camp at Corralitos ranch

mates of enemy losses in a case like this where the ground has not been gained are very uncertain, and this seems almost incredible, but since the German official reports have on the whole been quite free from sensational exaggeration the figures may be taken at least to indicate the severity of the conflict in the opinion of one of the combatants.

A copy of the general order issued to the Russian army on the eve of the offensive calls upon the troops in the name of the Czar to advance and drive the enemy beyond the frontier. It is surmised that the reason why the Russians took the initiative at such an unfavorable season was to draw off the Germans from the western front and thus relieve the pressure on Verdun. If so the effort does not seem to have accomplished its object.

But, on the other hand, we might say that the season forced the fighting when the spring thaw flooded the trenches along the Dvina River and in the swamps about Dvinsk both parties struggled to hold or gain the higher ground because of the advantage it would give when the floods retired.

Mining on the British Front

The British lines have been extended some twenty-five miles to the south to replace the French who have been sent to Verdun. The British signalized their arrival in the new

field by exploding a mine under the German trenches near La Boisselle. Further north near Hulluch the Germans undermined and blew up the British trenches but they did not gain much for the British took possession of the crater.

Still further north in the old battlefield of Ypres, where German and British troops have been fighting for a year and a half, the British mining operations were more successful. At St. Eloi, two miles south of Ypres, the British blew up more than a hundred yards of trenches, then the Northumberland and Royal Fusiliers charged and carried both front and second trenches for a distance of 600 yards. As soon as they had broken into the German trenches the British soldiers scurried thru them to pick up stray prisoners and succeeded in taking 170 of them. At one point an officer found two fusiliers who had laid their rifles on the ground and were fighting with their fists for the possession of a German prisoner whom both claimed.

Malancourt and Vaux

During the past week the Germans have taken a village on each side of Verdun, Vaux, five miles east, and Malancourt, ten miles west. Fort de Vaux was smashed to pieces by the German shells two weeks ago, but, as in the case of Douaumont, the village, sheltered in the ravine, held out longer

than the fort on the hilltop. On the last night in March the Germans in large mass charged the French salient at Vaux from north and south simultaneously but were checked before they reached the French lines. But a second charge followed immediately and after a hot fight among the houses the Germans obtained possession of the place. They followed this up on the following day by penetrating the woods lying between Vaux and Douaumont.

The advance upon Verdun from the north has hitherto been prevented because the French guns on the heights to the west of the Meuse River enfiladed the plateau along which the Germans must pass to reach the city. They have accordingly been resting in this sector for the last fortnight while they gained these dominant positions. Côte de l'Oie, or Goose Ridge, the nearest of these to the river, is now in German hands, and they also hold part if not all of the next height, Le Mort Homme or Dead Man's Hill, as well as the forest between Bois des Corbeaux or Crows' Wood.

Two miles further west is the village of Malancourt, which the Germans took by storm on Thursday night. Since this village, like Vaux, forms a French salient the Germans were able to assault it from west, north and east. A single battalion of infantry held the place in the first attack against assailants twenty times their number. But a second assault was made two hours later and forced an entrance thru the French defenses on the left. The house-to-house fighting continued till dawn. The Germans took here 328 unwounded prisoners.

British Strikes — The big guns urgently needed by the army in France for the summer campaign are being held up by a strike in munition factories on the Clyde. This is not a mere case of local dissatisfaction with wages but an organized effort to force the government to give up conscription and repeal the act placing the munition works under government control. The union authorities and the parliamentary representatives of the Labor party are opposed to the strike, but the movement is instigated by a union inside the union under the management of the Clyde Workers' Committee. About 1700 men went out. The government for the first time used the powers conferred upon it by the munitions act, fining twenty-two of the strikers \$25 apiece and banishing nine of the leaders from the district. This, however, only increased the resentment of the men and most of them are still out.

Another strike of more extensive character has broken out on the Mersey River where 10,000 dock workers have gone out. This threatens to tie up the shipping of Liverpool, which is now the most important as it is the most secluded port in the British Isles. The decision of the arbitrators was rejected by the men as not sufficiently meeting their demands. Later, however, part of the men returned to work.

THE INVESTMENT OF VERDUN

Slowly but so far without any serious setback the German forces are closing in upon the chief fortress of the French frontier. On the north and east their lines have been brought within easy gunshot of the city and now on the west side of the Meuse they are steadily advancing. Last week they captured Malancourt and they have gained a lodgment on the hill of Le Mort Homme. It seems impossible for the French to hold on much longer to the salient which projects between Dead Man's Hill and the Meuse. The shaded area is that now held by the Germans. The solid black line is their former position.

THE GREAT WAR

March 27—British take German trenches at St. Eloi. Seven German aeroplanes destroy barracks at Salonica.

March 28—British cruiser sinks German destroyer. Conference of Allies in session at Paris.

March 29—Ten thousand Liverpool dockers go on strike. Italians regain lost positions near Görz.

March 30—Germans take Malancourt. Russian offensive slackens.

March 31—Austrian air raid on Verona. Zeppelin brought down in Thames.

April 1—Germans take Vaux. Premier Asquith visits the Vatican.

April 2—Germans enter Caillette Wood, northwest of Vaux. Zeppelins raid Scotland and England.

Air Raids on England On the night of March 31 five Zeppelins crossed the sea and sailed over the eastern counties by different routes. Ninety bombs were dropt, causing the death of twenty-eight persons and the wounding of forty-four. One of the Zeppelins was brought down by the land guns and fell into the mouth of the Thames. The crew, seventeen uninjured and four badly wounded, were taken from the wreckage by the trawler "Olivine."

This makes thirty-one air raids on England which have been reported, and probably there are others of which the censor has suppressed mention. That there was at least one such came to light in the course of the parliamentary debate of March 28 when Mr. Tennant, Under Secretary for War, virtually admitted that Zeppelins had approached the coast on the night of March 19. It had been supposed that the German air squadron that night consisted of four seaplanes only.

According to a statement of Premier Asquith on March 10 the air raids made up to that time had caused the death of 127 men, ninety-two women and fifty-seven children. The bombardment of the coast by the German fleet killed forty-nine men, thirty-nine women and thirty-nine children. Besides these some 2750 other noncombatants had lost their lives on British merchantmen and fishing vessels, making altogether about 3153 civilians killed since the war began. The military casualties and damage are not reported. In the House of Lords recently it was stated in one case a great munitions works was missed by a few yards, and that one of the most important machine shops had an equally narrow escape. The German reports claim that in the raid of March 5 on Hull a magazine was blown up, a provision depot destroyed, the docks damaged and the warships hit.

The Zeppelins fly at a height of 7000 to 15,000 feet and at a speed of thirty-five to seventy miles an hour. The most recent type of Zeppelin is nearly 600 feet long and can travel about 2000 miles from its base. The German aeronautic bases in Belgium are only 160 miles from London. The British anti-aircraft guns have a range of only 5000 feet upward, so the Zeppelins are most-

ly out of their reach and have hitherto escaped.

The growing dissatisfaction of the people with the government for its failure to protect the country against the German air raids found expression in the election to Parliament of Noel Pemberton-Billing, a former Flight Lieutenant. He ran independently on this issue and beat the Coalition candidate, who had the support of both party machines. He declares that there are aeroplanes and pilots enough in the country to exterminate the Zeppelins if the government would only set them at it. Now that a Zeppelin has been actually captured the criticism of the government will doubtless be less acrid.

The British have begun to retaliate by raiding the German hangars in Schleswig-Holstein, east of the island of Sylt. Five seaplanes were escorted by cruisers to a convenient point off the German coast and there launched. Whether they did any damage or not is not known, but three of the machines were brought down on the island.

Salonica Attacked by Air

When the French and British evacuated Serbia and retired behind the Greek boundary the pursuit stopped because the Germans and Bulgars were reluctant to trespass upon Greek soil. But the Allied barracks, ships and fortifications at Salonica are reachable by air, so it is not surprising that with the advent of spring the Zeppelins and Fokkers have been paying frequent visits to the enemy's camp. It is only forty miles from the Serbian frontier to Salonica, so the German aircraft can make the round trip in an hour and a half. The French avions are not backward about returning the flying visits of the Germans. On March 24 a squadron of twenty-three French aeroplanes shelled the Bulgar positions west of Lake Doiran, losing two machines. One of them fell into the lake and the other was brought down on land, so close to the Greek border that the pilot could escape into the Allied lines after burning his machine.

On the 27th a squadron of German aeroplanes flew over Salonica and dropped bombs upon the barracks, magazines and railroad yards. According to the German report twenty tons of explosives were detonated and twenty-seven cars loaded with war material were destroyed. The same report states that 200 French and British soldiers were killed. In the French report no mention is made of any soldiers killed, but it is said instead that the bombs killed twenty Greek civilians and wounded thirty or forty more. It is also claimed that four out of the seven German aeroplanes were brought down.

The Greek Government has protested to the Central Powers against the aerial bombardment of Salonica and also presented a bill to General Sarraill, commander of the Anglo-British troops, for the damages, amounting to over a million dollars, due to the air raids which the presence of the Allied troops has caused. Payment was re-

fused by General Sarraill, who said he was responsible only for damages caused by the Allies and advised Greece to send the bill to Germany.

Avlona, which is the only port on the Albanian coast now held by the Italians since their evacuation of Durazzo, has also suffered from aeroplane bombs.

STILL OUT OF REACH

Wood in Philadelphia Public Ledger

BETWEEN THE DEVIL AND THE DEEP SEA

FROM STATE TO STATE

ARIZONA: When Judge Baxter, of the Superior Court, recently held that under the Webb-Kenyon act liquor could not be lawfully brought into this state even for personal use, it was declared that Arizona had the most drastic prohibition law in the Union. Now the Supreme Court of the state holds that Judge Baxter erred, and that "it is not unlawful in Arizona to have or to personally use intoxicating liquors." It is said that this decision, by relieving sheriffs of the task of watching all the shipments of liquor to the state, will give them more time for preventing illicit sales.

CALIFORNIA: The Pacific Traffic League has been organized in San Francisco. Its membership includes officials in charge of the regularly organized traffic bureaus, associations and chambers of commerce throughout practically all the territory west of the Sierra Nevada and Cascade Mountains. Some of its purposes are: to increase the Interstate Commerce Commission to nine members and provide that three of those members shall hold regular hearings on the Pacific Coast instead of, as now, sending a mere "examiner" there; to secure notification of proposed changes in rates and the publication of the transcontinental docket in advance, and generally "to advance fair dealings and promote, conserve and protect the commercial and transportation interests of the Pacific Coast."

COLORADO: It is said that, thru the efforts of Prof. B. C. Buffum, of Wyoming, emmer is likely to become one of the most important crops of Colorado, especially of the non-irrigated districts in the eastern part of the state. Emmer is an original type of wheat which grows wild in Palestine. There it has a sharp spinelike beard which clogs threshing machines and causes sore mouths among cattle, but Professor Buffum has succeeded in producing a beardless emmer, and Colorado farmers who have grown it without irrigation are delighted with the results. On about 2000 acres the average yield has been from forty to fifty bushels an acre, and it has run as high as seventy-five bushels. As stock feed they say it is superior to oats and produces much more heavily. It is also useful for making a very nutritious black bread.

CONNECTICUT: Brief interviews were recently held with a large number of parents of Hartford school children on the subject of introducing military training into the public schools. The purpose was to get the opinions of representative parents not only of different nationalities, but also of various occupational walks and social grades. The poll covered eight nationalities and most vocational fields, from the professional man to the day laborer. The result showed that about seventy-two per cent of the interviewed parents favored the military training for school children.

IDAHO: The Bannock County Republican Voters' Information League is something new under the sun, at least in Idaho. This organization, formed by a large number of non-office-seeking Republicans who desire good candidates for their party, purposes, it is said, to supply positively truthful information concerning all candidates, county, state or national, who may seek the suffrage of Republican voters under the direct primary laws. It is predicted that the league will soon be extended thruout the state, and that so long as it remains in the hands of its present class of members it will be of real service to the people and therefore to its party.

INDIANA: The second annual "Safety First" week, under the auspices of the Indianapolis Chamber of Commerce, has been celebrated with widespread enthusiasm. In Indianapolis the first three days were devoted to public meetings which were addressed by experts in reducing the number of accidents in streets, shops, on railroads and elsewhere. Clergymen took "safety" for their texts, schools made a specialty of teaching it, the city was placarded until "Safety First" signs stared from every available dead wall, show window, vehicle and even from the sky, since Boy Scouts flew kites from which great streamers of caution waved. Practically every civic, social and industrial organization in the city gave the greater part of the week to aiding the propaganda.

MISSISSIPPI: In the hope of inducing the Jackson Memorial Highway Association to lay its route thru Mississippi, the people of this state are stirring themselves as never before in the matter of making good roads. Nearly every county is working to make a good showing before the pathfinding committee comes to make its decision.

NEW JERSEY: A bill to regulate flying machines and undersea craft has been introduced in the New Jersey Senate. This is the first measure of the kind ever proposed in any of the states. Recent reports that planes have been seen hovering above munition plants and that submarines have been plying in waters near such plants have made it seem advisable to place these craft under restrictions which would make their owners responsible for their presence in forbidden localities. It is believed the bill will be put thru speedily.

NEW MEXICO: Few if any states in the Union can show as great increase in wealth production in the past fifteen years as New Mexico. In 1900 the taxable assessment of the state was \$42,000,000; now it is \$305,000,000. Then its population was 195,000; now it is 425,000. In the meantime the number of farms has increased from 12,311, valued at \$53,767,824, to 45,000, valued at more than \$250,000,000. The production of

eggs has increased in value from \$157,000 in 1900 to \$750,000 in 1915; of manufactured articles, from \$2,161,000 to more than \$10,000,000. The production of its mines in 1915 exceeded \$20,000,000 in value, surpassing that of any other year in the state's history. The total value of the products of its mines, farms, ranches, factories, home industries and its ten million acres of forest area is said to have exceeded \$100,000,000 in the past year.

OKLAHOMA: With a view not only to beautifying the city, but also to encouraging young boys and girls to learn gardening, Mayor Overholser, of Oklahoma City, has instituted a contest for a five-passenger automobile which he is to give and several cash prizes to be offered by other citizens. An exchange has been established where property owners may list vacant lots and where boys and girls may apply for the privilege of cultivating them. Within the city limits there are hundreds of vacant lots. It is Mayor Overholser's hope that practically all the owners will grant to the children the privilege of turning these worse than waste places into beauty spots, productive, in the aggregate, of considerable wealth.

OREGON: This state, thru Attorney General Brown, is to take a hand in the Utah case now pending in the United States Supreme Court in which the issue of state or Federal control of water power on public lands is at stake. It is estimated that more than 20,000,000 horsepower is running to waste in the Pacific Northwest, while only 700,000 horsepower has been developed. Nearly all this undeveloped water power is under the control of the Federal Government which, in the name of conservation, is permitting it to go to waste, while fuel supplies, used in its stead, are being exhausted. Those who favor state control say that under it not only a large part of this power would be developed by private capital, but the flood waters of the Columbia River alone would be used for reclaiming 2,000,000 acres of arid and semi-arid land.

RHODE ISLAND: A large number of farmers in this state are taking steps toward cooperation as a means of following out the suggestions made by the Commission of Agricultural Inquiry in its first report to the General Assembly. The commission urged the need not so much of increased production as of better methods of marketing and distributing. Last year the value of Rhode Island's agricultural products was about \$9,000,000, yet, the commission says, the farmers as a class are not making money, altho knowledge of how to increase production has been spread among them. The remedy, it is believed, lies in eliminating much duplication of effort and in reaching the consumer by a more direct and economical route; and this, they think, can best be accomplished by unit-

ing and employing their own marketing and distributing machinery.

SOUTH DAKOTA: The decision of Congress to continue indefinitely the duty on sugar has caused a revival of effort on the part of South Dakota men to establish at least one beet sugar factory in this state. Information gathered from neighboring states where such factories have been established shows that all are making money and that farmers in the vicinity of them are finding sugar beets one of the most remunerative crops they can raise. It is likely that South Dakota will soon have such a factory. A preliminary canvass of farmers has convinced the projectors that a sufficient quantity of beets would be produced to insure its success.

TEXAS: Governor Ferguson and a large number of prominent citizens of all parts of this state journeyed to old Washington on the Brazos, March 2, to celebrate the eightieth anniversary of the signing of the Texas declaration of independence. Washington, which is now almost deserted, was twice the capital of the Republic of Texas—the first and the last capital. Fifty acres of land there have been purchased for a state park. Near the center of this tract stands a simple granite shaft commemorating the signing of the declaration and the establishment of the Lone Star republic.

VERMONT: By the purchase of an additional tract of 2000 acres on the east side of Mt. Mansfield the Mansfield state forest has been increased to a total area of 5000 acres. It thus becomes not only the largest state forest in Vermont, but, excepting the Crawford Notch forest in New Hampshire, the largest in New England. A considerable portion of the summit of the mountain is owned by the University of Vermont, which insures the preservation of one of New England's greatest scenic attractions and makes possible a demonstration of practical forestry under the direction of the State Forester. A movement is already on foot for opening fine automobile roads thru Smugglers' Notch and Nebraska Notch.

VIRGINIA: The House of Delegates has defeated the bill, recently passed by the Senate, providing for the establishment of a co-ordinate college for women at the University of Virginia. The House vote was forty-six to forty-eight, the same majority against the measure that the Senate gave in its favor. The chief argument against the bill was that the state should discharge its obligations to the children by giving needed assistance to the graded schools of the rural districts before spending money "to keep up a college for a few well-to-do young women who are abundantly able to procure whatever extra educational advantages they may desire in addition to those now furnished by the state in its high schools and normals."

A RELIGION FOR DEMOCRACY

BY SHAILER MATHEWS

PRESIDENT OF THE FEDERAL COUNCIL OF THE CHURCHES OF CHRIST OF AMERICA

HE rôle of a prophet is always risky. The currents of history on which we move are so confused that it is difficult to pick out infallibly the main stream. In religion this is particularly the case, for there never was a time when the world was more busily engaged in recasting its religious thoughts and operations. Yet certain tendencies are undeniable, and may serve as a nucleus for a reasonable forecast of the next generation.

Christianity is both an asset and a problem. It is an asset to the degree in which men put it into actual operation, be the temporary cost never so great. It is a problem when one balks at the sacrifice it involves or questions its ideals. It is from each of these two points of view that our present religious situation must be approached if we are to forecast the future.

When the People repudiate a religion, that religion dies. If a religion is repudiated, it is because its institutions and teachings have been outgrown. Greek mythology was not disproved; it died of being ignored. Greek men became better than their gods and preferred to worship Jesus than to undertake to convert Zeus. There are those who say that the same future awaits Christianity. I cannot so believe. Christian ideals are immeasurably superior to social practices and unless we frankly reject these ideals and turn to the worship of some Baal of economic efficiency, we shall still look forward, rather than back, to Jesus.

THE CHURCH MUST BECOME
DEMOCRATIC

YET so far as Christianity during the next third of a century is concerned, all prophecy must be discriminating. The past of Christianity would argue that the immediate future will see a larger assimilation of the ideals of Jesus, and that Christianity as a socialized religion will increasingly stand for the gospel of Jesus as the ethical heart of the gospel about Jesus. But new conditions which the present war will produce will demand a more precise and direct application of the teaching of

Jesus to the People. Whether the immediate effect of the war will be to hinder or aid democracy, democracy holds the ultimate future. This tremendous fact sets new problems for the Christianity of this generation. Those which concern the church as a social institution are evident. However much we may differ with those radicals who hold that Christianity was originally a proletarian movement in the Roman Empire which found itself at last checkmated by the rise of an ecclesiastical aristocracy, the history of the last nineteen centuries shows plainly that great groups of Christians have not been democratic. Wherever there have emerged priests or officials claiming superior privilege in the presence of God, the People have been subordinated. The Reformation was a movement toward ecclesiastical democracy in that it denied special priestly privileges to the clergy, but distinctions none the less have been drawn in Protestantism between priest and laymen.

Furthermore the organization of state churches served to perpetuate the clergy as a special class with an official status not enjoyed by the rank and file of church members. The appearance of independents like the Anabaptists on the continent of Europe and various groups of non-conformist Christians in England and America marked the spread of democratic tendencies, but even in these churches the position of women has been one of ecclesiastical inferiority.

That some men should have special duties within the church is, it is true, imperative for institutional efficiency; and such a grouping is by no means inconsistent with truly democratic ideals. But this conception is even yet only partially held, and the democratic movement looks with ill-concealed suspicion upon an institution in which ancient inequalities of society persist, and in which there is also an alignment with the capitalistic group. This alignment is by no means to be prest so far as the literature of radical democracy affirms, but socialist propagandists are not altogether without justification in their identification of Protestantism with capitalistic sympathies. If the churches are increasingly to reach the people, they must grow democratic.

The second difficulty which democ-

racy must face in the Christianity of the next few years is less obvious. It has to do with the terms and concepts of Christian theology. The social mind of each of the great creative epochs of western history has expressed itself in all aspects of human affairs, but especially in religious thinking. Speaking in general terms our theological systems have been transcendentalized politics. God has been conceived of as a sovereign, who gives laws to his subjects; and they are punished or rewarded in proportion to their obedience. Reconciliation between God and man has always been set forth in terms of forensic justification, and doctrines of atonement since the days of Anselm have conformed to political experience.

This conception of religion under the forms of monarchy is sure to furnish difficulty for the religion of a growing democracy. Our inherited orthodoxy, shaped up as it was under the influence of the political practices and theories of empire and monarchy, is already with difficulty appreciated and understood by men under the domination of democratic ideals in both state and industry. How can a social order accustomed to elect its government grasp the full meaning of terms which express the religious beliefs of men accustomed to government as something superimposed upon the people? How can a democrat in politics and society be a monarchist in religion?

WHAT CAN CHRISTIANITY GIVE LABOR?

THIS difficulty which a rising democracy finds when it faces religion is by no means insuperable, but is more than mere speculation. The general disinclination of socialists and representatives of the People to find satisfaction in the church is due not so much to a turning against God and fundamental religious concepts as against our inherited ecclesiasticism. That may be one reason why working people are more ready to honor Jesus than the church. Much as church members may shrink from admitting the statement, the people at large, particularly in so far as they are wage earners, are growing indifferent, if not unfriendly, toward organized Christianity, both Protestant and Catholic.

I am by no means saying that this indifference cannot be dispelled by

wise planning and action. But the modern church, whether it be Protestant, Roman Catholic or Greek Catholic, cannot afford to overlook the deep-seated cause of the present situation.

Christianity is endeavoring to satisfy the religious needs of a developing industrial democracy with the forms and teachings begotten of that monarchical system against which democrats of all shades and countries are in revolt. In the new era already opening, the consequent tension is likely to become more acute.

Many attacks made upon organized Christianity by the representatives of popular movements seem to me to be thoroly unjustifiable, the result of misunderstanding often as wilful as it is inexplicable. But after one has thus made all necessary allowances, the fact remains that organized Christianity in all its branches faces the distinct and vital problem of adjusting itself to the religious needs of a world that is reorganizing itself in the interest of the people rather than in that of the classes. Thirty—yes even five years hence we shall see this more clearly than today.

CHRISTIANITY MUST NOT BE A CLASS MOVEMENT

I CAN conceive of no greater misfortune to both Christianity and the social order than to have organized Christianity become a class movement. Such a misfortune would carry with it a train of other misfortunes, not the least of which would be the identification of the church with the capitalistic classes. Such an identification would mean that our social morality would develop apart from our religion, and democracy itself would be deprived of forces both conservative and inspirational which it already greatly needs.

It is sometimes said that the people as a whole are possessed of a religion superior to that of the church. The laborer's loyalty to his union, his hatred of scabs and his determination to better his conditions thru his union are often contrasted with the moral force of the churches to the discredit of the latter. Much as we who are devoted to the church dislike admitting the force of the argument, it is undoubtedly true that the labor movement has a much stronger hold upon the masses of wage-earners than have the Protestant churches. The explanation of this is not difficult in view of all the facts, but it becomes clearer when one recalls that the ideals of the labor union are essentially those of *gaining* and enforcing

rights, while the ideals of Christianity are professedly those of *giving* justice to those who have not shared equitably in social privileges. Christianity as it originated and was embodied in Jesus was essentially more concerned to give justice than to demand rights. The Christian movement ought to be loyal to this sacrificial fraternalism.

Democracy must be leavened by the social spirit exprest in the teaching of Jesus if it is not to develop a new form of aristocracy or a new bourgeois emphasis upon rights as over against duties. The church can and must leaven the changing order with the ideals of Jesus. But it must itself first be so leavened.

With these ideals the recognition of a superiority of one social class to another is impossible. A consistent follower of Jesus does not judge others by their occupations, their relative wealth, their birth, or their nationality. In Christ they are all one. From this unity should spring the sense of mutual respect for each other that the search for rights tends to deaden. Unless signs fail, democracy itself, at least in certain of its industrial expressions, is seriously in danger of developing the same relentless pursuit of rights as characterizes the capitalism it attacks. Whether or not the ideals of Jesus are consistent with economic inequalities, whether or not the compulsion to labor that now lies in these inequalities would be any less dangerous if exprest in an absolute democracy, may well be open questions, but the obligation of the Christian Church to propagate the spirit of sacrificial fraternity is undeniable. That must be the first step in the evangelizing of our future democracy.

HOW WILL THE CHURCH EXERT ITS INFLUENCE?

THESE considerations, however, may seem to leave the matter in the region of general theory. To a certain extent this is true. Yet general theories are by no means to be despised. It may be that the largest service that any institution can render its day is to develop general sympathies and attitudes of mind in advance of actual activities. If the present generation can be trained to a moral sensitiveness to the ideals for which the church professedly stands, it can be trusted to use expert advice in industrial organization and political legislation of the future. It certainly is not and will not be the business of the church to enter politics. In the same proportion as religious institutions become identified with governmental processes

are they apt to lose the sense of the primacy of the spiritual and become engrossed in political maneuvers. It would be lamentable if the effort to evangelize our modern social order had any such outcome.

But Christians will do that which a church must avoid. By the readjusting both of their formulas and of their activities, churches should make their members sensitive to the immediacy of religious needs and also to the bearing of Christian ideals upon our industrial and political future. Organized Christianity has the agencies for such moral education. Sunday Schools might become, and I believe are becoming, agencies for teaching a religion which is something more than a knowledge of a list of the names of the books of the Bible and of denominational theologies. In so far as a Sunday School is now really fulfilling its function, it is teaching the young to see that the ideal life must express itself in social activity, and that love is vicarious social-mindedness. In this way as well as in others the churches are increasingly serving the cause of our future democracy.

This type of religious teaching is not as sensitive to doctrinal precision as was the older non-social instruction. It is, however, more than an appeal for "social service" and is no less true to the fundamental principles which constitute real Christianity. But just as we are coming to see that the teachings of Christ are quite as important as the teachings of the church about Christ, are we also coming to see that a generation which regards religion only as a means of gaining salvation in a future life is not as thoroly democratic as one trained to see that the supreme accomplishment of life is the individual who by God's grace has grown sacrificially fraternal and Christlike. When once society is convinced that a Christlike individuality is an ultimate good, it will more easily realize that economic efficiency is a secondary good. Wealth will become a servant rather than the master of human welfare. It is not reckless prophesying to say that already the great currents of church life are setting in this direction.

THE SOCIAL GOSPEL

BUT the course of events during the next generation will demand that the church become something more than an inculcator of ideals among the people. It must be also a servant of the people's welfare. It must practise what it preaches. It must see in society opportunities not only for heralding the wealth of human life, but it must also undertake

Matzene, Chicago

OF CHURCHES OF CHRIST IN AMERICA, AUTHOR OF "THE SOCIAL TEACHING OF
JESUS," "THE CHURCH AND THE CHANGING ORDER"

to benefit human life by its own operations. It is easy for radicals who are impatient of social transformation and want social revolutions to say that the church is so hopelessly degenerate as to be on the point of being replaced by some other as yet unknown movement. From my knowledge of the churches of the United States I am convinced that the next few decades will show that such an opinion is born of ignorance and hypercriticism. The problems which rise from democracy are felt by the leaders of organized Christians quite as truly as by those not within the church.

A lady whose work has been of large significance in the field of industrial reform once said to me, "Tell me about the church. Is it really dying?" I asked her how long since she had attended church. She finally was able to recall one or two occasions during the past ten years. I had the satisfaction of telling her of the Commission in Social Service of the Federal Council of the Churches of Christ in America, of the other commissions of the various denominations, of how local federations of churches have engaged in reform, of efforts being made by Christian people backed by the denominations to bring about legislation in behalf of child workers. The list might be even more extended. Organized Christianity of all sorts is deliberately shaping itself to meet the conditions of our new sense of the People's rights. It has not gone as far as it will go, but it has made a definite beginning. At least it is seeing that spiritual life is and must be social; giving justice as truly as caring for the victims of injustice.

There is apprehension on the part of some church leaders that this attempt to socialize the purpose of the Gospel will transform a church from a religious institution to an agency of charity or of recreation. That there may be such a danger need not be denied, but here again, within the most recent past, there has been a stabilizing of ecclesiastical purpose and a clearer perception that all agencies with which the church seeks to minister to the social needs of its community are secondary to its primary task of stimulating the spiritual ambitions and sympathies of the community. The Social Gospel, about which we hear sometimes such bitter words from those who believe that Christianity needs only to rescue rather than to save, is not another gospel. It is simply the application of Christianity to social forces as intelligently as it has been and is being applied to individuals. Thirty years hence the results of such an

THIS is the fourth article in The Independent's series on "The Next Generation in American Life." In a May number will appear the fifth: THE EXPANSION OF POPULAR EDUCATION, by George E. Vincent, who as Chancellor of Chautauqua Institution and President of the University of Minnesota, has worked largely to bring about the changes which he discusses.

extension of the Gospel will be reckoned as supreme social assets.

THE CHURCH MOVES FORWARD

MUCH of the tension between the People and the churches is born of mutual criticism. Rhetorical exaggerations were never less needed than at the present time. The church from the point of view of democracy is no more subject to criticism than is democracy from the point of view of genuine Christianity. If the church can be charged with emphasizing mere other-worldliness, democracy can be charged with a leaning towards mere economic interests. But both criticisms I believe to be unbalanced.

The day is past when the church is becoming more aristocratic. There is within its organization a distinct movement toward equality. Women and laymen are gaining influence even in those churches which most sharply distinguish between the clergy and the laity. Everywhere there is emerging a feeling as to the true obligations of the church. Within a few days I have heard of four towns in such widely separated regions as Texas, Kansas, Illinois and New York in which small churches in the country are ministering to the community actively and wisely. The coöperation between state universities and churches is growing closer. Feelings of mutual suspicion, if they ever existed, are rapidly disappearing, and thruout the country districts as well as in the great cities, there is coming to be a more distinct perception on the part of the church that if it is to be spiritually efficient it must minister to all those real needs of its community to which the community itself does not attend.

As I look back over the last twenty years I am impressed with the change which has come over the spirit of organized Christianity in these respects. I do not find that Christianity has grown less interested in spiritual truths. On the contrary the men I know who are most devoted to the social gospel are those who are

emphasizing the need of spirituality. It would not be difficult to mention scores of clergymen who not only lead the wider ministry of their churches to the needs of the people, but who are endeavoring to make the people themselves feel that man shall not live by bread alone but by the word of God.

WHEN DEMOCRACY AND RELIGION JOIN HANDS

ALTOGETHER, therefore, looking forward from a wide survey of the actual life of the American churches, I feel there is abundant ground for hope. True, there are reactionary groups with apparently unlimited funds at their disposal who are endeavoring to combat this effort to make Christianity recognize today's social needs. But such groups themselves cannot escape the general tendency and are enforcing their message of a living and forgiving God by social service to the people of great cities. In the future I believe the two wings of Christian evangelism will come to understand each other better. And thus understanding each other they will unite to bring Jesus Christ and His Gospel not only to individuals as they stand related directly to God, but also as they stand related to His immanent will in society. A real reliance upon God for help and a life in accordance with His purposes will find expression in forms and agencies thru which regenerate lives shall function socially. The People in their search for larger corporate self-expression will thereby be enabled to move more readily and surely toward not only a larger economic freedom, but also that freedom of the spirit which is born of a trust in the Heavenly Father.

Those of us who may not live to see this better day when religion and democracy shall come to a mutual understanding, can yet rejoice to have a share in preparing for its coming. Our religious life is certainly moving forward and we are organizing ideals and teachings and institutions which will make the religion of the future less a system of dogmatics and more a form of rational living. God and Christ will mean even more to the democrat of thirty years hence than they mean to us today. And altho my convictions may be too highly colored by my hopes, I dare predict that the men and women who shall be shaping public opinion and public policies in the next generation will admit more readily the practicability of Jesus' teaching as to the good sense of love and the foolishness of appeals to force.

Chicago

WHEN THE WATER WORKS FOR US

BY WILLIAM H. EASTON

EVER since George Westinghouse proved that electricity could be transmitted commercially a thousand miles as easily as a thousand feet men have been dreaming of the day when this mysterious force would become the Universal Servant of mankind—when it would be available everywhere and would be cheap enough to be used for every possible purpose. These dreams, tho inspired by true scientific insight, have so far remained mere castles in the air, for in spite of the great development of electricity it is not cheap, except in a few favored places, and it is available only in restricted areas.

But today these dreams bid fair to become true. For years conditions have been quietly shaping themselves—so quietly as to be marked by but a few—and now suddenly we have awakened to the fact that the day of universal electricity is about to dawn. All the means are now at hand. We are able to generate electricity in any quantity, transmit it any distance, and utilize it in innumerable ways. And most important of all, we have the power wherewith to generate it; for more than thirty million horsepower of inexhaustible water power is available in the United States. Today this great supply of energy wastes itself in idleness; tomorrow it will be working for you and me, making our lives safer and happier, reducing the cost of our living, and increasing our

resources by an incalculable amount. But it will occur to you that this power has existed here for centuries. Why has it not been developed on a large scale before now? There have been two main obstacles to this development, one legal and the other commercial, and it is because these obstacles have been, or promise to be, successfully removed that we can now look forward to universal electricity.

THE legal obstacle is an inheritance from days gone by. Quite properly at the time, Congress passed various laws that put a stop to the erection of power plants on navigable streams and in government reservations. Now it so happens that practically all the available water power is situated in these restricted locations, and as a result its use has been prevented. For example, a large electro-chemical plant, after having obtained all the power from Niagara it could get, desired to expand. Nowhere in the United States could it obtain a sufficient amount of power because of our adverse laws. Finally it actually decided to build its new plant in Norway, so that America is deprived of the benefits of a huge investment. Conditions have, however, changed radically since these laws were passed. Our government clearly recognizes this fact and Congress is now considering legislation that will permit the use of water power, and at the same time safe-

guard the interests of the people, prevent monopolization, and insure unobstructed navigation.

The solution of the commercial problems that clears the way for universal electrification is best shown by the following illustration: Suppose there are five water powers well distributed thruout a state the size of Pennsylvania, and each is near a city of some size. The older practise would have been to develop each of these powers separately and transmit the electricity to the nearest city. Owing to conditions too technical to discuss in this article, it is possible that none of these developments would have been very successful commercially. Many experiences of this sort turned engineers to the steam engine for generating electricity in large amounts—and the steam engine can never produce universal electricity. But now our engineers know that if all five water powers are joined together into a single system, which supplies all five communities, power of great reliability and low cost can be produced. And note this point especially: By the older method no one could obtain power unless he was located in or near the city or on the line between the city and the plant; but by the new method, all five plants would be inter-connected with a complex network of power lines which would be so arranged that nearly every one in the state would be reached.

Such networks will make our

AT THE ALABAMA POWER COMPANY'S DAM. THIS IS THE FORCE THAT WILL ELECTRIFY CIVILIZATION

dream of universal electricity come true. Their main source of power will be water, but every other supply of cheap power will contribute its share—the waste gases of blast furnaces, the culm piles of the anthracite regions, soft coal at the pit's mouth—and the result will be electricity at a fraction of the present cost. No demand for power will be too great for the capacity of these systems, no need too small to be supplied. The great railroad and the lamp in a miner's hat will each draw freely from the immense supply.

BUT after all, what will universal electricity do for us? What shall we personally gain from it? Let us answer this question without calling upon our imagination. Let us not consider what wonderful things may be brought into existence twenty years from now, but simply review a few of the more interesting applications of electricity that are in actual practical use today.

First, in our homes. In the day of universal electricity every one will have electric light—the clean, safe, cool, convenient light, that is always ready without the slightest thought or effort on the part of the housekeeper. But electric light is a small part of the service electricity will offer us. Electric cooking and heating are as superior to our present methods as the electric light is to the kerosene oil lamp. Imagine cooking without flame or smoke, on a range that will automatically start at any desired time, heat up to any desired temperature, and then hold that temperature until the food is cooked. No need for the housewife to live in the kitchen; no early rising for breakfast; no interference with afternoon pleasures to prepare dinner. And no servants needed, either. And as for heating, if you have shoveled coal and ashes; if you have fought a stubborn fire with the thermometer at zero; if you have feared for the safety of your house because something has gone wrong; would you not welcome a heating system that requires only the turn of a switch and keeps the temperature of each room at an exact point all winter long regardless of the weather? You can have all these things now if you will pay the price for the current, and every one will have them in the days of universal electricity.

But electricity will do more than light, cook and heat. It will wash your clothes, wring and iron them; sweep your floors; do your sewing; wash your dishes and dry them; grind your tools; polish your knives; curl your hair. And it will banish ice

as well as fire from our homes. In place of the damp, germ-infested ice box will be a clean, dry, sanitary refrigerator, operated by a little motor. And remember, these things will be enjoyed not only in the luxurious city apartment, but also on the remotest farm.

THE benefits of universal electricity will not stop in the farmer's home. His most troublesome problems at present are the difficulty of obtaining sufficient help, his dependence on nature for rain at the proper times, and the high cost of keeping his soil fertile. Let us see how electricity can solve these problems.

Electricity is not only the Universal Servant, it is also the great Hired Man. The electric motor is the ideal source of farm power. It is small and light so that it is easily portable; it requires practically no attention; and it is absolutely safe even around hay and other inflammable substances. Electric motors will do all the work around the farm, even to milking the cows and cleaning the horses, so that the need for human help will be cut down to a minimum.

Irrigation becomes a simple matter with cheap electric power. The electric pumps can be placed anywhere, started and stopped from the house or barn, and need be visited but once a week for inspection. Even in the moist climate of the East a prolonged dry spell at the wrong season will spell ruin at present—but never with universal electricity.

As for fertilizer, nitrogenous matter is one of the vital elements that must be returned to the soil. Today the farmer is dependent for nitrogen on animal refuse or the nitrate beds of South America. But electricity has the power of forcing the nitrogen of the air into combinations suitable for use as fertilizer. The raw materials for this process are universal and cost nothing, and if sufficient amounts of cheap electric power are available, the fertilizer problem is solved.

As an inevitable result of these various improvements, more land will bear crops, larger crops will be produced per acre, and the cost of production will be greatly reduced. Millions of acres of desert, where now no man can live, will blossom with harvests, support millions in comfort, and supply food for millions more. Will this not reduce the cost of our living?

In the field of transportation electricity is proving itself the ideal motive power. Today many railroads are using electricity at a compara-

tively high cost to operate their most difficult divisions—mountain passes, tunnels, suburban lines, and main lines with heavy traffic—because it reduces expenses, increases speed and safety, and eliminates many causes of delay. How they will benefit from cheap and universal electric power! At the same time, trolley systems will naturally multiply, and electric automobiles will laugh at forty-cent gasoline.

FROM another standpoint failure to make full use of our water power is foolhardy, not to say criminal. Our water power is inexhaustible; our coal, gas, and oil are not. Why should we let the water go to waste and continue to consume our precious and never-to-be replaced fuel? The substitution of twenty million horsepower of water for steam would mean the conservation of \$225,000,000 worth of coal a year.

It is not necessary to point out the value of cheap electricity as power for manufacturing and mining; the fact is obvious. In addition, great electro-chemical industries will arise, employing large numbers of workmen and producing certain substances that can be obtained in no other way or only at a high cost. Mention has already been made of fertilizer; there are also aluminum, caustic soda, chlorin and carborundum, among many others. The electric refining of iron and steel will probably revolutionize our most important industry, to the benefit of every person in existence.

Nor must we overlook the question of national defense. Today we are absolutely dependent on Chile for our supplies of the nitrates from which to manufacture gunpowder and every other explosive. What would be our position if we lost command of the sea and our reserve supply of nitrates gave out? No amount of preparedness in men, ships, or weapons could save us if we could not manufacture ammunition. And yet, as we have seen, electricity can make the essential ingredient, the nitrogen compounds, from the air. But nitrate plants cannot be built overnight, so they must be built for commercial purposes during times of peace to be ready for war; and for this, cheap electricity is essential.

It would seem, therefore, that we are about to enter upon a new era. The change will of course come gradually, but you and I will probably see the first steps, and if we live until 1950 we will undoubtedly look upon the year 1916 much as we now do upon the year 1840. The Age of Electricity is dawning.

New York City

THE HOURGLASS ON THE YELLOW SANDS

Joseph Urban, the scenic producer of the Shakespeare Masque, has designed this great hourglass to stand on the circular stage thruout the performance, to symbolize the passage of time in the art of the theater. The Spirit of Time rises on this altar to present the epilogue

THE SHAKESPEARE MASQUE

BY PERCY MACKAYE

THE tercentenary of Shakespeare's death—an occasion of international significance—can have no international celebration in Europe. It is, then, fitting that here in America, New York, the most cosmopolitan city of the world, should do honor to the supreme master of the art of the theater. Representatives of at least ten of the nationalities of this country, nationalities with which Shakespeare peopled his plays, will, it is hoped, be represented in the memorial masque in which New York's celebration will center.

By drawing in this manner from isolated groups of this great city—groups which ordinarily hardly know of each other's existence—the Tercentenary Committee hopes to effect the beginnings of that rare phenomenon known as "civic consciousness." But the community festival consists also of hundreds of local celebrations held in the schools, settlements, dramatic clubs, literary societies and the like, all of which contribute their part to the great whole.

In all, there will be the greater part of a million people thus actively engaged in the celebration. From among the many participants in the smaller celebrations, and from many widely divergent groups, will be selected the community actors for the Masque, which, with its interludes will be enacted for five performances on the evenings of May 23 to 27, in the New York City College Stadium, reconstructed temporarily to seat 20,000 spectators.

"Caliban, by the Yellow Sands,"

the Shakespeare Memorial Masque, seeks to honor Shakespeare by honoring the art of which he was master. It takes as its principal characters certain personages out of Shakespeare's play, "The Tempest." In the text these characters are developed for the purposes of the Masque so as to enact their own symbolic drama of the regeneration of brute man under the ennobling influences of the art of the theater.

In the first scene (the prologue) Caliban, a deformed creature, half man, half brute, is worshiping his father, the god-idol Setebos (half tiger, half toad), divinity of the Magic Isle of the "Yellow Sands." Miranda enters. Caliban, enchanted by the sight of this strange loveliness, approaches her, sniffing and staring in wonder:

Caliban

Hath feet

And hair; hath bright hair shineth like a fish's tail;

Hath mouth, and maketh small, sweet noises.

(He sniffs nearer; then howls strangely)

Spring in the air: Oho!

Miranda

Alas, poor creature! Who hath hurt thee?

Caliban

Hurt?

Who hurteth God? Am seed of Setebos; Am Caliban: the world is all mine isle: Kill what I please, and play with what I please:

So, yonder, play with him: pull out his wings

And put 'em back to grow. . . . Where be *thy* wings,

Spring—i'—the—air? . . . The moon hath a face

And smileth on the lily pools, but hath No lily body withal; thy body is All lilies and the smell of lily buds, And thy round face a pool of moonbeams.

As Caliban's wooing becomes more insistent, Prospero, her father, appears and by his magic power quells the man-brute, and dethrones Setebos. He appoints the good Ariel to train Caliban's spirit to nobler uses. With this purpose he conjures the historic pageant of the art of the theater. Thus begins the first interlude—the dramatic art of antiquity.

The three interludes and the epilogue, in which the trained amateurs participate, present thru rituals of pageantry and music varied forms of the dramatic art of past ages, culminating in the Elizabethan. The action is centered about the character of Caliban, which develops toward human self-consciousness under the influence of the "mirror held to nature." Bound in Prospero's power, he hears the call of the Priest, Lust, but Prospero tells him that Ariel will tutor him in the arts of civilization:

Come, Caliban: behold thy tutor. Behind these curtains he will show thee now

More than thy nature dreams on. If thou obey him

And learn mine art, thou shalt go free like him.

If not, thou shalt be spitted on a tooth More sharp than Setebos. What sayest?

Caliban (cringing)

Lord,

Art Cock o' the world, and Caliban thy worm;

Yea, only beggeth thee crow no more, nor set

They dancing dogs to bark at him.

MR. MACKAYE IN CHARGE

The author of the masque is directing a rehearsal in the snow-covered stadium. He has already made notable contributions to American pageantry and poetic drama—such as "Jeanne d'Arc," "Sanctuary," and the Masque of St. Louis

Prospero

Tush, fool:

Wilt thou obey?

Caliban

Obeiyeth both of you.

Then appears, on the inner stage, the scene in Shakespeare's "Antony and Cleopatra," in which the lovers meet after the battle of Actium. It disappears, and Caliban exclaims:

Ho, light! All's smother; 'tis gone!

Yo—yo, all gone—

Cloud-swallowed, all! Ah, woman, snake-bright queen,

Thou wonder-thing, come back! Ah, where—where—where?

Caliban, after beholding scenes from "Troilus and Cressida" and "Julius Cæsar," becomes overweening, and conspires with Lust to snatch Prospero's magic staff. Grasping it, he staggers and sways wildly, as tho being shocked by an invisible force, crying:

Now am I lord of lightnings: Lo, mine art

Shaketh the throne of Prospero. Awake, Imperial Rome! Return, ye snake-bright women

Of Troy and Egypt! Stain these yellow sands

Wine-red with spillings of your wreathed bowls,

And let the orgied priests of revel reign.

The mob which he gathers about him, a Roman rabble, clambers over the stage, but a great cross, appearing high above, stops them. The rab-

ble is revealed as the powers of Setebos. Thus the Christian Church arrests the degeneration of the civilized world, and Caliban is once more overpowered, and exclaims:

Yea, methought to be
His artist, and make dream-things of
mine own
Like Ariel his spirits, yet now—am
mud.

Then, in
the second
interlude,
the art of
the theater

in medieval Germany, France, Spain and Italy appears in symbolic ritual. The pageant, summoned by Prospero, continues with scenes from "Hamlet," "Romeo and Juliet," "The Merchant of Venice" and "A Winter's Tale." Once

more carried away by the enchantment, Caliban, in conspiracy with the second priest, Death, seeks the scroll of Prospero. His gray hordes, hatted and garbed like Puritans, wrest the prize from its proper hands, but withdraw in the face of the merry-makers of Elizabethan England, who now appear and dance the May-pole dances of the third interlude.

Caliban has thus twice betrayed his trust, but he is granted yet another chance. He witnesses scenes from "As You Like It," "The Merry Wives of Windsor" and "Henry V." Still again, under the influence of the third priest, War, he leads his mob to capture Miranda and the spirits of Ariel. Then Prospero, who, unhooded, is revealed in the form of the spirit of Shakespeare himself,

summons a final pageant of the creative forces of the theater in all ages—the great actors from Roscius to Irving, the great dramatists from Æschylus to Ibsen, and symbolic groups representing the great theaters, from that of Dionysus to the Comédie Française. And Caliban, groping and dazed, comes forth and in a voice hoarse with feeling says:

Thy tempest blindeth me: Thy beauty baffles.

A little have I crawled, a little only
Out of mine ancient cave. All that I build

I botch: all that I do destroyeth my dream.

Yet—yet I yearn to build, to be thine Artist

And stablish this thine Earth among the Stars.

DESIGNING A COSTUME FOR THE MASQUE

Mrs. John W. Alexander, whose husband left so deep an impress on American art, is designing the two thousand costumes which will help to make the Shakespeare Masque beautiful. The picture suggests how splendid these will be

SAVING—A VICE OR A VIRTUE?

THE CONTRADICTORY OPINIONS OF TWO HOUSEKEEPERS

Pearl Grace Loehr

MRS. BRUERE

BUT have you considered," a life insurance agent urged a friend of ours, "that some time you may not be earning as much as you are now? That when you are old——"

"My dear sir, what are the almshouses for?"

It is reported that the agent went away.

"And you know Wellford really meant it!" is every one's comment, which is praise or blame, according to the understanding of the speaker. Some feel that he is showing a wise altruistic courage, others that he is a prey to selfish folly. Few realize that Mr. Wellford knows he cannot afford to hamper his present usefulness by attempting personally to save money. Can the rest of us?

The answer to this question depends on the stage of civilization in which we are living. I say "we," meaning particularly women whose business is the vanishing one of housework. Strict economy of money and things is expected of us as a class virtue, and usually we practise it. During the long ages when the business of housekeeping developed, its side partner, the Habit of Saving, was grained deep into womankind, and became perhaps the highest of the virtues. Was it not a great day for the race, still a bit uncertain on its hind legs and reminiscent of the tree tops, when some provident an-

THE WASTE OF SAVING

BY

MARTHA BENSLEY BRUERE

cestress laid by a cave full of summer food to stead her family thru the winter? And from then till now, thru all the intervening ages when there wasn't enough of anything to go round, and when women not being earners could only add to the family security by saving, unremitting individual thrift was an important feminine virtue.

But those thrifty ancestresses of ours are dead, and we have come on a time when the work of saving, like the work of making cloth or books or flour, can be more effectively done by the community than by the individual. It is time for that habit of individual petty saving to be transplanted to the community garden.

For consider its workings when unhampered by the reasoning powers! "Mother" carries what the carver has left of a roast shoulder of lamb into a bright light, puts on her glasses and with a small sharp knife extracts from the interstices of the bones from one-half to two-thirds of a pound of edible fragments. She adds a green pepper, an onion, four cold potatoes, some dry bread and any appropriate trifles she finds in the refrigerator, puts the whole thru the meat chopper, breaks in two eggs and molds it into a loaf. If she is practised and quick she can perform the feat with the necessary preparation and cleaning up afterward in forty-five minutes, tho she must be on hand to baste the roast at appropriate intervals. Today the butcher quoted 26 cents as the price of lamb, so "mother" probably saves 15 cents by her endeavor—and a well-trained family will often accept the result as nourishment. But if "mother" had dropt the lamb bones with their ad-

This is the third article in Mrs. Bruere's series on what she calls "The Habits of Women Under Domestication." In an early number "Pernicious Heirlooms" will conclude the series.—THE EDITOR.

Harris & Ewing

MRS. THOMPSON

hering meat first into the soup kettle, and later into the garbage can, she would have spent two minutes of time and thrown away some seven cents' worth of nourishment. Would that seven cents have been wasted?

The Commissioner of Street Cleaning for New York City has just told me that the refuse from the city has a gross value of about \$4 a ton and that, altho the cost of saving it is from \$2 to \$3, there is still so large a profit that the latest contract for garbage disposal nets the city \$180,000 a year.

I can already hear some New York housewife crying wrathfully:

"What good does that \$180,000 do me? I don't get any of it back!"

Madam, if you don't it is your own fault. That saving is for the benefit of us all. Come out of domestication and take your seven cents' worth of the advantages which \$180,000 will give the community!

It is the tragedy of domestic saving that it is most prevalent in the middle class, which ought to know better. According to the best statistics which I have been able to put together people who have a little leeway above the requirements of decent living save about \$300 per year per family. And at what a community cost is it done!

A lady, blooming like a scentless plant in a window box, has just confided to me that she has saved enough

out of her housekeeping to provide for her old age. For more than thirty years she has run her ménage on the principle the Japanese use to grow their miniature gardens—each plant and tree is given, not all that it can advantageously assimilate, but the least that can be made to do. One would rise from her table with the taste of saved pennies in the mouth. And it wasn't only food—clothes, furniture, education, even the family doctor—all were the least expensive that could be made to do. If she had not looked upon matrimony as an opportunity to retire from industry, might she not have earned as much as she had saved? Might she not have expanded under a series of fresh impressions instead of shriveling mentally like a starved apple on a sapless tree? For not a thing has she done for the community but refrain from becoming a public charge—in money. In mental and physical inertia she has become a drag on the wheels of progress.

Then is our housekeeping to be deliberately wasteful?

Indeed no! Let us get what we need at the least price we can pay for it, but remembering that there are more coinages than money to buy with. We must determine whether money is more precious than muscle, legal tender more to be saved than brains, mere dollars and cents than time, material things than the effort it takes to conserve them. The crux of the matter is to determine the cost

of the individual saving of money in terms of the other measures of value, and to balance money saving against money earning both in its financial outcome and in its effect on ourselves—and this is a very difficult thing for women trained to think economy a virtue in itself to do.

Under domestication woman is blind to the fact that if she becomes part of a great community movement to control the meat packing industry, she will not have to stay at home and try out beef fat; if she puts her mending and sewing—yes, even the darning of the family socks, which can now be done by machinery—into the hands of industry she need not lie awake nights planning to cut a middy blouse for Ellen out of her aunt's old dolman in order to save a yard and a half of cotton duck, but can take up some form of earning to which she is suited. For now that material things are plenty and cheap, and labor and thought are dear, it is up to her to save the most valuable—and not to forget in the process that her own development is a commercial asset, to be fed and increased, not perpetually denied. We must indeed continue to save, but collectively thru organized society rather than individually in the home, for in a modern state the aggregate of our common savings, not our individual hoards, is the measure of our civilization.

Besides we already have a minimum provision of the things we're saving

for. We are secure against actual hunger and cold, against utter neglect in sickness, against complete illiteracy, against starvation in our old age. We have not provided ourselves with these things adequately nor with honor, but the combined effort it would take to make this provision adequate for all the families in the land, is out of all proportion small compared with the individual effort that goes into the attempt to make uncertain provision for the families of a few. Shaw says that we all need pensions for life—and then to be forced to earn them. Wouldn't it be a strong drive toward democracy! The pension for life earned under compulsion would give ease of mind to generations, for insurance companies may be mismanaged, and stock companies may fail, but the government, which is ourselves, goes on forever. And for those "solitaries" whom age finds ungathered into families there may come, instead of the almshouse, the Community Club, where such public servants as Mr. Wellford can live, not in dependence, but on the deferred payments for services they have stored to their credit during a long life.

Is it not high time that we women allowed our old virtue of domestic saving to be socialized along with our other individualistic virtues of industry and mercy and love? Time we tried to make ourselves contemporary?

New York City

THE SAVING OF WASTE

BY FLORA McDONALD THOMPSON

THE prevention of waste, the promotion of household economy, is the "better half" of preparedness.

Competent authorities proclaim that there is need of mobilizing the industrial forces of the United States. This means mobilizing the housewives of the country, too, and I propose that we get ready. I propose that we practise and perfect domestic economy as a patriotic duty—because we are good citizens.

This sort of efficiency has served the Germans admirably in the present war. Great Britain is just waking up to its importance and has begun an Anti-Waste Campaign, concerning which the Princess Louise said, "Under pressure of this terrible war the importance of domestic economy to the people and its value to the country is now very widely recognized, but there is still much waste in our kitchens, and it is by education and training that we have to

As president of the Housekeepers' Alliance in Washington, D. C., Mrs. Flora McDonald Thompson leads a nation-wide campaign for household economy.—THE EDITOR.

correct these national faults." The London *Illustrated News* calls attention to the "mischievous amateur spirit" in which women undertake housework, and remarks on the misfortune it is that women carry this same spirit into other work.

In France, on the other hand, the women, being perfectly trained in housework, have replaced their men in industry, in business, in the railroads, in the government, with no appreciable disturbance of the economic or public order. In short, the war in Europe, with terrible precision, defines housewifely ability as the necessary base of the good citizenship of women; it shows how inseparably domestic economy is allied

with the maintenance of industry and of the defense of the nation.

The Housekeepers' Alliance now proposes to make war on waste. We are not going to talk; we mean to do things. We confidently expect a great many men and women, who have never before considered housekeeping their business, to join with us in this campaign of household economy and to make our efforts real and practical.

Here is an all-inclusive woman's movement—making the most of our homes. What we save in the kitchen comes back to us in the form of increased resources for the happiness and productivity of all.

The American woman who makes up her mind can do anything she pleases. Let us make up our minds to do our part in the preparedness of the nation. Let us prevent waste. Let us promote efficiency in the household.

Washington, D. C.

THE NEW BOOKS

THE STORY OF GOOD FRIDAY

THE retelling of the story of Good Friday is no task for small men. John Masefield brings to the undertaking a vigor of expression, a fidelity to humanity, and a homely, flexible versification which make the dramatic poem which gives the name to his new volume, *Good Friday, and Other Poems*, a notable addition to a body of verse already more distinctive and important, perhaps, than that of any other living English poet.

It is rightly called a dramatic poem. It is not, properly speaking, poetic drama. In structure it is narrative rather than dramatic; the limits and incidents are determined rather by the original story, with which the poet has taken few liberties, than by considerations of dramatic unity.

But Masefield has woven on the threads of the Bible record a vivid tapestry of the forces and counterforces, the political rivalries, the personal interactions, the ironies and the passions of that day. His Pilate is beautifully characterized, his Herod and Pilate's wife very real, his Voices grimly true to the mob everywhere.

He has chosen to subordinate the scene which has figured so largely in Christian art, the "Ecce Homo," but in the story of Golgotha, put in the mouth of the centurion, he has written a picture which it would be hard to surpass.

We nailed him there aloft, between the thieves, in the bright air.
The rabble and the readers mocked with oaths;
The hangman's squad were dicing for his clothes.
The two thieves jeered at him. Then it grew dark,
Till the noon sun was dwindled to a spark,
And one by one the mocking mouths fell still.
We were alone on the accursed hill
And we were still, not even the dice clicked.
Only the heavy blood-gouts dropped and ticked
On to the stone; the hill is all bald stone.
And now and then the hangers gave a groan.
Up in the dark, three shapes with arms outspread.
The blood-drops spat to show how slow they bled.
They rose up black against the ghastly sky,
God, Lord, it is a slow way to make die
A man, a strong man, who can beget men.
Then there would come another groan, and then
One of those thieves (tough camelers those two)
Would curse the teacher from lips bitten through
And the other bid him let the teacher be.
I have stood much, but this thing daunted me,
The dark, the livid light, and long loud groans
One on another, coming from their bones.
And it got darker and a glare began
Like the sky burning up above the man.
The hangman's squad stood easy on their spears
And the air moaned, and women were in tears,
While still between his groans the robber cursed . . .

While the prevailing impression of the poem is its keen homeliness and reality, and the accuracy with which Masefield has suggested the human background of the tragedy, the closing note—as has sometimes happened before in his work—is vague and over-lyrical. The "Madman" is not a part of the picture; nor is he satisfying as a mouthpiece for the spiritual message. The poem is so intensely human that the highly poetized distillation of the sacrifice-theme into a sort of beauty-worship is quite inadequate.

One thinks of "The Terrible Meek" in reading this. In every respect save dramatic force and coherence Mr. Masefield's treatment of the Crucifixion is the finer. He gets naturalness without the exaggerated crudity which Mr. Kennedy uses; his canvas is, by choice, broader; his figures more lifelike. But where Mr. Kennedy errs in one direction Mr. Masefield goes to the other extreme. If "The Terrible Meek" is too argumentative, *Good Friday* disappoints because it is too vague. But it is an impressive achievement.

The rest of the book is given to a

loosely-joined sonnet sequence and a short poem of similar tenor. These philosophical musings on beauty, mortality and wisdom, elaborately metaphorical, sometimes turgid, often ragged in form, are a far cry from the "Salt Water Ballads," the long narratives and the dramas to which Masefield has recently been devoting himself.

As a whole they are hardly successful. Metrically they are just what one would expect from a Masefield turned sonneteer—sonnets reduced to the lowest terms. Elizabethan in form, of course, for he would not be likely to choose the Italian intricacies, they lack in most cases even the epigrammatic thrust which men of Shakespeare's age gave to the final couplet. In thought they are of unequal interest; the most appealing, as well as the most beautiful in form, are two or three superb sonnets dealing with the thought that

Wherever beauty has been quick in clay
Some effluence of it lives, a spirit dwells,
Beauty that death can never take away.

Taken together they reveal a new Masefield, but a Masefield not entirely articulate.

Good Friday, and Other Poems, by John Masefield. Macmillan. \$1.25.

MIDSUMMER FICTION IN APRIL

THE fiction of the last few weeks is a little in advance of the season.

It is the sort of material which publishers are accustomed to offer to the public for "vacation reading," meaning thereby a book which will while away a sunny hour with the least possible exertion on the part of the reader.

Belle K. Maniates' *Mildew Manse* is admirably adapted for this purpose. There is a likeable, happy-go-lucky family with rich friends who provide work for the eldest son, tents for the boys, a husband for the daughter and a phonograph for the mother. There is the eternal mortgage on the old home. There is the young heroine who boards with the Haphazard family, who tells the story in quite impossible letters to her father and who embarks upon a ridiculous but entertaining business enterprise. Also there is a love affair on every page.

Likewise afflicted with a mortgage is a new book by the author of "Pollyanna." Eleanor H. Porter has taken a trumped-up situation, a threadbare plot, some commonplace characters, and by virtue of David, *Just David*, has made a charming story. David is endowed with goodness which should make him a prig, but renders him delightful; with a simplicity which should render him an idiot, but makes him fascinatingly naïve; with a musical ability which should be incredible, but is not. In short, he is a perfectly real impossible character. Quite the contrary is

Sylvia Chatfield Bates's *Geranium Lady*, who accomplishes the feat of being attractive with a red geranium in her hair. She has moreover a disinclination to explain herself to her naval lieutenant lover which serves to produce a fairly good plot.

If one likes skilful character drawing, pleasant comedy, clever, almost too clever, talk, and truthfully and amusingly depicted contrasts of two generations, read *Some Elderly People and Their Young Friends*, by S. Macnoughtan, which takes one into the pleasant, easy, English social life, beloved of the novelist of manners.

The publishers present Carolyn Wells's *The Curved Blades* as "an old-fashioned detective story." It is. Fleming Stone is the orthodox sleuth. The plot is elaborate and fantastic enough to "hold the reader breathless to the last chapter." There are plenty of possible murderers. The heroine is beautiful, if not agreeable. But Miss Wells's knowledge of coroners' inquests and legal proceedings is limited.

It is surprising that any novelist can be as devoted to common sense as is Mrs. Watts and still be so interesting. Here at least is no midsummer fantasy. *The Rudder* is full of the same shrewd delineation of ordinary people, the same good-natured irony, the same frank use of homely detail, and above all the same persistent Ben Franklinism that one found in "Van Cleve" and "Jennie Cushing." Again there is a

University of Chicago Press

New and Recent Books

Gothic Architecture in France, England and Italy. By Sir Thomas Graham Jackson, R.A., F.S.A. With 191 plates (six in color) and 229 Illustrations in the Text. (*From the Cambridge University Press.*)

This highly artistic and interesting work by the distinguished British architect, Sir Thomas Graham Jackson, is in fact a continuation of the author's *Byzantine and Romanesque Architecture*, which *The Nation* said would take its place among the standard classics of every architectural library. Through these two works the author hopes to give the student a consistent idea of mediaeval architecture. Incidentally the new volumes deal with the architecture of Reims Cathedral and other Gothic work in France and should be of peculiar interest at the present time. The author has chosen for description such buildings or parts of buildings as are typical of the history and development of the art, and for the purposes of illustration has used original sketches rather than photographs.

2 vols., xxx+632 pages, crown quarto, quarter vellum; \$14.50, postage extra (weight 9 lbs.)

Essays in Experimental Logic. By John Dewey, Professor of Philosophy in Columbia University.

This new volume by Professor Dewey will be of peculiar interest and significance to that great and increasing circle of teachers and students who have come to recognize in the author one of the ablest thinkers and writers in the country on philosophical subjects. The book contains eight chapters and includes besides the introduction a discussion of "The Relationship of Thought to Its Subject," "The Antecedents and Stimuli of Thinking," "Data and Meanings," "The Objects of Thought," "The Existence of the World as a Logical Problem," "Some Stages of Logical Thought," and "The Logic of Judgments of Practice." The nucleus of the present volume is Professor Dewey's contribution to *Studies in Logical Theory*, now out of print.

452 pages, 12mo, cloth; \$1.75, postage extra.

American Prose. By Walter C. Bronson, Professor of English Literature in Brown University.

All interested in American literature will be glad to know that a companion volume to Professor Bronson's widely used anthology of *American Poems* will shortly be published. This new volume of representative selections from the prose literature of our country will quickly take its place as a standard book for classroom use, as well as for private reading and enjoyment. Clear and attractive in typography, *American Prose* contains a fund of highly interesting material, comprehensive in range and carefully edited with illustrative and explanatory notes by one of the leading scholars of the country. The selections cover the period 1607-1865 and include the work of thirty-seven authors.

800 pages, 12mo, cloth; \$1.50, postage extra.

The Story of the New Testament. By Edgar Johnson Goodspeed, Professor of Biblical and Patristic Greek in the University of Chicago.

The purpose of this volume is to present in a vivid and popular manner the situations out of which the several books or letters of the New Testament arose, and the way in which each book or letter endeavored to meet the special situation addressed. The author emphasizes the fact that Christianity did not spring from the New Testament, but the New Testament from Christianity. Professor Goodspeed's highly interesting narrative brings out clearly the practical and occasional character of many of the books of the New Testament, and being written without technicality or elaboration is admirably adapted for use in adult Bible classes and in biblical courses in colleges. For the lay reader also it gives in fresh and attractive form much information not easily accessible elsewhere.

160 pages, 12mo, cloth; \$1.00, postage extra.

A Short History of Belgium. By Léon Van der Essen, Professor of History in the University of Louvain.

The world-wide interest aroused in the history of Belgium by its present position in the great European war makes especially timely the publication of this volume by a professor of history in the University of Louvain, who recently gave a course of lectures on the history of Belgium at the University of Chicago. The history is objective and gives simply an account of the past history of the Belgian people, leaving entirely out of consideration their present deeds and sufferings.

viii+168 pages, 12mo, cloth; \$1.00, postage extra (weight 1 lb.)

selfish and inept woman (a little too black for belief, this time), and again the good old-fashioned contrast between shiftlessness and self-reliance. But the center of the stage is held by newer figures. The flashing heroine is a fine and convincing piece of portraiture, and except for a superfluous and obvious love-story, which provides a smooth ending for the book, the whole novel—broader and better balanced than the others—is a well-constructed picture of thoroly interesting people. Only once does Mrs. Watts become noticeably talky, and if her contribution to the labor question is neither original nor conclusive—neither is Ben Franklinism.

It is refreshing to leave well trodden ways for a new field of fiction. In *Cam Clarke*, John H. Walsh describes two things well: a frontier town and the boyhood of a railroad magnate. Wash-tucna, Washington, is not altogether prepossessing, but its worship of Mrs. Sarah Clarke, its kindness, hospitality and fair play go far to offset its chronic state of drunkenness and its somewhat free use of revolvers. The town and Cam are described with directness, insight, a nice sense of proportion and an agreeable cynicism. It is an unusual story, unusually written, and well worth reading.

FROM WAR CORRESPONDENTS

When a complete history of the European war comes to be written a complimentary chapter will be due justly to the American correspondent. His narratives of this greatest human cataclysm come one after the other intense with vitality, keenness of vision, and alertness to grasp an essential fact enveloped in the on-sweep of mighty events. This we write after reading every line of Arthur Sweetser's *Road-side Glimpses of the Great War*. This war correspondent is already well known to readers of *The Independent*.

To begin with he was not a member of the now familiar personally conducted party to the front. He simply had to be where "world history" was being made, and thither he went on a bicycle in spite of rules, rebuffs and the assurance he would be made prisoner and probably shot. It is his clear, independent view of the reality of war, obtained in a series of extraordinary adventures while chasing elusive French and German fronts, which makes his book illuminating for those occupied with the prevailing topic of American preparedness. Thus, after the German blow fell, Mr. Sweetser found in the French provincial cities of the north and among the peasants as complete a lack of the spirit of preparedness, as great a panic, as if France had failed to add a regiment or gun to her military organization since 1870. Here one may speculate

Wind and Weather

By L. H. Bailey

A collection of poems of widely various forms and moods, but so unified as finally to give a single strong impression by the fact that their common inspiration is a vital sense of man's intimate spiritual—and material—relation to nature.

The Administration of President Hayes

By John Burgess Ph.D., LL.D.

A masterly and illuminating review by this eminent American historian of what he shows to have been the momentous years of General Hayes's administration. The author shows not only cogently but eloquently how the South was freed and pacified when reconstruction seemed a failure, how the country was rescued from the curse of cheap money, and how Civil Service Reform was established on a firm basis by the patriotic wisdom of a President to whom history has not hitherto awarded his just dues of appreciation.

Antwerp to Gallipoli

A Year of War on Many Fronts—and Behind Them

By Arthur Ruhl

An extraordinary record of a great variety of experiences in France, Germany, Belgium, Austria, Bulgaria, Serbia, Turkey and Gallipoli, vividly told and with clear understanding of differing points of view.

Illustrated. \$1.50 net.

Why War

By Frederic C. Howe

A significant passage from this book:

"Wars are not made by peoples. . . . Wars are made by irresponsible monarchs, by ruling aristocracies, by foreign ministers and by diplomats. Wars are made by privileged interests, by financiers, by commercial groups seeking private profit in foreign lands. "Wars are made behind closed doors."

The Portion of a Champion

By Francis O'Sullivan tigre

A romance of the heroic age in Ireland, the story of how Conal, a chieftain's son, wrung from adverse fortune both public recognition as a champion of warriors and the hand of the beautiful Etain. The story is so vividly presented as to give a veritable panorama of the times from the Celtic angle.

BEHOLD THE WOMAN!

By T. EVERETT HARRÉ

\$1.35 net. Postage extra

"May justly be said to surpass in vividness, reality and human appeal any novel of recent years. Its true predecessors are 'Quo Vadis,' 'Ben Hur,' 'Salammbô,' 'Hypatia.' It is a novel of powerful religious significance, and bears a message for every man and woman."

In the character of Mary, the powerful Alexandrian courtesan whose beauty was "the glory of Egypt," the author presents the struggle of womanhood in its integrity and nobility with man's age-long exploitation, and interprets that eternal struggle which is today finding one of its expressions in the feminist movement.

It is the absorbing story of a woman's quest of love amid the vices and excesses of an age when wantonness was an art and a woman became eminent only through her shame, and of this woman's finding redemption in the divine love that in all ages knows not utter condemnation, but is all forgiving because all knowing.

A novel teeming with the turbulent excitement, intrigue and romance of the most splendid and licentious age of the world. The Time is the final conflict between Paganism and Christianity.

THE CURVED BLADES

By CAROLYN WELLS

Frontispiece by Gayle Hoskins. \$1.35 net. Postage extra.

FLEMING STONE in a murder mystery as calculating and cruel as it was hidden, which he unravels through a maze of misleading evidence. Those who have followed the career of Stone will enjoy heartily the falling in love of the great sleuth. It is his first affair and is as appealing as the mystery of the murder of Miss Lucy Carrington is baffling.

THE FINDING OF JASPER HOLT

By GRACE L. H. LUTZ

Author of "Miranda," "Lo, Michael!" "Marcia Schuyler," etc., etc.

Three illustrations in color by E. F. Bayha. \$1.25 net. Postage extra.

A love story of a Western man and an Eastern woman. To rise to the occasion he needs the agencies of an exciting railroad accident, a horse race and loads of beautiful roses from his own garden; but he succeeds and the reader rejoices. Mrs. Lutz's heart and humor are on every page.

Author of "The Final Verdict."

\$1.25 net. Postage extra.

Boston Transcript:

"Originality and dramatic strength are marked in many pages of this novel."

ADAM'S GARDEN

By NINA WILCOX PUTNAM

Frontispiece in color by H. Weston Taylor. \$1.25 net. Postage extra.

Adam's fate was to work out his salvation and win his girl by raising flowers upon a vacant city lot, surrounded by cats and dogs, dwelling with crusty, humorous curmudgeons who drift in from everywhere, having a feud with a thug, and being desperately loved by an unfortunate girl. A big story with humanity its theme.

A PENNELL VOLUME NIGHTS

Rome, Venice—in the Aesthetic Eighties. Paris, London—in the Fighting Nineties. By ELIZABETH ROBINS PENNELL. Sixteen to Eighteen Illustrations from Photographs and Etchings. \$3.00 net. Postage extra.

The pleasure of association with equally famous literary and artistic friends has been the good fortune of the Pennells. In this absorbing book there is the inside history of an enthralling period; and an acquaintanceship with those who made it what it was: Beardsley, Henley, Harland, Editor of "The Yellow Book," Whistler, etc. The illustrations, photographs and some of the etchings by Joseph Pennell are unusual.

FUNDAMENTALS OF MILITARY SERVICE

Prepared under the supervision of MAJOR-GENERAL LEONARD WOOD.

By CAPTAIN LINCOLN C. ANDREWS, U. S. CAVALRY

Limf Leather. \$1.50 net. Postage extra.

This will be the text-book in the summer training camps of the Eastern Army Division. It should be read by all classes, not only those who wish to equip themselves for military courses, but also those who will wish to be ready for any eventuality. It describes in detail the military service in all branches of the army.

whether the same effect in similar circumstances would be produced upon a whole nation, such as the Germans, governed and imbued with military principles in all branches of effort.

A follower in the wake of Von Kluck's army, he grants, from observation, that its all forceful advance was conducted, for the most part, according to the rules of war, which of unhappy necessity cover devastation, ruin and bloodshed. Otherwise he does not hold the Germans were outrageously severe with the French civil population. What happened to him when he did pedal down into German headquarters at Valenciennes with a dubious pretext for being there—and thereafter—will hold the reader's tense interest until the end of the last chapter. The inevitable bagging of the American newspaper man and the resulting puzzle as to what is to be done with such an extraordinary individual are the sole gleams of comedy in unending tales of horror. As Baron von Mumm Schwartzstein is quoted as saying in Horace Green's *The Log of a Noncombatant*, "You see, we were prepared for every thing—except ze invasion of ze American newspaperman. When he iss out of sight, zen we do not feel secure." Precisely! How is the military mind to deal with men, apparently crazy, who arrive at battle fronts in taxis, on bicycles, on foot, in straw hats, without proper credentials, and with sublime innocence demanding passes to impossible places because they prefer not being shot on their unwelcome travels. That the Germans were able to appreciate the jest of it is evident from roars of Teutonic laughter, but the French were in no humor to recall touches of Molière.

Mr. Green is, however, serious enough in his wanderings thru Belgium previous to the siege of Antwerp, and on a side trip to Germany, and back to the last Belgian fortress for its investment and capture. He throws an impartial light on the subject of German atrocities. When in Belgium he exerted effort to reach the sources of such stories, and states that, excepting a few detached cases which are likely to occur in any war, and should not be charged to wilful brutality on the part of the German military authorities, the reports were widely exaggerated. He reaffirms this in an appendix after reading the Bryce report, tho previously he intimates there may have been truth in sinister remarks let drop by Germans of British military prisoners ill treated by their captors and summarily executed. If these are ever proved, then indeed would lie a charge without defense or palliation.

In journalistic contrast we come to Arnold Bennett's *Over There*. It is evident that Mr. Bennett's intimacy with soldiers and knowledge of military affairs has been extremely limited. Moreover, he seems unable to draw near to or more than half comprehend either with the requisite sympathetic feeling—the broad vision—needful in a satisfactory witness of the greatest human drama. While he discusses interestingly the British military organization

A NEW LIFE

FOR YOU

*In Six Short Months I Can Remake You. Men and Women,
Your Destiny Is in Your Own Hands*

WHAT IS YOUR EARNING POWER?

*Your Position in the World
Your Facial Appearance and Ex-
pression
Your Health, Strength and Vim
Your Power to Control and Lead
Others*

*Your Physique and Symmetry
Your Power to Control Your
Thoughts
Your Control of Your Body and
Habits
Your Faculties of Reasoning*

THESE ARE ALL WITHIN YOUR POWER TO RULE.
AND SO FRAME YOUR FUTURE

Have you considered why it is some men and women succeed while others fail? Have you considered why some businesses go up by leaps and bounds while others come down by leaps and bounds? Have you considered why some people are content with a menial position and poverty as a reward in old age? Have you considered why some people enjoy good health while others are never ill but never well? Have you considered why some people are handsome and full of expression while others are faded and expressionless? Now, there MUST be a cause for all this. THERE IS: The law of cause and effect teaches us this. But what is this cause? I will tell you. Success and Failure depend upon—(1) Your Mental Condition. (2) Your Physical Condition. (3) Your Facial and Outward Expression. (4) Your Knowledge as to how to apply what you know. The vividness, ingenuity and inventiveness of your thoughts depend upon the quickness of your brain to generate nerve power, while these in turn are dependent upon the richness of your blood, the sunniness of your disposition, the sureness of your concentration, the strength of your will, and the reliability of your memory. It is the harmonious development of all these that ensures Success. The Nicholson-Wase Mail Course of Mental and Physical Efficiency trains the entire person. IT FITS YOU FOR A BETTER BUSINESS AND SOCIAL POSITION IN LIFE. —IN FACT, IT MAKES YOU LORD OF YOURSELF.

This Course Gives You { Virility of Speech—Power to Combat Difficulties as they arise—Shrewdness in Business—Strength of Purpose—Power of Observation—Retentive Memory—Power of Facial Expression—Graceful Carriage—Strong Nerves and a Balanced System.

IT TRAINS YOU
FOR SELF-POSSESSION

IT MAKES YOU
STRONG AND INTELLIGENT

You are not a Creature of Circumstances, you are just what you make yourself. Have you ever thought of what Mental Force really is? Have you estimated the amount of force that you can generate and keep going for twenty-four hours? Do you know this force is responsible for your health? Seeing this is so, do you suppose your EARNING POWER IS AT ITS BEST WHEN YOUR CREATIVE POWER IS AT ITS WORST? Of course you don't. To develop your Earning Power you must know how to generate Mental Force. Now I wish to make a proposal to you. Suppose you find you have little time on your hands, suppose you feel equally certain you ought to be earning more money; and suppose it were possible for someone to take you in hand and teach you how to succeed. And then, on top of this, suppose it were only going to take a few minutes daily out of your time, would you accept this offer? I am sure you would. Now, this is exactly what I am offering you today. I will send you free my explanatory Booklet, which will tell you all about it; also full detailed Folder Synopsis, giving you the outlines of each of the 52 lessons. Write to me at once. Write today. Fill in the Coupon. Get a pencil and DO IT NOW! Your dividend is waiting!

THE NICHOLSON-WASE MENTAL AND PHYSICAL EFFICIENCY TRAINING COURSE

Longacre Building, 1476 Broadway, New York

PERFECT WOMANHOOD

How about the women who succeed? What are the qualities that make success for them? Why, it is just that indefinable "something" that we call Personality, or Magnetism. That's it! Appearance and Character, a developed mind in an attractive-looking body. Perhaps the most important class to which we have to appeal is the housewife—she who rocks the cradle truly rules the world. Do you wish to develop that tact and sweetness of character that makes you firm but kind,

loved and loving, with the foresight to control the home and hearth, making it your little world of happiness? A healthy and genial appearance, intelligence, quickness of thought and an understanding, capable, and sympathetic intuition—all these go further than merely educational Training.

You may appear outwardly to be all right, and yet you know you are not at your best. I will show you the reason, and how to overcome it.

Charles A. Wase, M.A., Ph.D.,
1476 Broadway, New York:

Cave Life or Civilization

Civilized man is distinguished from the cave man by his habit of co-operation.

The cave man lived for and by himself; independent of others, but always in danger from natural laws.

To the extent that we assist one another, dividing up the tasks, we increase our capacity for production, and attain the advantages of civilization.

We may sometimes disregard our dependence on others. But suppose the farmer, for example, undertook to live strictly by his own efforts. He might eke out an existence, but it would not be a civilized existence nor would it satisfy him.

He needs better food and clothes and shelter and implements than he could provide unassisted. He requires a market for his surplus products, and the means of transportation and exchange.

He should not forget who makes his clothes, his shoes, his tools, his

vehicles and his tableware, or who mines his metals, or who provides his pepper and salt, his books and papers, or who furnishes the ready means of transportation and exchange whereby his myriad wants are supplied.

Neither should he forget that the more he assists others the more they can assist him.

Take the telephone specialists of the Bell System: the more efficient they are, the more effectively the farmer and every other human factor of civilization can provide for their own needs and comforts.

Or take our government, entrusted with the task of regulating, controlling and protecting a hundred million people. It is to the advantage of everyone that the government shall be so efficient in its special task that all of us may perform our duties under the most favorable conditions. Interdependence means civilized existence.

—particularly its transport service—it is unfortunate that his personal attitude toward soldiers suggests remoteness if not superiority. It is toward the end of Mr. Bennett's book that an incident occurs which reveals the author as not quite the type of man to mingle with and report upon the soldiers of his country. Mr. Bennett found himself alone temporarily in the ruined square of Ypres. Two Tommies strolled upon the scene. "I had a wish to accost them, but Englishmen do not do these things, even in Ypres. They glanced casually at me, I glanced casually at them, carefully pretending that the circumstances of my situation were entirely ordinary." Mr. Bennett is mistaken. All Englishmen are not of that narrow social creed. In another book, "A Surgeon in Khaki," is told the story of the old English clergyman—a dignitary of his church—drawn to the same scenes, and straight to the hearts of British and Belgian soldiers by simple democratic acts of kindness. He, too, of his own volition was "under fire," but it was to rescue, help and comfort the stricken soldiers thruout a long night in a place of unthinkable horror.

As the official British observer it is presumably Bernard Parès' part in *Day by Day With the Russian Army* to show what a wonderful uplift has taken place in Russia during the last ten years. Consequently everybody and everything in Russia are admirable. The book is a kind of grand full-dress parade, into which even the American correspondent steps as an "eminent" personage. It is such a novel role for him in the war that this time he surely must have been a bit rattled. But after discounting Mr. Parès' position one gathers that unquestionably a new era of freedom and fraternity has opened in Russian political and social life. Much of the ground traversed by Mr. Parès—Galicia and Poland—is now familiar, and he adds little new in this respect. But numerous opportunities to discuss the origin of the war with Austrian and German prisoners yield an interesting conflict of popular opinion in those countries, and as a companion to similar works the book is valuable for the political and military student.

Roadside Glimpses of the Great War, by Arthur Sweetser. Macmillan. \$1.25. *Log of a Noncombatant*, by Horace Green. Houghton, Mifflin. \$1.25. *Over There*, by Arnold Bennett. Doran. \$1.25. *Day by Day with the Russian Army*, by Bernard Parès. Houghton, Mifflin. \$2.50.

NINETY YEARS

Certainly one of the most interesting records of a literary life ever published is that of *Julia Ward Howe* written by her daughters. That life ran from 1819 to 1910. Its youth was spent in the dignified society formed by the families of New York's great merchants of the thirties and forties. Its later years belonged to the literary circle of Boston. But quite aside from her surroundings Mrs. Howe was a commanding figure—a woman of uncommon ability and power and of great charm. She sprang into fame with the writing of the "Battle Hymn of the Republic." That remarkable poem, born in

Here Is the Camp for Your Boy

where he can spend his summer in real boy fashion; where he has every facility and the right men to teach him how to manage a canoe, play ball, swing a tennis racket and make things with tools. When your boy returns from a summer or part of a summer at **CAMP YUKON**, you will be astonished and pleased to see how he has improved in health, physique, stamina, and all-round manhood. No more beautiful location for a camp could be imagined than on Lake Cobbosseecontee in the magnificent hard wood grove, sixty miles from Portland, Maine. A readable booklet, full of pictures, will tell you all about **CAMP YUKON**. Write personally to Frank D. Smith, Director, 203 West 102nd Street, New York, and you will receive by return mail something that will be to your advantage and that of your boy.

a dream, seems the sudden fruition of tremendous conviction and enthusiasm, for, with this exception, delightful as is some of Mrs. Howe's verse, she is greater in personality than as a poet.

A student always, one finds her seizing time during a visit to Rome to study Hebrew with some learned Jew whom she had the fortune to meet. With six children to care for, and to care for with untiring devotion and sympathy, as the pictures of that busy, happy household show, she determined to master philosophy and took up Kant, Hegel, Fichte in turn. It was no small matter, in the sixties, for a woman reared in her conservative circle, the head of a complicated household, to start out in the public work to which she felt herself called. It was not long, however, before her philosophical and ethical lectures, brought her into the field of practical organization and for thirty years she was in the forefront of the movements for the widening of opportunities for women and the aid of the oppressed. One incident shows her characteristic spirit. Starting in a heavy storm for a lecture in Salem, she and the hackman rolled together down the steps. "Oh, Mrs. Howe," cried the terrified man finding her already on her feet when he picked himself up, "let me help you into the house." "Nonsense," was the reply, "I have just time to catch my train." She was then seventy-six.

Over these pages plays a never failing humor, while the always entertaining reminiscences include literally almost every one of note in the literary world of England, Italy and this country for three-quarters of a century.

Julia Ward Howe, 1819-1910, by Laura E. Richards and Maud Howe Elliott. Houghton, Mifflin. \$4.

STORIES OF MEN AND THE SEA

There are many reasons for reading Joseph Conrad's latest book, a collection of four short stories. But aside from their beauty of style, their interest of plot, their skill in character portrayal and their keen psychological insight, most people will read *Within the Tides* just because they are good stories—stories of the sort that compel attention from start to finish.

All four are stories of adventure. If the author did not emphasize so clearly the mental, instead of the physical conflicts, they would be blood and thunder tales of mystery and murder. But their interest centers in personality more than in plot, and in each case the character of one man is formed by the incidents of the story.

Because of the Dollars is perhaps the most forceful—in plot it somewhat resembles Mr. Conrad's recent novel "Victory." The Partner is a tale of deep-dyed conspiracy on the high seas; villain is matched against villain and both meet inevitable defeat. In the Inn of the Two Witches is a remarkable description of a man's terror, "a deadly, chilly languor spreading over his limbs—as if his flesh had been wet plaster stiffening slowly about his ribs." The longest of these stories, The Planter of Malata, has the least action.

SPEED UP! Whether you are big or little, old or young, president or apprentice, you must **SPEED** up or **GIVE** up.

Competition is desperate, progress swift beyond precedent, the best opportunities home-made. **SPEED UP!**

HOW? The prime essential of speed is **KNOWLEDGE**. Energy, initiative, loyalty alone are of little avail—you must **KNOW**. And when emergencies arise you must know **INSTANTLY** how to handle them.

But it takes *time* to acquire knowledge and time is *precious*. Libraries are not always available, college or technical courses often beyond reach. What is to be done?

You must have a good *encyclopædia* at hand. It contains the knowledge of the whole world condensed in tangible form for instant use. It is the *quickest* question-answerer known. It will help you to "speed up" better than any other one medium. It has been the *chief educator* of many a successful man and woman. It is *necessary* to all and *always* necessary.

But **THE DAY** is today—yesterday is *dead*, tomorrow will *never come*. You must have at hand the *knowledge of today*. Your *encyclopædia* must be *up-to-date*. It's as foolish for you to depend for success on a *short-range encyclopædia* as for a warship commander to expect to win with *short-range guns*. Stop and *think!* When, in the world's history, has such wonderful progress been made, when have such sweeping changes taken place, as in the *last few years?* Can you *afford* to have an *encyclopædia* that is *silent* on these vital facts? **NO!** The *latest* authoritative *encyclopædia* is the *only one* that is *safe* for you to *buy*. Which is this one invaluable and indispensable reference work? The

New International Encyclopædia
SECOND EDITION

It is being published *NOW*. Therefore, it is *up-to-date*.

It is years later than any other reference work. Hence it is the *only* up-to-date *encyclopædia*.

Its preparation is in charge of two of the most brilliant and experienced cyclopædist of the day.

Its long list of contributors includes the foremost authorities on every subject of human interest.

Its publication is in the hands of Dodd, Mead & Co., Inc., publishers for over 75 years.

It is *complete*. It contains the world's knowledge from the dawn of history.

It contains 80,000 articles—33 per cent. more than any other *encyclopædia*.

Its articles are arranged *alphabetically*—a wonderful saving of time—you can thus turn *instantly* to the desired information.

It is an *American* production throughout—editorially and mechanically.

It has been pronounced the "*best and fullest* for American readers and American interests."

Yet it gives intelligent, impartial, comprehensive consideration to all *foreign topics*.

It is the best and most *profusely illustrated* reference work in existence.

It contains *more* and *better maps* than any other *encyclopædia*.

The print is from special, new type and is a *pleasure to read*.

The work is written in clear, interesting language that you can *understand*.

It is *never prosy* nor *verbose*, its articles containing not a word too little nor too much.

Its 24 volumes are as *convenient in size* as a standard magazine and almost as *light* in weight.

The paper was made *especially* for this Second Edition and is *thin but opaque, light but tough and durable*.

This *encyclopædia* is *easy to buy*—a small first payment places the work in your *immediate possession*; small monthly remittances complete the transaction.

And *after* you buy this *encyclopædia*, **USE** it. Don't forget that an *encyclopædia in hand* is worthy *twenty on the shelf*.

But you can best judge all these points for yourself—we'll send you a volume of the *New International Encyclopædia* for examination absolutely without obligation.

Write your name and address on the information blank and mail it to

Dodd, Mead & Co., Inc., Publishers, 449 Fourth Avenue, New York

Send me full information regarding your **SECOND EDITION OF THE NEW INTERNATIONAL ENCYCLOPÆDIA**, with details of Special Price, etc.

THE MOST IMPORTANT PRESIDENTIAL YEAR SINCE ABRAHAM LINCOLN

Will there be two, three or four candidates and who will they be, and who will be elected? This will be a big Presidential year—the most important, in fact, since Abraham Lincoln, and that is one reason why people during the coming six months will look to

The Independent

more than ever before for live, authoritative information. The Independent with its swift, national news service will present its readers with the facts and opinions and latest developments straight from headquarters.

During the last five Presidential campaigns the candidates of all the various parties have, without exception, contributed to the pages of The Independent, thereby giving substantial recognition of its position as a forum for public discussion and a journal of far reaching influence. The Independent prints BOTH SIDES.

DO YOU BUY IT EACH WEEK

or do you borrow your copy from a friend? We wish to enter your name on our lists as a regular subscriber, for we know you will either save money or secure your copy earlier and be able to read the news while it is current. Knowing that you will most likely remain a subscriber year after year we offer below a special twenty weeks Presidential Campaign subscription at FIVE CENTS per copy—just ONE HALF the regular newsstand price of Ten Cents.

OUR PRESENT SUBSCRIBERS

should also take advantage of this splendid opportunity to send The Independent for Twenty Weeks to a number of friends. The summer months offer more opportunity for reading, and this year, on account of the Presidential Campaign, a good weekly journal will be especially prized.

TWENTY WEEKS FOR ONE DOLLAR

THE INDEPENDENT
119 West 40th St., New York

I accept your Presidential Campaign offer. Please send a copy of The Independent each week for twenty weeks to the following. Enclosed find One Dollar for each.

INDOORS AND OUT

Raffia Basketry as a Fine Art, by Gertrude and Mildred Ashley. A text book on basketmaking that carries the learner from the beginnings to the most beautiful and complicated weavings.

Deerfield, Mass.: Ashley. \$2.

Spring herself is in the pictures and the names looking out from the pages of Harriet L. Keeler's fourth nature book. *Our Early Wild Flowers* is an uncommonly attractive as well as dependable pocket guide.

Scribner. \$1.

Unless one must have specific directions for the care of plants, no more suggestive book on gardening can be found than *Some Old Time Gardens* by Alice Morse Earle, of which a new printing is just issued.

Macmillan. \$2.

Indoor Merry-Making and Table Decoration, by Adler Mendel, contains suggestions for home entertainment on various festivals, including St. Valentine's Day, Hallowe'en, a Mother Goose Party, a Suffrage Party, and added chapters of riddles and games.

Boston: Wilde. \$1.

The A B C of Vegetable Growing, by E. E. Rexford, is a handy little guide to the culture of most of our vegetables and small fruits, the making of the hotbed and storage for winter, with an introduction that invites the attention of women and children to garden work.

Harper. 50 cents.

The Belgian Cook-Book, by Mrs. Brian Luck, contains, besides some receipts like sausages and fried apples, so familiar that they must have been brought from the Continent to the New World by the settlers, many quite new and tempting, as Hoche Pot, which is "delicious and makes a dinner."

Dutton. \$1.

It tells the love story of a man of extraordinary leadership, purposeful, imaginative, reticent, who refused to be satisfied with less than his ideal and so "set out calmly to swim beyond the confines of life, with a steady stroke, his eyes fixed on a star!"

Some of us have always appreciated Mr. Conrad's books; more of us perhaps have bowed to the dictum of authoritative opinion and read them because we have been told to like them; a few may even have refused to agree with the critics. But here are stories that must claim the approval of the "average reader" as well as of the literary connoisseur.

Within the Tides, by Joseph Conrad. Doubleday, Page. \$1.35.

A SONG OF THE PIONEERS.

Of American poets of the younger generation several are more widely known and find their way more often into print than John G. Neihardt, but those who have been fortunate enough to make the acquaintance of his first two volumes of verse, "A Bundle of Myrrh" and "Man-Song," will probably agree that at his best Mr. Neihardt is exceedingly good. To our thinking his lyric work excels his narrative poetry, to which latter kind the present volume, *The Song of Hugh Glass*, belongs. Hugh Glass sings of the daring of those pioneers of the American fur

trade whom Mr. Neihardt declares every way fit for the heroic roles of poetry of an epic cast. One of them he has made the hero of his own poem. In choosing to tell his story in heroic couplets, he has once more demonstrated that the "rocking-horse metre" has by no means outlived its usefulness, but, that, in the hands of one with a gift for musical and varied cadence—and Mr. Neihardt has this gift conspicuously—it serves as an admirable vehicle for narrative poetry. *The Song of Hugh Glass* carries the reader into the world of the pioneer and the Indian fighter; it records typical incidents and adventures of that world; it paints with a sure hand the wild beauty of the setting of the story; and it does all this in a truly poetic narrative.

The Song of Hugh Glass, by John G. Neihardt. Macmillan. \$1.

PLAYS TO READ AND ACT

In a four volume memorial edition of *Plays*, by Clyde Fitch, have been collected his most popular works, such as *Beau Brummel*, *The Girl with the Green Eyes*, *Barbara Frietchie* and *Captain Jinks*. They were written for the stage, but many of them adjust themselves very easily to the library.

Boston: Little, Brown. \$1.50 each.

The Unchastened Woman, still playing in New York, is counted as one of the most successful plays of the season. But it needs the skill of Emily Stevens' acting as well as that of Louis Kaufman Ansbacher's writing to present its full interest. Much of its clever characterization and dramatic force are lost in print.

Stokes. \$1.25.

St. John G. Ervine has won fame as the author of novels, short stories and essays. In his latest book, a play, *John Ferguson*, the literary quality is emphasized at the expense of the dramatic. There is plenty of action and the situations are well planned, but the author cannot resist long explanations, extremely interesting to the reader, which have no place on the stage.

Macmillan. \$1.

The Arrow-Maker, by Mary Austin, is an elaborate drama of Indian customs and psychology, carefully authentic in its presentation of the aboriginal community and yet modern in its discussion of "the struggle of Femininity to recapture its right to serve and still to serve with whatever powers and possessions it finds itself endowed." The play is particularly readable.

Houghton, Mifflin. 75 cents.

A group of one-act plays—obviously intended to be acted, and yet well worth reading—is *Confessional and Other American Plays*, by Percival Wilde. The subjects are those of most interest today, the treatment is fresh and sincere, and the author shows a keen sense of dramatic values. One of these plays, *According to Darwin*, is announced for performance in New York shortly.

Holt. \$1.20.

The saving grace of humor kept Anton Tchekoff from the depths of morbid psychology that characterizes so many of the foremost Russian writers, and enabled him to write plays which, in spite of their emphasis on ideas rather than actions, have found favor on both the English and the American stage. *The Second Series of Plays*, just translated by Julius West, includes *The Bear*, which was produced this season by the Washington Square Players in New York.

Scribner. \$1.50.

New Lingerie for Easter at McCutcheon's

Our stock of Underwear, Gowns, Envelope Chemise and Drawers includes, in addition to a very full collection of French and Philippine goods, some very attractive new American Made Models. All are of good quality Nainsook or Cambric.

Gowns—Embroidered and Lace trimmed, \$1.00 to 4.75.

Crepe de Chine Gowns—Square or V neck, hemstitched finish and rosé bud trimming, \$3.95.

Empire Model with Georgette top, \$6.95.

Envelope Chemise of washable Satin, tailored finish, \$3.65.

Camisoles in Wash Satins, Crepe de Chine, Val. trim, \$1.00, 1.50 to 4.75.

Silk Skirts—Crepe de Chine, Messaline and Taffeta Skirts in all leading shades at \$2.95, 3.95, 5.25, 6.75 and 7.75.

Tub Silk Skirts, \$4.50, 5.75 and 8.75.

Negligees and Corsets

Japanese Kimono—Hand embroidered, \$2.95 and 3.25.

Crepe de Chine Kimono, \$6.95, 9.75, 13.50 to 50.00.

Corsets—A complete range of New Spring Models of Gosard Corsets and our own lace-in-back styles. Also a full assortment of Brassieres.

Mail Orders receive our prompt attention.

More Home To The House

YOU can beautify your home and add to its attractiveness for all the family by equipping it with Aerolux Porch Shades and Awnings. Finished in soft, pleasing tones of green, brown or gray, that harmonize with any style of architecture or decoration and add that touch of completeness to bungalow or mansion.

Aerolux Porch Shades make your porch a shady, secluded refuge from the summer sun, a delightful living room, an ideal sleeping room for summer nights.

are furnished in several different grades and prices and in sizes to fit any porch opening. The Aerolux No-Whip Attachment, an exclusive feature, makes it impossible for them to whip in the wind. The Splint Fabric shuts out sun, but lets in light and air.

Write for illustrated catalog of Aerolux Porch Shades, Sleeping Porch Curtains, Awnings and Window Ventilators

The Aeroshade Co. 488 OAKLAND AVENUE **Waukesha, Wis.**

Aerolux Splint Fabric Awnings make your rooms many degrees cooler, because the wood is a non-conductor of heat and they do not absorb and retain it. They may be adjusted to shade any part of the window or rolled up entirely out of the way.

Independent Opinions

The "Young Business Man" who confess a change of heart in regard to T. R. evidently voiced the feelings of more than himself.

I have read with much interest and sympathy the article in your March 27 issue, entitled "How I Swung Back to Teddy." The author of this article has spoken for a multitude of voters. I would like to communicate with the author directly. I believe the delegates to the Republican National Convention which were elected in Minnesota this month will ultimately support Mr. Roosevelt. CHAS. S. MARDEN

Moorhead, Minnesota

Your young business man of this week's issue in the language of the street, has nothing on me. I was among those who howled with delight when Wilson won in 1912. Oh, for the "two-fisted strong man" who acts first and lets the other fellow compose the unanswerable argument. I have always been a Democrat, but I am willing and anxious to take off my coat and spend the hot weather campaigning for "Teddy."

DEMOCRATICUS

University Alabama

Being attracted by the article from a "Young Business Man," I submit a few condensed thoughts, from one who has not yet "Swung back to Teddy." I feel safe in saying that my admiration for Teddy was no less than that of this Prodigal Son, and while his argument is of a convincing tenor, I must still remain hostile. Differing from Young Business Man, I can forgive Teddy for giving us Taft, even as a failure, but cannot forgive him for his treatment of Taft—tho not because he was Taft. Finding little in the present administration to commend, I should not point to the return of our warships from Vera Cruz for especial demerit, even tho the expedition, fraught with fatalities, was suggestive of the traditional elements of the "False Alarm." Huerta was forced to flee, and he being the only "Government" at that particular time, we could find no one to grapple with, unless it be the first man on the street—so we came home. The ironic reference to Taft's availability rather disappoints the reader, on recalling the series of speeches which Teddy acknowledged greatly helped him in 1904, to say nothing of Mr. Taft's work in the Philippines and secretaryship of war, that made him a national, popular figure. Young Business Man's pessimistic view about the office of chief executive is exaggerated, but why not make a heroic effort now with Colonel Roosevelt in the ranks and not in the race, and land Hughes, or, perhaps a less known man. This country has elected no small man President and will not.

ISAAC BOWER

Atlantic City, New Jersey

I have lived in this city for over thirty-five years. I saw the C. & N. W. depot built, also the water tower, and if the picture on page 222 of the issue of February 14, 1916, showing the crowd who turned out to see President Wilson, is not Racine rather than Waukegan, I am very much mistaken.

WILLIAM A. LUNN

Racine, Wisconsin

You are not very much mistaken. We are. The photograph came to us labeled wrong, and not being as familiar with the Racine depot as our correspondent we published it as marked.

Here is a letter which we must admit is rather belated. And it is our fault,

The Making of Modern Germany

By FERDINAND SCHEVILL, Professor of Modern European History in the University of Chicago.

To present as succinctly as possible, and in a manner that can be easily and quickly understood, the story of the Making of Modern Germany is the aim of the author of this work. Beginning his narration at the time of Germany's disintegration in the Middle Ages, he shows how German unity has been achieved, how the national idea was evolved and what the Empire is today in state and society. Portraits, maps and appendices. Price \$1.25.

New Issues in the National Social Science Series

The American City

By HENRY C. WRIGHT.

An examination of the purpose of the city, and the reasons which govern its location, how it is governed and financed; how it takes care of the property, life and health of its citizens, and provides for the education and instruction of the children. Other topics discussed are the problems of transit, housing, racial differences, etc., etc. Price 50 cents.

Sociology

By JOHN M. GILLETTE.

Sociology is one of the newest of the Social Sciences, and it is its task to explain that great phenomenon which we term human society as a collectivity. This outline or primer of the subject has been prepared to meet the demands of those who have some curiosity about the nature of society and sociology, but have not a great deal of time in which to satisfy it. It is eminently suitable also for study clubs and secondary schools as a guide. Price 50 cents.

920 Nicollet Avenue, Minneapolis, Minn.

too. When received, last December, it was timely. But we could not publish it then because we got so many similar remonstrances against our criticism of Yuan Shih-kai for making himself emperor. Chinese students and American professors rushed to the defense of Yuan against our aspersions and argued that an emperor was just what was needed to make China tranquil and strong.

Barely three months have passed and China is not more tranquil and strong, but more turbulent and weak. So Yuan has, quite wisely, changed his mind again. It must be a great grief to President Goodnow to find his advice disregarded as soon as he left Peking for Johns Hopkins. We are assuming, of course, the truth of the official announcement of the Peking Government last year, that it was upon the recommendation of Dr. Goodnow in his capacity of constitutional councillor to the Chinese Republic that President Yuan became emperor.

But this letter from which we now propose to quote is belated, the restoration of the republic has, as our readers will agree, made views expressed in the following letter even more interesting and significant than if they had been published last December. We hope that President ex-Emperor Yuan will pardon the expression of the views which were so recently his own and will not treat Mr. Wang, whoever he may be, as rudely as he has some of his other political opponents.

I disagree with you that by accepting the crown President Yuan Shih-kai has betrayed all parties which have trusted him. The Republic is given up out of sheer necessity and on account of the peculiar situation in which China finds herself today, for which Mr. Yuan is not responsible.

The restoration of peace and stable government in China have been largely due to the strong personality of the man now at the head of the state. Good citizens feared that the passing away of Mr. Yuan might also mean disappearance of the settled government and the return of chaos and disturbance and then foreign intervention. Recognizing the limitation of the present regime and the peculiar situation in our country, a large majority of the intelligent Chinese who wanted to strengthen their national administration started the monarchical movement. They well knew the re-establishment of monarchy was more an alteration in the name of things than in realities, and if Mr. Yuan, who is master of the situation, could permanently assert his power the better would be the chances of definite improvement in the prospects of China in future. When all these facts are taken into consideration, they are wise in making President Yuan emperor.

WANG SHIH-YOUNG

Washington, D. C.

Will you kindly call and get my Independent of February 21? It contains no "Pebbles!" Oh, yes, I saw an article about Will Shakespeare, and Armor Plate, and The Nose of the Camel; and something relative to S. Bernhardt, and ditto Mr. "A. Columbus," and ditto Arnold Bennett's something; and two or three pages about War in Africa; and a touch on Office Efficiency, by Ed. Earle Purinton; and lots of things about books and insurance and dividends; and an advertisement intimating that men do not know how to shave; and bushels and bushels and bushels of other stuff, but nary a Pebble! I must have pebbles. They are first aid to digestion.

O. L. DOTY

Cleveland, Ohio

If You Would Be Successful Look to Your Food

By Arthur True Buswell, M.D.

AT first glance it seems a far cry from the eating question to business success, yet successful executives all over the country are proving that the foods we eat have a distinct relation to our mental efficiency and consequent material prosperity.

When simmered down, personal efficiency—the "power to do"—is intimately connected with our physical state. If we are full of vitality, abounding in surplus, energy, bubbling with the enthusiasm of perfect health, our minds are keener, more alert and we are able to accomplish things that would be impossible without the smashing mental power with which great physical vitality endows us.

That the foods we eat have the power to make or mar us physically and mentally seems to have been conclusively proven by Eugene Christian, the noted food specialist.

Twenty years ago Eugene Christian was at death's door. Suffering from acute stomach disorders, he consulted leading specialists without relief. Educated for a doctor, his brother physicians could offer him no hope. He finally went out on a farm supposedly to die, but in reality to try to save himself.

Here he commenced studying the chemistry of foods and their relation to the human organism and as a result of what he learned, without drugs or medicines, he literally *ate his way back to perfect health* in a remarkably short space of time.

Today, Eugene Christian is in his fifty-fifth year, yet he has more physical and mental energy—more enthusiasm than the average boy in his 'teens. He fairly radiates health and vitality.

According to Christian, the secret of eating for health and efficiency lies in knowing how to select and combine or balance our foods more than to any other thing. This does not mean that we have to eat foods we don't enjoy, or to which we are not accustomed—it merely means that at each meal we should eat the things that go to make up a constructive whole.

Christian regards the human stomach as a furnace and food as the fuel, and he says that some of the combinations of food we eat every day are as dangerous as wet leaves, sawdust, mud and a little dynamite would be for a furnace. No wonder 90% of all sickness originates in the digestive tract!

On the other hand, other combinations of equally delicious foods furnish maximum physical and mental power with a minimum of waste.

In order that business men and women or, in fact, anyone interested in increasing their health and personal efficiency, may follow Christian's methods, the Corrective Eating Society has published a little course of lessons written by Eugene Christian out of his 20 years' experience in personally treating about 23,000 people.

Technical terms have been avoided and every point is explained so that there can be no possible misunderstanding. Reasons are given for every recommendation, based upon actual results secured in the author's many years of practice. The course also includes actual menus for breakfast, luncheon and dinner, curative as well as corrective, covering every condition of health and sickness for all ages from infancy to old age and for all occupations, climates and seasons.

If you would like to see the 24 Little Lessons in Corrective Eating written by Eugene Christian, simply write The Corrective Eating Society, 44 Hunter Ave., Maywood, N. J. It is not necessary to enclose any money with your request. Merely ask them to send the lessons for five days' free examination with the understanding that you will either return the lessons within that time or remit \$3, the small fee asked.

There are, of course, some who will doubt the efficacy of Corrective Eating and its direct bearing on personal efficiency, but I am certain their objections will be quickly removed once they examine Christian's Course. Anyway, you are obligating yourself in no way by accepting the society's generous offer which enables you to investigate its wonderful work before you pay for the lessons. If the more than 300 pages contained in the course yield but one single suggestion that will bring greater physical and mental energy, or make you more clear headed at the office—you will get many times the cost of the course back in personal benefit—yet hundreds write the Society that they find vital helpfulness on every page.

I suggest that you clip out and mail the following form instead of writing a letter, as this is a copy of the official blank adopted by the Society and will be honored at once.

CORRECTIVE EATING SOCIETY, Inc.,
44 Hunter Ave., Maywood, N. J.

You may send me prepaid a copy of Corrective Eating in 24 Lessons. I will either re-mail these to you in five days or send you \$3.

NAME

ADDRESS

80 to 100 Words a Minute Guaranteed!

Learn at Home— 10 Easy Lessons

A wonderful new method of acquiring skill on the typewriter has been discovered. Almost overnight it has revolutionized the whole typewriting situation.

Already thousands of stenographers and other typewriter users who never exceeded thirty to forty words a minute, are writing 80 to 100 words with half the effort and with infinitely greater accuracy than they ever could before, and they're earning salaries increased in proportion.

Nothing Else Like It

Don't confuse this new way in typewriting with any system of the past. There has never been anything like it before. It is as different from the old touch systems as day is from night. Special *Gymnastic Finger-Training Exercises* bring results in *days* that ordinary methods will not produce in *months*. It is the greatest step in typewriting since the typewriter itself was invented—already its success has become nation-wide.

Doubles and Trebles Salaries

Among the thousands of operators who have taken up this system are hundreds of graduates of business colleges and special typewriting courses—many were so-called touch writers—yet there has not been a single one who hasn't *doubled* or *trebled* his or her speed and accuracy, and the salaries have been increased from \$8 to \$15 a week (their former pay) to \$25, \$30 and even \$40 weekly. And the new way is *amazingly easy* for anyone—there are only 10 lessons and they can be quickly learned at home.

Valuable Book Free

We cannot describe here the secret principle of this new method. But we have prepared a book which tells all about it in complete detail, which is *free* to those interested. It is a big 48-page book, brimful of eye opening ideas and valuable information. It explains how this unique new method will quickly make your fingers *strong and dextrous*, bring them under *perfect control*, make them *extremely rapid* in their movements—how in a few short weeks you can transform your typewriting and make it *easy, accurate and amazingly speedy*—all this and much more is told in detail. No instruction book ever written, no matter what its cost, ever told so plainly the real *WHY* and *HOW* of expert typewriting.

If you are ambitious to get ahead—if you want to make your work easier—if you want to put more money in your pay envelope—get this book at once. It will be a revelation to you as to the *speed and salary* that is possible to typists. Mail the coupon or a postal today—*Now*.

That is what happens to us whenever we leave out any one of our many departments. Somebody is sure to write in and say that the magazine isn't worth shucks without it. That is the reason we have so many departments. Some readers like one and some another, and none probably finds them all equally interesting. But we suspect that more of our readers than would be willing to confess it, have an avian appetite for pebbles. Youth is more frank in expressing its likes. In visiting a school where The Independent is used as a text-book the teacher told us how interested the pupils were in the periodical. Unable to conceal our pleasure at this and hoping to get more specific praise, we turned to the school and asked: "What part of The Independent interests you most? What page do you turn to first?" And the answer came in chorus from all over the room, "Pebbles!" This being the only part of the periodical that is not original, we should naturally have preferred some other selection, but nobody ought to ask a question of a school-room unless he is prepared to listen to the truth.

If we needed further proof that "Pebbles" are read—and carefully at that—we should find it in the following:

In regard to your article printed in the "Pebbles" column, I will say that you are entirely wrong as to the location and nickname of the L. K. & W., as it runs thru Clay Center, Kansas, and is owned by the Union Pacific Railway, and it is called the Little Kansas Wiggler.

DONALD P. BARNES

Clay Center, Kansas

P. S.—I am a twelve year old reader of your paper and sincerely hope you will take no offense.

P. P. S.—Let no man rob Kansas of her treasures.

No, we do not take offense and we do not intend to rob Kansas of her treasures, and we hope that Donald will continue to aid the advancement of editorial accuracy by viewing his periodicals "with a cricket's eye."

One of the little nations overrun by the war has been almost ignored by the outside world. Albania, which the European powers less than three years ago pledged themselves to protect, has been invaded by the troops of all the neighboring countries, Greece, Italy, Germany, Austria, Serbia, Montenegro and Bulgaria. The people had been previously reduced to destitution by the two Balkan wars and now that the invading soldiers have seized their provisions they are in danger of general starvation. The relief ship which was sent to their relief was shut out by the Italian Government, which is maintaining an illegal blockade of Albanian ports. To get these facts before the American public an association, The Friends of Albanian Independence, has been formed. From its publicity manager we receive the following:

If the territory of Albania is given to any other race than its legitimate owners, from their almost impregnable mountains, the warlike Albanians will maintain such a desperate resistance that it could

YOUR BOY

only be ended by their extermination. The civilized world ought not to allow these descendants of the ancient Ilyrians and Pelasgians to perish, for in the days when they had a fair chance, they made contributions to the world's welfare which show that their natural abilities are high. Under the banner of Scanderbeg—a black double-headed eagle on a red background, they beat back the Turk in the fifteenth century, and their race has produced Pyrrhus, Alexander the Great, Saint Jerome, Constantine, five other Roman emperors, Pope Clement XI, Crispi, Marco Bozzaris and other heroes of the Greek war for independence.

Albania occupies such a strategic position that it is coveted by all of the neighboring races, but none of them would be willing to see it possess by any rival. Hence the surrender of Albania to any one race, or any possible division of it among several races, would cause such national and racial jealousies to arise in the Balkans, that another Balkan war would be inevitable which might again embroil all Europe.

Among those who have enrolled themselves as The Friends of Albanian Independence are Miss Jane Addams, of Hull House, Chicago; Prof. Emily G. Balch, of Wellesley; Mr. George W. Coleman, of the Ford Hall Foundation, Boston, Massachusetts; Prof. Samuel T. Dutton, of the World Peace Foundation, New York City; Doctor Charles Eastman (Ohiyoesa), of Amherst, Massachusetts; Mr. Charles Wellington Furlong, the explorer, of Boston, Massachusetts; Mrs. Mary Antin Graham, of Scarsdale, New York; Mr. Hamilton Holt, of The Independent; Mrs. Haviland H. Lund, of the National Forward to the Land League, New York City; Dean Kelly Miller, of Howard University; Miss Mary White Ovington, of Brooklyn, New York; Prof. Herschel Parker, of New York City; Prof. Edward A. Steiner, of Grinnell, Iowa; Prof. Radoslay A. Tsanoff of Rice Institute, Houston, Texas; Mr. Oswald Garrison Villard, of the New York *Evening Post*; Mr. George Fred Williams, Ambassador to Greece; and Doctor Evangeline Young of the Boston School of Eugenics.

Information may be obtained from Mr. John Adams, editor of the *Albanian Era*, of 1412 South Halstead street, Chicago, or from Kol Tromara, secretary of the Pan-Albanian Federation "Vatra," at 97 Compton street, Boston, or from the undersigned.

JOSEPH F. GOULD

Elbowoods, North Dakota

Whenever we let slip in the word "first" or "new" in reference to municipal institutions we are sure to get letters claiming prior credit for some other locality, which is, of course, gratifying because it shows how close is the race between our progressive towns. When we referred to the circulation of player rolls by the St. Louis Public Library as "a new experiment" we learned that several libraries had the department in operation:

The Evanston Public Library has circulated pianola rolls since April 3, 1908. The Sadie Knowland Coe music room, which was opened April 2, 1908, now contains almost 2000 books, opera scores and sheet music; and about 575 pianola rolls. The room has contained since its opening a Weber pianola-piano, the pianola being open for use at certain periods of every day, the piano available at any time during library hours.

The collection is available for reference use at all times during library hours, and books, printed music and music rolls may be drawn upon borrower's cards. Only works of permanent musical value are included in this collection, which has proved of inestimable value in bringing a knowledge and love of the works of the masters of music to scores of people whose opportunities for musical culture have been very limited.

MARY B. LINDSAY.

Evanston, Illinois

Here Are the Facts About Nujol

REG. U. S. PAT. OFF.

OUR booklet, "The Rational Treatment of Constipation," summarizes briefly some of the facts which doctors have learned about constipation—what causes it, and why the use of Nujol as an internal lubricant is an effective method of treatment.

Casual dosing with laxatives and cathartics is an extremely unwise way of dealing with a disorder which is so full of potential dangers as is constipation.

If you are interested in learning the facts about a far saner and safer treatment, you should have this booklet. Clip and mail the attached coupon.

Most druggists carry Nujol, which is sold only in pint bottles packed in cartons bearing the Nujol trademark. If your druggist does not carry Nujol, we will send you a pint bottle prepaid to any point in the United States on receipt of 75 cents—money order or stamps.

MR. PURINTON'S EFFICIENCY QUESTION BOX

231. Mr. S. C., Missouri. "(a) On pages 343-347 of your book *Efficient Living* are answers to a question on woman's economic independence. Please advise me in what number of The Independent these pages were originally published, as I wish a copy for a friend who needs the broad view they contain. (b) My grade is only 60 per cent on your Personal Efficiency Test. Can you outline a course of reading and self-discipline to put me in the nineties' grade?"

(a) This material never appeared in The Independent like much of the contents of the book; it was taken from my personal answers to personal questions.

(b) I will note a few of your weak points on the chart. For knowledge of scientific management, of your own greatest power (character analysis), and of habitual optimism, see references in back files of the Question Box. For inventory of your mental and moral traits see "Efficiency Mind Builder," on page 257 of the book "Efficient Living." For suggestions on slow eating, see Horace Fletcher's various books. For health information, get sample copies of health magazines mentioned previously in Question Box, and answer the best advertisements.

232. Mr. C. E. F., Arizona. "Please tell me where I can obtain information as follows: (a) Regarding methods of industrial work in schools having the so-called 'self-help' departments; (b) regarding the shop-school plan to which you recently referred as being tried out in New York; (c) regarding the proposed Rural Credits legislation."

(a) Self-help features in college and universities are generally conducted by the Y. M. C. A. or Y. W. C. A. of each institution, not connected organically with the school. For general information apply to Intercollegiate Branch, Y. M. C. A., 554 West 114th street, or to National Board, Y. W. C. A., 600 Lexington avenue; both New York City.

(b) Write to the United States Commissioner of Education, Washington, D. C.; also the New York City Board of Education, Park avenue and Fifty-ninth street, New York; also Superintendent Wirt, of the City Schools of Gary, Indiana, the latter for details of the "Gary Plan."

(c) Your local bank officials probably could inform you. If not, write American Bankers' Association, 5 Nassau street, New York City. Experts consider Dr. John Lee Coulter, of the West Virginia University, an authority on rural credits; address Morgantown, West Virginia.

233. Rev. F. E. D., Vermont. "Will you put me in the way of finding literature on the subject of the improvements that have been made, especially in morals, in this country, since the days of the fathers? I want to show the advance on all lines, in a lecture on the subject."

Apply to Church Literature Press, No. 2 Bible House; American Social Hygiene Association, 105 West Fortieth street; Society for Ethical Culture, 2 West Sixty-fourth street; American Institute of Social Service, Bible House; G. P. Putnam's Sons, 2 West Forty-fifth street; Fleming, H. Revell Company, 158 Fifth avenue; all of New York City.

234. Miss B. W., Georgia. "I look after out-of-town collections for a manufacturer, and would like to find some new ways to say *Please remit*. We want short, courteous letters. Can you suggest any books to help along this line?"

We don't believe much in stereotyped business letters. They are usually about as effective as marriage proposals made out of a book. You can, however, learn the correct principles from an authority, and then put your own personality into your business forms. A few possible aids: "How to

Write a Business Letter," "Golden Rule Collection Letters," "How to Collect Accounts," "Pointers on the Collection Business," "Debt Reminders," "Business Correspondence." These books can be secured from the Efficiency Press Syndicate, 233 Broadway, New York City.

235. Mr. E. S. C., Vermont. "Where can I obtain literature or any information on The Fourth Dimension?"

Ask the Professor of Mathematics of your State University; also the Searchlight Information Library Company, 450 Fourth avenue, New York City. Manning's *Fourth Dimension Simply Explained*, published by Munn & Co., 233 Broadway, New York, is helpful.

236. Mr. G. L. W., Pennsylvania. "As a constant brain-worker, I am often troubled with brain fog, headaches, etc. I have an idea that the brain is undernourished, but don't know what to eat for this condition of anemia. Is fish a good brain food? I have heard it contains phosphorus."

It is by no means certain that your brain is undernourished. Your head troubles may come from any one of a number of other causes. Are you sure that your eyes are all right? Is your digestion in good order? Do you take enough exercise? Are your habits of living, to say nothing of your habits of work, rational and sensible? Do you drink plenty of water? There is no such thing as a brain food any more than there is an ear food or a hand food. The phosphorescent glow on a fish pertains to the scales. Must we then eat the fish scales, in order to become brainy? If you lead as sensible and well-regulated a life as you know how, not burning the candle at both ends, or indulging yourself in any direction, and the brain fog and headaches continue, you probably ought to consult a doctor. Are you sure that it is the work that you do which tires your brain, and not the fact that you come to your work with your brain already handicapped by some of the things you have done outside of your work?

237. Miss E. C. W., New York City. "Please advise me as to the best way to sell some oil paintings done by a Belgian prisoner of war. The paintings bear the name of the camp and the date."

Apply to Fifth Avenue Auction Rooms, 341 Fourth avenue; also to Merwin Sales Company, 16 East Fortieth street; also to Charles J. Darling and Company, 623 Sixth avenue; also to John J. Morris, 623 Sixth avenue; all of New York. If none of these firms can sell your paintings to your satisfaction, look up "Art Goods" dealers and "Picture Importers" in the business directory called the *Red Book* of New York, on view at almost any large hotel or drug store—publisher, Reuben H. Donnelly, 227 Fulton street.

238. Mr. J. C. C., New York. "After reading your articles on efficiency, I am very much interested in the subject. I am taking a special course in the arts department of a leading university, but feel that I am not working as effectively as I should. My schedule includes English History, Nineteenth Century Poetry, Astronomy, Debating, Shakespeare, and International Law. Could this be improved? Have you written any books that would help me secure efficient training for life?"

Your study curriculum is open for improvement. Why take Shakespeare and Nineteenth Century Poetry simultaneously? Does your life work prove the need for Debating and International Law? It may—but ask yourself how and why. A modicum of English History may be desirable. Astronomy is of doubtful value.

Like most "classical" students, you are neglecting the practical side of education. We would suggest that you quietly fade away from the Arts department a few hours each week, and learn how to handle your bodily machine.

Yes, you would probably find some help in my books; particularly *Efficient Living*, and *Five Efficiency Booklets*, obtainable from Efficiency Press Syndicate, Woolworth Building, New York.

MEN OF HIGH STANDING IN THE BUSINESS WORLD ARE LOCATING ON LONG ISLAND

Here are some of the reasons why:

The ease in traveling between home and office—any point on Long Island being but a short ride from the up or down town business sections, with service right into the heart of New York City, convenient to all the theatres, stores, clubs, hotels, and restaurants.

The wide variety of topography from which to select a site for a home—waterfront on ocean, Long Island Sound and many bays, hilly or level country.

Living amid those pleasures that appeal to them—boating, golfing, motoring, tennis and polo.

Having as neighbors people of the highest type—professional men from every walk in life.

These should also be *your* reasons for locating on Long Island.

For information concerning Long Island address the General Passenger Agent, Long Island Railroad, Room 371, Pennsylvania Station, New York.

PEBBLES

The most important spring opening thus far announced is the Panama Canal.—*New York Tribune*.

This is also the season when a town man would like to be a farmer if he didn't have to farm a great deal.—*Atchison (Kansas) Globe*.

Free soup kitchens would unite all Mexican factions. This is philosophy, not a superficial suggestion.—*Brooklyn Daily Eagle*.

Colonel Roosevelt insists that we "must make disorderly nations behave." The dickens of it is, Colonel, that there's such an infernal lot of 'em just at present.—*New York Sun*.

Australian Preacher: "Brethren and sistern, these be stirring times we do be livin' in. But we should remember the words of the Good Old Book, where it do say 'England expects that every man this day will do ez duty.'"—*Sydney Bulletin*.

RIMES OF THE TIMES

He thinks he sees upon a hill a Disheveled guy that looks like Villa, But even as the guy he scans, a Sharpshooter cries, "Why, that's Caranza!"

Cleveland Leader.

"Say, Alabama is a dry state, isn't it?" "Sure."

"But when I was there I saw several negroes who were intoxicated."

"Well, of course, they can't stop the sale of that awful cotton gin entirely."—*Cornell Widow*.

Officer to Tommy, who has been using the whip freely:—

"Don't beat him; talk to him, man—talk to him."

Tommy to horse, by way of opening the conversation:—

"I coom from Manchester."—*Punch*.

"How quickly some of those immigrants assimilate our ideas and methods!"

"As for instance?"

"Well, I asked my Italian barber if he was going home to fight and he said he wasn't; that he had paired with an Austrian in the next block."—*Boston Transcript*.

I remember, I remember

When Funston wasn't It.

When he among the Generals

Was not allowed to sit.

He was a most ambitious chap—

At nothing would he balk,

But then, as now, I well recall,

He was too prone to talk.

—*Cleveland Leader*.

In thinking of neutrals, I can't help thinking of two boys who stood the other day and watched an enormous safe being raised up to the twenty-sixth story of a skyscraper.

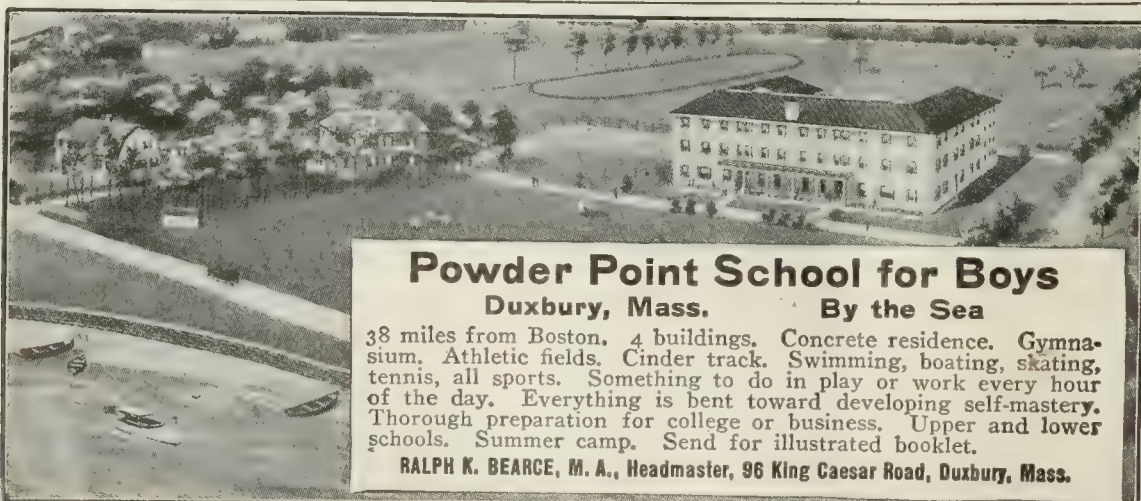

"The boys watched the safe rise slowly, dangling at the end of its wire rope, and when it reached the twentieth story the older lad turned away in disgust.

"Come on, Joe," he said. "We might as well move on. They ain't a-goin' to let her drop."—*Indianapolis News*.

Mr. Binks had invested \$500 in Colossal Steel stock. The War-Bride fever was upon him. One hour after making his investment he dropped into an office to see how many points his stock had gained. He grabbed the tape that flowed from the ticker and hunted for Colossal Steel. This is what he found:

"OWSMULXZ. SWWW. MY.54113113 LMWNYGCK. -115117113. ...UKWNA-AEYVYNNAAEWNNNNCMY 1135 CC WHULEDLWWWWPUU—P 431 33 Y 60335—CJY.—WJYNAAAUVYYY-YHULZZRUUUU 76 V884—53811"

One hour later strong men led Mr. Binks away and locked him up in a padded cell. —*Cincinnati Enquirer*.

Everything is bent toward developing self-mastery. Thorough preparation for college or business. Upper and lower schools. Summer camp. Send for illustrated booklet.

RALPH K. BEARCE, M. A., Headmaster, 96 King Caesar Road, Duxbury, Mass.

The Market Place

THE RAILROADS

Recent reports show no reaction in the favorable movement of railroad gross revenue and net earnings. Owing to the improved conditions and increase of profits, large orders for equipment have been given to the steel mills. Since March 1, orders for 900,000 tons of rails have been placed, but these, as a rule, are for delivery next year. The companies have also ordered, since the first day of the year, 1200 locomotives, and this number, in three months, may be compared with 2000 in the entire year 1915.

One result of the hearings before the Interstate Commerce Commission concerning the continuing severe congestion of freight at and near Eastern ports has been the forming of an association by fifteen prominent companies whose roads lead to New York, Boston, Philadelphia and Baltimore, with an embargo committee whose power is represented by an executive committee composed of six presidents and Commissioner Clark, of the Interstate Commerce Commission. With the coöperation of shippers and the support of Federal authority, these officers hope to make plans for relief. But the problems presented by freight congestion are regarded as of much less importance than the one which more than 400,000 employees ask the companies to consider. Their demands, which, the companies say, could be granted only at a cost of \$100,000,000 a year, have been formally submitted, and before April 28 the roads must reply.

FOREIGN LOANS

Subscriptions for the new loan of \$75,000,000 to the Canadian Government, offered to the public here by J. P. Morgan & Co., the National City Bank, the Guaranty Trust Company, Brown Brothers & Co., Harris, Forbes & Co., and the Bank of Montreal, were four or five times the amount named, and the bonds have been selling at a premium in the New York market. They are in three classes—five years, ten years, and fifteen years, the interest rate being five per cent. Those having a term of fifteen years were the most attractive to investors. They were offered at 94.94, and have been sold, since the original offering, at 97 $\frac{3}{4}$. Sales of the ten-year bonds, originally offered at 97.13 by the banking syndicate, have been made at 97 $\frac{3}{8}$. The bonds are free from all present or future taxes imposed by the Canadian Government, in-

Estimated unearned discounts	81,438.69
Total	\$45,690,634.40

AN INCOME FOR LIFE

Of all the investment opportunities offered there are few indeed not open to criticism. Absolute safety is the first requisite and adequate and uniform return equally important, and these seem incompatible. Aside from government bonds, the return under which is small, there is nothing more sure and certain than an annuity with the METROPOLITAN LIFE INSURANCE COMPANY, by which the income guaranteed for a certain lifetime is larger by far than would be earned on an equal amount deposited in an institution for savings, or invested in securities giving reasonable safety. Thus a payment of \$5,000 by a man aged 67 would provide an annual income of \$618.35 absolutely beyond question or doubt. The Annuity Department, METROPOLITAN LIFE INSURANCE COMPANY, New York, will give advice as to the return at any age, male or female.

come tax included. It is understood that at least a part of the money will be used in advances to the British Government for the payment of obligations for munitions and other war supplies. As a considerable portion of the supplies for which orders are placed in Canada is obtained on this side of the boundary, by means of subcontracts, part of the proceeds of the loan will be expended in the United States.

Carlos Castro, a member of the City Council of San José, the capital of Costa Rica, has come to New York to negotiate a loan of \$2,000,000 for that city. The money is needed for street paving, enlargement of the water supply plant, garbage disposal and other municipal improvements. In the past Costa Rica has borrowed in London or Paris. Now she turns to New York. If the money is procured here, the materials required for the projected improvements will be bought in the United States.

The new loan to Argentina is \$15,000,000, and the money was provided by the Guaranty Trust Company, which made a public offering of the securities. Since the beginning of the war, Argentina has borrowed \$79,500,000 here, including \$25,000,000 last May, represented by five-year notes. Her loans were formerly obtained in London. It is reported that there have been preliminary negotiations for a new loan of \$200,000,000 to France, the term to be three years, and the rate five per cent. Funds have been deposited here for the redemption of the \$30,000,000 of French bonds which fall due on April 1. Nothing is heard about the proposed loan of \$75,000,000 or \$100,000,000 to Russia. Our loans to foreign borrowers since the beginning of the war amount to about \$1,100,000,000. This total includes \$240,000,000 to the Canadian Government and to provinces and municipalities in Canada.

WAR SUPPLY ORDERS

The largest of the war orders recently reported is one for \$70,000,000 worth of submarines, which the Submarine Boat Corporation has undertaken to build for the Russian Government. But the work is to be done in Russian shipyards, under the supervision of officers of the company. There are to be 200 submarines forty-five feet long which can be carried on the decks of battleships. The cost of each will be about \$200,000. In addition the contract calls for fifty larger boats at \$600,000. The company will receive 7½ per cent of the entire cost, or \$5,250,000. It has recently taken an order for eight boats, at \$650,000 each, from another foreign government, and is said to have on its books contracts amounting to \$150,000,000.

Large sales of sugar have been made to the belligerents at rising prices. Italy has bought 20,000 tons. Exports of refined sugar to Great Britain in January and February were 52,000 tons, altho not a pound was shipped to that country in the corresponding months of 1915. Purchases of \$15,000,000 worth of leather have been made by the British

STATEMENT OF THE OWNERSHIP, MANAGEMENT, etc., required by the Act of Congress of August 24, 1912, of The Independent, published weekly at New York, N. Y., for April 1, 1916.

State of New York, } ss.
County of New York, }

Before me, a notary public in and for the State and county aforesaid, personally appeared William B. Howland, who having been duly sworn according to law, deposes and says that he is the President of Independent Corporation, owner of The Independent, and that the following is, to the best of his knowledge and belief, a true statement of the ownership, management, etc., of the aforesaid publication for the date shown in the above caption, required by the Act of August 24, 1912, embodied in section 443, Postal Laws and Regulations, printed on the reverse of this form, to wit:

1. That the names and addresses of the publisher, editor, managing editor, and business manager are: Publisher, Karl V. S. Howland; Editor, Hamilton Holt; Associate Editor, Harold J. Howland; Managing Editor, Geddes Smith; Business Manager, Frederic E. Dickinson, all of 119 West Fortieth street, New York, N. Y.

2. That the owner is Independent Corporation, 119 West Fortieth street, New York, N. Y. Names and addresses of stockholders holding 1 per cent. or more of total amount of stock: Charles B. Alexander, 165 Broadway, New York, N. Y.; James Douglas, 99 John street, New York, N. Y.; Hamilton Holt, 119 West Fortieth street, New York, N. Y.; William B. Howland, 119 West Fortieth street, New York, N. Y.; Harold J. Howland, 119 West Fortieth street, New York, N. Y.; Karl V. S. Howland, 119 West Fortieth street, New York, N. Y.; Theodore Marburg, 11 Mt. Vernon Place, Baltimore, Md.; John P. Munn, 277 Broadway, New York, N. Y.

3. That the known bondholders, mortgagees, and other security holders owning or holding 1 per cent. or more of total amount of bonds, mortgages, or other securities are: none.

4. That the two paragraphs next above, giving the names of the owners, stockholders and security holders, if any, contain not only the list of stockholders and security holders as they appear upon the books of the company, but also, in cases where the stockholder or security holder appears upon the books of the company as trustee or in any other fiduciary relation, the name of the person or corporation for whom such trustee is acting, is given; also that the said two paragraphs contain statements embracing affiant's full knowledge and belief as to the circumstances and conditions under which stockholders and security holders who do not appear upon the books of the company as trustees hold stock and securities in a capacity other than that of a bona fide owner; and this affiant has no reason to believe that any other person, association, or corporation has any interest direct or indirect in the said stock, bonds, or other securities than as so stated by him.

INDEPENDENT CORPORATION.
WILLIAM B. HOWLAND, President.

Sworn to and subscribed before me this 23d day of March, 1916. WESLEY W. FERRIN.
Notary Public, Kings County. Certificate filed in N. Y. County No. 87. New York County Register No. 7120.
(My commission expires March 30, 1917.)

DIVIDENDS

AMERICAN TELEPHONE AND TELEGRAPH COMPANY

A dividend of Two Dollars per share will be paid on Saturday, April 15, 1916, to stockholders of record at the close of business on Friday, March 31, 1916.

G. D. MILNE, Treasurer.

OFFICE OF THE NIAGARA FALLS POWER CO.

15 Broad Street, New York, March 29, 1916.
At a meeting of the Board of Directors of this Company, held on the 29th day of March, 1916, a dividend of \$2 per share was declared on the capital stock of this Company, payable on and after the 15th day of April, 1916, to stockholders of record at the close of business on the 8th day of April, 1916. F. L. LOVELACE, Secretary

DEAF?

**"I
Now
Hear
Clearly"**

You, Too, Can Hear!

Inasmuch as 200,000 users of the "ACOUSTICON" have had the same results from it as Mr. Garrett Brown, whose photo appears above, we feel perfectly safe in urging every deaf person, without a penny of expense, solely and entirely at our risk, to accept a thorough trial of the

1916 Acousticon

No Deposit **FREE** No Expense

All you need to do is to write saying that you are deaf and will try the "ACOUSTICON." The trial will not cost you one cent, for we even pay delivery charges.

WARNING! There is no good reason why every-
one should not make as liberal a trial
offer as we do, so do not send money
for any instrument for the deaf until you have tried it.

The "ACOUSTICON" has improvements and
patented features which cannot be duplicated, so no
matter what you have tried in the past, send for your
free trial of the "ACOUSTICON" today and con-
vince yourself—you alone to decide. Address

GENERAL ACOUSTIC CO., 1320 Candler Bldg., New York
Toronto, Ont. Office, Royal Bank Bldg.

and French governments, as material
for 10,000,000 pairs of shoes. Compa-
nies in Portland, Oregon, have been
asked to submit bids for 8,000,000 feet
of lumber, in forms suitable for trench
posts and pickets. The French Govern-
ment has bought 25,000,000 pounds of
copper at a price between 27 and 27½
cents a pound. This is the largest order
of the kind since the notable one of the
British Government, a few months ago,
for 135,000,000 pounds. Orders for steel
to be used in making shells are fre-
quently reported, and one from the
British Government for 200,000 high
explosive shells was made known last
week.

INTERNATIONAL TRADE

Since the beginning of the year there
has been a noticeable increase of our
imports, while, as is well known, our
exports have continued to be very
large. Imports in January were \$184,-
000,000, against \$122,000,000 in Jan-
uary, one year earlier. But the gain
for the seven months that ended with
January was only \$16,000,000. Official
figures as to the exports in February
are not yet available, but from the port
of New York alone they were \$216,-
500,000, against \$182,500,000 in Jan-
uary. The value of shipments of fire-
arms and explosives rose from \$31,-
451,000 in the year's first month to
nearly \$48,000,000 in the second. Ex-
ports of war supplies have been grow-
ing. In the last week of March eighteen
ships loaded with them sailed from
New York. There has been a great in-
crease of the exports of gunpowder. In
the year 1914 the value of the ship-
ments was only \$289,000, but in 1915
it was \$66,346,000, the average price
per pound advancing from 33 cents in
the first of these years to 79 cents in
the second. At the present time the
quantities going out are very large. De-
liveries on a great scale began in No-
vember, and 44,000,000 pounds were ex-
ported in that month and December,
the price rising to 87 cents. Powder com-
panies have declared great dividends.

In the harbor of Kola, on the north
coast of Russia, there are about 100
loaded ships, waiting, with ships at sev-
eral Norwegian ports, for the opening
of the port of Archangel, which may be
icebound until June. The new railroad
from Kola to Petrograd will not be com-
pleted this year, it is said. Munitions
recently received in Russia have
crossed the Pacific and been carried on
the Siberian railroad. More than forty
ships from New York are now on their
way to Vladivostok. There are said
to be about 300 ships, in all, now bound
for Russia and loaded with munitions,
their cargoes amounting to nearly
1,000,000 tons. As the freight charges
are high, the cost of transportation to
the war front is estimated at more than
\$75,000,000.

The following dividends are announced:
United Fruit Company, quarterly, 2 per cent,
payable April 15.

Otis Elevator Company, preferred, quarterly,
\$1.50 per share; common, quarterly, \$1.25; pay-
able April 15.

American Telephone and Telegraph Company,
\$2 per share, payable April 15.

Standard Milling Company, preferred, 2½ per
cent, payable April 15.

Insurance

Conducted by
W. E. UNDERWOOD

SOUTH CAROLINA LAW

For some years past the attitude of the Insurance Commissioner of South Carolina toward associated effort by fire insurance companies has been unfriendly. He doubtless regards the use of uniform rates and one code of practice by a number of companies as the exercise of monopolistic powers. Nearly all the fire insurance companies operating in South Carolina are members of the Southeastern Underwriters' Association, an organization which employs an efficient staff of expert inspectors to make periodical examinations of all the physical hazards in several of the Southern states on the Atlantic seaboard. From their reports, under properly formulated schedules, based on the combined experience of the companies in that territory, rates are made.

After years of agitation in political circles there the South Carolina Legislature has enacted a law proscribing the activities of the Southeastern Underwriters' Association and prohibiting the companies from making any agreement as to rates and practises. One clause of the law requires that some office or agent of each company who resides in the state, shall file an affidavit with the Insurance Department once a year stating that his company has not transgressed the law during the preceding twelve months. Every violation of the law is doubly penalized with a fine of from \$100 to \$1000 and imprisonment in the state prison for one year, but the imprisonment may be, in the direction of the court, reduced to from one month to one year in a jail.

Another provision of the law empowers the Insurance Commissioner to review any rate fixed by a company and to determine whether it is unjust or discriminatory. If he finds against the rate fixed he may order it changed. The relations of agents to each other are in the same manner rigorously regulated.

This policy of repression and proscription, new in South Carolina, has been tried out and been proven a failure in a few other states. Fire insurance companies, for the sake of the agency organizations built up at great expense thru years of effort, have submitted to injurious legislation in various Western and Southern states, clinging to the hope that time would remedy the conditions. But there is a point beyond which they dare not go in that direction. This was shown in their withdrawal from Missouri about two years ago.

SUMMER CAMPS

Sargent Junior

The Camp for Girls from 8-13

Dr. Dudley A. Sargent, President, Peterboro, N. H.
All the equipment of the big Sargent Camp. New buildings erected especially for this camp. All activities adapted to the age and health of each girl. Each camper under personal care of camp mother. Address
Secretary, 8 Everett St., Cambridge, Mass.

CAMP CHAMPLAIN

An Ideal Summer Camp for Boys on Lake Champlain. 23rd Year opens June 30th. Special attention to safety and comfort. Waterproof tents and floors. Two motorboats. Rowboats, canoes. Fishing, swimming, baseball, tennis, all land and water sports. Trips to Adirondacks, Green Mts. and Montreal; also numerous short hikes. In charge of experienced college graduates. Tutoring if desired. Large Assembly Hall, with piano, games, etc. Best of food and plenty of it. Camp physician. No mosquitoes or malaria. Long distance phone. Number limited. References invariably required. Illustrated booklet.

WM. H. BROWN, 307 West 70th Street, New York City.

CAMP WINNAHKEE

On Malletts Bay, Lake Champlain, between the Green and Adirondack Mountains.

An Ideal Camp for the Mental and Physical Improvement of Girls. In charge of experienced directress and councilors, who share in sports and daily occupations. Large bungalow with all improvements, sleeping porch, or tents. Nature study, woodcraft, manual training, swimming, boating, fishing, horseback riding, tennis, under competent direction and chaperonage. Trips to points of interest. Unimpeachable references required. Price includes all expenses. Booklet from Wm. H. Brown, 307 W. 70th St., New York City.

A Message to Parents

"A boy or girl, who reads The Independent one year, will not read about murder trials."
—R. D. Chadwick, Head of History, Emerson School.

If education is to be preparation for complete living, boys and girls must be led to a proper appreciation of the vital interests, movements and events of the present. Give your boy or girl The Independent to read each week.

NATIONAL SCHOOL OF CHIROPRACTIC
Dept. N-1, 421-427 So. Ashland Blvd., Chicago

As one who has worked in and believes he understands the fundamental principles under which the business of fire insurance operates, I say to the readers of The Independent that not only is it essential to the security of policyholders that rates be adequate, including not only ability to yield a profit as well as to pay losses, but that it is impossible properly to calculate those rates except upon the extensive data alone possess by the companies. It is idle to talk about discriminatory rates; there are not two physical hazards precisely alike. A thousand factors are involved, and the same number and kind will not be present in any two risks.

Insurance is a service, not a product. Its cost to the user is mainly determined by the losses incurred. In fact, insurance is nothing more than the medium thru which losses are distributed among the persons insured. With these truths in mind, does it not seem rather absurd to endow a state official who possesses no practical knowledge, no experience, no data, with the power to change rates calculated by insurance experts from records accumulated during many years?

Unless I am very much mistaken, the fire insurance companies cannot safely transact business in South Carolina under its new law and will probably withdraw from that state. That is one step toward self-preservation still remaining to them.

F. J. S., Ithaca, N. Y.—Under the circumstances, I am of the opinion that \$4000 or \$5000 of life insurance is too much for a young man who is several hundred dollars in debt and just starting in life. Take \$2000 ordinary life in some good dividend-paying old line company.

J. H. T., La Grande, Ore.—Without the aid of a constantly accumulating reserve no life insurance plan is practicable. It must be a full reserve, mathematically ascertained, based on a standard mortality table and a minimum rate of interest. Otherwise the rate must gradually rise to a prohibitive point.

J. E. W., Laramie, Wyo.—By applying to the Insurance Department of any state you can procure a list of all the insurance companies doing business in that state. If you wish a list of all the companies in the United States you will either have to write to the insurance departments of all the states or subscribe for a volume of reports furnished by one of the publishing houses engaged in that work. The latter, however, are expensive, for they contain a vast quantity of other information.

J. G. H., Lakeport, Calif.—A report before me touching on the so-called reserve fund of the Woodmen of the World, Pacific Jurisdiction, states that "the surplus . . . is shown only because the order does not charge among the liabilities a reserve to provide for the increasing cost of insurance due to the increasing age of the member and the corresponding increase in the mortality rate. The reserve [such as used by life companies], if charged, would more than offset this 'surplus' and would leave a large deficiency." That means that rates must necessarily go up. The Penn Mutual is an excellent company. Your age, circumstances and income considered, I would advise you to choose from among the policies you name the twenty-year endowment. As a policyholders' company the Penn Mutual ranks higher than the Missouri State Life.

BEWARE OF SOLICITORS

*A
Number
of Things
by
Edwin E. Slosson*

THERE'S nothing I admire more than courage and nothing I lament more than my lack of it in the great emergencies of life. Not long ago I attended—in honor of somebody who needed honoring or in furtherance of some cause which needed furthering—one of those feasts of Tantalus to which New Yorkers are addicted. The guests are seated at tables by tens and have placed before them at intervals dishes of the choicest food, which they are permitted to look at and taste, but before they can satisfy the appetite the plates are snatched away by a swarm of harpies in swallowtails. Now a good dinner demands and deserves both time and attention, but it can get neither at these big banquets because there is always some one at the speakers' table or by your side who wants to talk.

On this occasion I saw before me a salad of a sort in which I most delight, one of those wonderful confections to which all nature contributes; fruit, fish, flesh and fowl; nuts plucked from the tallest trees, crustacean drawn from the ocean bed; all flavors and savors combined and commingled in artistic confusion; harmonies and dissonances, strong chords and subtle overtones, a veritable Strauss symphony of the palate, something that would be treasured in the memory long after the last lingering taste had left the mouth. Over this mountain of pleasure there flowed a creamy lava, the making of which had required joint genius of the whole coalition cabinet of the kitchen, "the spendthrift for oil, the miser for vinegar, the councillor for salt and the madman to stir it up."

It seemed a shame to spoil such a masterpiece of culinary art, but my appetite overcame my awe and I timidly touched the edge of it with my fork, even as the bather steps first into the ripples on the beach in order to anticipate and postpone the pleasure of the plunge. The taste confirmed all of the expectations which the sight had aroused. But just at this critical moment the man on the right asked me a question on a subject that I knew about or thought I did, which amounts to the same thing. I replied with eagerness and eloquence, my eyes enlivened and my voice made musical by the thought of the plateful of bliss before me. This is, of course, a hypothetical objectivization of a subjective impression. Not having a mirror and a phonograph

at hand I was unable to prove that my manner corresponded with my idea of it. But it does not matter about that now.

I answered my right hand neighbor as briefly as the importance of the subject and the extent of my own knowledge of it would permit, then turned to the Salad of the Four Seasons, but to my dismay it was being withdrawn by a stealthy hand reached over my shoulder. I made no outcry. I stifled my emotion and submitted meekly to the wrong. I knew no other way. Lost property may sometimes be recovered, even lost health or a lost wife. But for a missed meal there is no possible recompense in this world and I fear not in the next, for even omnipotence seems to be subject to the limitations of chronology.

I turned to my neighbor on the left. He had eaten half his salad, but I saw the hand of destiny had already seized the edge of the plate. But while I watched with unsympathetic eyes, for misery loves company, I saw the hand of destiny slip. The plate stuck fast to the table as tho fastened with the glue which the man on the street corner uses when he hangs cannon balls to his broken crockery. My friend held the inner edge of the plate firmly gripped between the thumb and the knuckle of the forefinger of his left hand and he looked up with a malicious grin at the Great Stone Face as he chuckled:

"You didn't get it that time, did you?"

As the waiter stalked off with other plates echeloned on his arm, I could have hung my hat on his nose if it had not been taken from me by the hallway robber.

I knew then that I had the honor of sitting beside the bravest man in the world. I looked upon him with admiration and envy as he finished the salad to the last delectable drop. He did not offer to share it with me, altho he must have seen the hunger in my eyes. But I did not complain. I knew I did not deserve it. None but the brave deserve the fare.

Humor, say the Freudians, is the disguised expression of a supprest wish. Perhaps there's something in this theory. At any rate, humor often serves as a safety-valve for emotions which otherwise might make trouble. Whenever two nations or two persons stop making fun of each other look out for blows.

Our little tiff with Germany over the partition of the Pacific some twenty years ago worked itself off in comic verse, which is much better than slinging shrapnel. Admiral Coghlan started it going on this side-track by his:

HOCH DER KAISER!

Der Kaiser of die Fatherland
And God on high all dings command.
Ve two—ach, don't you understand,
Myself—und Gott.

Vile some men sing der power divine,
Mein soldiers sing: "Der Wacht am Rhein."

Und drink der health in Rhenisch wine
Of me—und Gott.

The Germans replied with a volley of verses quite as bad:

HOCH DER PRASIDENT!

Der Teddy Roosevelt bin ich ja,
Rauhreiter-Präsident,
In Deutschland und Amerika
Ein jedes Kind mich kennt.

Verletzet nie Monroes Doktrin
Sonst mach' ich gleich mobil,
Ich selbst ich stürme nach Berlin,
Held Dewey dampft nach Kiel.

And that was all there was to it; no high explosives, no torpedoes, no poison gases, merely hot air.

Time was when it was considered as disreputable to employ a tutor as to use a pony. Coaching was carried on in the woods or behind blanketed windows at dead of night. Later when it was realized that professors could not be expected to waste their time in teaching or students in studying, tutoring became recognized as an honorable and indispensable occupation, but those who practised it were slow to adopt up-to-date methods of pushing their business. They confined their efforts to the private circulation of neat copperplate visiting cards in the lower left corner of which one could discern with aid of a monocle the word MATHEMATICS or GREEK in the same small caps as are used by a fashionable hostess for MUSIC or DANCING or SKATING on her invitations.

But now the tutor has come to realize his own importance and learned how to impress it upon the public. In the Columbia daily I find an ad striking enough to stop an automobile, and from a Harvard man, too:

STOP! LOOK! LISTEN!

Stop flunking Mathematics. Look me up. Listen to my advice. I have taught Differential and Integral Calculus, Analytic Geometry, College Algebra and Trigonometry for several years, and have also wide experience as a tutor. Who am I? Ask your professor of Mathematics. F. S. Nowlan, A. M. (Harvard). Telephone Morn. 8920.

The distressed student has also adopted modern publicity methods for sending out his S. O. S. calls:

LOGIC TUTOR WANTED—A PATIENT, slow-speaking, flegmatic philosopher, who knows Jevons backwards, and who can sympathetically inject his definite practical knowledge into an eager mind, too busy to puzzle out the subject alone. Professors not satisfactory. Student will meet Tutor at University Tuesdays and Fridays between 5:30-7 p. m. State in own handwriting, age, sex, weight and terms. D., Spectator Office.

Some people have not taken as active a part in the discussion of the Balkan situation as they would like because they were uncertain as to the proper pronunciation of that city which in Bible times used to be called Thessalonica. But they should not worry. They can hardly miss it. The "Salonika correspondent" of *The Near East* gives the local usage:

If you are a Greek you will call it "Thessaloniki," if a Turk "Sela'nik," if a Frenchman "Salonique," if an American "Saloni'ki," but if you are an Englishman—or a Scotchman or Irishman, for the matter of that—you will call it "Salon'ika," or, as some people write it, "Salon'ica."

Auguste Rodin, whose best-known statue "Le Penseur" is reproduced on the cover of The Independent, has recently given to the French Government his entire collection of art works, and his mansion in Paris, which is to be made into a public museum for their exhibition. All his own sculpture and sketches, accumulated thru forty years of work, are represented in this collection. It also includes some notable examples of antique statuary.

We publish the photograph of a bronze cast of "Le Penseur" thru the courtesy of the Metropolitan Museum in New York City, which devotes one of its galleries to Rodin's work.

REMARKABLE REMARKS

E. H. SOTHERN—I prefer to snuff out.
THEDA BARA—I vampire to save souls.
DR. D. A. SARGENT—Fat is uninvested capital.
COL. HOUSE—Europe is always interesting.
LEW FIELDS—The Bowery is a fine old street.
ELSIE JANIS—I am still in the old maids' row.
BENNIE KAUFF—Say, who is this guy Ty Cobb, any how?
M. CLEMENCEAU—Wilson and his correspondent Wilhelm.
FRANCISCO VILLA—Americans will be shown no quarter.
DR. M. S. GREGORY—Every where I look I see signs of insanity.
AMBASSADOR MORGENTHAU—The missionaries have the right idea.
W. H. TAFT—I am afraid that some time this country will get a jolt.
KING GEORGE—The spirit of My allies and My people remains steadfast.
MRS. JOHN ASTOR—The English I think feel closer to us than we to them.
MRS. J. TERWILLINGER TARPON—I did not raise my husband to be a highbrow.
SENATOR JOHN SHARP WILLIAMS—We are the most egotistical people in the world.
MRS. O. H. P. BELMONT—It is time for us women to have a civilization of our own.
EVANGELIST MUNHALL—The curse of the Methodist Episcopal Church is her politics.
REV. S. PARKS CADMAN—Duty is the most fascinating pursuit for a healthy spirit.
PROF. R. L. GARNER—Once a gorilla takes a wife he cuts out the clubs and everything.

W. J. BRYAN—I will not allow anybody to drag me into a discussion of the presidential situation.

E. PHILIP PRINGLE—Pajamas cut you in two with the waist string, but the night shirt works up and leaves you cold.

G. K. CHESTERTON—The Prussian professors would defend cannibalism if they were allowed to call it Anthropophagy.

MARY PICKFORD—Some day I am going to study the history of art, as I feel it should be the part of every woman's education.

VICE-PRESIDENT MARSHALL—A member of the Supreme Court is a vestal virgin trimming the lamps at the altar of equal and exact justice.

GEORGE HAVEN PUTNAM—It is true I was born in England. But I am no more an Englishman than kittens born in an oven are biscuits.

WOODROW WILSON—I have sometimes been very much chagrined in seeing myself in the motion pictures. I have often wondered if I really was that kind of a "guy."

JAMES J. HILL—When the war is over the question confronting American wage-earners will be that of finding a market for their labor instead of fixing a price for it.

PROF. ERNST HAECKEL—The average course which the history of humanity follows is like the famous Echternach dancing processions, three steps forward, two steps backward.

BILLY SUNDAY—I have been in some churches where I could see the icicles hanging from the chandeliers, the frost on the walls, and where I felt like skating down the aisles.

GEORGE ADE—In the good old days, if most of the principals curled up and Died in the last act, the play was a Tragedy. If they stood in a line and Bowed, the play was a Comedy.

THE NEW PLAYS

The Great Pursuit is an ill constructed play, undecided whether to be tragedy or farce, but redeemed by most admirable acting, especially in the lighter parts. (Shubert.)

Captain Brassbound's Conversion. Grace George and her repertory company in one of Bernard Shaw's near masterpieces. Well-staged, well-played and entertaining. (Playhouse.)

The Blue Envelope. One of those old-fashioned farces where there are six doors opening into the scene and somebody behind each who does not want the others to see him or her; so they keep dodging in and out. (Cort.)

Lou-Tellegen does some excellent acting as *A King of Nowhere*—Celtic cousin of Henry VIII. The play has more histrionic than historic value. An expert fencing match adds to its entertainment. (Thirty-ninth Street.)

Merry Wives of Windsor. Mr. Hackett's production catches very happily the elate, sparkling atmosphere of the best in Shakespearean comedy. Scrupulous but thoroly vivacious acting, with a highly convincing Falstaff. (Criterion.)

The Washington Square Players give a varied bill—posterous French farce, negro psychology, "The Age of Reason," in which children satirize parental platitudes, and "The Magical City," an emotional play, well acted. (Bandbox.)

The Heart of Wotona. An Oklahoma Comanche Belasco play. The villain is a white cur whom everybody on the stage and off wants to shoot. The heroine is an Indian ingenue who draws handkerchiefs from everybody's pocket. (Lyceum.)

Pay-Day is a novel sort of parody on a supposedly typical moving picture thriller. Part of it is presented on the screen and then the curtain rises and the act continues behind the footlights. Satirical, sardonic and slushful extravaganza. (Booth.)

The Only Book on Will Power in the World

A Complete Course in Will Training Sent on Free
Trial—No Money in Advance—Just Mail Coupon

What Users Say

"'Power of Will' is intensely interesting—instructive. At present my copy is in the hands of a friend, a physician, who greatly enjoys it."—Rev. A. E. Harris, Assistant of Russell Conwell.

"I paid you \$3 in payment; from what I have already seen I believe I can get \$300 to \$30,000 worth of good out of it."—C. D. Van Vechten, General Agent No. West Life Ins. Co., Cedar Rapids, Ia.

"I am unable to do this book justice with the pen. It is a lifelong study, known and prized by those who are fortunate enough to select it out of the many."—Sam'l Rose, Jefferson Loan Society, Inc., Norfolk, Va.

"After carefully looking it over I am fully convinced that it is everything which has been claimed for it—and a great deal more. It is a wonderful book on a wonderful subject."—Gus A. Olson, Cashier Shermerville State Bank, Shermerville, Ill.

"I specialized on psychology—and I consider 'Power of Will' the greatest book on the subject ever written. I will make it an important factor in my scheme of life."—J. H. Leventhal, Butler Hebrew Inst., Butler, Pa.

We have hundreds of such testimonials on file.

What do you want most in life? Money and all that goes with it? Reputation, Prestige, Power? Greater mental and spiritual happiness? Whatever you want, whatever you have dreamt of some day having can be yours if you will follow the principles laid down for the first time in this wonderful book.

"Power of Will" is the only system in all the world that teaches you how to strengthen your will. While bound in book form it is in reality a complete course of 28 fascinating lessons which any one can understand and follow. And the results are well nigh miraculous.

Never in the history of self-help literature has a book created such a sensation. Last year alone over 100,000 men and women became owners of "Power of Will." On every hand one hears people discussing the wonderful values of this book and the successes being won by those who are applying its success-achieving secrets. They include leaders in business, politics and the professions—men of national repute, as well as thousands of others who are now on the road to leadership in their respective fields of endeavor.

What Is Will Power?

The will is the motive power of the brain. Without a highly trained, inflexible will, a man has about as much chance of attaining success in life as a railway engine has of crossing the continent without steam. The biggest ideas have no value without will power to "put them over." Yet the will, although hitherto entirely neglected, can be trained into wonderful power like the brain or memory and by the very same method—intelligent exercise and use.

If you held your arm in a sling for two years, it would become powerless to lift a feather, from lack of use. The same is true of the will—it becomes useless from lack of practice. Because we don't use our wills—because we continually bow to circumstance—we become unable to assert ourselves. What our wills need is practice.

"Power of Will"

By Frank Channing Haddock, Ph.D., a scientist whose name ranks with such leaders of thought as James Bergson and Royce, is the first thorough course in Will Power ever conceived. It is the

result of over 20 years of research and study. Yet you will find every page in the 28 lessons written so simply that anyone can understand them and put the principles, methods and rules into practice at once with noticeable results right from the very start.

Some "Power of Will" Owners

Among the owners of "Power of Will" are such master men as Judge Ben B. Lindsey; Supreme Court Justice Parker; Wu Ting Fang, ex-U. S. Chinese Ambassador; Lieut.-Gov. McKelvie of Nebraska; Assistant Postmaster-General Britt; General Manager Christeson of Wells-Fargo Express Company; E. St. Elmo Lewis, now Vice-Pres. Art Metal Construction Company; Gov. Ferris of Michigan, and many others of equal prominence.

May Change Your Whole Life

The users of "Power of Will" regard it as a veritable text book—it has enabled thousands to carry to a conclusion plans which they had worked on unsuccessfully for years—it has made active men of affairs out of pitiable down and outers—it has transformed those who had always been the pawn of others into self-confident powerful leaders—it has enabled men and women held down by petty fears, by trivial daily incidents, to brush them aside as though made of papier mache—it teaches self-mastery, control of appetites and desires—it has cured drunkards of long standing—it has made innumerable sick people well—it has brought peace and happiness to nervous, discontented, envious natures, and it has enabled strong, successful men by the thousand to accomplish bigger things by giving them even greater power to use in their dealings with others.

No matter what your occupation in life—no matter what your age—"Power of Will" can help you by giving you the power to say "I will," by giving you unwavering determination to carry out your purpose in spite of all—by showing you how to succeed where others fail—as over 100,000 men and women owners of "Power of Will" can tell you.

Send No Money—Examine Book First

Although "Power of Will" is a 400-page, leather bound book containing more material than many \$25 correspondence courses, the price is only \$3. The publishers will gladly send a copy free, for five days' inspection. Send no money now. Merely mail the coupon on the right, enclosing your business card, or giving a reference. If you decide to keep the book, send the money. If not, mail the book back. Tear out and fill in the coupon, or write a letter NOW, before you turn this page.

DODD OF "DODD'S RIDE"

A SEVENTEEN-HOUR RIDE WITH A FIGHT AT THE END OF IT ADDS ANOTHER CHAPTER TO THE RECORD OF OUR FAMOUS CAVALRY REGIMENTS. WHITE AND BLACK, THE SEVENTH AND THE TENTH CAVALRY, THEY RODE NECK AND NECK IN PURSUIT OF THE BANDIT, VILLA, AND THEIR LEADER WAS COLONEL GEORGE

A. DODD, WHO IS BILLED FOR RETIREMENT NEXT JULY BECAUSE HE WILL BE SIXTY-FOUR AND THEREFORE PRESUMABLY DECREPIT

WILL HOLLAND HAVE TO FIGHT GERMANY?

THESE is great and manifest uneasiness in Holland, the uneasiness of a small, weak Power wedged in between two powerful belligerents. For many days past the papers have been full of rumors of Dutch mobilization, of the closing of the frontier, of dangers threatening the people of the Netherlands both from the Allies and the Germans. On the one hand it is reported that Great Britain and France are determined to put an end to a situation which has made of Holland the chief clearing-house for German imports, and that they would really prefer the Dutch to be openly ranged on the side of their enemies. On the other hand, it is said that Germany believes that the British meditate a landing in Holland in order to strike at the Teutonic flank and that in this belief she is demanding permission to send German troops to reinforce the Dutch army. A further report makes nonsense of both these suppositions by suggesting that the recent sinking of the "Tubantia" and other Dutch vessels is a part of a deliberate German plan to drive Holland into the war. Finally, the real root of Dutch perturbation is declared to be a fear that a successful Allied offensive may lead to a violation of Dutch neutrality.

Which of these delightfully contradictory rumors is the most credible? From which side have the Dutch most to fear? The answer is clear to any one who looks at the broad, determining facts. It is from the Germans and from them alone that the Dutch have anything to fear. That the British or the French would dream of duplicating the infamy of Germany's occupation of Belgium by an invasion of Holland is unthinkable. That the Allies who already have their hands sufficiently full are thinking of adding Holland to the list of their opponents that they might thereby be legally empowered to blockade the Dutch coast, seems on the face of it not less fantastic. The conclusion, therefore, is irresistible that it is on Germany's policy today and on her possible action in the future that Dutch apprehensions turn. And this conclusion is buttressed by official German utterances in the past and by the pressure which Germany will increasingly feel to invoke once again the "necessity" which "knows no law."

WHEN the German Chancellor at the beginning of the war declared in effect that Belgium would be of little value to Germany unless a considerable slice of Holland were thrown in, he said a very significant thing. Its significance so far has been obscured by the German successes on land. The Kaiser up to now has had no occasion to treat Holland as he treated Belgium. But as soon as the tide begins to turn and the hopelessness of a final victory is driven into the mind of the ruling caste, the position of Holland, instead of being more secure, will be less so. It will be less so because in proportion as the possibility of defeat becomes a probability, and the probability a certainty, the Germans, or the governing clique in Germany, will be tempted, if not compelled, to gather in all the counters they can lay hands on to bargain with in the day of settlement. The harder Germany is pressed along her present fronts the more will she be driven to recoup herself elsewhere. That is why the sinking of these Dutch steamers has a

sinister air. That is why the talk of a deliberate attempt on Germany's part to goad Holland into the war cannot be dismissed as meaningless. That also is why among the conceivable developments of this conflict a German invasion of Holland has to be taken into account.

If a handful of soldiers, Junkers and blood-and-iron statesmen decide that German interests require the occupation of Holland, Holland will be occupied. The considerations that will guide them will be of the simplest character. That Antwerp is useless without the full control of the Scheldt; that now or never is the time to settle the question of the Rhine; that 400,000 Dutchmen present an easier military problem than 1,000,000 Englishmen with vast reserves in the background; that the seizure of Holland, besides facilitating the prosecution of the naval war against England, would immensely strengthen the hands of German diplomacy when the terms of peace come to be discussed—such are the sort of arguments that will count in deciding this issue. And behind them and perhaps governing them all will be the desperation of the official hierarchy, fighting to the last for its powers and privileges, and acutely conscious that its knell has sounded unless it can show that the sacrifices it has exacted from the German people have resulted in some solid, tangible gains.

ONE must remember, too, that the incorporation of Holland in the German Empire has long been an object of Pan-German policy; that all Germans are Pan-Germans at heart; and that the Pan-German program, officially repudiated at the outset, is very apt to be officially adopted in the sequel. The German Jingoism have never acquiesced in Dutch control of the Lower Rhine. That the mouth of the German Tiber should be in the hands of strangers, that a small and weak people should sit astride of Germany's busiest river, is as vexatious an anomaly as tho the mouth of the Mississippi were still in Spanish hands. It bars Germany out from the full freedom of the North Sea. It places her in the intolerable position of a man denied a key to his own front door. It makes of the short and difficult coast line between Holland and Denmark virtually the sole effective channel for the commerce of that great empire.

The Dutch have been warned time and again that this cannot endure, that Germany sooner or later must advance to her "natural" confines, and that an end would eventually have to be made of a situation which allowed Holland to share in the advantages of German progress without sharing in its burdens.

It has been of little avail. The Dutch are not willing to give up Free Trade; they foresee that an economic union with Germany foreshadows a complete political subserviency to Berlin; they intensely dislike the German militarist and bureaucratic spirit; they are far more conscious of the points of character, speech and manners that differentiate than of those that tend to unite the two peoples; and they cling with a hardy pride to the memories of the greatness of their past.

But the idea that Holland cramps Germany's development and shuts her off from much that she vitally needs for the protection of her security and the full utilization of her strength is one that has taken deep root in

the German mind. The necessity which knows no law may again be invoked to use that idea as the justification for further aggression. The Dutch at any rate do well to stand by their dykes and their guns in a state of instant preparedness. For them, more than for almost any other neutral, the war has been an incessant and imminent anxiety. Their difficulties and their dangers both increase as it nears its climax and the prospect of Germany striking out blindly in defeat to save whatever she can from the wreckage of her original hopes draws nearer and nearer.

THE GERMAN OPPOSITION

WHEN the Reichstag first assembled after the war broke out, one solitary Socialist voted against the war budget. Later on in the year 14 Socialists opposed war credits. In December, 1915, the number had risen to 20. Now 33 Socialists have voted against disciplining a member who declared "We cannot bring our enemies to their knees any more than they can Germany."

These 33 Socialists represent a million and a quarter of the Socialist votes. Can it be presumed that such a large proportion of the most intelligent people in Germany are beginning to get tired of the war? We shall see.

WHO WANTS WAR?

WE suppose there is not a responsible person in the whole United States who believes that our preparedness movement is designed for the purpose of waging an aggressive war upon Japan. We suppose likewise there is not a responsible person in all Japan who believes that the Japanese preparedness movement is for the purpose of waging an aggressive war upon the United States.

Yet there are sane people in America who believe Japan is preparing to attack us, and there are likewise sane people in Japan who believe the United States is going to attack them.

For instance, *The Chicago Tribune* not many days ago gave some of its valuable space to the report of a speech made by one John Maynard Harlan—"a candidate-at-large to the Republican National Convention"—who told a Champaign, Illinois, audience that

Japan could within a comparatively short time place 100,000 troops in Chicago. They could easily bring over small river boats "in the knock-down," put them together at New Orleans, after capturing that port, and steam up the Mississippi River at their leisure, taking cities and towns en route.

We presume the Japanese would come to New Orleans via the Panama Canal, altho so far we have found it rather difficult to traverse it ourselves.

Such a news item must seem about as absurd to the Japanese as the following editorial in the March issue of the *Japan Magazine* seems to us. Remember that the *Japan Magazine* is a reputable and responsible journal:

The Tokyo *Nichinichi* is quite alarmed at America's program of army and navy expansion, which, it says, attracts the attention of the world. Why does the United States require such enormous defenses? Some may say that America is preparing against Germany after the war; but so long as she maintains amicable relations with England she can have nothing to fear in that direction. No; America's objective is in another direction. She wants to command a big navy on the Pacific and play a striking rôle in the Orient. Japan, which holds the key to the peace of the Far East should not neglect to keep a sharp eye on American

policy. No amount of peace talk can alleviate Japan's anxiety over America's determination for a big navy. President Wilson seems to support the Monroe Doctrine, but if America has an ambition to play a leading part in Oriental affairs it is inconsistent with the Monroe Doctrine. There is no doubt that the aim of the American Government is to secure a foremost position in the Far East and the American people are determined to extend their concessions in this direction. In carrying out such a program how can America avoid conflict with Japan? This is what we fear. Japan has brought herself to the present position at enormous expense; and the position must be maintained at all costs; but how is she to do so in the face of American ambition?

If each nation now would only give the other the credit of being as unwilling to take offensive measures as it knows itself to be, all this disheartening war talk would cease. Or are there sinister influences working underground to bring about unfriendly relations between Japan and America? It would almost seem so.

A FILM OF WAGNER

THE Germans, under the maternal care of necessity, are developing their own resources. They are making nitrates from the air, cotton from wood and rubber from potatoes. Thru the assiduous watchfulness of their dearest foes they are protected from the temptation of wasting their money on foreign luxuries such as the American movies. Our Wild West films have always been highly appreciated in Europe for their educational value in giving a true picture of American life. There are, of course, brands of cowboy films made-in-Germany, but somehow the sight of an actor in chaps climbing to the top of his mount by the aid of a horse-block, and afterwards holding on by the aid of a saddle horn, does not convey the thrill of the genuine even to the unsophisticated European.

But now, deprived as they are of broncho-busters and suffering for lack of Charlie Chaplin and Mary Pickford, the Germans have been obliged to fall back upon such native talent as they do possess; so they have put Wagner on the screen. "Lohengrin" is the first to be filmed, and it is said to be a great success. The orchestra leader watches the screen and keeps the music in time to the action. It is also produced without an orchestra by the use of a synchronized phonograph.

This is a development of the music drama that would have delighted Wagner. His ambitions transcended the limitations of the stage of his day, and attempting the impossible in scenic effects he sometimes achieves the absurd. Even the devout Wagnerite can scarcely suppress a snicker at the sight of the gods crowded together on the gang plank running into the back screen which is supposed to represent the rainbow bridge leading to Valhalla. The Rhine maidens have always protested that they could not sing while hanging head down from the flies. The dragon has never been able to frighten a school girl. The castle of Klingsor does not vanish, but folds up and moves off with many a creak and rumble.

Now the magic of the movies can make visible the wildest of these dreams of Wagner. He did the best he could with such machinery as he had to get cinema effects. In the ride of the valkyries he used the stereopticon. In "Parsifal" he employed the panorama to produce moving scenery. But real giants and dwarfs were not to be obtained at any price, and it too often happened that the best singers did not look the part and could not act.

But now the Elsa need not appear as a too robust and

over-mature prima donna and Lohengrin can really look the swankiest. To state this the film opera has another advantage at the present time; it does not take men from the front. The actors may be filmed on a furlough and then continue to play their rôles in all parts of the empire while they are fighting or have fallen at Riga or Verdun.

ILLITERATE HUMBUGGERY

THE United States Congress will again pass a bill forbidding the admission of illiterates into this country, and again the President will veto it, altho there is some fear that it will be passed over his veto. The bill is a pretense and a humbug. It deceives nobody. No one is afraid of any danger from the admission of immigrants who cannot read and write. The object of the bill is to shut out immigrants, as many as possible, whether they can read or not. What is feared is that they will work and earn money and divide jobs with those already here. It is a very shortsighted policy. Every able-bodied immigrant, willing to work, adds so much to the wealth of the country, benefiting others as well as himself. Opposition to immigrant labor is as unreasonable as opposition to the introduction of machinery.

It is a part of the argument in favor of exclusion that the end of the war will bring to us an avalanche of ignorant immigration. That is far from likely. Workmen will be in demand abroad and money will be scarce to pay the passage. Passenger agents expect much more that the drift will be in the opposite direction. Tens of thousands will be taking steerage passage to visit their old homes and help their relatives. This talk about a flood of invasion is but a part of the pretense to help an unworthy cause.

AN ARMY STRIKE

AUSTRALIA used to be held up to us for our shame and emulation as "a country without strikes." But later, like all model children, it fell from grace, for in spite of its admirable machinery for the settlement of industrial disputes, the men would strike even on trivial occasions and against the decisions of their own tribunals. Now, it appears, "the right to strike" has been extended to a form of service which has, in theory at least, hitherto been exempt, that is the army. The recruits in the training camp near Sydney, who were being prepared to go to the front, decided that forty hours of drill per week was an intolerable imposition, tho it seems to be well within the limits of the eight hour law. So they went on strike and, seizing the railway trains, went to Sydney by the thousands. After looting the saloons they proceeded to paint the town red, and the 2000 men on police and picket duty were powerless to control them. Finally the labor government did what every other government, be it autocratic, aristocratic or bourgeois, has been obliged to do under similar circumstances, it put down the rioters by force. A regiment of loyal troops was sent to the scene of disturbance, cleared the streets by bayonet and cavalry charges and finally used ball cartridges on the mob at the Grand Central Station, killing one and wounding eight.

We used to be told that when the people owned the industries and determined for themselves the wages and conditions of labor, that work would be done with

good will and efficiency. But in Australia, where the state owns and manages the railroads, and where the state is merely the political branch of the labor unions, the old ca' canny policy still prevails. In the workshops of the state railroads of New South Wales the following placards were printed and posted:

Don't scab upon the unemployed by working hard. Slow work means more jobs—more jobs mean less unemployed—less competition means higher wages, less work, more pay. Slow down! Slow down! Don't be slaves!

With such admonitions reinforcing the natural disposition of all human beings to work as little as possible, it is no wonder that the efficiency of the service fails to meet the demands of the times.

Obviously the labor union rules and the labor union spirit are serious handicaps when it comes to war. It would be decidedly inconvenient if the first line troops should stop work and throw down their tools when their eight hours were up, or if they should adopt sabotage methods and jam their machine guns. Strikes among soldiers, formerly called "mutinies," have been known in all ages; the Pretorian Guards in the later days of the Roman Empire were much given to them, and the "slow down!" tactics of the Australian workshops are what has long been known as "soldiering." Such spirit and methods are really just as much of a detriment to a nation in time of peace as in time of war, tho the injury is not so conspicuous. The labor movement has done much in Australia and elsewhere for the advancement of wages and improvement of conditions, but it has failed to secure efficiency except by the adoption of the measures it condemns.

A HUNDRED YEARS AFTER

MASSACHUSETTS is not what it was early in the last century. It seems more than a hundred years ago that a mob of Protestants angrily demolished a Catholic convent in Charlestown, Massachusetts. Catholics were few then in the state and they did not try to rebuild it, but left the ruins as a monument of the malignity of Protestantism toward Catholic Christianity. We think we are living in a better world now when religious bigotry is vanishing away; and yet last week in Haverhill, Massachusetts, on two successive nights an angry mob of many thousands attacked the City Hall, smashed windows and doors, overpowered the police, injured and attempted to kill citizens and officers of the law, and so terrorized the city that the Governor had to call on the militia for protection. And it was a religious riot, only the conditions were reversed. It was the Catholics that composed the mob. Massachusetts cities are ruled by Catholics now; they have the population.

A foolish, reckless man who called himself an expriest had announced that he would make an address against giving public funds for parochial schools. We presume it was viciously intended to excite religious hatred. The proper way to treat it would have been with contempt. Those who did not like it should have stayed away and allowed him to speak to empty benches. Instead of that they advertised the lecturer and disgraced themselves, their city and their church. Here and now, in the early twentieth century, they rivaled the Charlestown mob of the early nineteenth century. There is nothing to choose.

We have no word to say against parochial schools. If parents wish to send their children to a religious school they have a perfect right to do so. If parochial schools are better than public schools it will appear in the product. If the public schools are the better that will come in evidence. *Probat ambulando*. The teachers in our public schools are a noble body of men and women, and the same can be said of the Sisters and Brothers who teach in the religious schools. They can live side by side in peace and if they are well taught their graduate pupils will be all fellow-citizens together, and love law and detest riot.

TOMMY ATKINS' REPUTATION

THE British army is not only bigger than ever before, but it is better behaved. At least it is supposed to be and anybody who insinuates to the contrary goes to jail. A London periodical, the *Bystander*, has been prosecuted for publishing a cartoon in which a British soldier is represented lying drunk on the ground "somewhere in France." The mere suggestion that any one of Kitchener's four million could so demean himself was held to be an actionable libel upon the army.

We congratulate Great Britain upon the high character of its soldiery, assuming, of course, that it was a case of false libel and that the cartoon could not have been drawn from life. Such a great improvement in so short a time is as remarkable as it is commendable. It was, if we remember aright, not many years ago when Kipling was amusing the British public with plain tales and barrack-room ballads to which this cartoon might have served as illustration. This most patriotic of poets also wrote verses in praise of loot and told how the sentry shut his eye when the officer rode past upon his sword. Now all that is over and forgotten, and Kipling, if he dare to write such nonsense nowadays, would be apt to find himself in prison instead of in the hall of fame.

But there is still another vice than drinking which Shakespeare and others have intimated was characteristic of the soldier. We mean profanity. It was at one time whispered about in England that "our army swore terribly in Flanders." The army is in Flanders again. The provocation is quite as great. Does Tommy Atkins resist the temptation nowadays? That is what we want to know, but we cannot think of any way of finding out except by publishing a cartoon of a British soldier with an oath coming out of his mouth. Then if we were sued for libel we should have to assume that Kitchener had indeed a model army.

IMPARTIALITY AND NEUTRALITY

THE two words *impartiality* and *neutrality* do not mean the same thing. In fact they are very different. One is positive and the other negative. One a word of strength, the other a word of weakness.

It is the business of a judge to be impartial, but not to be neutral. His business is to decide, to pronounce acquittal or guilt and punishment. He has to take sides. He must impartially acquit or convict. The position of a neutral is very different; he is an onlooker, nothing else. He has no passion, no sentiment, no judgment, or if he has he keeps it to himself and "roots" for neither side. Impartiality is the attitude of an intelli-

gent, self-respecting man, while neutrality is the attitude of the brutes about the ring of a dog-fight.

Unfortunately action and feeling cannot always go together. In the present terrible war it is the business of every intelligent citizen to be impartial, to commend or to condemn; he must do it if he has a conscience; he cannot be neutral; but it is different with what are called neutral states. The neutral nations must stand about the dog-pit and restrain their individual feeling and give equal show to the combatants. That is what we are trying to do.

Yet not wholly neutral. Neutrality has its limit. The game of war must be played by its rules, and even President Wilson has found it necessary at times to rise above the level of dead neutrality into the height of impartiality. If our Government did not protest impartially when Germany broke its pledged faith and invaded Belgium, it has at least strongly condemned the murder of innocent passengers of the "Lusitania" and a succession of other similar crimes. Our Government is finding it very hard to maintain the attitude of neutrality.

The most unhappy position is that of the Pope of Rome. Benedict XV is head of the Catholic Church the world over, and nearly all his spiritual subjects are fighting on one side or the other. Shall he be impartial or shall he be neutral? That depends upon whether he considers himself a temporal and political or a religious and spiritual potentate. If he is the teacher of the world's religion and morals it is his business to speak strongly and impartially in favor of what he sees to be justice, as does Cardinal Mercier. If, on the other hand, he considers first his political interest to maintain his position between the warring camps and offend neither, he will prudently declaim on the evils of war, the duty of seeking peace and the maintenance of a Christian spirit on the part of those who are killing each other.

A SECOND CANAL

THE United States Government has constructed a great Panama Canal. It now has the right, by treaty with Nicaragua, to dig the second great canal which one day must connect the Atlantic and the Pacific Oceans. Our Government ought forthwith to begin planning for its construction.

The United States built the canal at Panama, after great question between the route and that by Lake Nicaragua. We have finished the Canal, opened it to the trade of the world, and have had to close and reopen it more than once on account of persistent slides.

We need just now and may sorely need at any time in the future a second Canal. Of course we hope to control the slides, and we probably shall. Then there is the certainty of congestion some day from enormous and growing traffic that will eventually require two channels. The Nicaragua Canal will save about a thousand miles of travel to vessels from New York to San Francisco or Portland. We have the engineers, we have the machinery, and it would be the part of wisdom immediately to confirm our option, undertaking the preliminary work. It will relieve us from possible political complications later and will permanently and completely ensure American influence thruout Central America.

THE SCENE OF THE MEXICAN MAN-HUNT

VILLA, AS THE INDEPENDENT GOES TO PRESS, IS BELIEVED TO BE
ON HIS WAY TO PARRAL, AND DODD'S CAVALRY
HAS GONE BEYOND SATEVO

THE STORY OF THE WEEK

On Villa's Trail The pursuit of Villa and his band has gone on during the past week persistently but uneventfully. It seems certain that the bandit is really wounded so seriously that he is being carried in a litter by his men. After the rout by Colonel Dodd's cavalry of Villa's force which had attacked Guerrero, the bandits continued to flee south toward Paral. Two or three small encounters with American and Carranzista troops somewhat depleted their numbers; but it was soon reported that the bandit's force was being swelled again, tho whether voluntarily or by conscription is not known. American cavalry is hot on Villa's trail south of Satevo, and General Pershing has left his headquarters at the San Geronimo ranch and gone south to Satevo.

The American line into Mexico has been extended over 400 miles, and the problem of transportation of food, forage, ammunition and other supplies grows steadily more difficult. The State Department has tried to negotiate an agreement with General Carranza for the use of the Mexican railways for sending these necessary stores nearer to the forces in the field. But the *de facto* President has shown his usual spirit of obstinate arrogance, and declined to accede to this eminently proper request. The expedient has been tried of having shipments of army supplies made to private traders in Chihuahua for transfer by them to the quartermasters in the field. The question is also under consideration of establishing a new line of transportation direct from Presidio and Ojinaga on the border to Chihuahua. This line would be only about half the length of the present one from El Paso and Juarez.

Excitement was caused last week by rumors than there was an intention of withdrawing the forces in Mexico before Villa was captured. It was promptly allayed, however, by the declaration of the Secretary of War that the rumors were quite without foundation. Mr. Baker said, "The object of the expedition . . . has never been changed. No other orders have been given and the expedition is busily pursuing that object now with what, I hope, is a fair chance of early success." The original object of the expedition has been twice explicitly stated by President Wilson. On March 10 he said, "An adequate force will be at once in pursuit of Villa with the single object of capturing him and putting an end to his forays." On March 25 he reiterated this in these words, "The expedition into Mexico was ordered under an agreement with the *de facto* Government of Mexico, for the single purpose of taking the bandit, Villa, whose forces have actually invaded the territory of the United States." There is no reason to suppose that the Administration has any thought whatever of deviating from this purpose until it is accomplished.

The Reorganization of the Army The Senate has agreed to vote on the Army Reorganization bill on Tuesday, April 18. The Legislative, Executive and Judicial Appropriation bills were passed last week to make way for the Army bill. Next came the bill continuing the sugar duties. Then from Tuesday of this week, the Army bill has the right of way.

There are two hotly contested points in this bill—the provision for increasing the pay of the National Guard, and the national volunteer reserve provision. The latter escaped elimination from the bill in Committee of the

Whole by the narrowest of margins. Thirty-four votes were cast in favor of throwing it out, and only thirty-six in favor of retaining it. The motion to discard it will almost certainly be renewed and the margin of safety is so slight as to afford the supporters of the provision scant sense of security. The votes for retaining the section were quite evenly divided between the two parties—seventeen Republican and nineteen Democratic—while on the negative side the preponderance of Democratic votes was decidedly greater—thirty-four Democratic to ten Republican. Obviously the question of army reorganization is cutting squarely across party lines.

The conflict between these two provisions of the Army bill is a straight out disagreement as to fundamental principles. Under the section in question the reserve force behind the regular army would be a national organization at the command of national authority at all times, made up of national volunteers, trained and prepared under exclusive Federal authority. Its members would be drawn from their usual employments for only a small part of the year, unless needed for actual service.

In this respect the national volunteer reserve plan is like that for additional support for the National Guard; but in the other respects it is entirely different. The National Guard comprises forty-eight separate forces, each primarily under the control of a single state, and available for Federal service only in certain limited contingencies. The militia may be used by the Federal Government only to enforce Federal law within the states, to suppress insurrection or to repel invasion in time of war.

The movement to substitute additional financial support for the state militia for the plan to create a national volunteer reserve has been strongly assailed as tainted with a "pork-barrel" quality. It is asserted that a strong lobby is maintained by the National Guard organizations of the country for the purpose of influencing the army legislation in the direction of increased financial profit for state militiamen. Senator Chamberlain, of Oregon, chairman of the Senate Committee on Military Affairs, declared in the Senate that the lobbying which militiamen were doing almost inclined him to "put the Guard out of business."

The Army bill, as it passed the House, contained the additional pay for the National Guard feature, without the National volunteer reserve plan. The conflict between the two proposals will doubtless be threshed out in conference, as will the difference between the House and the Senate as to the size of the enlarged regular army. The House bill provides for 140,000 men; the Senate bill for 178,000.

These fish-pole sections are fitted together to make the 103-foot rod shown in the illustration below

Mr. Roosevelt's Platform

There is one outstanding fact about Theodore Roosevelt. No one has to take him on faith. He is wont to let it be known in no uncertain terms just where he stands—and where he thinks the rest of us ought to stand—on the important questions that confront the nation. To a group of political visitors at Oyster Bay the other day he made it emphatically clear just what any political party that contemplated nominating him for the Presidency would have to expect. The subject was broached by a prospective delegate to the Republican National Convention, who said: "You know, Colonel, I may make up my mind that we will have to nominate you."

The response was characteristically instantaneous: "Let me give you a piece of advice. If you have any doubt on the subject do not nominate me. Get it perfectly clear in your head that if you nominate me it mustn't be because you think it is in my interest, but because you think it is in your interest and the interest of the Republican party, and because you think it to the interest of the United States to do so."

This is good doctrine. It is the only possible basis on which a candidate for the Presidency—or, indeed, for any office—should be selected.

Mr. Roosevelt thereupon proceeded to outline his beliefs as to the paramount issues before the people of the United States at the present time. He prefaced this statement of his creed with the almost superfluous warning, "Don't you do it if you expect me to pussy-foot on any single issue I have raised." The Colonel, whatever else he may be, is no pussy-foot. The first item in the Rooseveltian creed is Americanism and no hyphenism.

Don't be for me unless you are prepared to say that every citizen of this country has got to be pro-United States, first, last and all the time, and no pro-anything else at all, and that we stand for every good American everywhere, whatever his birth-

place or creed, and wherever he now lives, and that in return we demand that he be an American and nothing else, with no hyphen about him.

Every American citizen must be for America first and for no other country even second, and he hasn't any right to be in the United States at all if he has any divided loyalty between this country and any other.

I don't care a rap for the man's creed or birthplace or national origin, so long as he is straight United States. I am for him if he is straight United States, and if he isn't I am against him.

The second item sets forth his views on war:

I am not for war; on the contrary, I abhor an unjust or a wanton war, and I would use every honorable expedient to avoid even a just war. But I feel with all my heart that you don't, in the long run, avoid war by making other people believe that you are afraid to fight for your own rights.

Uncle Sam must never wrong the weak; he must never insult any one or wantonly give cause of offense to either the weak or the strong.

The last item deals, of course, with preparedness:

And don't you nominate me unless you are prepared to take the position that Uncle Sam is to be strong enough to defend his rights and to defend every one of his people wherever those people are, and he can't be strong enough unless he prepares in advance. . . . The squarest possible way to enable him to keep the peace and to keep it on terms that will enable Americans to hold their heads high and not hang them in shame is for him to be so prepared in advance—and I mean prepared in his own soul as well as with his army and navy—that when he says anything the rest of the world will know that he means it, and that he can make it good.

Don't you try to nominate me unless you think that is the policy that ought to be followed out, and followed out for your sake as much as for mine, and for the sake of the rest of us here in the United States, and don't forget that isn't a course that provokes war; it is the only course that, in the long run, prevents war, and secures national self-respect and guarantees the honor of this country, and the rights of its citizens wherever they may be.

So there we have the Theodore Roosevelt of the present day. If the Republican party wants a man for

President who holds such views, and holds them, as he would say, not "tepidly," it knows where to find him.

Seventy-five prominent Republicans of New York State, including a score of delegates to the National Convention, have issued a public indorsement of Elihu Root for the Republican nomination for President. In their pronouncement they set him forth as "the ablest living American." The platform upon which they propose him to their fellow Republicans is, like the Roosevelt platform, one of Americanism and preparedness. The seventy-five include among their number Nicholas Murray Butler, Cornelius N. Bliss, Otto Bannard, Joseph H. Choate, Chauncey M. Depew, Job E. Hedges, John G. Milburn, William A. Prendergast, James R. Sheffield, Henry L. Stimson and Senator James W. Wadsworth, Jr. They include, as is perfectly natural, many well-known lawyers, and on the whole the membership is distinctly conservative. Their statement is as follows:

Elihu Root is the ablest living American.

The next four years will be critical in the life and influence of the people of the United States. New and vitally important problems confront the American people. Not only the domestic questions of national prosperity, of economic and industrial readjustment of the social welfare and of the

IT'S A LONG DRIVE AND A DANGEROUS ONE

The refusal of the Mexican Government to allow any but the most indirect and inadequate use of the Mexican Northwestern Railway for the transport of supplies to the punitive force has forced the army to rely on motor trucks. From Columbus to Guerrero is 300 miles

best use of our natural resources are pressing for solution, but the international policy of the nation is now to be defined in terms of present-day needs and relations.

At this time the nation requires its best trained, most experienced and most thoroughly tested leader in the highest executive office. After sixteen years of devoted public service as Secretary of War, Secretary of State and Senator of the United States, Elihu Root stands preëminent among contemporary Americans as a constructive, far-sighted and forward-facing statesman. While he has declined to become a candidate for even the highest political office, yet if nominated for the Presidency by the coming national convention at Chicago his sense of public duty must compel his acceptance.

As Americans, believing in an American policy at home and abroad and in proper preparation to express and to defend such a policy, we favor the nomination of Elihu Root for the Presidency of the United States.

The main plank in the Root platform, as here suggested, and as more fully set forth by Mr. Root himself in his speech at the Republican State Convention recently, is little different from that of Mr. Roosevelt. In choosing between the two men, the Republican party will have to be guided by other considerations—such as age, type of mind, temperament, fundamental convictions on domestic problems, associations, availability, popularity.

Meanwhile, Mr. Justice Hughes, the third in the trio of Republican possibilities, goes on administering justice on the Supreme Court bench—and says nothing, in both of which activities he is an adept. The Republican State Committee at a recent meeting adopted a resolution calling for the nomination of "a tried Republican, on whose record and character the nation can rely as a guarantee of wise statesmanship in the management of foreign and domestic affairs." State Senator Ogden Mills, who offered the resolution, declared, after the meeting, that this was a Hughes resolution—he himself being for Justice Hughes "first, last and all the time." Senator Wadsworth, however, who also voted for the resolution, declared, "We are going to work for Senator Root. He is our first, second and third choice for President."

Canadian War Graft

Canada's united support of the Great War, which has made possible a remarkable response to the Empire's need, is rudely threatened by

charges of huge war graft in the making of munitions, which may involve Major General Sir Sam Hughes, Minister of Militia.

Six weeks after the war began a Dominion Shell Committee was formed to take charge of the manufacture of munitions for the Canadian and British governments. It was later superseded by an Imperial Munitions Board, but its contracts, totaling more than \$300,000,000, are now under fire from the Liberal Opposition in the Dominion Parliament.

On March 28 documentary evidence of graft was offered in a Parliamentary debate at Ottawa by George W. Kyte, a Liberal member from Nova Scotia. He declared that thru the influence of Honorary Colonel J. Wesley Allison, a friend of General Hughes and publicly praised by him, four contracts for fuses, cartridge cases and picric acid had been so manipulated as to return a profit of over a million and a half dollars to Allison, his associates and the manufacturer. It is said that two orders for fuses, worth \$23,000,000, were placed with mushroom companies in the United States, companies which had neither adequate capital nor facilities for manufacture. Deliveries were therefore much delayed, and there is widespread indignation at the injury which may thus have been done to Canadian soldiers overseas.

Colonel Allison could not be reached when the charges were made, but it developed that he had been to Florida and was slowly traveling home. Sir Sam is in England, where he reviewed the Canadian troops on April 3, and tho he has cabled a flat denial of improper conduct, his return is anxiously awaited by his associates in the government.

Sir Wilfrid Laurier, Opposition leader at Ottawa, demanded an unlimited investigation of the Shell Committee contracts by Parliamentary commission. This the Government declined to grant, but by an Order in Council a Royal Commission has been appointed to sift the charges relating to the four contracts mentioned and make such other investigations as further orders in council may require. Sir Wilfrid's motion was defeated by party vote. Sir William Meredith, Chief Justice of On-

tario, and Justice L. P. Duff, of the Supreme Court of Canada, are the commissioners.

The "Sussex" Question

The sinking of the "Sussex" seemed at first likely to bring to a head the dispute between Germany and the United States over the use of submarines, and it has been rumored from Washington that our government was about to break off diplomatic relations on the ground that Germany had violated her pledge not to attack liners without warning. But the evidence of German responsibility is not so complete as one would like if the case is to be made the ground for action leading to a severance of relations and possibly to war. In the first place nobody on board the "Sussex" saw a submarine or a periscope, altho it was in the afternoon of a clear day. The captain and several others, however, report having seen the wake of a torpedo a few seconds before the explosion. The captain when he saw this gave orders to swing the ship, but this was done too late to dodge it.

The "Sussex" was a regular packet steamer plying between Folkestone and Dieppe. She was unarmed and carried no munitions. There were aboard on the day of the disaster, March 24, about 350 passengers and a crew of fifty-three. Of these there were about fifty who lost their lives, among them many women and children. None of the Americans on board was killed, but two were badly wounded, George Crocker and Miss Elizabeth Baldwin, daughter of Professor Mark Baldwin, the psychologist.

Fragments of metal found on board the "Sussex" and supposed to come from the torpedo have been sent to Washington for examination. These are said to be of phosphor-bronze not used in any torpedoes than the German.

Against this evidence there is the positive denial of the German Government that the "Sussex" was sunk by a German torpedo. It is stated by Berlin that all the craft which might possibly have been involved in an attack on the "Sussex" have now reported, and that the reports of their commanders make it certain that no German submarine or warship is responsible.

The German Government denies that it has relaxed its rules to submarine commanders, and it reaffirms its responsibility in case its instructions are violated. Dr. Alfred Zimmermann, Under Secretary for Foreign Affairs, gave out on April 6 this statement as to Germany's policy:

If German submarines have made, or should make, an attack on unarmed and unresisting passenger steamers without warning their action would constitute an error in violation of the German Admiralty's explicit orders made in pursuance of her promise to the United States. In all cases of such errors Germany would not hesitate to accept the consequences and make all suitable amends.

The Chancellor's Speech

The address of
Chancellor von
Bethmann-Hollweg

to the Reichstag is one of the most important official utterances of the war, since it bore upon such important questions as German's policy in regard to submarine warfare, the Monroe Doctrine and the future of Belgium and Poland. He began by a review of the military situation and showed what great gains had been made in Galicia, Russia, Serbia, Montenegro, Albania, Gallipoli and Asia since his Reichstag address of a year ago. He claimed that the food supply in most cases was sufficient and even tho the shortage of meat should lower its consumption to the level of the seventies, yet the Germans were strong in those days as their adversaries will remember.

He declared that neither Germany nor Austria-Hungary had intended to touch the Polish question, but since they had been forced into it they would see that neither the Poles, the Lithuanians nor the Livonians of the Baltic should ever be delivered into the hands of reactionary Russia. He denounced as "the silliest of imputations" the report that at the end of the war Germany intended to rush to America and conquer Canada, or had any intention of acquiring any territory in Brazil or any other part of America whatsoever.

On the submarine question he said:

No fair-minded neutral, no matter whether he favors us or not, can doubt our right to defend ourselves against this war of starvation, which is contrary to international law. No one can ask us to permit our arms of defense to be wrested from our hands. We use them, and must use them. We respect legitimate rights of neutral trade and commerce, but we have a right to expect that this will be appreciated, and that our right and our duty be recognized—to use all means against this policy of starvation, which is a jeering insult not only to all laws of nations, but also to the plainest duties of humanity.

An insurmountable obstacle to peace was the declaration of Premier Asquith that the Allies "shall never sheathe the sword . . . until the military domination of Prussia is wholly and finally destroyed." On this point the Chancellor said:

Let us suppose I suggest to Mr. Asquith to sit down with me at a table and examine the possibilities of peace, and Mr. Asquith begins with a claim of definitive and complete destruction of Prussia's military power. The conversation would be ended before it began. To these peace conditions only one answer would be left, and this answer our sword must give.

THE GREAT WAR

April 3—Parliament called upon to meet war expenses of \$25,000,000 a day. General Smuts captures stronghold in German East Africa.

April 4—Germans take offensive on northern part of Russian front. British relief force within twenty-three miles of Kut-el-Amara.

April 5—German Chancellor discusses peace terms before Reichstag. Germans take village of Haudcourt.

April 6—Zeppelin raid on England kills one child. Canadians repulse German attacks at St. Eloi.

April 7—Turks holding Russians northwest of Erzerum. British steamer "Kent" torpedoed, fifty drowned.

April 8—Austrian attack on Monte Nero repulsed by Italians. Holland strengthens army and defenses.

April 9—Germany denies sinking the "Sussex." French evacuate Bethincourt.

If our adversaries want to continue the slaughter of human beings and the devastation of Europe theirs will be the guilt, and we shall have to stand it as men.

German Peace Terms

The passages in the German Chancellor's speech which have attracted most attention are those in which he discusses the future of Belgium and the possibilities of peace. Since this is the first time the aims of Germany have been so definitely and officially formulated we quote his words:

We fight for our existence and for our future. For Germany and not for space in a foreign country are Germany's sons bleeding and dying on the battlefield. Every one among us knows this, and it makes our hearts and nerves so strong. This moral force strengthens our will in order not only to weather the storm, but also to achieve final victory.

Harding in Brooklyn Eagle

USED UP!

We have so often turned the other cheek to Germany that we may not have the face to do it again

Our enemies wish to destroy united, free Germany. They desire that Germany shall be again as weak as during past centuries, a prey of all lusts of domination of her neighbors and the scapegoat of Europe, beaten back forever in the dominion of economic evolution, even after the war. That is what our enemies mean when they speak of definite destruction of Prussia's military power.

And what is our intention? The sense and aim of this war is for us the creation of a Germany so firmly united, so strongly protected, that no one ever will feel the temptation to annihilate us, that every one in the world will concede to us the right of free exercise of our peaceful endeavors. This Germany, and not the destruction of other races, is what we wish. Our aim is the lasting rescue of the European continent, which is now shaken to its very foundations.

After the war there must be another Belgium. We must create real guarantees that Belgium shall never be a Franco-British vassal; never again shall be used as a military or economic fortification against Germany. Also in this respect things cannot be as they were before. Also here Germany cannot sacrifice the supple Flemish race, but must assure for them sound evolution which corresponds to their rich natural gifts, which is based on their mother tongue and follows their Netherlandish character.

We want neighbors that do not form coalitions against us, but with whom we collaborate and who collaborate with us to our mutual advantage. Remembrance of this war will still echo in the sadly tried Belgian country, but we shall never allow that this will be a new source of wars—shall not allow it in our mutual interest.

The fourth popular loan for the support of the war in Germany brought in subscriptions amounting to over \$2,500,000,000. The German Secretary of the Treasury, Dr. Karl Helfferich, announces with pride that:

Germany is the only belligerent power which has covered her total war expenditures by long term loans. That a nation of 70,000,000, cut off from the outer world by arbitrary acts in conflict with international law, should have borne for twenty months the heavy burden of the war, and should now again be offering to the Fatherland more than 10,000,000,000 marks, is proof of greatness beyond praise of words.

The ordinary expenses of the German Government exclusive of the military operations have risen from \$875,000,000 for the year 1913-1914 to \$1,375,000,000 for the current year. Since the closing of the custom houses and the curtailment of industry have cut off a large part of the national revenue it has become necessary to resort to new taxation. This takes the form of an impost on profits ranging in the case of an individual from 5 to 25 per cent and in the case of a corporation from 10 to 30 per cent.

In France the total appropriations made from August 1, 1914, to July 1, 1916, will amount to \$9,400,000,000, of which \$7,400,000,000 is for military purposes. France has shared with England the burden of financing the lesser Allies. The Budget for the second quarter of 1916 includes \$120,000,000 to Belgium, \$33,000,000 to Serbia, \$1,000,000 to Greece and \$80,000 to Montenegro.

In Russia the cost of the war is reported as \$4,000,000,000 in 1915 and \$5,500,000,000 in 1916. The prohibition of vodka, formerly a government

monopoly, meant a loss in revenue of \$345,000,000 a year, but according to the Minister of Finance this is more than compensated by the gains to the people from this compulsory temperance.

The expenditures of Great Britain for the army alone now amount to \$15,000,000 a day. The number of articles of apparel such as tunics, boots, etc., provided for the army since the war began amounts to 117,000,000, and the military stores consumed would have sufficed the British army at its former strength for 140 years.

The Meaning of Verdun The German attack upon the entrenched camp of Verdun, the strongest of the French frontier fortresses, began on February 21 and has been actively pushed ever since. This, however, does not mean that the fighting has been incessant all along the line or at any one point. On the contrary, the point of attack has shifted from one sector of the great circle to another, while the rest of the line is quiescent except for occasional skirmishes and the almost constant artillery duels. The fact the Germans have not stuck to one point and followed up their advantage where they have gained one does not, as it is sometimes interpreted, indicate that their assault has failed and that they have given up hope of success at that point and so turned in despair to another. The conditions of modern warfare make it impossible to break thru a fortified line at a single point and then continue the advance indefinitely as might have been done formerly. On the contrary it is essential that the line of attack be kept as nearly straight or as smoothly curved as the nature of the ground will permit and both sides are constantly engaged in smoothing out—in their own interest—the line that separates them. Such instruments of reconnaissance as the aeroplane and the captive balloon and such instruments of communication as the telephone, the helio-

graph and the wireless have made a "surprise attack" on a large scale almost impossible, and with modern organization and railroad and motor transportation there need be no "weak point" of a fatal character. If, for instance a German column should by some chance have hit upon a poorly defended point and been able to advance a mile or so inside the French line, the troops would doubtless be recalled unless they happened to have secured some dominant position or there seemed some prospect of bringing up to them the attacking line on both sides. For a body of troops occupying such a salient is subjected to fire on right and left and front from artillery miles away over an accurately measured range and the troops would be in danger of being killed or cut off.

Besides this a modern battle must be intermittent because of the necessity of reinforcing and replacing the men at the front and bringing up a new supply of ammunition to replenish the enormous waste. Even with the best of transportation facilities it is impossible to accumulate enough shells in advance at a given point and move them forward rapidly enough to allow of a continuous advance even against ineffectual opposition.

Now in the battle of Verdun the element of surprise has not entered except possibly in the first onslaught when the Germans within a few days advanced nearly four miles and took the fort of Douaumont. The French, at any rate, have made no mistakes but have stoutly contested every foot of ground, for they are supplied with plenty of ammunition and with artillery which is the admiration of their enemies. But this very fact makes the German attack seem all the more alarming. If the French, for all their skill and courage, are constantly being driven out of their entrenched positions, what assurance have they that the Germans will not eventually reach Verdun?

This assurance they find in the Ger-

man losses, and they believe that it will be impossible for the Germans to keep up the attack much longer. A semi-official estimate emanating from Paris gives the number of German troops which have been brought against Verdun as 450,000 and their casualties up to April 1 as more than 200,000. Such losses are indeed unprecedented in the history of warfare and certainly Germany could not afford to pay such a rate for the five miles which they have yet to make before they get to Verdun.

The Germans on the other hand claim that their losses are not excessive. Certainly they manifest no external evidences of discouragement and they still continue to gain, tho slowly. Last week they took the village of Hancourt, which lies just south of Malancourt. They also stormed the ridge beyond, capturing over a mile of French trenches and 714 unwounded prisoners. Their next objective in this quarter is probably Hill 304, which stands next to Le Mort Homme, still claimed by both sides. The French have been obliged to evacuate their salient at Bethincourt to avoid being cut off and to straighten their line.

The Battle of St. Eloi It is believed that the Germans have more troops massed in front of the British lines in Flanders than they have at Verdun and it is surmised that they may intend to make their main offensive in the west instead of on the Meuse. So far the chief center of activity on the west has been at the village of St. Eloi near the famous Belgian city of Ypres. Here the Canadians are posted and have made themselves conspicuous by their skill in tunneling and their daring in following up the vantage gained by their mine explosions. On March 27 they blew up the front trenches of the German line and established themselves in the craters. Ever since then the Germans have been trying to dislodge the Canadians from their crater forts but they have only succeeded in regaining one of them.

THE UNITED STATES MUST FIGHT

BY SYDNEY BROOKS

THERE are, roughly, four ways in which the present war can be brought to an end. First, peace would come speedily if the United States entered the conflict. Secondly, it would come more speedily still if a British defeat at sea destroyed the pivot of the whole Alliance. Thirdly, in the judgment of some good observers, the military force is to be so quickened, and we are destined during the spring and summer to see such terrific slaughter on all the fronts, that hostilities will be over by the winter thru the sheer exhaustion of the combatants. Fourthly—and this perhaps is the general British view—there is nothing for it but to go on killing German soldiers and applying the maximum of economic pressure to the German people until the military authorities are convinced by their losses in men and the civilians by their privations that the strain can no longer be maintained. When that point will be reached is, of course, a matter rather of guesswork than of mathematical calculation. Personally I do not see how the process of attrition can by itself end the war before the autumn of 1917.

Of these four alternatives the intervention of the United States is the only one I am at present concerned with. For myself I have not the slightest doubt that you are coming into the war. That is not the view that is most widely held in England. The vast majority of my countrymen neither expect American intervention nor desire it, except on one condition, that it proceed from America's own conception of her highest and final interests in this matter. There has never that I know of been any disposition in England to quarrel with or to criticize the official policy of neutrality adopted at Washington. At the beginning of the war neutrality was the obviously proper and sensible line for the United States to follow. Every one in Great Britain admitted as much; no one contemplated anything else. There was, it is true, some good-humored surprise when the President attempted to expand the program of official neutrality into a rule of private thought and conduct; but to neutrality itself, as the policy of the United States Government, nobody took or could take the slightest objection. The war was not an American war; the issues at stake were not specifically American issues; there seemed every reason to hope that the United States could hold honorably aloof.

There is no need to introduce Mr. Brooks to Independent readers. But this article—with its sharp and disquieting forecast of America's entry into the Great War—is more than the mere expression of an observant journalist's opinion, colored by the natural hope of an Englishman that the United States will aid the Allies. In the last few weeks Mr. Brooks has had exceptional opportunities to learn from American officials and public men just what trend affairs are taking, and what he has to say on the subject merits serious and thoughtful consideration.—THE EDITOR.

Nor even now would any Englishman desire to see America drawn into it, except, as I have said, under the constraint of purely American interests and in order to fulfil her own idea of what her honor, her dignity and her duty as one of the great pillars of democracy demand. Were the United States on her own initiative to throw in her lot with the Allies, then, indeed, every Englishman would hail her advent into the arena with a great shout of joy, would feel that the dearest wish of his heart had been realized in the mere fact of a working coöperation between all the English-speaking peoples, would say—and would be right in saying—that now at last the only possible foundations of a lasting peace had been well and truly laid. But that, as every one in Britain recognizes, is a matter for Americans to decide in their own way and at their own time. From first to last in this war I do not think you will be able to point to a single line in the British press or a single utterance of any British statesman that savored of the impertinence of urging the United States to abandon her neutrality or that tendered any advice whatever on the subject.

IF America is satisfied to remain outside, we in England are content to have her do so. We do not need the naval or military assistance of the United States to win this war. We can and we shall save civilization, if we have to, without her. For themselves the Allies want nothing from America beyond what their command of the seas enables them at this moment to receive—arms, food, raw material, equipment of all kinds; and in regard to many of these necessities they will very soon be independent of any sources of supply but their own. We do not seek American intervention for our

own sakes; we are confident we can dispense with it; at the same time if it came we should passionately welcome it—not for its effect on the present war alone, but because we should see in America's emergence into the world as an Ally among Allies the one sure and certain guarantee of future peace.

BUT there are different kinds of neutrality and it would be absurd to pretend that the kind adopted by the United States Government has met with universal acceptance in England. There is a large and sober body of British opinion, friendly to the United States by instinct and conviction, that has found American diplomacy during the past year and a half a difficult pill to swallow.

If I were asked for a summary of what in British eyes have appeared to be its deficiencies I should point to the speech delivered by Mr. Root on February 15. Englishmen have rightly refrained from saying the things that Mr. Root as an American was free to say. Indeed one of the pleasantest surprises that awaits an English visitor to the United States these days is to discover how mild is British dissatisfaction with the foreign policy of the Administration, and in what scrupulously temperate language it finds utterance, as compared with the full-blooded ferocity of American comment. But it seems clear to me that Mr. Root and the general run of Englishmen approach this question from approximately the same angle. Both feel that in what has been done and left undone at Washington there has been a failure to embody and interpret the best American sentiment. Both feel that it is the American people themselves and not the Allies who have the most cause to complain of and to be chagrined by the Administration's acts of commission and omission.

But it would be very easy to exaggerate the extent to which British opinion has thereby been adversely affected. Toward the American people there is thruout the British Isles, and there will continue to be, nothing but the utmost friendliness and sympathy. We know how many thousands of Americans have enlisted in the Allied armies. We know of their work in succoring the wounded. We know of that increasing stream of gifts in money and kindly service that flows eastward from the United States. And above all we know that the heart of America is with us. Knowing all this we do not allow trivial clashes of opinion between

our respective governments to disturb us unduly. Rightly or wrongly we distinguish between popular sentiment in the United States and official neutrality. We are not blind to President Wilson's difficulties. Some of us, I imagine, make even greater allowance for them than do his own countrymen. If at times the actions and attitude of the American Government have disconcerted us it has not been solely, or even mainly, on our own account. It has been because those actions and that attitude have struck us as falling below our ideal of what the United States is and stands for. We have no specific grievances against Washington. We retain to the full that goodwill toward America and Americans that is now an inseparable element not merely of British policy, but of the British consciousness. The only thing that infuriates us is to hear Americans say, as I have often heard them say, that the events of the past eighteen months have left the United States without a single friend in Europe. The United States will always have a close friend and a faithful friend in England. And at a crisis, if America ever finds herself in a tight corner, that friendship will not be found wanting. Even in the convulsive fluidity of world-politics as they are today and as they are likely to continue for some time to come, that at least is a fixed and stable point.

ON what then do I base my conviction that you must shortly enter the war? I base it on the inherent conditions of the case. The last hope of reaching any satisfactory agreement with Germany on the issues of submarine warfare has by now, I should imagine, been pretty well exploded. No one can any longer cling to it. No one in Washington does cling to it. It has gone down in a welter of broken pledges and repudiated assurances. Germany, it is perfectly obvious, intends to go on torpedoing all the merchant vessels that her submarines can get at, armed or unarmed, and wholly irrespective of the nationality of the passengers on board. Any day an incident may happen comparable to Villa's raid on Columbus. Any day you may be forced into the European war as you have been forced into Mexico, reluctantly, in spite of yourselves, as the result of some intolerable outrage. You have suffered in the last eighteen months at Germany's hands a series of unexampled affronts and you have suffered them with unexampled patience. But there are limits to American patience. Villa overstepped them. Germany

likewise will overstep them. It may be tomorrow, it may be next week or the week after, but that eventually, and before very long, Mr. Wilson will have no option but to hand Count Bernstorff his passports and recall Mr. Gerard from Berlin is, in my judgment, beyond question. And that sooner or later means war.

AMERICANS have frequently said to me, "Are we not doing a greater service to the Allies by staying out of the war than we should be doing by coming in?" They are thinking chiefly of the supply of munitions and of the inevitable demands upon the domestic output if the United States were to raise an army on the European scale. Well, I have seen more than a little of what America is doing in the way of munitions, and it commands my immense gratitude, my unbounded admiration. The way in which, under the direction of Messrs. Morgan & Co., American manufacturers have been organized for the production of war material, and the zeal and efficiency with which they have thrown themselves into the industry, are a record of which every American might well be proud. At the same time only the fringe of the country's industrial resources has been brought into play and under government encouragement and control the output could be increased well-nigh indefinitely. That is one consideration. Another is that the British Government, British manufacturers and the British workingmen by magnificent efforts have by now all but made good our original deficiencies and that the Allies before long will be comparatively independent of American shells, guns, rifles and cartridges. I always therefore beg my American friends who are apprehensive on the score of munitions not to be deterred from entering the war on that account; and I always add that the participation of the United States, by its effect on such neutrals as are still hesitating, by its shattering demonstration of the final impossibility of a Teutonic triumph, and by its immediate easing of the Allied financial situation, would be a commanding asset, and more than any other single factor, always excepting the almost unthinkable contingency of the destruction of the British seapower, would shorten the war. Work out the effects of a proclamation by President Wilson calling for the enlistment of 1,000,000 men and of another proclamation placing the entire engineering trade of the country under government direction and dedicating it to the production of munitions, and the enormous importance

to all the belligerents of American intervention will be very soon apparent.

But if I were an American I should like to see my country enter the war not to avenge the loss of American lives, not to reinforce the Allies, not to ward off the menace to American political and strategical interests that is implicit on a German victory, but on other and wider and nobler grounds. I should like to see it enter the war, first of all, on the score of humanity and in the sure knowledge that American intervention would lessen, and possibly avert, the most appalling slaughter, the most hideous mass of waste and misery, that ever threatened to devastate the world. I should like to see it enter the war, secondly, because democracy is at death-grips with militarism and absolutism and because every principle of right-dealing between nations, and, indeed, the whole form and temper of civilization, are at stake in the struggle. I should like it, finally, to enter the war because only by so doing can the United States help to start the world on a new and saner path and to erect and support an enduring fabric of peace.

PEACE, democracy, humanity—no nation every had a nobler call to arms than these causes. As an Englishman, who has loved and studied and done what he could to interpret America for the past twenty years, I refuse to share the misgivings and lamentations of many of my American friends. I believe that the great issues I have named are powerful to touch the conscience and idealism of the American people. I believe that in no land is a leader who appeals to what is best and least material and most self-sacrificing in human nature more certain of a national response. I believe that the fundamental passion of America is to serve the world at whatever cost to herself. But there never has been in all history such an opportunity for service as now, or so clear and insistent a summons to the faith and vision of American statesmanship—the aspiring spirit of the American people. You will come into the war in any event. What I hope and pray is that you may not drift into it on some minor and merely national pretext and with incoherent aims, but will take your stand deliberately as befits the splendor of the American nation proclaiming its resolve to rescue humanity, to safeguard democracy, and to lay broad and deep the foundations of future peace.

PERNICIOUS HEIRLOOMS

BY MARTHA BENSLEY BRUÈRE

DOES a frog serenely sunning himself, drawing dry air into a newly acquired pair of lungs, choosing luxuriously which one of four available legs he shall scratch himself with, have any of the habits of his recent gray-green world where a cold fluid surged thru his gill slits and he was all bulbous head and vibrant tail? Sometimes he does bring a bit of his tadpole appendage to land, but that is a purely material hang-over and soon discarded. If he brings tadpole habits will they not make him a less efficient frog? Will not a tadpole mind hamper him more than a tadpole tail?

Almost as suddenly as a frog passes from water to land, we have passed from the old civilization, where for the race as a whole there was not enough of anything, to the new time where, thanks to machine production, scientific agriculture, quick transportation, and especially to the rise of the democratic ideal, there can be enough for every one. And we—the women especially, who thru domestication were very perfectly adapted to the earlier stage of privation—have brought over into the age of prosperity a vast number of possessions. The actual material heirlooms are not a serious menace. Great-grandfather's clock does not greatly hamper us unless it prevents our buying a new and more accurate timepiece. But under the slow civilization that was controlled by a perpetual community deficit, women acquired the appropriate habits of toil, economy, self-sacrifice, an incredible patience, and a fixity of mind which mitigated the pressure; and they are still trailing these hampering tadpole habits and ideals. Most terrible of all, they still have minds set in the mold of another civilization, to which our modern working hypothesis, that all change is probably good, is quite incomprehensible.

It would seem that only thru youth are women able to free themselves from this backward drag. Then, while they can feel the pull of the future, things are not good or desirable to them because they have always been, but because they are about to be. Instead of memories, they are governed by hopes. They are plastic things, and for this reason they are able to do the work of a fast changing civilization—able to learn the governing conditions of the new age of plenty and act on them—able, so long as they are young, to beat back their inheritances.

With this article Mrs. Bruère ends the series of studies of "The Habits of Women Under Domestication," which was begun in The Independent on March 20.—THE EDITOR.

Shall not a frog remain a frog?

If women are to give their full value to this modern world, they must learn to keep at least so much of youth as its plasticity, in order that they may adapt themselves to the continual change which is the governing factor of the civilization of prosperity. But to remain plastic requires the most unceasing vigilance, the firm refusal to take any tradition for granted, even that of our own personal experience, and most particularly to avoid accepting heirlooms of thought and practise in what is still woman's most common occupation—housekeeping. For there is no more insistent beckoning to a fixed mind than domestication. It was under the controlling power of a perpetual social deficit that our whole theory and practise of housekeeping was developed, and it is in that field that pernicious inheritances have us most closely entangled. To realize that the past is dead—all of it—is practically impossible till we have learned to think in terms of change rather than permanence. And even while we are acting on this knowledge, the dead world mysteriously rises ready to "set" our minds again like jelly in a mold!

Quite recently I fought with this ghost as raised by an antiquated household equipment—treasured heirlooms lovingly preserved. Without the possibility of rescue I was dropt into a white cottage on a hillside, and housework, which had been under my feet, rose up and attacked me. From the time when I started the wood stove in the morning, thru all the sweeping and cleaning, cooking and sewing of the day, my mind had to adjust itself to machinery developed on the basic concept of saving everything but human work. The heirlooms from the civilization of poverty and self-sacrifice produced the inoperative mind which was content to endure them. The potatoes for Monday, for Tuesday, for Wednesday, all equally bulbous, equally brown and susceptible of the same number of ways of cooking, were kept in an ancestral bin where it was best for them, not most convenient for me. The lingering routine of bringing water from the well offered after the first time no mental stimulus whatever; neither did

sweeping out the corners of the same rooms with the same broom, or scrubbing the dirt from the same shirt-waists on the same washboard in the same tub. The combination of all these monotonies made up a stifling routine that filled the day; and which, with that equipment, there was no avoiding.

It was not that the work was hard—to run a typewriter all day is more fatiguing; it was not the isolation; it was the fact that there was no new use for my brain in these changeless surroundings; nothing for it to do but become fixed. By just so much as I grew to do these things without change, did change become more difficult for me. If I had stayed there long enough I would have reverted to the past and become unable to fit into modern civilization.

I knew once a little Swedish woman, who, having been taught housekeeping by her mother, who was very poor, could never be brought to beat eggs with anything more efficient than a fork. Her mind had "set" so that she could not think in terms of even a hand driven egg-beater, much less of an electric one. And because her inherited ideas, formed under the stress of poverty, would not let her do housework in the most efficient way—would not in fact, permit her to let go of most of the details of it—she was less valuable as a housekeeper and a human being than she might have been. Her inherited training had fossilized her mind.

If we could only act on the theory that anything left to us from the past, whether an idea or a thing, has got to prove its present value before we accept it, and that anything new has got to prove itself worthless before we pass it by, we might stay these ossifying mental processes.

For it is obvious that our work of family conservation cannot be performed by antiquarians. We can do nothing for the families of the past; our work is in the present, for the future, and it cannot be performed by inherited mental processes or by machinery designed for dead occupations. We are working our civilization out in a new set of interchangeable parts, and the attempt to use old ones makes the whole run wobbly. It is important to realize that if an idea or a habit was inevitable in great-grandmother, it is better dispensed with by her descendants, and to act on the conviction that if a habit was perfectly adapted to the needs of a tadpole it is by that very fact unadapted to the needs of a frog.

New York City

A NOISELESS, SMOKELESS, JERKLESS TRAIN

Crossing the Continental Divide on an electrified railroad. Two of these huge locomotives are used as tractor and pusher on a steep up-grade

CLIMBING THE ROCKIES BY ELECTRICITY

A LONG STEP TOWARD A NEW ERA OF RAILROADING

OVER the Rockies by electricity! That is possible, now that the biggest piece of railroad electrification on the continent has been completed by the Chicago, Milwaukee and St. Paul Railway.

Four hundred and forty miles of track, from Harlowton, Montana, to Avery, Idaho, clean thru the three ridges that make up the Rockies, over the back of the continent at a height of 6300 feet, have been prepared for the heavy electric tractors that will displace the steam locomotives. Already 115 miles are in operation, between Three Forks and Dear Lodge—the section which includes the Continental Divide.

The electric locomotives draw heavier trains, at higher speed, than the old ones, over grades where the line climbs as much as 115½ feet in a mile. They are leviathans; each weighing 284 tons, with a length of 112 feet 8 inches. Each is more than 10 per cent more powerful than the modern Mallet steam locomotive. Mountain streams, with their tremendous head of water, are tapped at various points in Montana to create the current. The railroad buys its power from the Montana Power Company, which has its main plant at Great Falls. Fourteen sub-stations along the railroad receive the electricity in 100,000-volt alternating current, reduce it from 100,000 to 2300 volts, still alternating current, and then by the use of motor-generator sets at each sub-station, consisting of one alternating current motor driv-

ing two direct current generators, change it to a direct current of 3000 volts. This is nearly six times the voltage used in ordinary street railway work.

So much for the way the trains climb the mountains. But they behave surprisingly as they slip down the other side. The motion of the train as it slides down hill is used to make the reversed motors gener-

ate more electricity. This serves as a braking system, so that the air-brake is not needed except for emergency or to stop the train, and new current is actually turned back into the trolley wires to be used as needed by other trains. From a quarter to a half of the current used up on one side of the mountains is thus restored on the other side by "regenerative braking."

Why should steam give way to the new power?

For many reasons — all lumped under the familiar term "efficiency." It is cheaper—you get more power for your money. When a steam locomotive stops at a station or at a division point where locomotives are changed, it goes right on burning coal; it uses indeed 80 per cent of the fuel that it requires when it is at work drawing the train. The electric locomotive uses power only when it moves. The steam locomotive loses heat—and hence power—in cold weather. The electric works better than

than at any other time and has power enough to buck the heaviest snowdrifts. The old engine had to be inspected and groomed at the end of each division—every hundred miles or so. The new one runs a thousand miles without needing inspection. Coal has to be hauled; electricity requires no fuel trains. The electric train is clean, noiseless, "jerkless." Electrifying one track, the railroad officials believe, will increase the efficiency of the mountain division as much as tho the line had been double-tracked.

THE GIANT OIL SWITCHES

The current under the enormous pressure of 100,000 volts is controlled by oil insulation

THE SOURCE OF POWER

At Great Falls, Montana, and at several other points, the mountain streams' accumulated energy is transformed into electricity

CONCENTRATE!

BY EDWARD EARLE PURINTON

DIRECTOR OF THE INDEPENDENT EFFICIENCY SERVICE

TO every one of the boons of life, the short cut is concentration. No matter what the goal ahead of us stay on the first step—find and follow the path of concentration. Out of the blind thicket of human destiny, that surrounds, tangles and impedes the great majority of us, the one clear, open, swift way to freedom is the path of concentration.

What do you need most? Health—money—power—loisure—friends—counsellors—advantages—opportunities? Learn to concentrate, and whatever you need most will come to you. The law never fails.

I am not talking metaphysics. Indeed my first duty is to rescue the word *concentration* from the mouths of metaphysicians. Nowadays nearly every city in America has a fluttering bevy of self-styled metaphysical teachers who would, for a suitable honorarium, induce you to “practise concentration” by sitting vague and vapid in a “concentration class,” or fixing a rapt gaze on a crystal ball, or doing some other fancy exhibition stunt. This brand of concentration is not the one I am writing about.

Suppose you are riding east, on a New Jersey road, fifty miles out of New York. You meet a man walking west. He is gaunt, begrimed, unshaven, unwashed. He hobbles on a twisted cane. His clothes are torn. He looks the picture of hunger, friendlessness and woe.

You are moved with pity. You stop and ask him, “Why so forlorn?” He answers, “I have no friends, no money and no food.” You ask him, “Where are you going?” He answers, “I don’t know.” You ask him, “Why did you leave the city?” He answers, “I forget the reason just now.” You ask him, “How long are you going on like this?” He answers, “Till I drop from weariness or fall ill—then some one may give me a lift.” What do you do? You buy the man a meal, ring up the police station, have him taken to the psychopathic ward of the nearest hospital, and try to locate his relatives or friends.

On the road of destiny the average man is walking west. In the mental geography on the map of his mind, he is aimless and powerless as a ragged, starving tramp. He hobbles on a twisted cane of tradition, habit or misinformation. He hasn’t enough mental food to keep him nourished—and most of what he has wouldn’t pass a pure food inspector. He follows a rut of routine, looking neither ahead nor above. His psychic raiment

is mud and tatters. His moral expression is meaningless, like that of a man with a wandering mind. He does not know where he is going, or why he is going anywhere. He is waiting for some one to give him a lift—or send him to a hospital. Why all this vacuity, poverty, tragedy, in the life journey of the average man? *Loss of the power, loss of the path, of concentration.*

Is the picture overdrawn? From reading thousands of letters, by men like this, I say it is not. Four persons out of five that you meet are mentally and spiritually lost. They have never found themselves, nor their place and work in life. Lacking a goal, they lack the grit and gumption that a man with a goal has to get. Their actions, thoughts and emotions are at loose ends—kite tails flying in the breeze. A man’s career is but the measure of his concentration.

WHAT DOES IT MEAN?

LET us define our word. Concentration is the science of knowing what we want most to do, have and be; the art of achieving it; and the habit of forgetting it.

The prime essential is a fixed goal. A good example here is the racing crew of a big eastern university. Every member of the crew knows just where he must end the race and land the boat; he has learned to time his stroke to the fraction of a second; he has stripped away every ounce of superfluous clothing—he has for weeks lived on simple fare selected by science; he has fully mastered the principles and methods of team work.

Just where am I going to be at the end of the race of life—or five, or ten, or twenty years from now? Have I a definite picture of the goal in my mind? Have I chosen, and proved, the shortest, easiest and best way to that goal? Am I working every day, every hour, with this in view? Are all the useless things left behind? Is every act in working hours properly, regularly timed, so that my daily output is sure to equal my maximum? Do all my habits of life speed me on to my goal—or do some of them handicap me? Is every one of my working associates eager to help me win? If not, why not—and where am I now? Have I advanced all that was possible? Have others advanced more? Do I know the causes of my slowness in progressing? How shall I remove the obstacles, in my surroundings and myself? These are a few of the questions for every alert

man or woman to face bravely and settle fairly, as initial steps on the road of concentration.

Before one attempts to concentrate, he should have his greatest, finest, strongest desire shape and designate the exact goal that he would reach thru concentration. Then he should line up his present system of work, thought, and home life with his ultimate goal, to such an extent that he can see how every move he takes puts him forward. Then he should make his will a power so firm, prompt, resistless, that he does precisely and fully whatever he sets out to do. Then, he is prepared to learn to concentrate. A difficult program? Surely, and gladly. What are we here for if not to face hard jobs with a smile? What keeps a man small is the habit of looking for easy things.

There is, however, a shorter, easier way. Few people have learned how to plan, foresee, and lay out their lives, from here and now to the larger place ahead. It will suffice, temporarily, to learn to concentrate by doing our daily work—whatever it is, more thoroly, quickly, easily, and thoughtfully. Suppose, for example, you are a stenographer. Your first concentration exercise will be to make every letter, manuscript and memorandum *perfect*—so as not to waste a moment of your chief’s time in the location and correction of your mistakes. When you have made every piece of work faultless during a whole day, try it for two days—three days—a week. Having attained a perfect record for a week, you can then focus on speed. Without losing in accuracy, you should be able to gain perhaps thirty per cent in rapidity, merely by ceaseless practise in mental and manual concentration. There are new books and systems to aid you here. Find them, and study them. Your next object will naturally be an easier way of doing the work you have made better and faster. Modifications of scientific management, and service departments of the large typewriter companies, should save you needless motions and responsibilities. Then you may begin to *think for your company*, especially in relation to your desk and departments, for increasing the sales and decreasing the costs. Now if you are an ordinary stenographer, you have never practised *any* of these four kinds of concentration exercise—that is why you remain an ordinary stenographer. Promotion follows concentration.

EFFICIENCY CONCENTRATION TEST

FOR ANY MAN OR WOMAN BETWEEN
15 AND 55 YEARS OF AGE

DIRECTIONS. Read first this article. If any point is not clear, talk it over with some friend who is a logical, deep thinker. On the basis of the article, interpret and answer the following questions. Where the answer is Yes, write numeral 10 in blank space on dotted line. Where the answer is No, leave space between 1 and 10 expressing degree of assurance. Don't favor yourself—make each numeral too low rather than too high. Add column of numerals for your percentage in concentration, so far as the test goes. This test shows the general aim of Mr. Purinton's efficiency work—to apply to every one, starting with himself, the rules and principles followed by the world's leaders in attaining their goal. On this test, the grade of a really big man or woman would be perhaps eighty per cent, while that of the average person might be not more than twenty-five per cent. If your grade, honestly reckoned, is 40 or 50 per cent, you are probably ahead of the majority, but still far behind the leaders.

1. Have you a great ultimate achievement, based on your talents, clearly pictured in mind for ten or twenty years hence?
2. Do you know how to work toward your goal, and is every day's work put minutely in line with your advancement?
3. Have you a surplus of energy, so that you are never tired, vexed or despondent?.....
4. Can you think or work so hard, five hours at a stretch, that you forget to eat or sleep or answer the door-bell?
5. Do you spend at least a half hour every day in planning your future, studying your work, and improving yourself?
6. Is your earning capacity regularly increasing at a substantial rate?
7. Have you read at least two modern books on the principles and methods of concentration?.....
8. Have you learned how to make use of all the functions of your mind?.....
9. Do you always tackle the hardest job first, and choose hard jobs in preference to easy ones?.....
10. Are you so sure of final success that nothing and nobody can discourage you; and when everything seems to go wrong, you calmly forge ahead with even greater strength and determination?.....

Copyright, 1916, by
Edward Earle Purinton

Total equals your approximate grade in
the knowledge and use of concentration.

Lloyd-George has become the first man of England. Apparently the war crisis made him such; but really his own concentration habits made him. He was a poor, alien boy, without friends, influence or opportunity. Worse—he was violently opposed by the political, financial and ecclesiastical authorities who froze careers with a frown. But only fluid minds can be frozen, and Lloyd-George had his mind set. He resolved to know what were the great problems of the nation, and how they could be solved. Nothing else mattered. Anything materializes when nothing else matters. And the first place in the realm was given the man who had given the realm first place in his thought.

All great men are masters of concentration. And any man will be great when he has learned to be master of concentration. The texture of the brain counts for little. The size of the brain counts for less; the use of the brain is the measure of human power. Concentration is merely intensive farming of the mind; and what the scientific farmer can do for and with his crops, the scientific thinker can do for and with his thoughts. We have today the new agriculture, we shall have tomorrow the new menticulture. The barren mind, as the barren field, is merely one that has not been cultivated. And the output of any mind, as of any field, can be doubled by the right methods of cultivation.

A number of books now available discuss the metaphysical side of concentration more or less truthfully and impressively. But the majority of these neglect the practical side. Out of perhaps fifty fundamental factors in the science and art of concentration, I would here dwell briefly on ten of the most important. If you incorporate only these ten in your daily habit of thought, work and life, you should eventually double your power of mind—and your productivity, happiness and usefulness.

WHAT YOU NEED

FIRST. *A focus of taste and talent.* Always concentrate on something you want to do, and may reasonably hope to do well in course of time. There is a group of things, different but related, which every man or woman could perform with unusual skill when trained and experienced. Learn your vocational group of inherent possibilities, and confine to this group your exercises in concentration. The prime focus of our will should be our work; and our work, to succeed, must literally be ourselves. It is not true, as we are told by certain peddlers of metaphysics, that we can always be what we mean to be. It is true that we can be what we were meant to be! The first move in concentration is to find what we were meant to be.

2. *A clear, firm and useful ambition, both ultimate and immediate.*

Have you learned how to use mental photography? The world's most powerful camera is the human mind; a picture of our desired achievement there scientifically produced will outlive and outreach a hundred photographs of our face by a mechanical instrument. The purpose of concentration is creation; therefore we must know exactly what we want to create, what motive is back of it, what use ahead of it. To concentrate without a present object is to cheat your client or employer; to concentrate without a future object is to cheat yourself. Haphazard work is the universal bane, whether in commerce, education or religion.

3. *A surplus of energy, and control of the sources of vitality.* The mind that creates must be a self-renewing dynamo of impelling, animating, electrifying thought. Physical health is the basis. Whether you put your whole self into your brain and evolve a masterpiece of music or invention, or whether you put your whole self into your fingers and weave a rare fabric or weld a steel frame of a thirty-story building, your power of concentration depends on how healthy you are. Get a physique, or your mind will crack under the strain of prolonged, intense concentration, which to a master worker ends in exhaustion. You must eat and bathe and exercise and sleep with vitality in view. You can't live an ordinary life and do extraordi-

nary work. Have you developed a satisfactory system of creating and conserving your maximum of energy?

4. *A regular concentration habit, both mental and manual.* When you lie in bed a few weeks, you can hardly walk. To walk right, you must walk every day. So, to think right, you must think every day; and toward a given point, as you walk. If a man started for the postoffice, then decided to go to church, then got a notion to visit the blacksmith shop, and finally went home without reaching anywhere, you would call him feeble-minded. Yet the whole thought-world is a realm of wandering minds—we merely do not see them wander. Can you think so hard on a plan or purpose or piece of work that you forget to eat and sleep, don't know whether it is today, yesterday or tomorrow, and feel concern about nothing in the universe but the all-absorbing thing you are doing? If you can, you are on the road to somewhere; if you can't, you are a mental and moral idler, with an empty future like your empty past.

Learn to spend at least a half-hour each day fostering and strengthening your life purpose, by a period of intense, original, constructive thought on the best and quickest ways of reaching your goal. And form the habit of doing *everything* promptly, thoroly, scientifically. When I throw a fistful of discarded papers at the waste-basket, and the wad fails to hit, I get up and walk over and place the consignment where it belongs. Not to be neat, bless your heart—a man too neat is an unmanly mixture of lady-likeness and nothingness; but rather

to keep in trim the wholesome habit of hitting what I aim for.

5. *A proper observance of time and place.* For concentration of mind the best time seems the early morning, when brain is clearest, body strongest. And the best place is wherever you can be in silence and solitude. Great thoughts are crushed by the crowd. But for concentration of *body*, the turmoil of business competition seems required—in their manual skill men are naturally gregarious.

6. *A punctilious regard to the physiology of thought.* The brain is mostly blood. Hence a copious and ready supply of rich, pure blood is the first essential to powerful thought. Do not try to concentrate when physically tired, or less than two hours after a full meal. Give brain and nerve foods a large place in your diet. Learn to think at home in a bathrobe and sandals—every bit of tight clothing serves to congest the blood and retard its passage to the brain. Consider also the matter of posture; lie flat if that helps you to think hard.

7. *A systematic study of practical psychology.* A thinker must know the mind as an electrical engineer knows the dynamo, not for the sake of the theoretical knowledge, but so as to get the greatest service out of the mechanism.

8. *A balanced life.* The strain of holding the mind on a tension must be offset by frequent periods of absolute relaxation; with such aids to carefreeness as music, a romp with the children, a bit of gardening, or a long tramp. The ordinary man must learn to be a firebrand—the extraordinary man must learn to be a vegetable. Kindly, however, do not try to be a vegetable until you know you

are a firebrand, as the supply of human vegetables now gluts the market.

9. *A dauntless perseverance.* You may need forty years to work out your life purpose. What of it? The holding of the purpose makes you strong, and that is really the mission of the purpose. Ten thousand obstacles may hinder you. No matter—the fiends plague and fates besiege only the man of power. You are stronger than they, as soon as you know you are. Even your old friends may turn from you, misunderstand you, join against you, as you fare on and up. Keep smiling—new and better friends are waiting. Everything you try to do may seem to go wrong, and whelm you in failure—only that you may learn to survive success thru learning to survive failure.

10. *A never-failing fund of optimism.* The road of concentration, as you may have surmized, is not necessarily a boulevard of roses. But the real people travel here, and the real rewards lie ahead on this road. Besides, this road gets easier and easier, while the road of inertia gets harder and harder. A man doesn't know what life is for till he tries to do something his neighbors say can't be done. Concentration is the science of removing the word "can't" from the mind. When this has been performed—this necessary operation on the intellect—such a new array of opportunities will be manifest that no pessimist can live in their presence. Accordingly we say: Become an optimist now, that you may feel at home with the triumphant workers when they gather at the goal of their ambitions. Only the optimist *sees* opportunities. And the road of concentration is the world's highway of opportunities.

SEE THE ROYAL FAMILY!

BY ELLIS O. JONES

SEE and behold the Royal Family! Yes. What a scrumptious, effulgent and withal perfectly useless Royal Family it is. What is the Royal Family doing?

The Royal Family is regaling itself with a certain form of mortal combat called war. That is to say, the Royal Family is fighting.

Ah, but is it not unseemly and altogether *infra dig* for the Royal Family to fight?

Oh, but you must remember that the Royal Family does not engage in the fight *in propria persona*.

No? How can that be?

The Royal Family would no more

think of doing its own fighting than of shining its own shoes or currying its own horses or running its own automobile or buttoning itself up the back.

How then does the Royal Family get its fighting done?

By the use of a carefully selected body of men called soldiers and sailors.

Whenever a Royal Family picks a quarrel with some other Royal Family, it is only necessary to order out these carefully drilled soldiers and sailors and have them shoot each other with great zeal, vigor and diligence.

But isn't it rather difficult to get men to engage in such a dangerous occupation?

Not at all. It is very easy. Of all the occupations under the sun, that of soldiers and sailors is the poorest paid and they are usually ill treated into the bargain.

It is incredible. How long has it been that way?

It has been that way for a very long time.

How long will it be that way?

As long as hard-working citizens cherish the notion that idle Royal Families are worth fighting for.

SHALL WE SWAP?

SOME COMMENTS ON THE PROPOSAL TO EXCHANGE THE PHILIPPINES FOR THE BRITISH TROPICAL POSSESSIONS

IN describing his visit to British Guiana in our issue of February 28, Edwin E. Slosson suggested that if the Administration and Congress were determined to relinquish the Philippines it would be better to trade them off for British Guiana, Honduras and West Indies rather than turn them adrift in an unfriendly world. As might be expected such a radical proposal aroused considerable criticism and we print below some of the letters we have received on the subject.

We quote first from Professor Elwood Mead, who was for many years in charge of the irrigation service of Victoria, Australia:

The more one considers the novel suggestion of Dr. Slosson the more advantageous it appears. This country could develop and protect British Guinea with few of the hazards and expenses that must always go with the control of the Philippines.

It would seem that the exchange would benefit Great Britain in equal measure. There is a profitable and rapidly growing trade between Australia and the Philippines. The relations of both parties would be more satisfactory if both countries were under the same government, with tariff restrictions and trade jealousies wholly eliminated. Australia is the nearest supply point for the Philippines for agricultural products not now produced there and which can be grown more cheaply in temperate climates. It would only add one more to the immense island possessions of Great Britain and lessen rather than increase the difficulties of administration.

So far as the Philippine people are concerned, this transfer would be to their advantage. While we have done much for the country, we cannot yet claim to have reached there the certainty and efficiency in the administration of outside countries that Great Britain has shown in the control of adjacent island areas. In both political and economic equality the countries under British rule are better off than under any other government, and the sentimental political freedom which turning these islands adrift to their own inexperienced management is supposed to make possible would never be realized. To do this is simply to connive at their spoliation, either from lawless elements at home or by the greedy countries that surround them.

I hope therefore that this proposal will become more than a matter of speculative discussion.

ELWOOD MEAD

University of California

There are, as stated in Dr. Slosson's article, some advantages which might be derived from such a trade, but there are also some very pertinent arguments against the plan as well as some practical difficulties in its realization.

1. It takes two to make a bargain, and it is hardly conceivable that England would be willing to relinquish her foothold in Latin-America.

2. We now have possessions in and

about the Caribbean sea sufficient for our strategic purposes and I fear that the South American Republics, with whom we are trying to form a closer union, but to whom our motives have heretofore been an object of suspicion, will look with great disfavor upon any further attempt by us to acquire territory in those sections.

3. The Philippines are very desirable as a base for operations in the event of war with one of the Pacific nations. It has been argued by many that the islands are particularly susceptible to attack, but Corrigedor, at the opening of Manila bay, is now one of the world's great fortifications and were a nation to direct toward that port an army and a fleet large enough to even hope to take it, the force remaining for invasion of our home shores would be materially weakened.

4. England, together with the other European nations, has scoffed at our attempt to educate and give self-government to the Filipinos, and has laughed at our "Little Brown Brother Policy." Shall we leave, half-finished, our experiment in altruism, admitting our defeat, giving over the benefits of education, sanitation, public works to a nation whose policy has too frequently been exploitation, and go to another part of the world and start over again?

5. Since 1899, our motto has been "The Philippines for the Filipinos," and we have promised them self-government as fast as they could fit themselves for it and, ultimately, independence. Such a trade as suggested by Dr. Slosson would be a direct violation of that promise, for we could certainly not dictate to England her policy of administration of the islands nor could we bind her to ever give them up. It will, in my opinion, be a long time before the hope of independence can be fulfilled, and I am not at all sure but that such a government as would be given them by England would be better than any they would ever give themselves. Nevertheless, we have given our word to the Filipinos and we are in honor bound to, if possible, see that this pledge is redeemed.

Bearing in mind that we have promised independence to the Filipino people and not merely to a little group of politicians, I greatly deplore the recent action of the United States Senate to whom these arguments seem to have no weight.

DEAN A. WORCESTER

University of New Mexico

Mr. Bowen, former American Minister to Persia and to Venezuela, comments as follows:

Dr. Slosson's plan, if it could be carried out, would relieve us of a great burden in the Pacific and would add very much to our power and prestige in the Atlantic; but we cannot consider it seriously, for we have made many promises, express and implied, to the Filipinos to the effect that in due course of time we would give to them their independence. That they would ever consent to be bargained away to another Power, or that an enlightened people such as the British are, would, in view of all the circumstances, attempt to incorporate them into the British Empire without their consent is hardly sup-

posable. Furthermore the great war now raging in Europe has so intensified the patriotism and loyalty of all British subjects, and our weak and wavering course toward Germany has derogated so much from our dignity as a nation, that the inhabitants of the British possessions Dr. Slosson proposes should be exchanged for the Philippines would undoubtedly elect to retain their present allegiance, and Great Britain could not do otherwise than respect their wishes even if she wished to make the exchange. In short, Dr. Slosson's plan would be favorable only to our own interests. The Filipinos would lose by it, as they would lose the hope of receiving what is dearest to their hearts—their independence. Great Britain would lose by it, for she would have to shoulder our burden in the East, and lose possessions in the Atlantic that are of very great value to her, and the inhabitants of those possessions would lose by it, as they would be transferred to a Power that has not adequate forces to protect them, and that had not even spirit enough to break off friendly relations with Germany when she horrified the whole civilized world with her malignant atrocities on land and her murderous outrages on the sea.

HERBERT W. BOWEN

Woodstock, Connecticut

A much more ambitious proposal than that suggested by Dr. Slosson was brought forward by Charles W. Sherrill, of New York, former Minister to Argentina, in an address before the University of Buffalo, October 20, 1915, and at a banquet given in Washington, December 30, 1915, by the Carnegie Endowment for International Peace to the American Society of International Law, the American Political Science Association, the American Society for the Judicial Settlement of International Disputes and Section VI of the Pan-American Scientific Congress. We quote from the latter speech:

Our possession of the Philippines does not true up to the underlying ideas of the Monroe Doctrine. But neither does the possession by Denmark, Holland, France and England of colonies in this hemisphere! Why not set one of these discordant facts off against the other, and trade the Philippine Islands for all European possessions to the south of us, and then turn the Guianas and British Honduras into free republics, return the Falkland Islands to Argentina, and take under our flag the West Indian Islands, so important to the defense of the Panama Canal. Thus at one step would we eliminate Japanese distrust caused by our holding the Philippines, honorably release us from the responsibility for those distant islands, complete the protection from European entanglements initiated by Monroe's protest against additional European colonization, and, finally, free us from European military bases near the Panama Canal.

In his book "Modernizing the Monroe Doctrine" just published by Houghton, Mifflin, Mr. Sherrill de-

velops his idea that the United States should coöperate with other American republics to free all American territory south of us from the cloud of European sovereignty.

The official spokesman for the Filipinos is the Resident Commissioner, Mr. Quezon. He desires independence, pure and simple, but that, in our opinion, is an impossibility under present circumstances, whether it is a desirability or not.

I hardly need to tell you that I am against this proposition. I deny the moral right of the United States to dispose in this way of the Philippine Islands, I contend that the only thing that the American Government can do in regard to the Philippines consistently both with the ideals of the American people and the principles of justice and morality is to grant the Philippines independence. MANUEL L. QUEZON

House of Representatives

Dean Kinley of the University of Illinois has several times represented the United States at South American conferences:

On the whole, I think the balance of argument is against his proposal. The exchange would be an advantage to us because it would somewhat consolidate our possessions and would take us out of a position in the Pacific which in some degree arouses the resentment of other countries. But I cannot see that the inclusion into our citizenship of the population of these British possessions would be a greater advantage to us than the inclusion of the Filipinos. To my mind, the positive disadvantages of the exchange would be two. The most important would be the effect on public opinion in South and Central America. The step would undoubtedly be regarded by some as another advance towards domination of the political destiny of the southern continent. Moreover, it seems to me that it would be as a shirking of a duty to the Philippines which, fortunately or unfortunately, has become ours; and it would be a shirking of international responsibilities which, as the possessor of the Philippine Islands, and as a member of the family of nations, we are morally bound to carry.

DAVID KINLEY

University of Illinois

We would remind our readers that the author of the article under discussion made the proposal of a trade with Great Britain merely as a preferential alternative to the measure which the President and Senate approves, for abandoning the Philippines altogether. This would mean their speedy acquisition by some one of the world Powers. The question of our right to transfer the islands to another sovereignty is relevant. A quit-claim deed from the United States is all that any Power would ask, and this the Administration is proposing to pass.

I have been an active Anti-Imperialist since our taking of the Philippines and only stronger in my convictions as the years go by, that people should decide for themselves upon their government, and neither Great Britain nor this country have any right to transfer

The most remarkable factory in the United States

THE old Lippitt Mill, at Lippitt Village, R. I., is the oldest cotton mill in continuous operation in this country. Though built in an era when factories were dark as dungeons, today this plant is fairly flooded with daylight. Visitors to this old mill are first struck by the unusual brightness and cheerfulness of the interior. In this respect it compares favorably with any modern plant although the windows are small and the only other lighting is by kerosene lamps.

The secret of this bright interior is that the ceilings and walls have been treated with Rice's Gloss Mill White.

INCREASES DAYLIGHT 19% TO 36%

In this plant as in 3,000 others, Rice's has increased the amount of daylight from 19% to 36%. It helps the workmen see better—do more and better work. It also saves big money in painting bills, and vastly improves sanitary conditions, in a way that the Lippitt Mill well illustrates.

(Reg. U. S. Pat. Off.)

MANY OLD LAYERS OF WHITEWASH

In this old mill, during the past century, literally scores of layers of whitewash had been applied. This was continually flaking off, and necessitated continual and costly repainting. By the Rice Method, Rice's Gloss Mill White was used. Flaking and scaling is now a thing of the past. Repainting will not be necessary for years. The original. There is no substitute.

RICE'S GLOSS MILL WHITE

TRY IT UNDER OUR GUARANTEE

Rice's is an oil paint, but it does not yellow like ordinary oil paints. It gives a glossy, tile-like white finish, at no more expense than lead and oil paint. Every user is protected by the Rice guarantee.

CHAUTAUQUA ONCE AGAIN

*Forty-third Annual Assembly
June 29—August 27*

Chautauqua Institution, the pioneer in summer assemblies, summer schools, and home reading courses, maintains its leadership by a rare combination of intellectual training, stimulating platform events, and healthful recreation.

A Musical Center. Faculty of twenty instructors; Alfred Hallam, Director; Ernest Hutcheson, piano; Horatio Connell, voice. Great chorus. Superb organ. Russian Symphony orchestra. Ask for Music Announcements.

An Intellectual Forum. Many of the leaders of American thought, in educational, political, and business life already engaged to speak in the Amphitheater this summer. Symposia on subjects of great national import. Ask for Program.

A Literary Center. The foremost lecturers, dramatic interpreters, and teachers of literature and expression. Ask for Catalog of Schools.

A Religious Force. Shailer Mathews, Director of Religious Work. Eight notable preachers of various denominations. Denominational meetings twice a week. Daily devotional addresses, conferences, and classes. Ask for Circular on Religious Work.

A Recreative Opportunity. Golf, tennis, roque, bowling, quoits, gymnastics, aquatic sports, track athletics. Bathing, rowing, sailing, fishing, cruising in launches, automobiling. Motion pictures, dramatic readings, outdoor plays by Coburn Players and others, concerts, recitals, fetes, pageants. The shade of noble groves. The climate that belongs to an altitude of 1400 feet on the fringes of the Alleghenies. Environment and traditions peculiarly favorable to outdoor life. Ask for Illustrated Folder.

CHAUTAUQUA, N. Y.**

sovereignty over either Guiana or the Philippines.

GEORGE FOSTER PEABODY
Saratoga Springs, New York

Dr. Slosson's article, as a journal of travel, is very entertaining. His pictures of scenes and conditions in British Guiana are drawn with a skilful pen, at once interesting and instructive. But his proposition to swap the Philippines for the British West Indies and British Guiana cannot seriously be entertained. Immediately is raised the question of the moral status of our title to the islands and consequently of our right to enter into any such negotiation. If we hold to the declaration that governments derive their just powers from the consent of the governed, then we have no title, and we cannot in conscience swap something the ownership of which is not clearly and morally vested in us.

JOHN F. SHAFROTH
Chairman of the Committee on Pacific Islands and Porto Rico, United States Senate

Professor Usher's "Pan-Germanism," appearing just before the war, gave him an international reputation which he has confirmed by his "Pan-Americanism," dealing with the larger aspects of the Monroe Doctrine:

I am of the opinion that the Philippines are not a very desirable commercial possession of the United States, and are likely, rather sooner than later, to involve us in regrettable trouble with Japan. I am therefore in favor of ridding ourselves of this possession if we can do it honorably both to ourselves and to the Filipinos. Whether the exchange proposed by Dr. Slosson with Great Britain is practical, I am inclined to doubt, and should myself feel that Jamaica is the British territory we wish to acquire rather than Guiana and the smaller islands. It is not, however, Great Britain which covets the Philippines, but Japan, and I should feel that the sale of the Philippines to Japan for even a nominal sum would be better statecraft than the more cavalier treatment which the pending legislation would sanction.

ROLAND G. USHER
Washington University, St. Louis

Professor Shepherd of Columbia is known widely thru his handy little volume on "Latin America":

Tho I doubt the historicity of Dr. Slosson's version of the swap of 1667, I am much inclined to favor the arrangement he proposes for 1916, or as soon thereafter as practicable. But in order to lessen still further the disparity between our end and the British end of the compact, I would suggest the inclusion of the Bermudas also. Turning over the Philippines to a party not so disinterested, perhaps, as ourselves, and receiving in exchange what we can use to better advantage and situated near our own shores, would be a bargain altogether desirable. Strategy, economies and common sense approve it. Here in the Americas the United States has two continents and numerous islands in which to apply its future energies to the mutual welfare of all concerned. The Monroe Doctrine is not elastic, and the Federal Constitution not amphibious enough to make them properly applicable to adventures in Australasia.

WILLIAM R. SHEPHERD
Columbia University

What Is Auto-Intoxication —and How to Prevent It

By C. G. PERCIVAL, M.D.

PERHAPS the best definition I have ever noted of Auto-Intoxication is "Self-intoxication, or poisoning by compounds produced internally by one's self." This definition is clearly intelligible because it puts Auto-Intoxication exactly where it belongs; takes it away from the obscure and easily misunderstood, and brings it into the light as an enervating, virulent, poisonous ailment.

It is probably the most insidious of all complaints, because its first indications are that we feel a little below par, sluggish, dispirited, etc., and we are apt to delude ourselves that it may be the weather, a little overwork or the need for a rest—

But once let it get a good hold through nonattention to the real cause, and a nervous condition is apt to develop which it will take months to correct. Not alone that, but Auto-Intoxication so weakens the foundation of the entire system to resist disease, that if any is prevalent at the time or if any organ of the body is below par, a more or less serious derangement is sure to follow—

The ailments which have been commonly, almost habitually traced to Auto-Intoxication, are—Languor, Headache, Insomnia, Biliousness, Melancholia, Nervous Prostration, Digestive troubles, Eruptions of the skin, Rheumatism, Neuralgia, Kidney Disturbance, Liver Troubles.

There are several conditions which may produce Auto-Intoxication, but by far the most common and prevalent one is the accumulation of waste in the colon, caused by insufficient exercise, improper food, or more food than Nature can take care of under our present mode of living.

I wonder if you realize how prevalent this most common cause of Auto-Intoxication really is—the clearest proof of it is that one would be entirely safe in stating that there are more drugs consumed in an effort to correct this complaint than for all other human ills combined—it is indeed universal and if it were once conquered, in the words of the famous Medical Scientist, Professor Eli Metchnikoff, "The length of our lives would be nearly doubled."

He has specifically stated that if our colons were removed in early infancy we would in all probability live to the age of 150 years.

That is because the waste which accumulates in the colon is extremely poisonous, and the blood, as it flows through the walls of the colon, absorbs these poisons until it is permeated with them—Have you ever, when bilious, experienced a tingling sensation apparent even above the dormant sensation which biliousness creates? I have, and that is Auto-Intoxication way above the danger point.

Now, if laxative drugs were thorough in removing this waste, there could be no arraignment against them—

But they are at best, only partially effective and temporary in their results, and if persisted in soon cease to be effective

at all. Their effect is, at best, the forcing of the system to throw off a noxious element and they therefore "jolt" Nature instead of assisting her.

There is, however, a method of eliminating this waste which has been perfected recently after many years of practice and study which might be aptly termed a Nature Remedy. This is the cleansing of the Colon its entire length at reasonable periods by means of an internal bath in which simple warm water and a harmless antiseptic are used.

This system already has over half a million enthusiastic users and advocates, who have found it the one effective and harmless preventive of Auto-Intoxication, and a resulting means of consistently keeping them clear in brain, bright in spirits, enthusiastic in their work, and most capable in its performance.

The one great merit about this method, aside from the fact that it is so effectual, is that no one can quarrel with it, because it is so simple and natural. It is, as it is called, nothing but a bath scientifically applied. All physicians have for years commonly recommended old-fashioned Internal Baths and the only distinction between them is that the newer method is infinitely more thorough, wherefore it would seem that one could hardly fail to recommend it without stultifying himself, could he?

As a matter of fact, I know that many of the most enlightened and successful specialists are constantly prescribing it to their patients.

The physician who has been responsible for this perfected method of Internal Bathing was himself an invalid twenty-five years ago. Medicine had failed and he tried the old-fashioned Internal Bath. It benefited him, but was only partially effective. Encouraged by this progress, however, he improved the manner of administering it, and as this improved so did his health.

Hence, for twenty-five years, he has made this his life's study and practice until to-day this long experience is represented in the "J. B. L. Cascade." During all these years of specializing as may be readily appreciated, most interesting and valuable knowledge was gleaned, and this practical knowledge is all summed up in a most interesting way and will be sent to you on request without cost or other obligations, if you will simply address Chas. A. Tyrrell, M.D., 134 West 65th Street, New York, and mention having read this article in The Independent.

The inclination of this age is to keep as far away from Medicine as possible and still keep healthy and capable. Physicians agree that ninety-five per cent of human ailments is caused by Auto-Intoxication.

These two facts should be sufficient to incline every one to at least write for this little book and read what it has to say on the subject.—Advertisement.

"Pretty soft for him"

OF course, it's pretty soft for the man who has made good. But, if you look behind for the real cause of his success, you'll find that luck played no part whatever—TRAINING did it. Yes, TRAINING secured through spare-time study. TRAINING is the **big** difference between you and the man who holds down the sort of job you'd like to have. Don't worry because others get ahead. Train yourself with the help of the International Correspondence Schools for the job you have in mind and you can do as well or even better.

Tens of thousands of men, at one time no better off than you, **now** hold good jobs as the direct result of I. C. S. training. These men simply wouldn't stay down. You're a man capable of doing bigger things. Make up your mind to do them. But get started. Every minute gained brings your success so much nearer. Mark and mail this coupon now.

ARMS AND THE SOCIALIST

The Future of Democracy, by H. M. Hyndman, the leader of British Marxism, represents the views of those English Socialists who support the war without supporting the government. Mr. Hyndman regards a German victory as the greatest possible menace to democracy and social reform; desires the British to adopt universal military service on the Swiss model; and, like his fellow Socialist, Bernard Shaw, thinks that the United States also should follow the path of preparedness.

"If the Great Republic," he says "were in possession of a sufficient army and an adequate navy, the attitude of the American President, alike toward our enemy, Germany, and our ally, Japan, would be very different from what it now is." On the other hand, he views the coalition government with the deepest suspicion, as at once cringing to the capitalists and oppressive to the working men; "we are at the mercy, not of one powerful and capable, if obnoxious dictator, but of a series of petty despots and jacks-in-office, who take advantage of the truce in party politics and the general desire not to embarrass the Government, to imperil and attack our ancestral liberties in every direction."

The Future of Democracy, by H. M. Hyndman. Scribner. \$1.

MADE IN AMERICA

If you would be Colonial, first know *The Colonial House* as she is built, lest you fall into error and encourage large meshed trellises to clamber over a doorway of 1800 simplicity or permit an Italian pergola to coquette with a gambrel roof. Joseph Everett Chandler in his readable volume will educate you in the periods of Colonial development in a most pleasing fashion and pilot you safely past the architectural pitfalls of your own ambition.

McBride. \$2.50.

RUSSIAN MELODIES FOR AMERICAN PIANOS

At first reading *Modern Russian Piano Music* is discouraging. The elusive themes leap nonchalantly from bass to treble, and it takes not only nimble fingers, but nimble musical wit to follow them. But they respond to a little study, and minor melodies of unique tone-color emerge from the disconcerting accidentals. As Constantin von Sternberg says in the preface to these two volumes of the Musicians' Library: "Russian music furnishes a strong illustration of the great difference between natural dignified modernity and its frenzied caricature, called modernism."

Ditson. \$1.50 each.

THE BENEFITS OF MONOPOLY

In *Anthracite*, Scott Nearing describes the system of monopoly ownership in natural resources, drawing his illustrations from the coal business, and shows how the consumer, the worker and the owner fare under the system. There is a study of the strike of 1912, with the analysis of the net results to the three parties at interest. In short, his argument is that monopoly al-

"THE FASCINATION OF THE NEW HOUSEKEEPING"

THAT is what members say who take the new correspondence course, *Household Engineering, Scientific Management in the Home*. It produces results in housekeeping just as marvelous as scientific management in other industries. It easily saves up to a third of the time spent in housework, smooths out difficulties and reduces expense. It changes indifference to enthusiasm and brings about the splendid efficiency attitude of mind that makes for success, health and happiness.

All who are interested in housekeeping or who would like help in their problems or wish to make progress in their life work are invited to enroll (this month only) **free of charge**. Simply write a post card or note or clip the following:

AMERICAN SCHOOL OF HOME ECONOMICS,
529a W. 69th St., Chicago.

Please enroll me for your new course, "Household Engineering." Send details and directions and Part I, *The Labor Saving Kitchen*, 64 pp. and the remaining eleven (11) Parts, one per month. When I am sure of the value of the Course to me, I will pay \$8.50 in full (or) I will send \$1.00 per month till \$9.00 is paid. Otherwise I will return the lesson books received and pay nothing.

ways leads to ends that are in conflict with the best interests of society. The benefits accrue to the owners only, and the rest of us pay the bills.

Philadelphia: John C. Winston. \$1.

TRICKS FOR TRAMPERS

Every experienced campaigner in the woods feels an impulse to save others work and worry by giving them the benefit of what he has learned. In Emerson Hough's *Out of Doors* a most complete book of this sort is presented, and every one who thinks of a walking-tour, or a camping-trip, or a shooting-excursion in either lowlands or highlands, will do well to read it.

Appleton. \$1.25.

THEORIES OF ART

Raley Husted Bell pretentiously calls his book on *The Philosophy of Painting* a study of the development of the art from prehistoric, to modern times. Yet he altogether misses the opportunity offered him to discuss futuristic art, and ends his survey with the Impressionists. The book, while readable enough, and containing much information, falls far short of any realization of its lofty promise.

Putnam. \$1.25.

SPANISH COLONIAL ADMINISTRATION

The splendid research work being done in western history by the University of California is evidenced by the handsome volume on *Texas in the Middle Eighteenth Century* by Prof. H. E. Bolton. This is based not only upon the study of manuscripts in the archives of Mexico City, Sevilla and Austin, but upon twenty-five thousand miles of travel by train, horse and foot in search of material and verification of sites.

University of California. \$3.25.

A MUSICAL POT-POURRI

A collection of "favorites" is usually disappointing, but Julia Culp's two volumes of *My Favorite Songs*, the second of which now appears, are representative enough to be well worth possessing. They have an unusually wide range, with emphasis on the German group, comprizing many well-known songs common to concert singers in general, and others that seem especially part of the musical personality of the Dutch Lieder singer.

Ditson. \$1 each.

"LES MISERABLES" IN LITTLE

Les Miserables in a small pocket volume seems a miracle, but the editor responsible for the abridgement has done his work so judiciously that we venture to say one unacquainted with the original might never discover that he was not here perusing a work complete in itself. The edition includes a helpful introduction and notes that elucidate obscure matters, and also explains many things that insufficiently explain themselves.

Macmillan. 25 cents.

PENNSYLVANIA'S DEPENDENT CHILDREN

A *Study of Child Welfare Work in Pennsylvania*, by a committee of the State Conference of Charities, under the direction of Dr. William H. Slingerland, condenses a great deal of important information about the opportunities for dependent children. The constructive suggestions will be helpful to all engaged in social work with children, wherever situated. Comparisons with methods and accomplishment in other states give balance and practical outlook to the study.

Russell Sage Foundation. \$2.

REALISM VS. ROMANCE

The Nameless One is a romantic drama of the sixteenth century set in admirable blank verse. The realist would think to dismiss it by the epithet, "sentimental." But then the chief failure of the realist is his blind spot on the side of the heart. Sentiment is just as solid a reality in this human world as viciousness. Too much of either is quite as bad as too much of the other. In Ann Cleveland Cheney's play there is no realism, and not too much romance.

Stokes. \$1.

This plan has saved the company \$37,000

A YOUNG department head with his plan enabled his company to eliminate certain costly parts of the business which the directors had not known were unprofitable. As a result the president appointed him his assistant.

This young man tells us that it was by applying to his own business the principles and methods presented in the Modern Business Course and Service, that he was able to work out one plan that saved his company \$37,000.

Helps Men Succeed in a Big Way

This case is typical of thousands. Every day men are doubling their earnings by having looked ahead and fitted themselves for the opportunities that come to the men who are equipped. These men are preparing themselves with all the business knowledge available through our Modern Business Course and Service. A billing clerk wins a position as head accountant in his concern. A general manager saves his firm from impending bankruptcy. A young bank clerk gains a position paying \$9,500 a year.

This Course and Service is Based Upon the Actual Experience of Thousands of Successful Business Men

The Institute collects, classifies and transmits to you, through the Modern Business Course and Service, the best thought and practice in modern business. It will give you a thorough and sound training in the fundamental principles underlying all departments of business—it will give you a knowledge that could be otherwise obtained only by years of bitter experience—if at all.

Advisory Council

The Advisory Council includes Judge E. H. Gary, Chairman of the United States Steel Corporation; Frank A. Vanderlip, President of the National City Bank; John Hays Hammond, the great engineer; Joseph French Johnson, Dean of New York University School of Commerce; and Jeremiah W. Jenks, the statistician and economist.

"Forging Ahead in Business"

THE COMPTROLLER OF THE CITY OF NEW YORK

will sell at his office in the Municipal Building, on
Wednesday, April 19, 1916, at 2 P. M.

\$40,000,000.00—4 $\frac{1}{4}$ %

Gold Corporate Stock of the City of New York

Payable April 1, 1966,

—and—

\$15,000,000.00—4 $\frac{1}{4}$ %

Gold Corporate Stock (15-Year Serial) of the City of New York

Maturing annually from April 1, 1917, to April 1, 1931, inclusive.

Exempt From FEDERAL INCOME TAX and From
All Taxation in the State of New York Except for State Purposes.

The latter class will be sold only in series. For example: A single bid for \$15,000 is a proposal for 15 \$1,000 items maturing from one to fifteen years. No bids will be accepted for separate maturities.

Separate Proposals must be made for each class.

The Greater New York Charter provides that bids may be made for as small an amount as \$10 and in multiples of \$10 for each maturity. No bid for Corporate Stock in the serial form can be accepted for less than \$150.

Send bids for each class in separate sealed envelopes, enclosed in other envelopes addressed to the Comptroller. A deposit of Two Per Cent. of Par Value must accompany each Bid. Such deposit must be in money or certified check upon a New York State Bank or Trust Company, or any National Bank.

For fuller information see "City Record," published at Nos. 96 and 98 Reade Street, New York, or consult any Bank or Trust Company. Send for descriptive circular to

WILLIAM A. PRENDERGAST, Comptroller, City of New York.
Municipal Building, New York.

Insurance

Conducted by

W. E. UNDERWOOD

A GREAT ACHIEVEMENT

Considered merely from the viewpoint of a commercial achievement, the business-getting record of the Metropolitan Life Insurance Company in 1915 may be described as something more than notable. The new insurance written aggregated \$592,800,860. Even those who know nothing of a working life insurance organization must have a measurable idea of the energy, skill and acumen that produces a result so prodigious. Seasoned veterans, who know and understand every cog in the agency machine, are struck with admiration for the system which in a single year can produce without strain at any point six-tenths of a billion of new insurance of which three-fifths consists of industrial policies averaging less than \$150 each. On January 1, the Metropolitan had in force 15,832,885 policies for \$3,196,491,344.

J. L. Harvey, N. D.—The financial condition of the Postal Life warrants the statement that its policies are fully secured. I presume the policies of the Brotherhood of All Railway Employees cover for sickness and accidental injuries only. I have no data respecting the organization, but you can get its figures by writing to the Insurance Department, Springfield, Ill. I presume a citizen who desires a policy in a company not operating in his state could procure it by applying directly (without the intervention of an agent) to the home office of the company. No first-class company would issue a policy that did not cover from date.

F. R. M., Cimarron, Kans.—It is difficult to express an opinion of the Pioneer Life of Kansas City, Missouri, that would be mutually satisfactory. The company seems to have changed managements five times since organization in 1907; its capital was once officially declared impaired; its capital has been increased and decreased several times and, taken altogether, it seems to have experienced many difficulties. On January 1, its assets were \$403,472; its surplus, \$160,181. Its insurance in force, \$2,338,980, is \$217,243 less than the year before. I think it is in better shape now than ever it has been previously, but what its future will be is difficult of determination at this time.

L. L. H., Hanover, Ind.—The Illinois Bankers' Life Association of Monmouth, Illinois, does business on the assessment plan. It maintains a guarantee fund composed of contributions from applicants, based on age, with the object of providing for claims in excess of the amount realized on a call of 30 per cent for mortuary purposes. But to life insurance mathematicians this fund is inadequate for the purposes of a reserve to meet increasing cost due to the increasing age of the membership, with the result that ultimately the members will have to submit to heavier assessments. No scheme of life insurance which ignores the accumulation of a reserve scientifically calculated on a standard mortality table can result in a level premium and guaranteed security to policyholders.

THE MARKET PLACE

THE FLOOD TIDE OF FOREIGN TRADE

The foreign trade figures for February, in spite of the shortness of the month, show continued increase. Imports amounted to \$193,935,117, nine and a half million dollars more than in January, and sixty-eight million dollars more than in February of last year. Exports were more than twice as great, \$409,836,525. This was an increase over the highest preceding month, December last, of more than fifty million dollars; and over the corresponding month of last year of one hundred and ten millions, or more than one-third. The favorable trade balance was also a record figure, \$215,901,408.

For the eight months of the fiscal year the increase in imports over the preceding year was \$235,452,481; but the increase in exports was \$951,835,553—a gain of thirty-seven per cent. The excess of exports over imports was \$1,295,217,462, considerably more than double the excess for the corresponding months a year ago.

These are the most astounding figures in our trade history. While no definite information is yet forthcoming it is clear that the great excess of exports is due to munitions and other supplies for the warring nations. This excess of exports is paid for by loans to foreign governments and by securities returned here for sale. It is a curious fact that during February, there was no balance of gold coming here in adjustment of the foreign exchange situation; in fact, we exported more than twice as much as came in.

Only one thing can happen when the close of the war brings this abnormally favorable condition to a sudden end—a reaction which will require all our wisdom and ingenuity to meet.

THE WINTER WHEAT CROP

It is a dozen years since the Department of Agriculture's first report of the season on the winter wheat crop has been as pessimistic as it is this year. The estimate, which has just been made public, gives a "condition percentage" of 78.3 per cent. In 1904 the estimate was 76.5, but every year since it has been so much higher that the ten-year average is 87.3. A year ago the percentage was 88.8, and in April, 1914, it had reached the remarkable level of 95.6.

The Department gives the "harvest indication," based upon this "condition percentage," as 495,000,000 bushels. This April indication is, of course, not a thoroly safe guide to the actual harvest; for in 1915 there was harvested 36,000,000 bushels more than was estimated in April, and in 1914 65,000,000 bushels more than the early estimate.

But even making all allowances for the increases over the present estimate that are probable, it is clear that the winter wheat crop this year is to be much below any crop since the war began.

The government estimate on this important crop, however far it may prove to be from the final outcome, is of great interest in view of the tremendous influence of the two great wheat crops of last year and the year before upon the balance of trade and our national prosperity.

AN ASSAULT UPON DECENT BUSINESS

A thoroly vicious law dealing with the affairs of corporations has been enacted by the Legislature of New York state and signed by the Governor. It provides that the list of stockholders of any corporation is to be open for inspection only to a stockholder holding more than five per cent of the stock of the corporation and to such a stockholder only after six months of stock ownership. For such an assault upon the rights of the small stockholder there can be no justification. The law will deprive many of the owners of a business of the right to important knowledge as to the affairs of the business. It will keep many of the partners in a business from knowing who the other partners are. It puts a premium upon underhandedness and secret manipulation.

The *Wall Street Journal* has picturesquely described the measure as "conceived in iniquity, born in secrecy, passed in ignorance and signed by the Governor in callous indifference to anything but his own political fortunes."

No legitimate and honest corporation needs or desires to carry on its business under such baleful obscurity. The facts as to the actual ownership of any corporation are the legitimate property not only of every stockholder, but of the public as well. The business whose owners fear the light is a legitimate object of suspicion. For the state to aid and abet such men in their desire for secrecy is a betrayal of the public welfare. It is an affront to every decent business interest.

The following dividends are announced:
The New York Central Railroad, \$1.25 per share, payable May 1.

American Brake Shoe and Foundry Company, preferred, quarterly, 2 per cent; common, quarterly, 1¼ per cent; both payable March 31.

Westinghouse Electric and Manufacturing Company, preferred, quarterly, 1¼ per cent, payable April 15; common, quarterly, 1½ per cent, payable April 29.

American Light and Traction Company, preferred, 1½ per cent; common, 2½ per cent, and 2½ shares common stock on every 100 shares.

Pacific Gas and Electric Company, common, \$1.25 per share, payable April 15.

The Niagara Falls Power Company, \$2 per share, payable on and after April 15.

When War Orders Cease

Business as the result of war forms a great part of our present activity. What about *your* business when the war stops? Babson's Reports will help you.

Avoid worry. Cease depending on rumors or luck. Recognize that all action is followed by equal reaction. Work with a definite policy based on fundamental statistics.

DIVIDENDS

AMERICAN TELEPHONE AND TELEGRAPH COMPANY

A dividend of Two Dollars per share will be paid on Saturday, April 15, 1916, to stockholders of record at the close of business on Friday, March 31, 1916.

G. D. MILNE, Treasurer.

AMERICAN LIGHT & TRACTION COMPANY DIVIDEND NOTICE.

The Board of Directors of the above Company, at a meeting held April 4th, 1916, declared a cash dividend of one and one-half per cent. (1½%) on the Preferred Stock; a cash dividend of two and one-half per cent. (2½%) on the Common Stock, and a dividend at the rate of two and one-half (2½) shares of Common stock on every one hundred (100) shares of common stock outstanding, all payable May 1st, 1916.

The Transfer Books will close at 12 o'clock noon on April 15th, 1916, and will reopen at 10 A. M. on May 1st, 1916.

C. N. JELLIFFE, Secretary.

PACIFIC GAS & ELECTRIC CO.

Dividend (Number 6) for the three months ending March 31st, 1916, at the rate of \$1.25 per share upon the Common capital stock of this Company will be paid on April 15, 1916, to shareholders of record at close of business March 31, 1916. The transfer books will not be closed. Checks for the dividend will be mailed.

A. F. HOCKENBEAUMER, Treasurer,
San Francisco, Calif., March 31, 1916.

Shakespeare's Portrait

While our limited supply lasts we will mail in a tube suitable for framing an excellent reproduction on heavy cameo paper of Leopold Flameng's etching of the famous Chandos portrait of Shakespeare. Send six two-cent stamps to cover cost of wrapping and mailing.

DOING IT WELL

PEOPLE HERE AND THERE WHO ARE ACHIEVING EFFICIENCY

Department Store Training

"I sold three times the amount of the girl next to me," Mrs. Lucinda W. Price says in *The Bookman*, in telling how a self-imposed turn at the counter of a big department store led to her founding the School of Salesmanship in connection with the Women's Educational and Industrial Union, of Boston. "It was partly because I was interested in serving the public; she was interested in getting her salary." As the result of finding, first-hand, the needs of department store employees and the vast possibilities of more efficient service, Mrs. Price was able to organize lessons in selling methods, arithmetic, applied physical education, textiles, design, hygiene and the elements of economics, with an advisory committee composed of the heads of Boston stores, who have taken up the movement vigorously. Girls actually working in the Boston stores are taking the lessons mentioned; another branch of the school's activity is to equip college graduates for training department store employees. Applied psychology, economics, textiles, and the principles of education form part of the curriculum of this class of students, who, on the practical side, learn their business by going as salesgirls into the large stores. Fully trained graduates are working, as a result, in New York, Cleveland, Atlanta, Newark, San Francisco, Milwaukee, Denver and Toledo. "For the college girl who has the vision of service," says Mrs. Price, "no greater field than this can be found." In New York the Board of Education and the University have agreed to develop, as part of the regular work, the plan of the Department Store Educational Association, under which 336 saleswomen from one store alone have already taken courses.

An Inventory of Industry

Prominent among the many steps that are being taken toward Preparedness—the topical name for national efficiency—is likely to be the preparation of a thoro inventory of American industry, for the first time in the country's history. Three hundred thousand qualified engineers, according to the plan, will combine in the undertaking, which is part of the scheme for stimulating the Preparedness Idea planned by the Associated Advertising Clubs of the World. With the sanction of President Wilson, the organization, representing American business at every point, placed its services at the disposal of the Committee on Industrial Preparedness, which it will assist thru a committee of leading publishers and advertising experts and a big campaign in the press. "It is vitally necessary," says Mr. Howard E. Coffin, "that American industry be made aware of the part it must play in our national defense.

Our whole conception of warfare has changed almost overnight. We are confronted with the need for interlocking the military and industrial elements in one great working organization, and that is the work before us."

Art and the Poster

The efficient poster is not a thing of screaming colors and harsh lines—this is the proposition which the Pennsylvania School of Industrial Art is seeking to prove by an exhibition at which will be shown some of the latest and most successful attempts to combine artistic and publicity values. The exhibition reflects a growing body of opinion among advertisers in favor of billboards, posters and other illustrative advertising that shall strike the imagination as well as the retina, and one of the principal exhibits is to be the \$1000 prize poster designed by Adolph Theidler for the Newark, New Jersey, anniversary celebration.

The New Way in Railroad Telegraphy

Mr. Andrew Carnegie, at the age of fifteen years, was working as a telegraph operator on the Pennsylvania Railroad, a fact which gives point to the effort which the company is making to popularize this branch of its operative work. The railroad is up against the pulling power of big wages offered by the flourishing munitions works of the state, but results are looked for from an offer to teach telegraphy free at the company's school at Bedford, where, in addition to every facility on the theoretical side of the work, there has been erected a miniature railroad, with tiny trains operated by electricity. In cabins arranged round the track pupils learn how to do their share in the work of traffic regulation, seeing meanwhile the actual effect of their duties. With proficient scholars the miniature trains run to schedule time, and literally as smoothly as clockwork, but an error may produce a bloodless disaster that effectively warns the would-be telegrapher of his responsibility.

A Better St. Paul

The Association of Commerce of St. Paul is considering a plan of reorganizing with a view to greater efficiency and making St. Paul "a better city in which to live, and a more productive community in which to transact business." The scheme, which is exhaustive in its consideration of the life of the city, aims to enroll all classes who may conceivably help toward the general improvement. Three divisions of the association's work are contemplated: one for dealing with public affairs, em-

bracing every economic problem of the city, from housing conditions and street planning to recreation facilities and the administration of charities; another for the advancement of business and for such matters as labor welfare, trade expansion and transportation difficulties; and a third for the administration of the association itself. The movement aims: ". . . to inculcate among our citizens a higher appreciation of the value to the individual of disinterested community service and a keener understanding of community problems; . . . to perfect a central clearing-house of information having to do with civic, commercial and industrial St. Paul."

A Columbus of the Air

What is the goal of efficiency in the matter of aerial science? Mr. Rodman Wanamaker gives the answer in a letter to Mr. Alan R. Hawley, president of the Aero Club of America, printed in full in the *Aerial Age*. He believes that not until one of our great oceans is crossed in a single flight will aviation have met the supreme test, and he is having built another aircraft specially designed for alighting on and rising from rough seas, and fitted for a transatlantic flight. It is now under construction and when complete will be thoroly tested at the Atlantic Coast Aeronautical Station at Newport News. "The crossing of the Atlantic Ocean in one flight," Mr. Wanamaker writes, "is, to my mind, as important to aerial navigation as was the voyage of Columbus to transportation by water. What man can do once, he can do any number of times. Once the Atlantic is crossed in a single flight of an airship, there will soon follow regular transatlantic trips and a fixed, safe transatlantic passenger air line. The crossing of the Atlantic by air is not a matter merely of initiative, nor of daring, nor even of skill; it is a problem of science." It is understood that the design of the new craft is absolutely different from anything else constructed so far, is an entirely new departure in design and construction, and will be the largest aircraft ever built, and also that this craft will be equipped with six twelve-cylinder motors of 300 horsepower each, or 1800 horsepower, and will be capable of making a speed of about 100 miles an hour, with a crew of six people, the fuel, instruments, provisions and equipment necessary for the transatlantic flight, which it is expected will be made by this craft in about thirty hours.

Following Mr. Wanamaker's announcement, the Aero Club of America has sent a cable to the Royal Aero Club of Great Britain and to Lord Northcliffe advising of Mr. Wanamaker's project, and inquiring whether the \$50,000 prize for a cross-Atlantic flight offered by Lord Northcliffe is still open. His reply was, "Yes, after the war."

VOX CLAMANTIS

"Rattle and clatter and clank and whirr," And it's long and long the day is. From earliest morn to late at night, And all night long, the self-same song—"Rattle and clank and whirr." Day in, day out, all day, all night—"Rattle and clank and whirr"; With faces tight, with all our might—"Rattle and clank and whirr"; We may not stop and we dare not err; Our men are risking their lives out there, And we at home must do our share;— But it's long and long the day is. We'll break if we must, but we cannot spare A thought for ourselves, or the kids, or care; For it's "Rattle and clatter and clank and whirr." Our men are giving their lives out there, And we'll give ours, we will do our share—"Rattle and clank and whirr." Are our faces grave, and our eyes intent? Is every ounce that is in us bent On the uttermost pitch of accomplishment? Tho it's long and long the day is! Ah—we know what it means if we fool or slack; —A rifle jammed—and one comes not back, And we never forget—it's for us they gave, And so we will slave, and slave, and slave, Lest the men at the front should rue it. Their all they gave, and their lives we'll save, If the hardest of work can do it;— But it's long and long the day is. Eight hours, ten hours, twelve hours' shift— Oh, it's long and long the day is! Up before light, and home in the night. That is our share in the desperate fight, And it's long and long the day is! Backs and arms and heads that ache; Eyes over-tired and legs that shake; And hearts full nigh to burst and break;— Oh, it's long and long the day is! Week in, week out, not a second to spare, But tho it should kill us we'll do our share,

For the sake of the lads who have gone out there For the sake of us others to do and dare;— But it's long and long the day is! "Rattle and clatter and clank and whirr," And thousands of wheels a-spinning— Spinning Death for the men of wrath, Spinning Death for the broken troth, —And Life, and a New Beginning. Was there ever, since ever the world was made, Such a horrible trade for a peace-loving maid, And such wonderful, terrible spinning? Oh, it's dreary work and it's weary work, But none of us all will fail or shirk;— Not women's work—that should make, not mar, But the Devil drives when the world's at war;— And it's long and long the day is. And YOU can help us in many a way, You others, who have not to be in the fray; For it's your men, too, we are working to save, Your bravest and best, just as we did, you gave; But it's all giving now, if we'd safeguard the rest, And make a sure end of this horrible waste. We ask you to help us to lessen the stress Of these days of unnatural weariness, There are plenty of ways for you to express The warmth of your hearts and your thoughtfulness— For it's weary and weary our way is, And it's long, long, long, the day is.

We're not slacking, Tho we lack, You're not lacking— Will you slack?

—By John Oxenham, in the London Times (Copyright)

REMARKABLE REMARKS

"BUGS" BAER—The only cure for golf is golf. SENATOR VARDAMAN—The President has written some good books. SENATOR SHERMAN—The country is surfeited with phrase-makers. AMY LOWELL—I wish that newspapers did not try to review books. SENATOR SMOOT—The American garbage can is the fattest in the world. PUGILIST MORAN—There's a lot of money in that Billy Sunday game. MARION HARLAND—Few of us escape the well meant gifts we do not wish. COMMISSIONER OF HEALTH EMERSON—Dogs are not necessary to a cultivated existence. YUAN SHIH-KAI—Owing to our lack of virtue we are unable to win the will of heaven. WOODROW WILSON—Have you the courage to go in? Have you the courage to come out? S. STANWOOD MENKEN—Internationalism as a practical possibility is dead for our generation. ARTHUR CHAPMAN—Impressive office furniture can often carry an unimpressive man to success. ANNE RITTENHOUSE—It looks as tho the majority of bathing suits will be parade uniforms this summer. SENATOR BURTON—It is impossible to contemplate the future of America without a feeling of enthusiasm. W. H. TAFT—Railroads have themselves to blame for the condition in which they now find themselves. GEN. NELSON A. MILES—I would match a volunteer American defending his liberties and his government against any German soldier. WILLIAM RANDOLPH HEARST—The press of New York City and New York State should unite in an effort to maintain the moral standards.

THE PRESTIGE OF A MOTOR CAR no longer depends upon a mere name, surrounded by a fictitious atmosphere of aristocracy.

The only aristocracy in motor cars, now, is an aristocracy of merit.

It is true that the ownership of a Cadillac carries a distinct social value in every community.

But it is the *character of the car* which sheds lustre on the Cadillac name—not the name which confers lustre on the car.

Intent upon the more serious purpose of making the Cadillac as good as a motor car can be made, this Company has paid scant attention to any other aspect of the case.

Social distinction came to the Cadillac as an after-result. It was conferred by the owners themselves—as an appreciation of its more sterling qualities.

Each year the number of those amply able to pay more, but who prefer the Cadillac because of what the Cadillac is, has rapidly increased.

Each year the lure of a mere name has grown less.

It is the age-old process at work.

Neither a man, nor a motor car, can live on a name alone.

The world demands deeds from the one, and performance from the other.

In the working-out of that process, the world has bestowed greater and greater distinction upon the Cadillac.

WHAT SANK THE "SUSSEX"?

THE German note on the attack upon the British Channel steamer "Sussex" presents what is either an astounding coincidence or a disgraceful attempt at evasion.

The German Government admits that on the day the "Sussex" was damaged a German submarine torpedoed in the English Channel a vessel which the submarine commander assumed from outward appearances to be a British mine layer; but it asserts that this could not have been the "Sussex." In support of this contention it offers in evidence a sketch of the torpedoed vessel made by the captain of the submarine, and, for comparison, a newspaper picture of the "Sussex."

Observe, now, the remarkable coincidence. The "Sussex" was damaged in the Channel between Folkestone and Dieppe; so was the vessel admitted to have been torpedoed. The disaster to the "Sussex" happened at a few minutes before four on the afternoon of March 24; so did the torpedoing confest to by Germany. The forward part of the "Sussex" was wrecked by the explosion; the same part of the strange vessel was wrecked by the German torpedo.

Was the vessel that the German commander torpedoed on sight, without warning, with no definite knowledge of its identity or character, the "Sussex"? If it was not, the coincidence verges upon the miraculous?

If it was the "Sussex," our course is clear. The incident proves once for all that Germany is not keeping her word to us. It shows that the "scrap of paper" habit is too deeply ingrained to be eradicated. We can trust Germany no longer. Our friendly relations must have an end.

The German Government calmly suggests a reference of the disputed facts in the case to an international commission of inquiry in accordance with the Hague Convention for the Pacific Settlement of International Disputes. This is a plausible proposal. The "Sussex" case, considered alone by itself, is exactly the kind that the Commission of Inquiry was intended to take care of.

It involves primarily a disagreement as to facts. Was the "Sussex" sunk by a German torpedo, or was it not? That is the question.

But it is not necessarily the whole question. If the "Sussex" struck a mine, of course the determination of that fact would automatically close the case, so far as the United States is concerned. But if the boat was torpedoed, it is not merely a question of apology and disavowal and reparation. There is involved a broken pledge on the part of the German Government, a violation of plighted faith. Such a breach between two nations cannot be healed by mere expressions of regret or cold payments of money.

Nevertheless, if the evidence at the command of the United States Government is not sufficient to convince us beyond a reasonable doubt that the "Sussex" was torpedoed, it would be well to accept the German proposal, on one condition. Germany must give the most complete guarantees that, pending the report of the commission, she will give up her submarine warfare against merchant ships in its entirety. For in that warfare, as now admittedly carried on by the German navy, there are too many chances for mistakes and unfortunate accidents.

If Germany is to go on torpedoing merchantmen at will, we must come to our own conclusion as to the facts in such a case as that of the "Sussex." Under such conditions Germany could not come into court with clean hands.

But the belief is irresistible that the German proposal is not made in good faith. It comes too late in the day. It bears too much the look of one more move to gain time and to postpone the day of reckoning.

If our government becomes convinced that the "Sussex" was in fact sunk by a German torpedo, that day of reckoning should come swiftly. Diplomatic relations should be severed without parley. We cannot live on terms of friendly harmony with a people who make it impossible for us to trust their word.

LABOR, LAW AND LIFE

ONE of the most vitally important questions of our present day world is that of the relation of conditions of industry to the common life and the general welfare. This question, with ever increasing insistence, is urging itself upon the thought and enlisting the activity of students everywhere of the social problem. With greater and greater frequency it is engaging the attention of our legislatures and our courts. Step by step the domain of the old arrogant theory that industry is a private matter between the employer and the laborer has been invaded. The victorious invader

has been the dawning realization that industry is a matter of public concern and that the condition of the great mass of mankind that works with the hands is of vital interest to the community and to all mankind.

The trunk line of this invasion has been the public control of the hours of labor. The forces of progress in this country have now reached a crucial point in the advance. If this point can be successfully assaulted, the way will be opened for a complete conquest, by the powers of enlightenment, of the benighted kingdom of industrial exploitation of the workers.

A case is now being argued before the Supreme Court of the United States, the decision of which will determine whether the next step is to be forward or back. It is to test the constitutionality of the Oregon Ten Hour Law. The phraseology of the law is so unusual and so significant that we quote its principal provisions:

Section 1.—It is the public policy of the state of Oregon that no person shall be hired, nor permitted to work for wages, under any conditions or terms, for longer hours or days of service than is consistent with his health and physical well-being and ability to promote the general welfare by his increasing usefulness as a healthy and intelligent citizen. It is hereby declared that the working of any person more than ten hours in one day, in any mill, factory, or manufacturing establishment is injurious to the physical health and well-being of such person, and tends to prevent him from acquiring that degree of intelligence that is necessary to make him a useful and desirable citizen of the state.

Section 2.—No person shall be employed in any mill, factory, or manufacturing establishment in this state more than ten hours in any one day. . . .

The constitutionality of the law is assailed under the Fourteenth Amendment to the Federal Constitution, which provides that no state shall "deprive any person of life, liberty or property, without due process of law." Its constitutionality is defended under the police power of the state. The liberty of contract guaranteed by the Constitution is subject to modification by reasonable regulations imposed by the Legislature on behalf of the general welfare. The only limit to such modification is that it shall be actually reasonable and not arbitrary.

It is an interesting development in the judicial attitude that cases like the present, concerned with industrial conditions, have come more and more to be considered as questions not of law but of fact. Is the legislation in question as a matter of fact a reasonable exercise of the police power as applied to the conditions which actually exist in the industries involved? This is the question which the Court has to decide in any case like the one now before it.

This has led to a new method of arguing such cases, invented by Mr. Louis D. Brandeis, whose appointment to the Supreme Court still awaits confirmation. It consists in presenting a mass of evidence and authoritative opinion in support of the thesis that the conditions legislated against are actually detrimental and a danger to the public welfare.

The law in the case needs no arguing: it is too well established by decisions of courts thruout the country and of the Supreme Court itself. It is only the facts that need to be determined. In a previous case—that of the California law establishing an eight hour day for women in certain industries, which the Supreme Court sustained just a year ago—the Court reasserted the principle that it is the function and the duty of the Legislature to determine the need, the expediency and the wisdom of the law as a protection of the public welfare, and that the function of the court is limited to the determination whether in view of the actual facts in each case the Legislature acted arbitrarily.

In the present case the Attorney General of Oregon had retained the services of Mr. Brandeis for the preparation of the case on appeal. When Mr. Brandeis was appointed to the Supreme bench, he of course retired from the case, and Professor Felix Frankfurter, of the Harvard Law School, one of the most brilliant of the younger generation of American lawyers, was retained in his place. In the preparation of their brief these gentlemen have had the able and expert assistance of Miss

Josephine Goldmark, publication secretary of the National Consumers' League.

It has long been accepted, not only by the courts but generally, that it is a legitimate function of government to protect by legislation the health of workers in dangerous trades. The contention of the brief is that all occupations are dangerous where the hours of work are too long. In all industries a permanent predisposition to disease and premature death exists in the common phenomena of fatigue and exhaustion. This is a danger common to all workers, even under good working conditions, and all manufacturing industries. Excessive hours of work produce over-fatigue and the results of over-fatigue are lessened efficiency, increased susceptibility to disease, particularly the so-called degenerative diseases of the heart, blood vessels and kidneys, weakening of the moral fiber, and general deterioration.

Beside these general factors of danger to the workers, other dangers of environment are found to be common to many trades. It was formerly supposed that injurious substances, such as mineral and vegetable dusts, fluff, gases, fumes and industrial poisons, were menaces to the health of the workers in only a few dangerous occupations. It is now known that one or another of these deleterious substances is to be found present in most of the important branches of manufacture. They constitute hazards not only in a few special trades, but almost universally. In addition to these specific dangers there are numerous general industrial hazards common to practically all manufacturing industries. They include bad air, humidity, extremes of heat and cold, noise, bad lighting, vibration, and other similar conditions. Not all these injurious factors are ordinarily found in conjunction in every industry; but one or more of them is operative in nearly every manufacturing industry. Investigation has proved that these general incidents of factory life predispose to the more rapid onset of disease. They thus undermine the workers' powers of resistance and constitute causes of premature deterioration.

The brief in the present case presents an impressive array of evidence, drawn from the experience of countries all over the world, in support of the thesis which we have all too inadequately stated here. It marshals an array of facts that is overwhelming.

The decision in this case will be awaited with the greatest eagerness by all those who realize the importance to the welfare of the whole community of legislative protection of the workers against unhealthful and oppressive conditions of labor.

RECONSTITUTING THE BRITISH EMPIRE

THE unwritten constitution of Great Britain has received a severe jolt. The Little Englanders were content, as they always have been, with an automatic and imperceptible evolution of political institutions "broadening slowly down from precedent to precedent." But the people who live in the "British Isles" lying on the southern side of the world care nothing for precedents, and they share the American aversion to "taxation without representation." Three years before the war Sir Joseph Ward, then Prime Minister of New Zealand, shocked London by suggesting that the foreign policy of the empire ought no longer to be managed exclusively by a small group of Englishmen, but that the

self-governing dominions ought to have something to say about it. This unconventional proposal naturally excited considerable amusement, but, out of regard for the feelings of the New Zealander, the English quietly ignored it.

But such polite obliviousness will no longer suffice. Australia has sent two men to England who are accustomed to speaking their mind and who are doing it, ex-Premier Fisher and present Premier Hughes, both leaders of the Labor party.

In 1911 Premier Fisher and his Minister of Defense, Senator Pearce, were called to London with the representatives from the other dominions in order that Premier Asquith and Sir Edward Grey might explain to them the foreign policy of Great Britain and urge them to more active measures in preparation for the coming conflict. Mr. Fisher was deeply impressed, and when he went back used all his influence with the party and the people to put thru measures for a greater army and navy. As soon as he came into power again, in September, 1914, he declared in favor of "standing with the empire to the last man and the last penny," and he has kept his word.

But while he has thus pledged the support of Australia to the Mother Country, he has at the same time insisted that the dominions ought to have something to say about the foreign policy which they are asked to support, and about the terms of peace at the end of the war. But his request early in 1915 that an Imperial Conference be called to consider such questions was curtly declined by the British Government, which still adhered to its old policy of refusing the colonies any share in governing the empire of which they are members.

Now Mr. Fisher has come back to England as High Commissioner of the Australian Commonwealth. Almost as soon as he landed he called attention to the curious circumstance that, if he had remained a poor miner in Scotland, where he was born, he would have had some influence over questions of imperial policy, because he could have heckled his representative in Parliament and voted for or against him on that ground. But, he says:

I went to Australia. I have been Prime Minister. But all the time I have had no say whatever about Imperial policy—no say whatever.

Now, that can't go on. There must be some change.

So, too, Sir Robert Borden, Prime Minister of Canada, has declared that "never again" will Canada take part in a British war unless she has something to say about its causes and results.

But Premier Hughes has gone further. Hearing that a conference of the Allies was to be held in Paris the last of April to consider the advisability of a customs union and other measures by which German trade could be kept down after the war, the Australian Premier coolly asked to be admitted to the conference. This suggestion was, as we might suppose, received with pained surprise. It was politely pointed out to him that Australia was not one of the Allied Powers and that it would be manifestly improper to admit the Premier of Australia and not the Premier of Canada, who, it appears, did not want to be included. But Mr. Hughes persisted and he carried his point. He will attend the conference on commercial strategy, and it would be interesting to know—tho we are not likely to—what he will say. At any rate, we know that he will not be likely to say the same things about tariffs, labor, defense and the

like as would be said for him by Mr. Asquith and Sir Edward Grey.

It seems quite possible that when President Lowell gets out a new edition of his great work on "The Government of England" he will begin a new chapter with Mr. Hughes's arrival at Paris.

THE DIABOLICAL JAPANESE

OF course, you have heard of the 100,000 trained Japanese soldiers now in the United States disguised as farmers, artisans, students and domestic servants, going about seeking whom they may devour and prepared at a given signal to unite and seize the United States. Well, the statistics of the Japanese in the country for 1914 are now available, and the most alarming prophecies are confirmed. It seems that there were 99,321 Japanese scattered thruout the country in 1914, of whom 70,303 were men, 14,876 women, and 14,142 children. Of these 70,303 mature men about fourteen per cent were born in the United States and therefore have not served in the Japanese army. Moreover, the men are decreasing in numbers steadily, to say nothing of getting older and past military age all the time. In 1906 eighty-eight per cent of the Japanese in California were men; in 1914 only sixty-six per cent. Since 1908, when the Japanese population was at its maximum, over 10,000 more Japanese have left our shores than have come here. Thus the Japanese menace proves more horrendous as each new fact is unfolded. We can well applaud the brave Chamber of Commerce of Los Angeles which has just memorialized Congress for a "national rural reserve" of 5,000,000, and a permanent force stationed on the Pacific slope of 500,000 troops "fully equipped and officered" and "ready for instant military service."

COLLECTIVE VS. COMPETITIVE ARMAMENTS

NATIONAL preparedness is a necessary evil. It is necessary because the world is politically unorganized and each nation is the sole custodian of its own security. It is an evil, because it is costly, wasteful, subversive of the golden rule, and is apt to result in the very resort to force it is intended to prevent.

As long as each nation lives under the delusion that it can protect itself against all, as long as it believes in the mathematically impossible policy of having a greater force than any other nation, the United States has got to "play the game" with the rest.

The system is analogous to cut-throat competition in railroads. If one road selfishly lowers rates, thinking thereby to get the other's business, the competitor must follow suit whether he wants to or not. As a result, both roads are worse off than before. So if one nation thinks to gain advantage over a neighbor by greater preparedness, the other must prepare likewise or risk being conquered.

This is why The Independent is for preparedness, and yet deplores preparedness. If we stand for preparedness—moderate and unhysterical tho it be—we do so only as a stop-gap until the whole competitive system of armaments is abolished. This, we admit, is no small task. But there can be no doubt but that once the world has sense enough to substitute the collective system of armaments under a League to Enforce Peace for the

competitive system of armaments, under which the world now so grievously suffers, we shall have devised a scientific formula for changing the colossal rival armaments of the world into a true international police, and that will mean their inevitable reduction. For if a recalcitrant nation cannot hope to create a large enough force "to lick all creation," and if a law-abiding nation can be certain to be backed up in its just actions by an overwhelming world force, there will be no incentive to increase armaments and every incentive to decrease them.

Let the United States, then, proclaim to the world that it is ready to join with other nations in a League to Enforce Peace. In the meantime, let us heed the lessons taught by the present war and put our military house in order.

National preparedness is a necessary evil. International preparedness is a necessary good.

UNIVERSITY MANAGEMENT

IF there be a Professors' Almanac like to the old Farmers' Almanac, it would have strung down the April page: "About—this—time—look—out—for—squalls." For every spring we hear complaints about the tyranny of university authorities and attempted interference with free speech. Last year the chief storm centers were Pennsylvania, Utah, Dartmouth, Colorado, Lafayette and Minnesota. This year trouble is reported from about as many more places, and the season is young. For instance, the German-American Alliance of Cincinnati demands the suppression of President Dabney because he "attempts to foist his dangerous notions, personal fallacies and national antipathies upon the community and to turn the tide of opinion to his own liking." The chief ground of complaint seems to be the publication of a private letter which the president of Cincinnati University wrote to a kinsman of his wife's, Congressman Cantrill, urging him to support President Wilson on the question of warning passengers against armed liners. Evidently if a public man in Cincinnati has any private opinions that are not pro-German he had better beware how he puts them on paper.

We may match the sample of German intolerance by a piece of British intolerance from the other side of the ocean. The Rev. Dr. Edward Lyttelton, the honored headmaster of Eton College, has been compelled to resign because, as the dispatch naïvely states, he expressed the opinion "that it was the duty of Great Britain to extend the principles of Christian charity to Germany."

From Oregon we hear that J. Willis Jefferies has been dismissed from the Franklin High School of Portland because he preferred *The Independent* and other periodicals to the grammar and rhetoric books in the teaching of English. There are, we have good reason to believe, several thousand teachers in the United States who are guilty of the same crime, but we will never tell on them.

The most serious affair, however, is an insurrection in Bryn Mawr against the rule of President M. Carey Thomas, who is accused of autocratic and dictatorial methods by many of the faculty, alumni and students. This outbreak is no surprise, for the trouble has been brewing for many years, and now that it has become public it will probably result in a reorganization of the institution on a more satisfactory basis.

That has been the result in the neighboring University of Pennsylvania. The dismissal of Professor Scott

Nearing, which we discussed on July 5 of last year in the editorial on "The Rights of Professors and Students," aroused such indignation among the alumni and public that the university trustees amended the statutes so as to provide for consultation with representatives of the faculty before a professor is removed. This is a great step in advance and will do much to unify the university and to restore confidence in its management.

It is not safe to assume, as the public is apt to do whenever a professor is removed, that the administration is altogether to blame. Such cases are never so simple as they seem to outsiders, but are always complicated by personal factors and conflicting educational ideals. The university authorities should scrupulously avoid all forms of interference with freedom of speech, but, on the other hand, the teacher should remember that he also is under obligation to the institution as to the way in which he exercises that freedom. The best statement we have seen of this reciprocal obligation is contained in the report of the Committee on Academic Freedom and Academic Tenure of the American Association of University Professors, vulgarly known as the "Professors' Trade Union":

The claim to freedom of teaching is made in the interest of the integrity and of the progress of scientific inquiry; it is, therefore, only those who carry on their work in the temper of the scientific inquirer who may justly assert this claim. The liberty of the scholar within the university to set forth his conclusions, be they what they may, is conditioned by their being conclusions gained by a scholar's method and held in a scholar's spirit; that is to say, they must be the fruits of competent and patient and sincere inquiry, and they should be set forth with dignity, courtesy, and temperateness of language. The university teacher, in giving instruction upon controversial matters, while he is under no obligation to hide his own opinion under a mountain of equivocal verbiage, should, if he is fit for his position, be a person of a fair and judicial mind; he should, in dealing with such subjects, set forth justly, without suppression or innuendo, the divergent opinions of other investigators; he should cause his students to become familiar with the best published expressions of the great historic types of doctrine upon the questions at issue; and he should, above all, remember that his business is not to provide his students with ready-made conclusions, but to train them to think for themselves, and to provide them access to those materials which they need if they are to think intelligently.

If all professors would live up to the ideal thus formulated by their representatives there would be fewer cases of tyrannical action on the part of university authorities, and when such a case did occur public opinion would be unanimous in condemning it.

SHAKESPEARE HARD AT IT

THE other day Ellen Terry helped the Lord Mayor of London to pack—with due pomp and ceremony—a consignment of Shakespeare tercentenary badges to be sent to Canada.

These 750,000 buttons for Canadian buttonholes would seem to indicate an admirable loyalty on the part of this active youngster of a nation to the memory of an old-country poet. It is not literature, however, but philanthropy that is at the bottom of the nation-wide decoration. The Shakespeare buttons are to be sold for the benefit of the British Red Cross, Belgian Relief, and the League of Mercy.

So for a small investment one can honor Shakespeare, comfort a wounded Tommy Atkins, and feed a Belgian baby, all at one stroke. It is a bargain tag-day.

The quality of mercy is not strained. But can one say as much for the memory of Shakespeare?

THE STORY OF THE WEEK

Carranza Wants Us to Withdraw

General Carranza has addressed a note to the American Government formally protesting against the continuance of American troops in Mexico in pursuit of Villa. The de facto President of Mexico declares that the expedition into Mexico was undertaken under a misapprehension by the American Government of the position of the Mexican Government as set forth in General Carranza's note of March 10. He admits that the action in dispatching the troops in pursuit of Villa was taken in good faith; but asserts that he had no intention of agreeing to such an act in the present case.

The purpose of the original Mexican note was, Carranza now says, to submit a proposal for an agreement under which American or Mexican troops, as the case might be, could cross the boundary line in pursuit of bandits if "unfortunately, there should be repeated along the border acts like those committed in Columbus." The note of last week further declared that the Mexican Government had judged from the first that the Columbus incident, because some time had passed since it had occurred, could not be considered an occasion for the sending of troops into Mexico. Since the subsequent attempts to frame a formal agreement or protocol regulating the reciprocal passage of troops across the border had proved unsuccessful, the Mexican Government now asserts that it "judges it convenient to suspend for the present all discussion or negotiations in this particular or founded on the circumstance that the expedition sent by the United States Government to pursue Villa is without foundation in virtue of the non-existence of a previous agreement, formal and definite." The delivery of the note to Secretary Lansing was regarded by General Carranza as "ending negotiations for a reciprocal passing of troops and asking for disoccupation of the territory occupied by American troops in view of Villa's party having been destroyed."

The Protocol Negotiations

Subsequent to the receipt of the Carranza note, the State Department made public all the previous correspondence between the two governments looking toward the making of a formal agreement. The Mexican Government, in its proposals, suggested severe limitations in several particulars to the sending of any punitive expedition. The expedition must not exceed 1000 men; it must be composed only of cavalry, with no infantry or artillery. The cavalry, however, might be accompanied by machine guns. The pursuit must not be carried further than forty miles across the boundary line, and must be discontinued and the troops withdrawn within five days, "except in unusual cases."

The pursuing forces are not to cross the line within six miles of any town on the border, or to occupy any city or town in the country they have entered. It was further proposed that clashes between troops of the two governments "thru errors or indiscretions of commanders" should not be considered sufficient to hold the government of the offenders responsible; nor could attacks upon the pursuing forces by the inhabitants operate to impose responsibility upon their government.

To these proposals the American

State Department returned counter proposals, disposing of most of the limitations suggested with the exception of those relating to the point on the border where the line should be crossed, the occupation of towns, and the length of time the forces should remain within the entered country. The length of time under this last provision was proposed to be lengthened to fifteen days, subject to a special agreement for its extension. A request was added to the American reply for the consideration of the Columbus case as falling outside the limits of the protocol and therefore not subject to the limitations contained in the proposed agreement.

To these counter proposals General Carranza declined to agree and the negotiations therefore came to an end.

STRICT NEUTRALITY
Never mind, Carranza has not given the Villistas permission to use the railways, either

Meanwhile the troops of General Pershing were pushing on along the supposed trail of Villa. More than 400 miles over the boundary line they were well beyond easy communication with their base at the border, and their movements were taking place behind a dense haze of remoteness, accentuated doubtless by the rigorous censorship. Thru this mist came last week the story that Villa had died and been buried in a lonely grave in the mountains. According to the tale, the body was exhumed and started on its way to Chihuahua for definite identification.

A report by Robert Dunn, special correspondent of the New York Tribune, gives an interesting picture of the chase as it has now developed:

With the prospects for the capture of Villa apparently no better than they have been since the battle at Guerrero, the campaign has entered into still another new phase—a process of minute search and elimination. Every adobe, every clump of tangled undergrowth that may afford a refuge, is examined in quest of Villa and his generals.

Dramatic night sleuthing and dangerous day combing of arroyos, mesas and canyons have marked the work of our column. Much of the night the men are in the saddle, tumbling into well-earned slumber with the advent of broad day, and buckling again to their work before the afternoon sun has permitted the first faint touches of the evening chill to steal upon them.

Recently three villages were surrounded and searched in the dead of the night, for here we are hot on the trail of Pablo Lopez, and perhaps of Villa himself. In one of these villages our native scout, formerly a Diaz colonel, reported Lopez in hiding. He had been to visit his parents there the night before, our scout had learned, and it was expected he would return again from his hiding place in the hills—a cave, located the villagers knew not where.

At dusk the village in which Lopez's parents live (I am not permitted to write names of places or positions) was surrounded. When the place had grown silent, cavalrymen clattered from door to door, arousing the sleepily protesting inhabitants, searching every hovel, poking even into ovens and straw piles. Lopez, warned, doubtless slept on in his cave bed, and

Cesare in New York Sun

GERMAN SUBMARINE COMMANDER'S ACCURATE CONCEPTION OF BOAT HE BLEW UP

morning again found our men, irritable and tired, ready for camp and rest.

... We were again in the saddle at dusk, halting a brief spell beyond the ranch and dismounting. ... In the light of the half moon the whole world seemed immersed in a single coloring of silver gray. For a silent hour we rode along, listening

Kirby in New York World

FROM ALL SIDES

now and then for sounds from the other commands.

Suddenly we came in view of a bright fire gleaming on a hilltop, supposedly a Villista signal, while below it lay the village, a light gleaming here and there among the adobes. As we reached the village we found the other details already in the town. The house to house search revealed nothing new except the quaint lie that the signal fire on the hill was that of a lone sentry guarding a Villista cache of treasure.

Finally the command withdrew, only to take up a ten-mile trot across country to another village, where the same scene was reenacted, with the same empty return.

The Parral Fight A significant incident, which may have important, perhaps serious, results, occurred on the twelfth, at the mining town of Parral. Major Tompkins with two troops of the Thirteenth Cavalry entered Parral, with the cordial acquiescence of the Mexican commander. They were cordially received by the high civic and military officials. General Pershing, in his report, describes what then happened:

"In the outskirts of the town groups of native troops and civilians, following, jeered, threw stones and fired on column. Major Tompkins took definite position north of railroad that was soon flanked by native troops and forced to retire further. About three hundred Carranza-troops joined in pursuit, and Major Tompkins continued to withdraw to avoid further complications until he reached Santa Cruz, eight miles from Parral. Fighting ceased about fifteen miles from town. Major Frank Tompkins deserves great praise for his forbearance. General Lozano attempted to control his men when he first began, but failed. Colonel Brown, with Major Charles Young, and a squadron of the Tenth Cavalry, was eight miles away when notified, and joined Major Frank Tompkins, 7 p. m. (Sentence deleted at this point.) Reported privately forty Mexicans killed, all soldiers, including one major. One civilian wounded. Americans killed, two; wounded, six; missing, one. Major Tompkins slightly wounded in foot (?) by spent bullet."

This attack upon American forces by Carranzista troops naturally raises the question whether the activities of the

Starrett in New York Tribune

JOB: "THERE, YOU WEAR IT!"

American forces in Mexico are long to be free from obstruction and active defiance by the people in general. It also suggests the possibility that not all of the Carranzista officers and troops are cooperating in good faith with the American expedition.

It was announced officially last week that 12,000 soldiers were already in Mexico, and 18,000 engaged in guard duty on the border. This leaves, according to the War Department's announcement, only 4000 regular troops in all the United States.

It becomes obvious that if larger forces become necessary for the completion of our task in Mexico, the militia of the several states must be called upon or the enlistment of a volunteer army resorted to.

Not the Body, but the Soul

Mr. Roosevelt continues to set forth the articles of his political creed with vigor and directness. In so doing he disagrees with certain leaders of the Republican party as to the principal issue on which the campaign against the Administration must be waged. Last week Senator Harding, of Ohio, who has been selected to act as temporary chairman of the Republican National Convention, declared that the tariff was the paramount issue. In commenting on this point of view, Mr. Roosevelt said:

From time to time it has recently been announced that the fight against Mr. Wilson is to be waged only, or almost only, on the tariff. Such an appeal would be an appeal to the belly and not to the soul of the American nation. By all means provide the things of the body, but only on condition that we treat the body as the servant of the soul.

I believe heartily in a protective tariff. Unless we return to a protective tariff, preferably administered thru a commission of experts, we shall face widespread economic disaster at the end of this war.

But this is not the great issue on which the fight is to be made if the highest service is to be rendered the American people. The issue is that the American people must find its own soul. National honor is a spiritual thing that cannot be haggled over in terms of dollars. We must stand not only for America first, but for America first and last and all the time, and without any second.

WHERE THE VILLA CHASE HALTED

The heavy black line indicates the route of the punitive expedition in its hunt for the bandit. At Parral a detachment of the Thirteenth Cavalry was attacked by a mob and then by a regular force of Carranza troops. It retreated eight miles to the northeast, and the Americans were north and west of the city when The Independent went to press. It was at Cusiuhirachic that Villa is said to have died

WAR PAINT

Kirby in New York World

THE WELL'S GOING DRY

Our loyalty must be to the whole United States. The East must stand for the safeguarding of the Pacific Coast against every foe. The West must stand for the safeguarding of the Atlantic Coast against every foe. East and West and North and South alike must hold the life of every man and the honor of every woman on the most remote ranch on the Mexican border as a sacred trust to be guaranteed by the might of our united nation.

We can be true to mankind at large only if we are true to ourselves. If we are false to ourselves we shall be false to every one else. We have a lofty ideal to serve, a great mission to accomplish for the cause of freedom and of genuine democracy and of justice and fair dealing thruout the world.

If we are weak and slothful and absorbed in mere money getting and vapid excitement we can neither serve these causes nor any others. We must stand for national conscience, for national discipline and for preparedness—military, social and industrial—in order to help the soul of this nation.

We stand for peace, but only for the peace that comes as a right to the just man armed, and not for the peace which the coward purchases by abject submission to wrong. The peace of cowardice leads in the end to war, after a record of shame.

Mr. Roosevelt sees but one issue and states that issue over and over again with characteristic forcefulness.

Germany Appeals to The Hague The German note of April 10 reports an investigation by the Admiralty of the recent cases of submarine attacks. In regard to the British steamers "Berwindvale," "Englishman" and "Eagle Point," it is claimed that these were given fair warning and ample time for the crews to take to boats. In regard to the French steamer "Sussex" the commander of the submarine reports that he sank a vessel at about that time and place, but he believed it to be a British mine-layer and his sketch of it does not correspond exactly with the picture of the "Sussex" as published in the London illustrated papers. The German note concludes:

No other attack whatever by German submarines occurred at the time in question for the "Sussex" upon the route between Folkstone and Dieppe. The German Government must therefore assume that the injury to the "Sussex" is attributable to another cause than an attack by a German submarine.

For an explanation of the case the fact may perhaps be serviceable that no less than twenty-six English mines were exploded by shots by German naval forces in the channel on the 1st and 2d of April alone. The entire sea in that vicinity is, in fact, endangered by floating mines and by torpedoes that have not sunk. Off the English coast it is further endangered in an increasing degree thru German mines which have been laid against enemy naval forces.

Should the American Government have at its disposal further material for a conclusion upon the case of the "Sussex," the German Government would ask that it be communicated, in order to subject this material also to an investigation.

In the event that differences of opinion should develop hereby between the two governments, the German Government now declares itself ready to have the facts of the case established thru mixed commissions of investigation, in accordance with the third title of The Hague agreement for the peaceful settlement of international conflicts, November 18, 1907.

A German Ship Plot Discovered Thru the efforts of the

New York police force a splendid beginning has been made at uncovering the activities of a group of German sympathizers in this country who have been engaged in putting inflammable bombs into the cargoes of ships sailing for ports of the allied powers. Last week eight arrests were made, seven of them of men connected with the Hamburg-American Line, the eighth of a man connected with a German chemical firm in Hoboken.

The prisoners are Captain Otto Wolpert, commander of the "Friedrich der Grosse," of the Hamburg-American Line; Captain Enno Bode, pier superintendent for the Atlas Line, a subsidiary company of the Hamburg-American; Captain Charles Von Kleist, superintendent of the New Jersey Agricultural and Chemical Company, and Ernest Becker, Carl Schmidt, Frederick Praidel, Wilhelm Paradies and Frederick Garbade, all connected with the engineering staff of the "Friedrich der Grosse."

The story as told by the police is that the bombs were made on board the steamer and sent to the chemical company's works to be filled. The bombs

were then turned over to German officers to be secreted in the cargoes of allied merchant ships, and to be shipped to other ports for similar purposes.

The bombs were steel tubes about six inches long and three-quarters of an inch in diameter. Into the top of the tube was screwed an aluminum tube, shaped like a rocket. This inner tube was filled with a liquid chemical which

WHAT ARE THEY MARCHING INTO?

The Thirteenth Cavalry, with their backs to the United States and their faces toward Mexico City. The clashes between Mexicans and American soldiers at Parral suggest ugly possibilities in the path of the punitive expedition

would eat its way thru the wall of the tube in a certain calculated time, depending upon the thickness of the aluminum shell. When this liquid had penetrated the shell it came into contact with another chemical substance in the main tube, generating such extreme heat as to burst and destroy the outer steel tube and set fire to anything surrounding it.

The first hint of the plot was obtained when the steamer "Kirk Oswald" was being unloaded at Marseilles on June 8 last. A bag of sugar broke open and nine metal objects rolled out. An investigation by the French police showed that these objects were fire bombs. One of them was subsequently sent to the American State Department and turned over to the New York police. From this single clue the city's detectives, after ten months of work, built up the case against the men who have now been arrested.

It is reported that two, at least, of the prisoners have already confest their share in the manufacture of the bombs. It is believed that evidence will be forthcoming connecting Captain von Papen, the recalled German Military Attaché, and Captain Boy-Ed, the recalled German Naval Attaché, with the plots; and that other Germans of prominence, still in this country, will also be implicated in responsibility for them.

Losses to Merchant Shipping According to a statement given out by Admiral Sir Cyprian Bridge the total losses to merchant shipping from the beginning of the war to March 23 amount to 980 vessels all told. The British losses amount to six per cent of their total tonnage, the French to seven, the Russian to five and the Italian to four and a half per cent of their total tonnage. On the other hand, ship building in Great Britain has been so rapid that British shipping has gained 344,000 tons since the war began. The distribution of losses is as follows:

Losses to Belligerents

Steamers		
Nationality.	Number.	Tonnage.
British	379	1,320,000
French	41	140,000
Belgian	10	30,000
Russian	27	42,000
Italian	21	70,000
Japanese	3	19,000
Totals	481	1,621,000

Sailing Vessels		
Nationality.	Number.	Tonnage.
British	31	19,000
French	12	18,000
Russian	8	7,000
Italian	6	3,000
Totals	57	47,000

Totals	42	24,001

Trawlers: Denmark, 1; Holland, 7.

Recruiting the British Army The efforts of the government to raise the army to four million are meeting with increasing difficulty. There were 1,400,000 more men needed at the beginning of the year, and it was hoped that they might be obtained by Lord Derby's

scheme of personal solicitation of every eligible man. But this did not bring out enough volunteers, so the government has begun to apply the draft to the unmarried men over eighteen. On April 7 all the married men who have registered as volunteers were ordered to report at the recruiting offices. As three months is regarded as the minimum period of training before sending men to the front, it will be hard to get the field forces up to full strength in time for a vigorous offensive before fall.

On account of the dissatisfaction of the married men at being called out so soon the government is making every effort to reduce the number of men who are ineligible for enlistment by reason of being needed in the manufacture of munitions and other essential industries. This has been done chiefly by the greater employment of women. In commercial, clerical and transport work 275,000 women have found employment and 14,000 in farm work, thus releasing about as many men for military duty.

The conviction is spreading that it will soon be necessary to resort to universal conscription, and it is argued that this would be much more fair and equitable than the present semi-volunteer system which places a premium upon dishonesty and cowardice. A faction of both the Unionist and the Liberal parties favor conscription and the Cabinet is similarly divided. Lloyd-George, the Minister of Munitions, is said to favor it, but Mr. Asquith has declared that conscription shall never be adopted so long as he is Prime Minister. It is quite likely, therefore, that the present coalition ministry may be reorganized before very long.

No attempt has been made to extend any of these measures to Ireland, where there is heated and organized opposition even to volunteer recruiting. John Redmond, T. P. O'Connor and most of the Nationalist leaders favor recruiting, but the radical faction known as the Sinn Fein is bitterly anti-English. There are a dozen newspapers openly denouncing the enlistment of Irish in the British army and the efforts of the government to suppress them have been ineffectual.

One of the important events of the week is the announcement from Bucharest that Rumania has concluded a commercial agreement with Germany, according to which each country is free to export to the other all goods for home

THE GREAT WAR

April 10—Germany expresses willingness to refer "Sussex" case to The Hague. British take crater at St. Eloi.

April 11—80,000 Germans attack Avocourt front at Verdun. Ten vessels, three of them neutrals, sunk.

April 12—Rumania signs commercial agreement with Germany. British repulsed by Turks on the Tigris.

April 13—Fighting continues on Dead Man's Hill. British Government agrees to pay American packers \$15,000,000 for meat cargoes seized.

April 14—Austrians take Italian position near Görz. Russians advance a hundred miles west of Erzerum.

April 15—Russians attacking German lines at Dvinsk. British aeroplanes drop bombs on Constantinople.

April 16—French attack south of Douaumont. Russians defeat Turks at Bitlis, Armenia.

consumption. This means primarily that Germany can get the surplus of grain crop from Rumania, which amounts to more than 100,000,000 bushels. With the Bulgarian, Rumanian and Turkish grain fields to draw upon, it would seem that Germany is relieved of any danger of being starved out by the British blockade.

The probable action of Rumania has been a puzzle from the start. The Rumanians, claiming, as their name implies, to belong to the Latin race, were by blood and culture in sympathy with the French rather than the Germans and their national ambition was to take from Hungary the territory on the other side of the Transylvanian Alps inhabited by their own people. In the first winter of the war, when the Russians had occupied Galicia and Bukovina and seemed about to invade Hungary, Rumania was expected to enter the war. Indeed it has been asserted that a treaty to that effect had been signed and sealed.

But then the tide turned. The Russians were swept out of Austrian territory. The British, who, it was said, had an option on the Rumanian wheat, failed to open the Dardanelles, so Rumania could get no market except the Central Powers, for Russia, her neighbor on the east, is also an exporter of grain.

It looks as if Rumania had watched to see how the spring campaign opened before deciding which side to take, and now, finding that the Russians were not accomplishing anything and that the Germans were vigorously taking the offensive at Verdun, had made up her mind that the Allies stood little chance of winning. The diplomacy of the Allies in the Balkans has been exceedingly unfortunate. At the start Rumania and Greece were decidedly pro-Ally and almost pledged to enter the war on that side, while Bulgaria was on the fence. Now Bulgaria is actively hostile, Rumania is feeding the enemy and Greece is sullenly submitting to the occupation of her territory by the Allied forces. Serbia and Montenegro are wiped out and Albania is practically lost to the Allies. Of the five Balkan states the Allies have not got one to show for the money they have expended and the armies they have sent to Gallipoli and Salonica.

The Chinese Revolution The revolt against the rule of Yuan Shih-kai continues to spread and his renouncement of his intention to assume the throne has not allayed it. Nine out of the eighteen provinces of China have now declared their independence or are under the control of the revolutionists.

The revolt originated last December in Yun-nan, the most distant of all the provinces from Peking. Thence it spread to Si-chuan (Sze-chuen), the next province on the north, and gradually advanced eastward until it reached the coast, thus pursuing much the same course as the revolution of 1911 which overthrew the Manchu dynasty and the unsuccessful rebellion

of 1913 against Yuan Shih-kai. Canton, the chief port of southern China, has declared its sympathy with the movement. In some cases the governors of provinces and cities have spontaneously renounced their allegiance to the Peking government and thousands of government troops have joined the republican army. The five warships at Canton also have gone over to the revolutionists. From Peking have come frequent reports of battles in which the rebels were crushed, but apparently there has not been much real fighting.

The leaders of the insurrection assured the American Minister, Paul S. Reinsch, that they would protect the lives and property of foreigners in the territory they took over, and so far there have been no complaints by the missionaries and foreign residents.

The national assembly of 1912 elected Yuan Shih-kai President for five years, but last September it was announced that the office was to be made permanent and hereditary. At New Year's, Yuan Shih-kai became Emperor and the coronation was to follow as soon as a propitious date was determined and the necessary preparations made. Later—as the insurrection spread—it was announced that the coronation was postponed, and recently

Yuan Shih-kai resumed the title of President and acknowledged that he had misinterpreted the will of the people. But the republicans of the south, who have always been suspicious of him, have now altogether lost confidence in him and his latest change of position fails to conciliate them.

Two contradictory theories as to the origin of the rebellion are current among the supporters of the imperial régime, some laying it to Japanese and others to German intrigue. The republicans, however, indignantly deny that they are under any outside influence. For the German theory there is no apparent evidence. On the contrary, Yuan Shih-kai is supposed to have the support of Germany. But Japan is at least disposed to sympathize with the revolutionary party. The Japanese Government opposed Yuan's plan of becoming Emperor and tried to get the other Powers to unite in thwarting it. The attempted revolution of 1913 received the support of the Japanese interests in the Yang-tse valley and when it failed the leader of it, Dr. Sun Yat-sen, sought refuge in Japan, from which he appears to be directing this new rising. The Chinese in the United States, especially the students, are actively supporting the revolution.

THE SPREAD OF THE CHINESE REVOLUTION

As the shaded area on the map shows the republicans who are fighting Yuan Shih-kai have now control over the southern half of the Chinese empire. If they are not able to overthrow the Peking Government they are likely to convert the southern provinces into an independent republic with Canton as the capital.

FROM STATE TO STATE

ALABAMA: Never before in the history of Alabama has so much been done for the removal of illiteracy from the state as in the last year. Hundreds of communities in which a year ago there were no schools of any kind, some in which there was no person who could read or write, now have well appointed school houses and a competent corps of teachers. Now that the people are thoroly aroused, much is being done by state and county authorities, but the greater part of the work is still carried on by private enterprise.

DELAWARE: For several years the public schools of Wilmington have suffered because of differences between the City Council and the Board of Education. The law requires the board to conduct the schools effectively, but forbids it to create floating debts. The City Council is required by law to appropriate annually such sums as the Board of Education may deem actually necessary, but it is said the council in recent years has made its school appropriations without consulting the board and that the sums have been insufficient. The board therefore claims it has had to create floating debts or close the schools, while the council claims that if the schools had been managed economically the appropriations would have been ample. Now the board has not enough money to keep the schools open any longer and has determined to appeal to the courts unless the council makes an immediate appropriation.

DISTRICT OF COLUMBIA: An organization to be known as the District of Columbia Referendum Association has been effected by a large number of leading residents of Washington. In the absence of suffrage or any other organized means for the citizens of the District to express their needs or desires, it is the purpose of the association to petition Congress "to enact legislation providing machinery that will take jurisdiction by referendum on all matters affecting the general welfare of the citizens of the District of Columbia, and after said referendums are executed that they shall be presented to the Congress of the United States."

FLORIDA: The Legislature last year provided for the organization of a state roads department, but made no direct appropriation for its maintenance. It was supposed that fifteen per cent of the money received by the several counties for automobile licenses would provide a sufficient fund, the remaining eighty-five per cent to be used as road funds by the counties collecting it. But the county authorities have been so lax in the collection of these license fees since the department was organized in October that the commissioner has been practically without money. It is said that motor tourists, who make the most use of the roads, are the worst offenders in escaping payment, tho the law re-

quires only a small fee in one county for use of the roads anywhere in the state during the year.

ILLINOIS: The University of Chicago has determined upon a site for the chapel which John D. Rockefeller, the university's founder, desires shall be the central and dominant feature of the university group. In a letter setting forth his ideas concerning this structure Mr. Rockefeller said: "It is my desire that at least \$1,500,000 be used for the erection and furnishing of a university chapel. . . . The chapel may appropriately embody those architectural ideals from which the other buildings, now so beautifully harmonious, have taken their spirit, so that all the other buildings on the campus will seem to have caught their inspiration from the chapel and in turn will seem to be contributing of their worthiness to the chapel."

KANSAS: Topeka calls upon the world to look at what she has done in the matter of city-owned lighting and water plants. Twenty-five years ago she established her lighting plant. Up to the present time she has invested \$103,515.03 in it. She lights with arc lamps 94.52 miles of streets and with tungsten lamps 34.5 miles. Counting all costs of operation and allowing for depreciation of plant, she is able to supply electricity at the switchboard at a cost of a little more than one and a half cents per kilowatt hour. Consumers buying from a private concern pay at the rate of seven cents. Ten years ago the city bought the water works from a private company for \$620,000. Since then the plant has been more than doubled, the rates to consumers reduced four times, yet a sinking fund of \$143,249.50 has been accumulated, tho \$341,618.08 has been spent on improvements and extensions.

KENTUCKY: In the week recently devoted by the citizens of Louisville to raising money for an auditorium, \$252,445 was contributed. Never before in the history of the city had so many people contributed to a public improvement. It had been said that \$250,000 must be the minimum sum for putting the project thru, and many had predicted that this amount could not be raised, but in the week it was exceeded, and the people had determined to have a \$300,000 auditorium.

MARYLAND: A unique situation has arisen in Maryland out of the battle for statewide prohibition, which has been raging for a long time in the General Assembly. The "dry" counties of the state have been forcing the fight for months, but by means of the McIntosh amendment, which the House has adopted by a vote of fifty-three to forty-seven, the question whether the "wet" counties and cities are to remain "wet" is to be left to them alone. The amendment provides for a compulsory vote on prohibition in those counties

and cities which are now "wet," but calls for no vote in other places.

MICHIGAN: At a recent meeting of the Michigan State Tax Association a movement was inaugurated for the investigation of the state government with a view to ascertaining where all the tax money goes and what the people are getting for it. The per capita taxes in Michigan, for all branches of state and local government, have increased 130 per cent in the last ten years. The investigation is to be made first in the state departments, all of which, with a single exception, have increased their expenditures by percentages ranging from 21 to 27.73 in the last ten years.

MONTANA: The army cutworm, which caused serious loss of winter wheat in this state last year, has made its appearance again this spring in even larger numbers. The State Entomologist has issued a special bulletin requesting farmers to examine their fields carefully at once and to communicate with him as soon as they discover evidence of the worm's presence. He says he could have saved a great deal of grain last year if he had received earlier reports.

NEBRASKA: Of the 386,000 children of school age in this state about 350,000 attend rural schools. Yet until less than a year ago only the elementary grades were taught in most of these schools. Since last spring, however, 191 new high schools have been put into operation, and the way is now open for at least 10,000 rural children to reach the college and university without having to go to the larger cities for their preparation. A large number of villages and small towns have also increased the number of their high school grades.

OHIO: At the recent executive meeting of the trustees of the Ohio Anti-Saloon League it was decided to make a campaign for \$350,000, which, it is estimated, will be required for "organization and educational purposes" and for carrying out the statewide survey of the liquor traffic which has been decided upon. This survey is for the purpose of gathering all possible information regarding the amount of money spent for liquor in the state and of determining the relation of drinking to crime and pauperism. Also its aim will be to learn the attitude of all employers and employees in the state toward prohibition as related to efficiency.

TENNESSEE: At the suggestion of Mayor Littleton, of Chattanooga, a call has been issued by mayors of leading cities in fourteen states for a representative convention in Chattanooga on June 2, the purpose being to discuss freely all matters pertaining to national defense. The plan is to have each mayor appoint not less than ten representative residents of his city and each county judge appoint a similar number of other

citizens of his county to attend the conference. It is hoped thus to gain accurate knowledge of the prevailing sentiment of each section represented and to bring together for discussion many various views of preparedness.

UTAH: One of the most elaborate organization campaigns ever attempted in this country by a highway association had its beginning at Grand Junction in this state a few days ago, when a committee left there to log the National Midland Trail to Washington, D. C. On the way thru Colorado, Kansas, Missouri, Illinois, Indiana, Kentucky, West Virginia and Virginia the committee will seek to stir up enthusiasm for highway construction and organize local branches of the association in all cities, towns and villages. At the end of the journey a report will be made by the highway engineer on the condition and needs of every section of the road. This will be published with the general report and widely distributed.

WASHINGTON: An aerial passenger and freight line between Seattle and Tacoma, which was authorized by the Legislature recently, promises to begin a regular schedule of trips on June 1. The hydro-aeroplane with which the company will begin operations measures 100 feet in wingspread. Below the plane is a car which will carry ten passengers and two pilots, and beneath this are two pontoons, each designed for carrying an aeroplane gun in time of war, but which may be used at other times for carrying certain light freight or baggage. The machine is driven by two 120-horsepower engines.

WISCONSIN: People of this state and Michigan, especially those of the port cities, are thoroly aroused over the proposed granting of permission by the Federal War Department for the diversion of additional volumes of water from Lake Michigan into the drainage canal at Chicago for the purpose of making the canal navigable to the Illinois River. They say it would so lower the level of the Great Lakes and tributary rivers as to impose heavy additional expense upon lake cities for maintenance of harbor and channel depths. It is believed that when this fact is realized every city on the entire chain of lakes will join in the protest.

WYOMING: A remarkable change of opinion concerning the settlement of the public domain has taken place in this state in the last few years. What is known as the 640-acre homestead bill in Congress is now receiving the support not only of the general public, but also of the large ranchmen, who have heretofore vigorously opposed all such propositions, but who are now among the most active leaders in favor of the bill. Practically all the newspapers in the state are also supporting it.

HOW MUCH PREPAREDNESS?

BY CHAMP CLARK

SPEAKER OF THE HOUSE OF REPRESENTATIVES

TODAY we are facing two important national problems, each awaiting Congressional solution, and these problems are popularly known as preparedness and revenues. Both are of the utmost importance, and in writing of them I do so with a thoro and solemn sense of responsibility.

I believe that the average American is in favor of reasonable and adequate preparation by land and sea, not for the purpose of attacking any nation on earth, but to repel the attack of any and every nation under the sun, should any nation be so unwise as to assail us. While he is not eager to pay taxes, he is willing to foot the bills for reasonable and adequate preparedness.

A great many people—I am not talking about foreigners now, but about our own citizens—sadly misjudge our national character. We are constantly told that this is the most peaceable nation beneath the stars; but that is only half the truth. The whole truth is that, while we are the most peaceable nation in the world, we are at the same time the most martial. The proof of that seeming paradox is that in April, 1861, there were not 20,000 soldiers in America, while four years later the continent trembled beneath the tramp of 2,000,000 of the finest soldiers the sun ever looked down upon, some in blue and some in gray.

Notwithstanding the senseless and malicious abuse heaped upon the Congress, what Congress invariably does, when it can ascertain with a reasonable degree of assurance what the will of the people is, is to transmute this will into law. That is exactly what Congress is trying to do at the present time, and those impatient folks who have been criticizing the Senate and the House for going too slow have no conception whatever of the toil, thought and investigation which their members have expended on important measures, especially the measure of preparedness. Now, what is the will of the people on this?

SINCE the agitation for and against what is popularly known as preparedness became acute I have spoken and lectured in thirty-one states, and have tried to find out public opinion by reading magazines and newspapers, by experiments in my speeches and lectures on many audiences, and by interrogating every sort of citizen; section bosses, fire-

men, engineers, conductors, farmers, merchants, lawyers, laborers, preachers, statesmen, soldiers and teachers.

There are certain fundamental propositions on which the vast majority of the American people are agreed. They want peace, but not peace at any price; they want peace with honor. While peace is the normal condition of Americans, and while they love it most fondly and pray for it most devoutly, they believe thoroly that there are things worth fighting for. They do not intend to see this country turned into an armed camp, and are unalterably opposed, always have been, and forever will be, to a large standing army. They are not willing to bankrupt the country in military and naval preparations. They are, however, willing to spend all that is necessary for the public defense. They are almost to a man against conscription in times of peace, but they are for it should it become necessary in times of war. For in war, as in other undertakings, having put their hands to the plow, they do not look back. While proud of the record of our small army in all our wars, they have always depended upon our volunteers to do most of our fighting, and they glory in the valor of our volunteers on hundreds of historic fields. And last, they have no desire or ambition to have our country pose as a great military power, and they have no intention of seeing it as helpless as China. They know beyond a peradventure that a great, rich country without the means of defense is a constant temptation to the cupidity of mankind.

THESE hard-headed Americans believe profoundly in the philosophy that an ounce of prevention is worth a pound of cure. They are against a war of aggression, but they will fly to arms any day in a war for defense. They know that the navy constitutes the first line of defense and that it has proved a very present help in every time of trouble. They know that coast fortifications constitute the second line of defense and that observation of the stupendous war across the sea proves that battleships cannot batter down well-constructed land defenses. They know that regulars, with such other troops as we can put into the field, constitute our third and last line of defense.

In view of all these facts, beliefs, observations and desires, the aver-

age American is, I repeat, in favor of reasonable and adequate preparation by land and sea.

FROM time to time something is said about our revenues, and how to meet the bills that will be accumulated by an enlarged preparedness program. Personally, I can see no reason at present for considering a revision of the Underwood tariff, either in general or in regard to special schedules of the law. The bill seems to be doing what was expected of it, and for the present, at least, it should be left alone.

I cannot favor the imposition of further stamp taxes or burdensome excise taxes to meet the needs of the Treasury now or in the near future. Stamp taxes are onerous at best and should be resorted to only as emergency measures. I believe the present war tax law should be revised and many of the stamp taxes which it contains should be eliminated.

Under the recent decision of the Supreme Court of the United States the income tax law becomes available as a means of raising additional revenue without making its provisions especially burdensome to any one class of citizens. Thru the income tax we can raise a large part of the money we need for various purposes. An increase in the income tax rates and a general rearrangement of the classification of incomes under the income tax law would produce a large amount of revenue and would not unduly burden any one.

Then I believe the proposal to levy a tax on the manufacturers of war munitions, who are shipping vast quantities of their products abroad, should be favorably considered. These munition manufacturers are making vast profits out of the present increased trade in their product. They are probably the most prosperous class in the country today. I am convinced that they should bear their share of any increased taxation. I believe that a fair and equitable scheme of raising revenue thru this tax can very easily be evolved.

Of course, we are not in a position to settle upon a definite detailed revenue program until we have some definite idea of what the expenditures of the government for the fiscal year 1917 will be. This we cannot have until the various appropriation bills have taken form and we know what expenditures are proposed for increased national defense.

HIS THREE BROTHERS FOUGHT AND
DIED FOR FRANCE

THE NEW SHAW

RECENT PHASES IN THE DEVELOPMENT OF G. B. S.

BY EDWIN E. SLOSSON

AUGUST 4, 1914, cuts time in two like a knife. We are already beginning to look back upon the antebellum days as a closed period, and those who were conspicuous in it are being seen in an historical perspective such as the lapse of a generation of ordinary times is needed to produce. Some reputations are shrinking, others are rising, as mountains seem from a departing train to rearrange themselves according to their true height. The true prophets are becoming distinguishable from the false.

Among those who have stood the test and stand higher than before, is George Bernard Shaw. Whether he will write better plays than before remains to be seen. Perhaps he will write no more of any kind. But those he has written will be regarded with more respect because we can see their essential truth, whereas before we feared lest we might be merely fascinated by their glitter. Warnings which the world took for jokes because of their fantastic guise now turn out too terribly real, and advice which the world ignored would better have been heeded.

Few writers have as little to take back on account of the war as Shaw, altho few have expressed such decided opinions in such extreme language on so many topics. For instance, Kipling's "The Bear That Walks Like a Man" makes queer reading now that England is fighting to give Russia what then she was ready to fight to prevent her getting. But the full significance of Shaw's fable farce of "Androcles and the Lion" is now for the first time being realized. The philosophy of this, his most frivolous and serious play, is summed up by Ferrovius, a converted giant of the Ursus type, who finds it impossible to keep to his Christian principle of non-resistance when brought into the arena. The natural man rises in him and he slays six gladiators single-handed. This delights the emperor, who thereupon offers him a post in the Pretorian Guards which he had formerly refused. The fallen and victorious Ferrovius accepts, saying:

In my youth I worshiped Mars, the god of war. I turned from him to serve the Christian God; but today the Christian God forsook me; and Mars overcame me and took back his own. The Christian God is not yet. He will come when Mars and I are dust; but meanwhile I must serve the gods that are, not the God that will be. Until then I accept service in the Guard, Caesar.

In speaking of "the new Shaw" I mean merely that he looks new. The

This is the ninth article of a series entitled "Twelve Major Prophets of Today." The first six, dealing with Maurice Maeterlinck, Henri Bergson, Henri Poincaré, Elie Metchnikoff, Wilhelm Ostwald and Ernst Haeckel, have been published in book form by Little, Brown & Co., Boston. In the second group of studies, the sketch of Rudolf Eucken appeared in The Independent of February 17, 1913, and that on H. G. Wells in the issue of November 20, 1913. Articles on G. K. Chesterton, F. C. S. Schiller and John Dewey will complete the series.—THE EDITOR.

great cataclysm does not seem to have changed his opinions one iota, but all England is changed, and so he appears in a different light. More of his countrymen agree with what he used to preach to them than ever before, yet he was never so disliked as he is today—which is saying a great deal. The British press has boycotted him. His letters once so sought after by the most dignified journals now no longer appear except in *The New Statesman*. His speeches, be they never so witty and timely, are not reported or even announced.

Consequently those who wish to hear him have to resort to the advertising expedients of the era before printing. A friend of mine just back from London tells me that he saw chalked on the sidewalk a notice of a meeting to be addressed by Shaw in some out-of-the-way hall. Going there he found it packed with an enthusiastic crowd gathered to hear Shaw discuss the questions of the day. It will be interesting to see how long he can be kept out of print. We cannot help thinking of the time when certain New York papers took a similar vow in regard to another man famous enough to be known by initials. But when T. R. ran for President and got shot at he could no longer be kept off the front page.

But Shaw thrives on unpopularity or at least on public disapproval, which is not quite the same thing. It is not only that Shaw would rather be right than Prime Minister; he would rather be leader of the Opposition than Prime Minister. He would be "in the right with two or three"; in fact, if his followers increased much beyond the poet's minimum he would begin to feel uneasy and suspect that he was wrong.

Shaw's brain secretes automatically the particular antitoxin need-

ed to counteract whatever disease may be epidemic in the community at the time. This injected with some vigor into the veins of thought may not effect a cure, but always excites a feverish state in the organism. It is his habit of seeing that there is another side to a question and calling attention to it at inconvenient times that makes him so irritating to the public. At present he is interned in Coventry as a pro-German on account of his pamphlet, "Common Sense About the War." But this is almost the only thing produced in England during the first weeks of the war that reads well now. Compare it with its numerous replies and see which seems absurd. Doubtless it was not tactful, it might have been called treasonable, but it certainly was sensible. Shaw kept his head level when others lost theirs. That was because he had thought out things in advance and so did not have to make up his mind in a hurry with the great probability of making it up wrong. In that pamphlet he presented the case for the Allies in a way much more convincing to the American mind than many that came to us in the early days of the war, and his arguments have been strengthened by the course of events while others advanced at that time have been weakened.

As for the charge of pro-Germanism, that may best be met by quoting from a letter written by him to a friend in Vienna early in 1915:

As regards myself, I am not what is called a Pan-German. The Germans would not respect me, were I at such a time as this, when all thoughts of culture have vanished, not to stand by my people. But also, I am not an anti-German. The war brings us all on to the same plane of savagery. Every London coster can stick his bayonet deeper into the stomach of Richard Strauss than Richard Strauss would care to do to him.

Militarism has just now compelled me to pay a thousand pounds war taxation in order that some "brave little Serbian" may be facilitated in cutting your throat or, that a Russian Moudjik may cleave your skull in twain, altho I would gladly pay twice that sum to save your life, or to buy some beautiful picture in Vienna for our National Gallery.

Shaw has always condemned militarism because of the type of mind it engenders in officers and men. But he has never been opposed to preparedness or to the use of force. In the *London Daily News* of January 1, 1914,—note the date—he said:

I like courage (like most constitutionally timid civilians) and the active

use of strength for the salvation of the world. It is good to have giants in strength and it is not at all tyrannous to use it like a giant provided you are a decent sort of giant. What on earth is strength for but to be used and will any reasonable man tell me that we are using our strength now to any purpose?

Let us get the value of our money in strength and influence instead of casting every new cannon in an ecstasy of terror and then being afraid to aim it at anybody.

At that time, seven months before the storm burst, he not only anticipated the war, but said that it might be averted,

By politely announcing that war between France and Germany would be so inconvenient to England that the latter country is prepared to pledge herself to defend either country if attacked by the other.

If we are asked how we are to decide which nation is really the aggressor we can reply that we shall take our choice, or when the problem is unsolvable we shall toss up, but that we will take a hand in the war anyhow.

International warfare is an unmitigated nuisance. Have as much character building civil war as you like, but there must be no sowing of dragon's teeth like the Franco-Prussian war. England can put a stop to such a crime single handed easily enough if she can keep her knees from knocking together in her present militarist fashion.

Of course Shaw may have been wrong in supposing that an open announcement of Great Britain's determination to enter the war would have deterred Germany, but as we now know from the White Paper this same opinion was held by the governments of both France and Russia. On July 30 the President of France said to the British Ambassador at Paris that

If His Majesty's Government announced that England would come to the aid of France in the event of a conflict between France and Germany as a result of the present differences between Austria and Servia, there would be no war, for Germany would at once modify her attitude.

And on July 25 M. Sazonof, the Russian Foreign Minister, said to the British Ambassador at Petrograd that

He did not believe that Germany really wanted war, but her attitude was decided by ours. If we took our stand firmly with France and Russia there would be no war. If we failed her now, rivers of blood would flow and we would in the end be dragged into war.

SHAW now gives the same advice to the United States that he gave to his own country before the war, that is, to increase its armament and not be afraid to use it. In a recent letter to the American *Intercollegiate Socialist* he said:

I should strenuously recommend the United States to build thirty-two new dreadnoughts instead of sixteen, and

SHAW AND SHAKESPEARE

From a cartoon by E. T. Reed in *Punch*. This and the cartoon on the opposite page reproduced by courtesy of Stewart & Kidd, publishers of Henderson's *George Bernard Shaw*

to spend two billion dollars on its armament program instead of one. This would cost only a fraction of the money you are wasting every year in demoralizing luxury, a good deal of it having been in the past scattered over the continental countries which are now using what they saved out of it to slaughter one another.

If the United States wishes to stop war as an institution, that is, to undertake the policing of the world, it will need a very big clubhouse for the purpose.

If I were an American statesman I should tell the country flatly that it should maintain a Pacific navy capable of resisting an attack from Japan and an Atlantic navy capable of resisting an attack from England, with Zeppelins on the same scale, a proportionate land equipment of siege guns, and so forth. And until the nations see the suicidal folly of staking everything in the last instance on the ordeal of battle no other advice will be honest advice.

In "Major Barbara" Cusins abandons the teaching of Greek to take up the manufacture of munitions because he has the courage "to make war on war." It is in this play, which has recently been running in New York, that is expounded the theory on which President Wilson is now acting. Lady Britomart tells Cusins: "You must simply sell cannons and weapons to people whose cause is right and just, and refuse them to foreigners and criminals." But Undershaft, the munition-maker replies: "No; none of that. You must keep the true faith of an Armorer, or you don't come in here." And when Cusins asks: "What on earth is the true faith of an Armorer?" he answers:

To give arms to all men who offer an honest price for them, without respect of persons or principles; to aristocrat and republican, to Nihilist and Tsar, to burglar and policeman, to black man, white man and yellow man,

to all sorts and conditions, all nationalities, all faiths, all follies, all causes and all crimes. . . . I will take an order from a good man as cheerfully as from a bad one. If you good people prefer preaching and shirking to buying my weapons and fighting the rascals, don't blame me. I can make cannons; I cannot make courage and conviction.

In this same conversation Shaw also gives a hint of his theology, when Cusins says to Undershaft: "You have no power. You do not drive this place; it drives you. And what drives this place?" Undershaft answers, enigmatically, "A will of which I am a part." This doctrine of an immanent God working thru nature and man to higher things was developed more definitely in a debate which Mr. Shaw held some years ago with the Rev. R. J. Campbell, then of the City Temple. Here he argued that God created human beings to be "his helpers and servers, not his sycophants and apologists." Shaw continues:

If my actions are God's nobody can fairly hold me responsible for them; my conscience is mere lunacy. . . . But if I am a part of God, if my eyes are God's eyes, my hands God's hands, and my conscience God's conscience then also I share his responsibility for the world; and wo is me if the world goes wrong!

This position enables him to explain evil on evolutionary principles as "the Method of Trial and Error." When Blake asks of the tiger, "Did he who made the lamb make thee?" Shaw conceives the Life-Force as replying:

Yes, it was the best I could devise at the time; but now that I have evolved something better, part of the work of that something better, Man, to wit, is to kill out my earlier attempt. And in due time I hope to evolve Superman, who will in his turn kill out and supersede Man, whose abominable cruelties, stupidities and follies have utterly disappointed me.

IN the unactable third act of his "Man and Superman" is to be found one of the most eloquent arraignments of war in all literature. It is, remember, the Devil who is speaking:

The plague, the famine, the earthquake, the tempest were too spasmodic in their action; the tiger and the crocodile were too easily satiated and not cruel enough; something more constantly, more ruthlessly, more ingeniously destructive was needed; and that something was Man, the inventor of the rack, the stake, the gallows and the executioner; of the sword and gun; above all, of justice, duty, patriotism, and all the other isms by which even those clever enough to be humanely disposed are persuaded to become the most destructive of all destroyers.

Three years before the war Shaw wrote a little satirical skit, "Press Cuttings," which was

deemed so dangerous to both Britain and Germany that the censors of both countries agreed in prohibiting its production on the stage. Since the British censor seemed to fear that the principal characters, "Balsquith" and "Mitchener," might be taken by the public as referring to certain well-known statesmen, Shaw offered to change the names to "Bones" and "Johnson." But even that concession would not satisfy the censor's scruples, so the play was never put on the stage, tho, since there was then no censorship of literature, it was published as a book. Here is a bit of the dialog:

Balsquith—The Germans have laid down four more Dreadnoughts.

Mitchener—Then you must lay down twelve.

Balsquith—Oh, yes; its easy to say that; but think of what theyll cost.

Mitchener—Think of what it would cost to be invaded by Germany and forced to pay an indemnity of five hundred millions. . . .

Balsquith—After all, why should the Germans invade us?

Mitchener—Why shouldnt they? What else have their army to do? What else are they building a navy for?

Balsquith—Well, we never think of invading Germany.

Mitchener—Yes, we do. I have thought of nothing else for the last ten years. Say what you will, Balsquith, the Germans have never recognized, and until they get a stern lesson, they never will recognize, the plain fact that the interests of the British Empire are paramount, and that the command of the sea belongs by nature to England.

Balsquith—But if they wont recognize it, what can I do?

Mitchener—Shoot them down.

Balsquith—I cant shoot them down.

Mitchener—Yes, you can. You dont realize it; but if you fire a rifle into a German he drops just as surely as a rabbit does.

Balsquith—But dash it all, man, a rabbit hasnt got a rifle and a German has. Suppose he shoots you down.

Mitchener—Excuse me, Balsquith; but that consideration is what we call cowardice in the army. A soldier always assumes that he is going to shoot, not to be shot.

The play ends with the establishment of universal military training and equal suffrage, thus doing away with a militarism that was both timorous and tyrannical, snobbish and inefficient, and at the same time making the nation truly democratic. It is characteristic of Shaw that recently when the papers were discussing what sort of a monument should commemorate Edith Cavell, he interjected the unwelcome suggestion that the country could honor her best by enfranchising her sex.

SHAW has two defects which militate against his popularity; first, he is too conventional, and, second, his conventions are peculiarly his own. "There is," says his Undershaft, "only one true morality for every

man, but not every man has the same morality." Shaw is easily shocked, but never by the same things that shock other people.

There is no doubting Shaw's intent to undeceive the world or his willingness to undeceive himself. "My way of joking is to tell the truth," says his Father Keegan.

But when he strains his eyes to see something clearly he sees only that one thing. By following consistently one line of logic—instead of several as he should—he gets tangled up in illogicalities. His mode of reasoning is often the *reductio ad absurdum* of his own theories, and this is not a persuasive way of argumentation.

By temperament Shaw is a mystic, but his conscience compels him to assume the method of cold intellectualism. He is an artist in the disguise of a scientist, not an uncommon thing to see in this so-called age of science.

Probably Shaw is not more inconsistent than any man of agile mind who is capable of seeing in succession different sides of a thing, but he is franker in expressing the point of view he holds at the time. Consequently he has many admirers but

few followers. They can't keep up. The only possible Shavian is Shaw.

PERHAPS the reader will think that I am rather too presumptuous in professing to know just what Shaw means and believes, when most people are puzzled by him. So I should explain that I have the advantage of a personal acquaintance with Shaw. I may say without boasting—or at least without lying—that at one period of his life I was nearer to him than any other human being. The distance between us was in fact the diameter of one of those round tables in the A. B. C. restaurants, and the period was confined to the time it took to consume a penny bun and a cup of tea, both being paid for by him. I resorted to thoro Fletcherizing for the purpose of prolonging the interview, and I wished that either he or I had been a smoker. But altho a vegetarian he eschews the weed, and smoking did not seem to be in accordance with Fabian tactics.

The occasion was a recess in a Fabian Society conference. I did not suppose that anything could shut off Socialists in the midst of debate. The theme of discussion was the House of Lords, which the Fabians unanimously agreed ought to be abolished, tho no two of them agreed on the substitute. But while they were iconoclasts as to one British institution, they rendered homage to another by stopping to take tea in the midst of a lovely scrap.

The Fabian Society is the fruit of one of the seeds which Thomas Davidson scattered in many lands. You can track this peripatetic philosopher thru life, as you can Johnny Appleseed, by the societies that sprung up along his pathway. In the Adirondacks he found the Glenmore School of Philosophy. In the Jewish quarter of New York City another of his schools still thrives and is enthused with something of his zeal for learning. In England he started the Society for Psychical Research and the Fellowship of the New Life, of which the Fabian Society was an offshoot. Yet Davidson himself was neither a spiritualist nor a Socialist.

AT the Fabian Society one sees Shaw in his element. Every creature, says Browning, like the moon, Boasts two soul-sides, one to face the world with, One to show a woman when he loves her. The Fabian Society is Shaw's own true love, and to her he turns a different face than to the outside world. As I watched him during the afternoon—preceding and following the brief

SHAW IN ACTION

From a cartoon by Max Beerbohm in *Vanity Fair* (London)

period of personal contact of which I have been boasting—I was struck by the tact and kindliness which he showed in the course of the discussion. There was in his occasional remarks no trace of the caustic and dogmatic tone which one gets from his writings. He is not merely the “shining light” or “presiding genius” of the society, but one of the “wheel horses,” and devotes himself diligently to the detailed and inconspicuous work of the organization.

The question under discussion at the conference was that of the reconstruction of the House of Lords. This was shortly before the war, when such questions were regarded as important. Various plans were proposed in order to secure the election of the fittest, when Shaw took the floor in defense of genuine democracy. His argument ran something like this:

Our idea is that any 670 people is as good as any other for governing, just

as any twelve chosen by chance on the jury have our lives and property in their hands.

Now if I and Mr. Sydney Webb here were sent to the House of Commons it should be with unlimited opportunity to talk but not to vote. To give us a vote would be to permit the violation of the fundamental principle of democracy that people should never be governed better than they want to be. If you had a government of saints and philosophers the people would be miserable. For instance, I would want to stop all smoking and meat-eating and liquor drinking, but like all superior persons now I have to convince other people because I cannot compel them.

These remarks, delivered in a musical and sympathetic voice with frequent flashes of a broad row of white teeth, sounded very different from the way they read in cold type. I do hope the phonograph will be perfected before Shaw dies or his voice goes cracked so posterity can have a vocal version of his plays and prefaces. Otherwise his personality stands little chance of being understood.

Shaw is tall and uses his eyeglasses for gesticulating as an orchestra leader uses a baton. His hair was once a fiery red, but is now tempered into gray. Between his brows there are three perpendicular wrinkles, but not of the cross and fretful type. His face is long and pointed, but he looks not in the least Mephistophelian as the caricaturists represent him. In short, Shaw is not so black as he is painted by himself and others.

If I were to sum up Shaw in two words it would be that his distinguishing characteristics are courage and kind-heartedness. The sight of suffering and injustice drives him mad, and then he runs amuck, slashing right and left, without much regard to whom he hits and no regard at all to who hits him. He is, like Swift, a cruel satirist thru excess of sympathy. If Ibsen is right, that “the strongest man in the world is he who stands most alone,” then George Bernard Shaw is not to be ignored.

A SONG FOR FRANCE EMBATTLED

BY ROBERT UNDERWOOD JOHNSON

Across the sea that once was free now let the message leap That France has won our Western hearts, and waked our souls from sleep! Proud land! No more shall we mistake the shallows for the deep.	They reckoned ill who thought her will was sunk in sloth or pride, Who held as weak her patience and on her feuds relied. No power can lock the scabbards where thinking swords abide.	And when beside the Marne's red tide— a lioness at bay— She gave September unto Mars to make him holiday, She saved with hers our kindred soil three thousand miles away.
They knew her not who lightly thought her frivolously gay— She who first taught our grimmer world the sanity of play; They saw the birds that fly the nest but not the brood that stay.	Oh, there is calm of Sabbath psalm and there is calm of wo, And calm of slaves who never the calm of freemen know, When, tho the storm may tear the wave, the sea is calm below.	How we acclaim Man's sacred name, as second unto God, And deem our bond a brotherhood di- vine of cloud and clod! Where are men fellows but in France, save underneath the sod?
And we who knew and loved her true and shared her welcome kind— The welcome of her heart, and more, the welcome of her mind— How could we know these newer bonds that evermore shall bind!—	Upon the air no martial blare pro- claimed the fateful call; No drum need make the summons the spirit makes to all; Not softlier to the solemn earth the autumn leaflets fall.	Her heart a cup of joy filled up to greet the dancing day, How willingly she spilled the wine and threw the cup away That deserts yet unpeopled may live in peace for aye!
That she, the Queen of Peace serene, who sought the sword no more— That she, the Queen of Art, who keeps the key of Beauty's door, More royal than her royal lines, should be the Queen of War!—	With gaze that saw far things of awe she stood as in a trance, But faltered not before the shock of War's long-dreaded chance, And every soul was born again—an effigy of France!	The triple watchword of her faith shall spread to every land, Till free and equal comrades th' en- nobled nations stand, And all shall take the sacrament from her devoted hand.
For, tho the years have drowned in tears her thrones and quarter- ings, She, kingless, has not lost the proud residuum of kings: <i>Noblesse oblige</i> is written fair on every flag she flings.	Oh, eyes that weep in lonely sleep but show no waking tear, Oh, lips with their brave silences and lingering words of cheer: What memories of parting have made the danger dear!	And when Hate's last far crop is past, sown broadcast by the blind, The memory of her chivalry shall stir in humankind A love akin to bridal love—the passion of the mind.
Let others plead a brutal need and compromise with faith, And soil the robe of honor, and make of joy a wraith, No taint of lie shall linger in any word she saith.	And when the breath of icy Death sweeps like a winter rain, And like a scythe the iron hail cuts down the human grain, How bleed we with her wounded and sorrow for her slain!	ENVOI, TO THE REPUBLIC When Peace and Toil shall guard thy soil in all its ancient right, And Freedom, by thy fortitude, has found a newer birth, We still shall cry, “My France, our France, the France of all the Earth!”

HOW WINIFRED LEARNS

BY WINIFRED SACKVILLE STONER

WHEN my big little girl, Winifred Sackville Stoner, Jr., was twelve years old, Dr. M. V. O'Shea, of the University of Wisconsin, said: "This child knows more and can do more than the average college graduate."

Now, Winifred and I are passing thru the most trying time of life together. I refer to the adolescent period when my daughter is neither a child nor a woman. I say that we are passing thru this period together because I am Winifred's co-worker in all things.

Every day I receive letters from parents asking me what my little girl is doing since "she knows everything." Such statements make us both laugh, for we know that no one can be thoroly educated. Education began when the first man performed a conscious act by taking a deep breath and wriggling his finger, and education will continue as long as there is life. By *natural education* I mean practical education thru play to a purpose from the cradle to the grave—and it is just this sort of education which we are both gaining.

When Winifred was a baby I talked to her as if she were an intelligent being. I got my reward as she soon responded and could express her thoughts in intelligent forms of speech long before the age at which most children learn to talk. I have continued this plan of making my baby my chum.

Believing that work is for an end, but play is the very end itself, I have used all sorts of games to teach different lessons. For tools I have employed those which have been familiar in the nursery from time immemorial. I have, however, banished all toys which lead to the destructive idea, such as toy swords and pistols, and I have used only constructive toys.

In the belief that children should learn foreign languages before the twelfth year I taught Winifred to speak some eight languages by the time that she was eight years of age. She learned them in the Simian fashion of mimicry and knew nothing of rules of grammar.

As I believe that the foundation

WINIFRED

Because of her remarkably rapid development both physically and mentally, Winifred Stoner, Jr., has attracted the attention of prominent educators and envious mothers all over the country. When she was five years old she knew the first book of the Æneid by heart. At eight she spoke eight languages easily, and she has written several books for children.—THE EDITOR.

THE LETTERS

*Of consonants there are a-plenty,
Altogether there are twenty.
In numbers vowels don't go so high,
A, E, I, O, U and Y.*

FROM THE BONY SONG

*Eight and twenty bones, 'tis said,
Are located in my head.
In my trunk are fifty-four
That I add to my bone store;
While my limbs have plenty more—
Full one hundred twenty-four.*

*Eight carpals help to form my wrists,
Five metacarpals in my fist,
While all my fingers have but three
Phalanges that are strong but wee;
But my poor thumbs can only boast
Of two phalanges at the most.*

—From *Facts in Jingles*, by Winifred Sackville Stoner. Published by Bobbs, Merrill Co.

of a practical education should be laid before the thirteenth year and that children should not be forced in the adolescent period, I am not giving Winifred any set tasks at the present time. This does not mean that she is idle. She has been given a taste for knowledge and she will not discontinue her search for it. Each day she writes original jingles, short stories or descriptions of places she has seen or people she has met. The typewriter, next to the children's encyclopedia, is our best helper. Winifred can write long stories with only a fraction of the fatigue she would get from the use of a pen. Typed stories show more plainly the construction and thus help her in composition. The typewriter also helps her in memorizing. At five she had made a thousand gems from the classics her own.

Music should be instilled into the child's being from the very first moments of his life. When Winifred was but a few days old she heard good music, and I have attempted to give her opportunities for musical development in all of her thirteen years. Each day we play together on the violin and piano, mandolin and

MRS. STONER

piano or other musical instruments. When possible we go to hear good music and at other times we listen to the best "canned" music.

Jingles are a great help in our home and in my natural education schools. We grown-ups often fall back upon the rime "Thirty Days Hath Sep-

tember." Thru jingles Winifred has salted down important facts in all of the sciences, in history and art. She has used this jingle memorizer even in learning facts about her body and a jingle which she calls *Bony Song* has become very popular among medical students, who say that they never forget the names of their bones after having learned Winifred's jingle. The little girl has written perhaps 500 jingles and several hundred of these rimes have been published in a book called *Facts in Jingles*. This book, as Winifred says in the introduction, was written to help make the pathway to knowledge a joy for other children.

Judging from the number of jingles which Winifred has written some people may imagine that the child spends her time writing rimes. Not so! She rides her bicycle, plays tennis, rows, swims, boxes, fences, takes long walks, drives or rides.

And now I hear some mothers ask: "And how about discipline?" We mothers who are leading our children thru the transition adolescent period all have occasion to think of discipline. So far there has been none in our home.

I have taught Winifred that there are but two objects in life—to learn self-control and the joy of service. Self-control can be taught only thru example. I have striven not to lose control of my feelings before my little daughter. She has been taught to bear pain with fortitude and to "laugh at the world." We mothers cannot expect to have happy sweet-tempered children if we show them anger, tears, grief and fears.

The only true joy comes from doing something for some one else; that has been the mainspring of Winifred's training. She has been taught that in order to give service, which means joy to self, she

must be an all-around well-developed person—a jack-of-all-trades and master of one. Both of us strive to learn everything within our reach and we find that we can gain knowl-

edge from all whom we meet. We learn how to use our hands as well as our heads and our hearts. We have no genius-qualities, but thru occupation, which is the secret of happiness,

and thru striving to "do a good turn each day before we go to bed," we are healthy, happy and—let us hope—intelligent, normal beings.

Wilmington, North Carolina

WHAT WILL ROOSEVELT DO?

BY GUTZON BORGLUM

RECENTLY, while on a Northwestern train from St. Paul to Chicago, I heard the following conversation between two Western lawyers—lawyers, I say, for one addressed the other as "Judge" and they referred to pending cases.

Both had been Roosevelt men; both were amazed at Wilson's flop from "too proud to fight" to "Johnny, get your gun" speeches. Both were for universal training and limited universal service.

The "Judge," who, I afterwards learned, was one of the best known federal judges of the Northwest, but whose name I may not give, was portly. He drest the part of the Middle West politician.

"What do you think of Roosevelt now?" the judge said after they had finished with Wilson's Chicago speech. The judge looked wistful.

"Oh, watching for another chance to break the slate," snapped the other.

The judge's eyes were almost shut, avoiding the smoke curling about his shrewd face, but he turned toward his friend in surprise for an instant; then said slowly: "You are wrong, Bob; the Colonel will not be a candidate next June, and that is how he will score again over your dog-in-the-manger Republicans, who are wasting all this precious time barricading yourselves against troubles you will not have, at least would avoid if you were preparing the country and public opinion for your confidence."

"Then you still believe in him, Judge?" the other said, wearily.

"Yes, he is, in some ways, the greatest force among us, but the worst advised. His Cabinet was the strongest that has governed America since the Civil War. Since his Presidency his advisers have been largely the unsuccessful men, or men unfortunate in their success. Yes, I believe in him still. I believe he will weather this final Waterloo you chaps are planning for him in June. I believe he will come out of it vindicated and gloriously successful."

"You mean he will be our next President?"

"Oh, no! If my estimate of the Colonel is right, you won't be able to even push him into the chair, and

Mr. Borglum is a sculptor who has not shut himself up in a studio. He is always heard from when the public is threatened with civic ugliness, and is strong for preparedness. Here he plays reporter for an interesting conversation.—THE EDITOR.

that is how he will win. The Colonel really wants America to believe in him, and he wants more than anything in this world to expunge from his life all responsibility for the past three years of American history. No man can do so much as the Colonel to right whatever wrong is there. It means sacrifice—in fact, it can be accomplished in no other way—and I believe the Colonel is prepared for any sacrifice necessary, and that is where he'll beat you fellows. You don't appear to have noticed the Colonel is about the only man in the country who has been really worrying about the ignoble position our nation has put itself into. No, you can gamble on it, the Colonel is not and will not permit himself to be a candidate."

"Who do you think will be the nominee of the reunited Republican party? You admit they will be reunited, don't you, Judge?"

The judge laughed, but was earnest: "Certainly they will unite, and God help the man on either side who plays Iago next June. The candidate disturbs me a great deal, and lately, discussing this very subject with Mr. Hill, I remarked what a raw, unordered civilization we have and how much that is really bad lies between our most efficient men and their ability to serve mankind!"

"Don't you think we have good Presidents, Judge?"

"I would shock you if I told you how few I think we have had since we became a nation. I regret I can't see a clear way nor a big available man. La Follette of Wisconsin, Cummings of Iowa, Hadley of Missouri, Borah of Idaho, Johnson of California, Estabrook of Nebraska, then Sherman of Illinois and Mann of Illinois, Fairbanks of Indiana, Burton of Ohio—Herrick is out of it, he wants the senatorship—then Knox of Pennsylvania and Whit-

man and Root, McCall of Massachusetts, Weeks also—that is not a list of experienced administrators. And then there is Colonel Goethals, who is being kept in a dark stall to be sprung at the last moment—none of these men measure up to the needs of the services they must render."

"You have missed Wood and Hughes, Judge."

"No, I did not mention Wood, because politicians avoid ability; they never turn to men they cannot control, unless in absolute necessity. But this country never more needed a man with the known and tried administrative ability and long experience Wood possesses. For the services required, compare his equipment with any of the names in the long list pressing before the convention, and what becomes of them? And as for Hughes—Hughes's main qualification is his incorruptibility. That being true, it will protect him and it will protect his colleagues."

"You object to going to the Supreme Court bench then for a candidate?"

"Certainly not, but I object to letting the Supreme Court find it out. You have no idea how subtle and corrupting preferment is."

The judge paused, looked concerned and continued: "Do you know, if the Supreme bench should ever become a reserved group of Presidential possibilities there would cease to be a Supreme Court in the United States, and no decision of national importance would be safe after, or wholly free from suspicion."

"Justice Hughes knows that to consent to the use of a Supreme Court justice's name in a political convention would irreparably injure the whole bench—the one branch of the government that must remain sacred and out of politics. No, my friend, Justice Hughes has his opportunity, and that is, to place the Supreme Court above the Presidency, where it is if it is what it boasts being."

"And if he fails?"

"He will not fail. Justice Hughes knows as well as any man living that the Supreme Court is more important to America than his candidacy."

THE CO-EE COMPANY MARCHING TO THE SEA

Thirty volunteers from a backwoods town in Australia set out to walk to Sydney, 320 miles away, to enlist. As they past thru the country giving the Co-ee call hundreds of men left their farms and flocks to join the company

AUSTRALIANS TO THE RESCUE

THE youngest of the British colonies set an example in preparedness which the Mother Country was slow to follow. It was not until a year and a half after the war began that Parliament could be brought to sanction the least degree of conscription and no premier has yet dared to propose universal military training. But four years before the war Australia and New Zealand had started in to train all of their young men for the war, which was then clearly foreseen. In a recent speech in London the commissioner from New Zealand told how the Prime Minister of Great Britain at the Imperial Conference of 1909 had asked the Prime Ministers of the Oversea Dominions to prepare to fight Germany.

The Labor party was then in power in the Australian Commonwealth and Andrew Fisher, a Scotch coal miner, was Prime Minister. He at once called to his aid the same man whom England called upon at the outbreak of the war, Kitchener of Khartum, who went to Australia and drew up a plan for compulsory service which Mr. Fisher promptly put into effect. This provides for military training from the age of twelve to the age of twenty-six. At first it is part of the regular school work. The

junior cadets get not less than fifteen minutes for 120 days a year, devoted to drilling, athletic exercises and shooting. The senior cadets, fourteen to eighteen years old, are put into uniform and have company drills of from one to four hours. At eighteen

they are classed as citizen soldiers and for the next eight years must have from 16 to 25 training days a year, part of it in camp.

Those who fear that the enfranchisement of women will effeminate the race should note that the only parts of the British empire where universal military training and compulsory service have been established are the two dominions where equal suffrage prevails. In the British Isles, where the women have been scornfully denied the vote, general military training is unknown and the mere idea of compulsory service meets with violent opposition.

Under this system Australia with a population less than five million will have 270,000 boys and men under training all of the time. These are not required to serve outside of Australia, but at the outbreak of the war most of the citizen soldiery as well as many civilians volunteered for the imperial service. The Australasian troops were mostly employed on the Gallipoli peninsula, where, owing, as is now admitted, to the blunders of the British generals, many of them found graves in the Anzac zone.

This is not the first time that Australia has contributed to the defense of the empire, for she sent a large contingent to fight the Boers.

THE LAUNCHING OF THE "BRISBANE"

The protected cruiser "Brisbane" of the new Australian navy was nearly completed, when the war broke out

A SUFFRAGE OASIS

ANOTHER PRIZE ARTICLE IN THE BEST THING IN YOUR TOWN CONTEST

BY WILLIAM O. STEVENS

THE word "best" is not only superlative, but comparative. The best thing in a thousand square miles of sand, for example, is a little Oasis, and to appreciate it one must see the desert first.

Our town, as a biennial legislature makes us realize all too keenly, is the capital of our state. It has but ten or eleven thousand inhabitants, counting white, black, and intermediary tints. In the eighteenth century, however, it was one of the most important cities in the country. Here Washington resigned his commission in the presence of the Continental Congress, here met the assembly of notables which issued the call for the Constitutional Convention, here occurred many other historic events, which every member of the Peggy Stewart Chapter, D. A. R., has at her tongue's end. Our Town contains many beautiful colonial mansions, rather down at the heel now, perhaps, but still gratifying evidence that there was once a time in American history when wealth and taste went together.

To put the matter kindly, Our Town is like a dear old lady nodding over her knitting by the fire and dreaming of the days when she was the toast of the town. To put it less sentimentally, the "Ancient City," as it loves to be called, has been so long satisfied with its historic fame that it is content to fuddle along without a particle of enterprise, glorying in the superstitions of sixty years ago. Politically it lies flat beneath the wheels of a Democratic machine, whose boss can always scare off any independent spirit by waving the time-worn negro bogey.

The aridity of business and politics, however, is not the driest feature of this desert. For the genuine Sahara one must turn to the intellectual life of Our Town. Long ago it sank to the position of an outlying fringe, or limbo, for the great naval school in its borders. Accordingly, such thought as escaped the limits set by our First Families has run thru the narrow channels of Navy Yard life. The intellectual activities of the naval officer are concerned with the problems of his profession. Bound as he is to serve any administration, he is likely to take small interest in political or economic issues. His wife, rejoicing in his shore leave, naturally tries to make up for the lean and lonely years of sea duty by getting as much fun as she can out of social activities. Navy Yard life, therefore, becomes a round of calls, teas, hops,

card-parties; and conversation seldom rises above the level of shop and personalities. Since the naval influence is predominant, the "nice people" of Our Town are content to color their lives and thoughts after the Navy Yard style. This combination of naval influence with hoary tradition forms a kind of stopper that hermetically seals the mental life of Our Town. Music, drama, art, literature, science, social progress—all put together do not weigh against an invitation to the Officers' Hops.

So much for the desert.

The Oasis is a small group of women organized in the interests of woman's suffrage. No one in naval society has yet "taken up" suffrage, and the very idea of Lovely Woman soiling her Purity at the polls is anathema to the "chivalry" of our First Families. Hence that little organization means a defiance of the laws of the social Medes and Persians. Its president is one of our best citizens, and the woman editor of our one local paper gives loyal support, but as it is extremely unfashionable to be a suffragist in Our Town the organization has no flowery road to travel.

Moreover, these women are not content to hold meetings and read

reports. When the cry went up last fall for Belgian relief, the leader of navy society declined to help for fear of being unneutral. The reason was quite intelligible in her case on account of her husband's official position. But the effect of the refusal was that scarcely any other woman in Navy Yard or Town would touch the project, and Belgian relief, as far as Our Town was concerned, would have died had not the suffrage president responded energetically to the appeal and opened the suffrage rooms as headquarters for receiving contributions and making garments.

On another occasion, when our Boss attempted to reward a faithful henchman by making him postmaster, the only protest came from the suffragists, and they finally carried the day for a worthier candidate. It is an eloquent fact that a representative of the Boss was seen handing over a fistful of banknotes to an "anti" speaker when she visited Our Town. Moreover, these women who want the vote insist on digging up embarrassing facts about the government of Our Town and the county. While the male voters are content to be pulled about by the nose and "let well enough alone," these suffragists raise questions about school funds, sanitation, the almshouse, child labor in canning factories and silk mills, and they are the only people in Our Town doing anything of the kind.

There are no women of "means" among these suffragists, and they have some difficulty in raising the money they need, but they manage to spare a little now and then for a good book for a little library in their rooms. There is no public library in Our Town, and our local reading taste is satisfied with the confections of Harold Bell Wright and others of the Marshmallow School of American Literature. The only place in Our Town where a person may obtain a political discussion like "The New Freedom," a novel like "Angela's Business," or an exposition of feminism like "What Women Want," is the book-shelf in the suffrage rooms.

This, then, is the oasis in our desert, a handful of women with their faces set toward enlightenment and progress, and making a sturdy fight against the overwhelming odds of indifference, ridicule, and active opposition on the part of town and society. For this reason the suffrage organization is the best thing in Our Town.

Annapolis, Maryland

APRIL MUSIC

BY CLINTON SCOLLARD

The lyric sound of laughter
Fills all the April hills,—
The joy-song of the crocus,
The mirth of daffodils.

They ring their golden changes
Thru all the azure vales;
The sunny cowlips answer
Athwart the reedy swales.

Far down the woodland aisleways
The trillium's voice is heard;
The little wavering wind-flowers
Join in with jocund word.

The white cry of the dogwood
Mounts up against the sky;
The breath of violet music
Upon the breeze goes by.

Give me to hear, O April,
These choristers of thine
Calling across the distance
Serene and hyaline.

To clear my clouded vision
Bedimmed and dulled so long.
And heal my aching spirit
With fragrance that is song!

A SHORT CUT THAT COST TWELVE MILLION DOLLARS AND SAVES TWENTY MINUTES

The viaduct across the Tunkhannock Valley which was built by the Lackawanna Railroad to reduce a circuitous, hilly route of thirty-nine miles to a straight, level road of three and a half, and to save twenty minutes' time for passenger trains and an hour for freight between New York and Buffalo. It is the largest concrete structure in the world, containing more than 500,000 cubic yards of material. Its dimensions are approximately those of Brooklyn Bridge, except that it is a hundred feet higher.

THE MAIL-ORDER SUFFRAGIST

Seven miles from the nearest post-office, ten miles from a railroad, tied down by a multiplicity of housekeeping duties, and hampered by the difficulties of transportation—how is a woman going to find out why and how to be a suffragist?

It is a country-wide problem, and strange to say it is from the city of subways and mass-meetings that the answer to the country woman's question comes. For the New York State Woman Suffrage Party is the first organization to propose a really satisfactory solution of the problem.

Under the direction of the New York state president, Mrs. Raymond Brown; the chairman of the Educational Section, Mrs. Howard Mansfield; and the lecturer on suffrage history and argument at the New York Suffrage Training School, Miss Louise Grant a correspondence course in suffrage has been prepared—a twelve-lesson presentation of the history of the vote, and the bed-rock reasons for extending it to women.

The course was started about two months ago as an extension department of the Suffrage Training School in New York City, which gives a series of about fifty lectures on suffrage history, public speaking, parliamentary law, civil government, and suffrage organization.

These lectures are attended principally by suffrage workers. Mrs. Beatrice Forbes-Robertson Hale, whose reputation as a lecturer and as a feminist is already well established, gives the course in public speaking. Mrs. James Lees Laidlaw, one of the leaders in the recent New York state campaign, talks on suffrage organization. Of course it takes a man to explain a man-made government, and the suffragists have borrowed Mr. Arthur Macmahon, a Columbia University instructor, to tell them just how the machinery of government works. When I visited the school he was showing a gallery of charts to indicate how state laws are made, with red and green and blue lines to mark their various maneuvers, tho he confest that the actual passage of a bill would have to be drawn with invisible ink in convoluted spirals.

A similar course is to be held two or three evenings a week thru the spring

for suffragists who cannot attend the lectures during business hours.

As soon as other women began to hear about these lectures there was a demand for an extension of the field. Suffragists "upstate" wanted the same sort of training and they had no way of getting it.

So the correspondence school, an entirely unexpected development of the original plan, was organized—and already it has grown to ten times the enrollment of its parent institution.

The lessons are mailed at intervals of a week, with test questions every month. A six months' magazine subscription is the *magna cum laude* reward, to be given at the end of the course to the twenty women whose answers rank highest.

The success of the correspondence school has practically forced the New York suffragists to become missionaries to the whole country. From most of the non-suffrage states (and even from Nova Scotia) requests have already come for permission to take the course. Twenty-five cents, to cover the cost of postage, is the tuition fee. And every applicant is welcome.

IN A THIRSTY LAND

One of the cairns put up by Navajo Indians to guide the traveler in the desert to water

SENTINELS OF THE DESERT

Travel in the Painted Desert would be a dangerous matter were it not for the silent sentinels erected by the Navajo Indians to direct the stranger traveling thru this country, where once there was water in plenty, but where now there are only the dry beds of rivers.

If you have never experienced the pangs of thirst, you cannot conceive of the terrible agony it may bring to a prospector lost in the desert. Half-crazed with delirium, he loses all sense of direction. His swollen tongue protrudes from his mouth. His lips are raw and cracked by the action of the fine alkali dust which rises from every movement of his leaden feet. He strives to reach the phantom lake so clearly seen in the quivering heat waves of 'the mirage'—only to have it fade before his blood-shot eyes, just as he stoops eagerly to drink of the unreal waters.

It is to avoid just such occurrences, that the Navajo Indians have placed their stone sentinels to point the way to water in the desert.

These sentinels are piles of rock as high as a man, located on the higher ground, where they may be readily seen. In the body of the monument is placed a projecting rock, which is arranged to point the direction to the nearest spring or water-hole. If you follow the direction indicated, tho you may have to travel considerable distance, the precious water will always be found.

Frequently it is only a very weak seep, supplying no more than a few cups an hour. Or it may be a pool located deep in the recesses of a rocky ledge and collected from the melted snows of the past winter. Sometimes it may be situated in an out-of-the-way place and in that case there may be two, or even three, smaller monuments erected along the route designated.

Along the way there may be arrows cut in the rocks, or crooked grooves symbolizing the windings of a brook, or signs of various kinds which will attract attention. These directions all help to make the way plainer and reduce the chances that the traveler will become confused.

THE NEW BOOKS

UNUSUAL VERSE

Hotly rebelling against the illness that sentenced her to exile at Saranac Lake, longing passionately for the normal opportunities of work and self-expression, Adelaide Crapsey found in verse her means of making life worth while. Seventy poems, published just after her death in a slim, unobtrusive gray volume which somehow suggests her own personal appearance, had been chosen by her to embody, as she expressed it, her "immortal residue." Into them she put all her longing for the beauty of life—the outcry of a spirit unreconciled to its fate—and thru them she gave expression to

Infinite passion, and the pain
Of finite hearts that yearn.

Most of the *Verse* is somber, some of it tragic—it could not be otherwise and be true.

To her genuine poetic ability Miss Crapsey added a considerable technical knowledge of metrics. She was for several years Instructor in Poetics at Smith College. In the verse form which she invented and called the cinquain she has done some of her best work—clear cut ideas sharply focused, single impressions etched in a few significant lines. Thus she writes of Night Winds:

The old,
Old winds that blew
When chaos was—what do
They tell the clattered trees, that I
Should weep?

The Triad shows another interesting use of the cinquain:

These be
Three silent things:
The falling snow—the hour
Before the dawn—the mouth of one
Just dead.

Verse, by Adelaide Crapsey. Rochester: The Manas Press. \$1.

INDUSTRIAL PROBLEMS

The eight million women engaged in "gainful occupations" are gradually awakening to the realization that they hold a permanent place in the industrial world. From being content with casual work and casual conditions, they are becoming organized for their own education and for the education of the public as to their rightful place in modern society. *The Trade Union Woman*, by Alice Henry, formerly editor of *Life and Labor*, gives an account of the union movement, its current methods and aims, as well as its history. It is difficult to separate woman's development in industry from her social and political aspirations; the chapters in this book treat the various aspects of the movement as rather distinct problems, altho there is a unity of attitude and ideals running thru the whole story. The emphasis on the larger life of all workers and on the immanence of human dignity in the labor movement commands for this book the serious attention of thoughtful readers.

Among the special studies made for

the Federal Commission on Industrial Relations was one on *Scientific Management and Labor*, by Professor Hoxie of the University of Chicago. This is now published in book form. With the coöperation of a representative of the employers and of a trade-unionist, Mr. Hoxie investigated the labor claims of the late Frederick W. Taylor, and of Harrington Emerson and H. L. Gantt, the leaders of the sci-

entific management movement. The studies were made in a number of establishments selected by the efficiency engineers, and a few other factories selected for purposes of comparison. The formulated objections of labor representatives were also checked off, and the final statement received the unqualified approval of the two partizan members of the investigating committee. Many of the suspicions and fears of the workers appear to be groundless; but many of the more serious objections urged by them against the employers' efficiency methods are abundantly sustained.

The most serious aspects of the controversy deal with the ultimate status of the worker as a human being; and this status is not protected by scientific management. The tremendous economic gains made possible by the application of science to the organization of industry certainly appear to have given some measurable advantage to the unskilled workers; but this leveling upward is more than compensated by the relative degradation of the skilled workers. The only protection that the workers have had against the mechanical search for increased productiveness has been their own organization.

The Trade Union Woman, by Alice Henry. Appleton. \$1.50. *Scientific Management and Labor*, by Robert Franklin Hoxie. Appleton. \$1.50.

THE COST OF WAR

The shock given the moral world by the engulfing European war is not greater than that to the financial world. The first estimates of expense were astonishing, the figures have finally become appalling, and now, while adequate indemnities and liquidation of war debts are usually thought possible, many begin to look on them as verging to improbability and impossibility.

W. R. Lawson, a financial authority, in *British War Finance*, foresees a great reduction in Great Britain's bloated civil and municipal lists and in her army and navy. He compares the present cost to Great Britain of £2,000,000,000 (December 31, 1915) with the twelve million sterling debt left by William the Third's campaigns and the debt of but twice that left by Marlborough and Eugene. "War in those days was dirt cheap compared with what it is now," he laconically and picturesquely observes. How vague the figures are after all, for the experts vary from seven to ten shillings per day as to the average cost per soldier, and there is some uncertainty as to the number of soldiers! But Mr. Lawson himself cannot be called vague. He writes from a large knowledge of international relations and the resources of nations and of bond issues, exchange, scrip schemes and silver bullets. He describes the great difficulties met by the financiers, and critically reviews the means by which the whole almost su-

HOLIDAY HOURS

Miss Mackay's new *Memorial Day Pageant* brings in the Indians, the Puritans, the men of '76 and 1812, of '61 and of the Spanish War, all striving for freedom. Its moral seems rather thinly sugar coated, but the idea of a definite program for Decoration Day is most valuable.

Harper. 25 cents.

A pleasant tale has George Madden Martin made out of the little data we have of Shakespeare's boyhood. *A Warwickshire Lad* has no plot, is rather a biography in story guise, but makes life in Stratford and in the Shakespeare household very real.

Appleton. \$1.

Less attractive in title than in content is *The Child's Book of English Biography*. Mary Stoyell Stimson has the rare power of weaving a few essential facts into a good short story. The especially good account of Shakespeare makes the book timely.

Boston: Little, Brown. \$1.

The Handbook of Athletic Games, by J. H. Bancroft and W. D. Pulvermacker, besides giving descriptions and rules for the ball games and for track and field athletics, includes directions for meets and contests, and the latest winning records.

Macmillan. \$1.50

Illustrated by the best of the Punch cartoons, Stephen Paget's informal *Essays for Boys and Girls* give the story of England's entrance into the Great War and recount sympathetically the position of each of the allied nations. It describes Germany as one would expect.

Macmillan. \$1.25.

More Tales from the Arabian Nights are delightfully edited for young folks by Francis Jenkins. The stories are taken mainly from the Lane translation. Among those in this volume are Abdallah, Princess Perizade and Mahommed Ali the Jeweller. The attractive illustrations are by Willy Pogany.

Holt. \$1.50.

Joyful Star, by L. N. Partridge, is a collection of Indian legends, of North and South America, drawn from government reports, from folk lore journals and antiquarian society records. They are written with the Camp Fire girls in view.

Sturgis & Walton. \$1.25.

The Jolly Book for Boys and Girls is the gift for an invalid of eleven years or so. J. J. Olcott and Amena Pendleton have gathered a joyous collection of stories from a wide range of great writers, just right to read aloud.

Houghton, Mifflin. \$2.

perhuman task has been and is being in a way accomplished.

Thus far the war has produced few books that for profound interest surpass this vividly written but unfortunately drily entitled volume.

British War Finance, 1914-15, by W. R. Lawson. Van Nostrand. \$2.

MYSTERY A LA MODE

Gertrude Atherton's *Mrs. Balfame* is a perfectly conventional murder mystery story, well constructed and ably written. It has, however, an unconventional beginning, "Mrs. Balfame had made up her mind to commit murder." By the time you have found out whether she did or not, you will have been well entertained.

Stokes. \$1.35.

AN AMERICAN SALON

Memories and Anecdotes, Kate Sanborn's entertaining chat concerning folk of note in American letters during the latter half of the last century, has many good stories, but none more interesting than that of Mrs. Botta's famous and delightful Saturday Evenings, at which gathered all that was finest in literary New York.

Putnam. \$1.75.

A FIRST VOLUME

Apparently a first volume, *Laurentian Lyrics and Other Poems*, by Arthur S. Bourinot, is marred by most of the sins of first volumes. Occasional slipshod riming and mediocrity mark the little collection. But Summer is a pretty picture, and To the Memory of Rupert Brooke a convincing poem.

Toronto: The Copp Clark Co. 50 cents.

THE FRINGES OF THE FLEET

When Kipling writes of the sea and the men who go down to it in fighting ships, the thing has been done once for all. The romance, the self-denial, the bravery, the endurance, the patriotism—all are there in *The Fringes of the Fleet*, set forth by the master hand. But Kipling is no pacifist—and the other side of the shield is kept resolutely turned away.

Doubleday, Page. 50 cents.

"X"

A second series of communications to Elsa Barker supposed to come from the late Judge Hatch is *War Letters from a Living Dead Man*. Striking as are such descriptions as that of the Kaiser's will, raised into a separate being and become his particular devil, yet the letters would seem a not unnatural result of subconscious mental activity or thought transference and remind one of the powerful "Letters from Hell" introduced to us years ago by George MacDonald.

Kennerley. \$1.25.

ENJOYING SHAKESPEARE

Lovers of Shakespeare will find the second edition of Dr. Stalker's *How to Read Shakespeare* a delightful volume that points out much that is best in Shakespeare's work. The young reader will find the book a happy introduction to Shakespeare's plays,—clear, free from scholastic details and dry-as-dust material, interesting, and leading at once to points of modern interest. The advice to begin with the English histories,—King John, for example—is undoubtedly wise.

Doran. \$1.50.

WOMANKIND

The first paper in Miss Tarbell's *Ways of Woman* is firmly rooted in the thirteenth United States Census, and shows that the business of the overwhelming majority of women is still that of the mother and home-maker. For the rest, this volume pleads for systematic training of girls for motherhood and in domestic science; makes an ingenious and plausible apology for the talkativeness of the sex; laughs at ill-directed feminine efforts in the quest of culture; protests against the notion that low wages are directly responsible for the lapses of working-girls.

Macmillan. \$1.

Bridal Trousseaux at McCutcheon's

THE supplying of Bridal Outfits is a specialty in itself. Our long experience has made us familiar with all the requirements of good taste and prevailing fashion and enables us to handle promptly and properly the details of marking and making. Trousseaux are distinctly the business of "The Linen Store."

Prospective brides will find here the largest collection of Household Linens in the world, as well as an exceptionally beautiful and complete assortment of French Lingerie, Hosiery, Handkerchiefs, Silk and Knit Underwear, etc. The very latest styles are here in profusion.

A request will bring you our helpful little booklet, "Bridal Trousseaux," in which the choicest designs are shown, and which includes suggestive lists of Outfits ranging in price from \$100 to \$5,000.

Mail orders receive our prompt attention

Partial Interior View of One of the Hundreds of Big Storage Warehouses in which the Choicest Burley Leaf is Aged in Wood Three to Five Years for Tuxedo Tobacco. The Large Central Inset Shows a Hogshead Opened.

All Smoking Tobaccos Are Aged

Have to be to make them smokable. Tobacco in its natural state is raw and harsh. Ageing makes it mellow, milder.

The leaf for some tobaccos is aged for only one or two years.

That for Tuxedo is aged in wooden hogsheads for *three to five years*—until it is as nearly perfect as nature can make it.

Most manufacturers simply age the leaf and *let it go at that*. But—

Tuxedo Is More Than Aged

After nature has done all it can to mellow the leaf, then the *original* "Tuxedo Process" is applied.

This famous process—a doctor's discovery—takes out all the bite left by nature. Prevents irritation of mouth and throat. Makes Tuxedo the mildest, most comfortable smoke possible to produce. Enables men to enjoy

a pipe who formerly could not do so.

The "Tuxedo Process" has many imitators. Millions of dollars have been spent trying to invent a "just as good" process. But it still remains the great *original* method for making tobacco absolutely biteless and non-irritating.

Tuxedo

The Perfect Tobacco for Pipe and Cigarette

Get a tin of Tuxedo. Try it for a week. Note how sweet and fragrant it is and how mild! You can smoke it all day and have a sound tongue and a perfectly comfortable throat at the end. A week's trial is bound to make you a permanent smoker of Tuxedo.

"Yes, and his wife furnished it."

"How?"

"With a sewing machine, a cutting table, two dressers, dummies, three sewing chairs and a full-length mirror."—*Tit-Bits*.

The Scotch version of Tipperary, which reaches us from Glasgow, deserves a wider publicity. It is given with the caution that it cannot be lightly attempted save by a Scotsman:

It's a lang wye tae Auchtermuchty,
It's a lang wye tae Perth,
It's a lang wye tae get tae anywhere
Frae anywhere else on airth.

Guid-bye tae Ballachulish,
Farewell but an' ben;

It's a lang, lang wye tae Auchtermuchty,
But I'll gang back again.

—*Christian Science Monitor*.

A Chinaman was brought before a magistrate in Salt Lake City and received a fine for a slight misdemeanor. But the judge could not make him understand.

"Look here, man," he said, disgustedly, "you pay one dollar or go to jail, see?" There was no gleam of intelligence from the Oriental and the judge repeated his explanation, but without results.

Finally the officer who had arrested the man came up. "Say, you dish-face," he called, "can't you hear anything? You've got to pay a five dollar fine."

"You're a liar," yelled the Chinaman. "It's only one dollar."—*New Thought*.

MR. PURINTON'S EFFICIENCY QUESTION BOX

239. Mrs. B. F. J., Michigan. "I belong to a club of middle-aged people, several of whom are deeply interested in the study of longevity, and the prevention of those weaknesses and disorders which commonly afflict persons from forty to sixty years of age. Will you please name a few books for personal study likely to prove beneficial?"

Every home should have a library shelf of books of this kind. We gladly suggest a few: "Prevention and Cure of Old Age," by Sanford Bennett; "The Nature Cure," by Dr. H. Lindlahr; "Autology," by Dr. E. R. Moras; "How to Live," by Prof. Irving Fisher and Dr. E. L. Fisk. These books may be all obtained thru Efficiency Publishing Company, Woolworth Building, New York City.

240. Prof. T. W. A., Minnesota. "As a school principal, I am especially interested in efficient teaching and school administration. Will you give me some clue as to the best literature in this field?"

In general, books on all phases of personal or professional efficiency may be secured thru Efficiency Publishing Company, Woolworth Building, New York. You might also write the National Educational Service Corporation, 230 Fifth avenue; Librarian of Teachers' College, 525 West 120th street; editor of *American Educational Review*, 154 Nassau street; and such large booksellers as Putnam's, Brentano's, or Baker & Taylor; all of New York City.

241. Mr. E. E. B., Florida. "I figured my grade on your Personal Efficiency Test as about 50 per cent. The answers to questions Nos. 4 and 13 were zero. I am most concerned about answering these properly. Can you advise me?"

For detailed information on No. 4, consult authorities in character analysis and vocational guidance, mentioned in these columns since your letter was received.

For more knowledge regarding No. 13, get book catalogs from the publishers of *Good Health*, Battle Creek, Michigan; *Health Culture*, Passaic, New Jersey; *Physical Culture*, Flatiron Building, New York City; *Herald of Health*, 110 East Forty-first street, New York City; *Nautilus*, Holyoke, Massachusetts.

242. Mrs. J. S. I., Michigan. "To succeed in literary work has been my ambition. I have plunged wholeheartedly into the work I love. Unprejudiced critics admit my stories and verses give evidence of merit; yet almost everything I submit to magazine editors is promptly returned; often, I have reason to believe, unread. I am told this is because my name is not well enough known. Can you advise me how to proceed?"

Get a stock of unlimited patience—you will need it. Work so many hours a day, whether you sell anything or not. Write of the people and events you know. Criticize your output continually and relentlessly—never mind about its "merit," ask your friends not to eulogize it, but tear it to pieces. Master a mail course in short-story writing, and another in advertising or business English. Look up author's agents, generally advertised in such periodicals as *The Dial*, *The Black Cat*, the weekly *Book Supplement* of the *New York Times*. Submit your copy to editors right—get a book like *Preparing Manuscript for the Printer*, Funk and Wagnalls, 354 Fourth avenue, New York. Contribute to your local newspapers, and if your work is good enough, it will command a larger field. Get rid of the impression that editors do not read the manuscripts submitted to them, or are unduly influenced by well-

Over 400,000 Words Defined 2700 Pages 6000 Illustrations Grand Prize Panama-Pacific Exposition

Doran Books To Be Read Now

These are the days of the testing of genuine democracy. There are three classes of books to be read carefully by every intelligent citizen—

I. Those dealing with domestic problems of defence and preparation. The real text-book on this subject is Theodore Roosevelt's **FEAR GOD AND TAKE YOUR OWN PART: a clarion call to intensive citizenship, regardless of party.** Net \$1.50

II. Those dealing with the actual problem of invasion and war—a possible if not probable event. Cleveland Moffett's book (just ready), **THE CONQUEST OF AMERICA**, presents the matter squarely and accurately. (It has the approval of chiefs of the Army and the Navy.) It is a romance to be considered most seriously. Illustrated. Net \$1.50

III. Those telling of the trials and the devastation we must study to escape. Here are some of the most vivid and informing of recent books: **THE RED HORIZON**, by Patrick MacGill, done with the skill of portraiture of his famous "Children of the Dead End" (Net \$1.25); **MY HOME IN THE FIELD OF HONOUR**, by Frances Wilson Huard—the story of the looting of a wonderful home in the Aisne Valley (Illustrated, Net \$1.25); **WHAT GERMANY THINKS**, by Thomas F. A. Smith, is a genuine interpretation of the mind of non-military Germany (Net \$1.25); **AMONG THE RUINS**, by Gomez Carillo, is the first-hand statement of a Spanish war-correspondent (Net \$1.50).

But all is not war and politics. There remain the entertaining books—the genuinely attracting novels. These you should review at your book-shop—

A SENTIMENTAL DRAGON Nina Larrey Duryea
Delightful comedy of Americans conquering social Paris. Net \$1.25

OLD JUDGE PRIEST Irvin S. Cobb
Cobb's famous and beloved Kentucky judge. Net \$1.25

LOVE IN YOUTH Frank Harris
A light, modern tale of love—by an acknowledged genius. Net \$1.25

THE LEAST RESISTANCE Kate L. McLaurin
The career of a clever, pretty woman who fought alone. Net \$1.25

THE S.S. GLORY Frederick Niven
A romance of realism—a sea-yarn that is intensely realistic. Net \$1.25

GOLDEN GLORY F. Horace Rose
Exploring an untouched field—Africa before the white man. Net \$1.25

THE BELOVED TRAITOR Frank L. Packard
A powerful drama of genius, struggle and love. Net \$1.25

THE AMATEUR Charles G. Norris
An important American novel of contemporary life. Net \$1.35

GOSSAMER G. A. Birmingham
Brilliant, humorous, clever study of an international financier. Net \$1.25

THE OAKLEYITES E. F. Benson
The story of a big-souled woman—with fascinating comedy relief. Net \$1.35

THE IMMORTAL GYMNASTS Marie Cher
It will enchant you—an exquisite but not trivial fantasy. Net \$1.25

BEGGARS ON HORSEBACK F. Tennyson Jesse
Splendid tales, full of color, vigor, glow of life. Net \$1.25

And two delightful books on out-of-doors—intimate both of them:

CHILD AND COUNTRY Will Levington Comfort
Child-culture, rose-culture—and Will Comfort all over! Net \$1.25

THE WINDOW IN THE FENCE Harriet Brunkhurst
How two clever, interesting people made dreams come true. Net \$1.25

known names attached to articles submitted. The editor who is abreast of his job is more anxious to discover a new writer of real merit than to accept a manuscript from a writer whose reputation is already made.

243. A Western Educator. "I have been unexpectedly appointed to the deanship of a college, without having grown into the position at all, as a dean normally should do. I am conscious of serious shortcomings, in the formal routine of the position, in natural temperament, especially in the ability to keep in close and sympathetic touch with the heart and thought of the student body."

We gladly refer you to several possible sources of help, as follows: The book on College Administration by President Charles F. Thwing, of Western Reserve University, Cleveland, Ohio; the Association of College Deans, whose next convention occurs at Columbus, Ohio (we are informed), particulars of which may doubtless be had from the President or the Registrar of Ohio State University; the work of the Educational Magazine Publishing Company, 31 East Twenty-seventh street, New York; that of the Educational Publishing Company, 18 East Seventeenth street, New York; the publications of the Teachers' College, 525 West 120th street, New York; the literature of the University Extension Society, 105 East Seventeenth street, New York; of the University Forum of America, 550 West 118th street, New York.

The president of your state university should know of conferences and bulletins by college executives. The Librarian of the University of Chicago will probably cite books of value. A student cabinet, for student problems, is worth considering.

244. Mrs. M., Pennsylvania. "Will you please suggest what seems to you a wise budgeting of an income of \$1600 a year, for a family of two, who desire to save now while they are young and healthy? Are the following groupings correct? What amount should go to each? (a) Savings account, insurance, etc. (b) Household expenses—food, laundry, help, up-keep. (c) Outside expenses—rent, water, fuel. (d) Personal expenses for wife—clothes, dentistry, tithe, gifts, postage, etc. (e) Personal expenses for husband—similar to above. (f) Recreation, books, travel, concerts, etc."

The groupings are approximately correct—tho we should transpose the order somewhat, as food, rent and clothing precede the items of savings and insurance. Local prices and conditions, also the professional and social responsibilities of the husband and wife, cause variations in any financial budget. We hardly ever assume to give exact figures, where the personal equation is unknown. However, we should fix the amounts roughly as follows: (a) \$300 a year. (b) \$480. (c) \$340. (d) \$220. (e) \$190. (f) \$70. If the wife is an expert cook, buyer and seamstress, probably she can reduce (a) and (d). If the husband has no professional appearance to maintain, he can reduce (e).

245. Mr. C. J. H., Pennsylvania. "Am nineteen, have had three years' practical railroad work; would like to take a good traffic course. (a) Do you think such a course would pay? (b) Would Spanish in connection be an advantage? (c) Is there a demand for an expert manager of traffic? (d) Please refer me to a few good authorities or institutions. (e) Where can I obtain your 'Triumph of the Man Who Acts?'"

(a) Yes. (b) Decidedly—our affiliations with South American countries will make Spanish a larger asset in many trade lines; get particulars of the new association for United States industrial expansion founded by President Frank A. Vanderlip, of the National City Bank, New York. (c) There is always a demand for an expert anybody. (d) Write the Traffic Club, 291 Broadway; The Railroad Man's Magazine, 8 West Fortieth street; the Traffic Service Bureau, 143 Liberty street; Railway Engineering, 50 Church street; Railway Review, 30 Church street; all of New York City. (e) This was reprinted in The Independent of January 17, 1916.

NOTE Freight paid, at prices quoted, to Railway Stations in Eastern and Central States. Prices slightly higher in West and South.

Independent Opinions

Mr. Purinton's article in our issue of March 20 on "The Efficient Housewife" brought in many counter-criticisms. We quote from the letter of one who signs herself modestly—or defiantly—"The Inefficient Housewife," but who nevertheless seems to know her business or businesses.

It is economy to buy leg of lamb rather than chops. Yes, especially for a small family, for neither ice, nor paraffin paper, nor disguise will keep the meat from growing dry and flavorless as the days go by, and before it disappears you will find the family leaning strongly toward vegetarianism. I, the inefficient, never serve a roast when my family, small meat eaters all, numbers less than five.

Pound for pound fish costs less than meat, but that scientific table of food values which "should be the constant guide of the housekeeper," gives it only half the food value. The Boston Cooking School Cook Book says it is cheaper only when compared with the choice cuts of meat.

Likewise, brown sugar, cheaper by the pound than granulated, is not so pure and does not "spend" so well. Several years ago a friend of mine gave it a careful trial for a period of weeks. She reported that her sugar bill was not diminished in the least. I tried it long enough to convince myself that if there were any saving it was not enough to pay the room rent of a second sugar bucket.

Fruit is cheaper at wholesale than at retail. But would the amount saved on a winter's supply pay the rent of a cold storage room? For the most of us the fruit and vegetable cellar belongs to the days of our grandfathers.

I wish I knew where Mr. Purinton buys his grapes and cornmeal. I cannot make grape juice at 8 cents a pint; even tho I leave out of account bottles, fuel and labor. I can remember buying cornmeal for 3 cents a pound, but that was in the dim and distant past. My last cost me 8 cents. Even at that five ounces is cheaper than ten eggs. But how did Mr. Purinton happen to think of substituting for the expensive egg the cheap cornmeal? Did he wish to make that change in his own dietary? He certainly did not find the suggestion in that scientific table of food values which he recommends to inefficient women, for that shows that cornmeal, rich in energy-producing carbohydrates but poor in tissue-building proteids and fats, is in no way an equivalent for the egg with its high nutritive value. I believe that cornmeal is the staple article of food in certain sections whose inhabitants, ill-nourished and poorly developed, are subject to the dread pellagra.

And then there is the labor-saving machinery. Much of this is impractical in a small family, where the time and energy it saves will not keep it clean and in running order. Much of it, too, saves energy, but not time, as, for instance, the vacuum cleaner and the sewing machine motor. For the average woman to say that her kitchen is "fully supplied and equipped with labor-saving devices" is to confess to the height—or depth—of "inefficiency." The work in the average family of today is on too small a scale and too diversified to warrant the outlay. A man might as profitably equip his kitchen garden with all the tools and machines of the big farms, or use a motor truck to transport a wheelbarrow load ten rods.

Wherever there is a discussion of woman's work and labor-saving machinery there appears also our old friend, "What is a hen's time worth anyhow?" A hen's time

To the man who would stay young

PONCE DE LEON failed in his search—just as has everyone else who believed that the secret of youth lay in other than simply the conservation of the youth that Nature herself gives.

The secret of youth lies in making good, promptly and thoroughly, the many drains and overdraughts that modern ways of living impose upon the bodycells—for the cells are the brick and mortar of the body structure. It lies in guarding and husbanding the finer strength of the nervous system, which overwork, worry and stress undermine.

It is in this work of conservation that Sanatogen has proven itself of such distinct merit. In rebuilding

wasted tissues, revitalizing starved cells, enriching blood and thus storing up health and energy against the passage of time, Sanatogen has been pre-eminently successful.

As Sir Gilbert Parker, the statesman-novelist, has written:

"Sanatogen is to my mind a true food- tonic, feeding the nerves, increasing the energy, and giving fresh vigor to the overworked body and mind."

And when you realize that more than 21,000 physicians have written—as they have—their approval of the use of Sanatogen, you can see for yourself that its reputation is founded not on theory but on actual results.

Let Sanatogen be the guardian of your youth!

Sanatogen is sold by good druggists, everywhere, in sizes from \$1.00 up.

Grand Prize, International Congress of Medicine, London, 1913

BOSTON UNIVERSITY

Law Medicine
 College of Liberal Arts
 Theology Graduate Department

The College of Liberal Arts now occupies its new building next to the Boston Public Library and offers the advantages of a modern college course. The building is equipped with Laboratories, Department Libraries and has fullest use of the Boston Public Library. The professional schools located in the heart of the city not only offer the usual courses of instruction but afford unusual opportunities for self support and for the practical training in the several professions. The Graduate School offers exceptional opportunity for research work.

is worth so much that if you are hatching eggs by the hundred you cannot afford to use hens. If you aim to hatch only a dozen you cannot afford to use an incubator. But can you afford to hatch a paltry dozen of eggs? That is another question. The fact is, the whole scheme of our domestic life today is a relic of the time when each family was a community complete in itself. Brought over into the present it is an anachronism and an economic waste. Women know this now; some day men will see it and consent to a change. Let me here say to Mrs. Bruère, Amen, and Amen, and Amen.

But Mr. Purinton's efficient housewife would be dubbed most inefficient by her neighbors, like the restaurateur who, by cutting out the frills and fancies, reduced his expenses to a minimum—and lost his patrons. No, the truly efficient housewife must, with her minimum expenditure of money, time and labor, produce the maximum of comfort, happiness and content for her family. She cannot do this by serving the correct proportion of proteid, fat and carbohydrates at the least possible cost, or by labor-saving machinery or by system.

THE INEFFICIENT HOUSEWIFE
 Worcester, Mass.

Referring to your editorial "Where Public Buildings Are Needed" in your number of March 13th:

Keep on telling the country about how much of Uncle Sam is living in lodgings here in his own home town, and we may live to see him respectably housed on his own premises. It is generally understood here that the Government lately signed a ten-year lease for an office building erected by private capital at a rental that will more than pay the cost of the building in that time!

That is not the worst. When the Navy Department decided to evacuate the Mills Building at the end of the term of its lease on account of the extortionate rent, the Department of Labor promptly filled the void and moved in one door as fast as the naval contingent moved out of the other. It would take more than a C. P. A. to figure out the gain that justified that upheaval in two of our departments. Since we must needs remain in the Rental Age a while longer, let us have a Manager of Government Leases, that spectacles like this shall not cause us to pray for a Teutonic injection into the veins of our body politic.

TENCH T. MARYE
 Washington, D. C.

Of the many editorials which have been written upon the Hubert Eaves case, discussed in our editorial pages on March 27, one of the most sensible is that of the negro weekly, *The New York Age*. After discussing the first reason alleged by the boy for his action, that the flag "doesn't have God in it," the *Age* says:

Hubert, in his second reason for not saluting the flag, says: "I haven't any country. It all belongs to the white man." This statement would be more rational than the first, if it were true. But is it true? It is not. Three hundred years of labor and loyalty makes this country belong to the negroes as much as it belongs to anybody else; and a good deal more than it belongs to many who are living under its flag. Of course, we have been wronged, we are still being wronged, many of our rights are still denied us, but the American negro is not going to renounce his rights because some people in the country are opposed to his having them. No, he is going to work and fight until his every right is recognized and accorded. If he should lie down and say, "I haven't any country. It all belongs to the white man," he would not deserve a country.

Hubert seems to feel that the country is all wrong; that God is nowhere in it; Hubert is mistaken. Altho many, sometimes a majority of the people in this coun-

try are wrong, yet that abstract thing we call the Country is right, and is always making for the right.

I wish to commend your editorial, "A Negro Nonconformist," in The Independent for March 27. Hubert Eaves has been sentenced to the state reformatory and the sentence has been suspended on the agreement of his parents to educate him in a private school. If it should seem probable that such action would increase respect for the flag the boy refuses to salute, then severity might be commendable. But it is difficult to see how just the reverse will not be true. It is a very one-sided contest when the commonwealth of Iowa is pitted against a little negro boy and his parents. In such an unequal struggle the sympathy of the onlooker is likely to be with the under dog. Depriving him of the rights enjoyed by others in his class will seem to many lovers of justice much like persecution. He is thus elevated to the position of a martyr, and achieves a publicity he could not otherwise easily have attained.

Now the general effect of all this cannot be good. It may, as you say, thru fear enforce a hypocritical compliance with custom. It may bring about a result very different; it may encourage in some who desire notoriety a nonconformity as hypocritical as is enforced conformity. It is not easy to believe it will add to the affection for the flag on the part of those who already love it.

If, on the contrary, no attempt had been made to compel a show of reverence the heart does not feel, the case of Hubert Eaves would never have been heard of outside of his school, or at any rate outside of Des Moines. He would have been tolerated as any other eccentric person is tolerated. His act would have acquired none of the glamour it attains the moment he is arrayed in a matter of conscience against a power able to do with him what it will. Because no punishment followed his nonconformity no sympathy would have been felt for him, and thru him for his act. The whole tendency under such circumstances would have been to discredit, not necessarily him, but unquestionably his act.

And this brings us back to where we began. For certainly the only aim here is to increase respect for the emblem of our national life and devotion to the ideals it represents. Therefore it is good that you speak out on the matter with no delusion that the punishment of Hubert Eaves will attain the object at which it aims.

A. STARBUCK

Iowa State College of Agriculture

I cannot resist resenting the letter of the Rev. Mr. R. S. Lindsay in your issue of March 27th. "A few adventurers have been killed." Personally acquainted with the men who were slaughtered at Santa Isabel I resent such terms, and wish to criticize the ignorance, in lieu of other words for such attitude, which rushes into print.

At least three of the Santa Isabel victims were university men, and all of them were high grade men far from being "adventurers." It is rather a benighted intellect that considers its vocation as the only one in life, and its sinuous lines of least resistance the broad way. These men were mining engineers, found where sent in pursuit of that vocation.

The slaughtered at Columbus were reputable American citizens, as well as Federal soldiers, engaged in their pursuits in their own country, tho it was a border town. Villa came near to getting a Congregational minister who was in Columbus that night. Was he an "adventurer?"

I might inquire whether Mr. Lindsay considers the Congregational missionaries at Chihuahua, Guadalajara and elsewhere in Mexico "adventurers?" One of these missionaries, to my knowledge, retired only two weeks ago.

For Sore Muscles

Absorbine, Jr., brings quick relief. Keep it always at hand for instant use.

Athletes use Absorbine, Jr., for the muscle that has been strained, for the cut or laceration that runs a chance of infection; for the abrasion that pains and the limbs that are stiff and lame from over-exertion.

Absorbine, Jr.
THE ANTISEPTIC LINIMENT

is needed in and about the home—for the numerous little hurts that come through work in the kitchen and about the house, the stable, the garage and the grounds.

In addition to being an efficient liniment, Absorbine, Jr., is a positive germicide. When applied to cuts, bruises and sores, it kills the germs, makes the wound aseptically clean and promotes rapid and healthy healing. It allays pain and inflammation promptly.

Absorbine, Jr., is made of herbs and is non-poisonous—safe to use anywhere, even by the smallest member of the family.

\$1.00 a bottle at druggists or postpaid

The Market Place

STEEL RAILS GO UP

As foreshadowed last week, the Steel Corporation has announced that the price of steel rails is to be advanced. The advance will be \$5 a ton, making the price \$33 a ton for Bessemer rails and \$35 a ton for open hearth rails. This is the first increase in the price of rails in fifteen years. It is intimated that it is the intention of the manufacturers not to make this a merely temporary advance during the time of the war, but to establish the new price as a standard base figure, to be maintained permanently. The controlling factors in the increased prices are said to be the higher cost of labor and of the raw materials entering into the manufacture of rails.

It is an interesting fact that the price of rails has been maintained at the same level ever since the formation of the Steel Corporation in 1901, in spite of the fact that the semi-finished steel which enters into the manufacture of rails has at times been quoted above the price of rails. During the present period of industrial prosperity the discrepancy between the price of the semi-finished steel and the completed rails has been wider than ever before. For example, Bessemer and open hearth billets are quoted at \$45 a ton, as compared with prices of \$20 a ton a year ago. Steel bars are quoted at double the prices at which rails have been selling. Under these conditions, an advance in the price of rails was inevitable.

THE PAN-AMERICAN HIGH COMMISSION

The International High Commission, composed of the Secretary of the Treasury or Finance Minister of each of the nine American Republics, has completed its organization at Buenos Ayres. Secretary McAdoo has been elected president, John Bassett Moore vice-president, and L. S. Rowe, of the University of Pennsylvania, secretary general. The headquarters of the commission are to be at Washington.

The commission made a number of important recommendations, including the following: Completion of an inter-continental railway system; improvement of telegraph and cable facilities between the American republics; absolute government control of all wireless communication; uniformity of law regarding bills of exchange; clarifying international conventions on trade marks and copyrights; reduction of postal rates.

DRUGLESS HEALING

The LARGEST INSTITUTION in the WORLD DEVOTED to DRUGLESS HEALING.

Our remedial measures are absolutely free from poisonous drugs. Poison and health-building are not compatible—it is like trying to mix life and death.

We take every known complaint except those of a contagious nature. We use every method of Drugless Healing that has definitely proven its value—Physcultopathy, Osteopathy, Dietetics, Therapeutics, Massage, Thermo-Therapy, Medical Gymnastics, Exercise, Chiropractic, Hydrotherapy, Orthopedics, Suggestive Therapeutics, Helio-Therapy and Spondylotherapy. Every known method of building supreme vitality is included in our system of treatment.

We own our quarter-of-a-million dollar building. Our equipment is thoroughly complete and up to date. We challenge the world to produce an institution devoted to the healing art with as high a percentage of cures and benefited patrons as is shown by the records of our Health Resort.

The International Health Resort is not like a hospital or a sanitarium. We call it a Health Resort, and many who come here declare that they have just as much enjoyment and fun as they would at a summer resort. Our process of getting well is distinctively pleasurable. We have shunned nauseating medicines and have avoided all other unpleasant features of curing disease.

We have had thousands of patrons who testify to the extraordinary curative value of our methods. They come to us from nearly every country in the world.

If you are interested in Drugless Therapeutics, if you have tried every known measure to recover health, vitality and vigor, do not give up your search until you have heard more of our story.

Write for our beautifully illustrated booklet and our new 64-page catalog of convincing testimonials, just off the press.

INTERNATIONAL HEALTH RESORT

Dept. 70—GRAND BLVD. 42d & ST. CHICAGO

The commission adopted resolutions declaring the creation of an American merchant marine to be of paramount importance. Strong sentiment developed at the meeting in favor of coöperation between the leading South American governments and the United States to secure results. Speakers at the meeting declared that Latin America looked to the United States to meet the situation, and the belief was expressed that full development of inter-American relations was impossible without an adequate American merchant marine.

SKYROCKETTING OCEAN FREIGHTS

In the last two years the freight rates on grain between New York and Liverpool have increased 900 per cent. The rates on flour have been multiplied six times, and the rates on provisions five times. In ordinary times grain is carried at especially low rates because of its desirability as ballast and because of the comparative ease with which it is loaded and discharged. This explains the more rapid rise of rates on grain.

The rates on cotton, both from New York and New Orleans, have also been increased tenfold. But it is still cheaper, in spite of the congestion at the Northern port, to ship cotton from New York than from New Orleans.

The facts in regard to this phenomenal increase of rates of ocean freight are contained in a letter address to the chairman of the House Committee on the Merchant Marine and Fisheries by the chief of the Bureau of Foreign and Domestic Commerce in the Department of Commerce.

The shortage of ships that has led to the remarkable increases in shipping rates is attributed to the following causes: (1) The elimination of the merchant ships of Germany and Austria-Hungary; (2) the withdrawal of merchant ships for military and naval purposes, and (3) the loss of ships through submarine and mining operations.

EARNINGS OF INDUSTRIALS

While many of our industrial corporations have not yet given to the public their reports for the year 1915, the figures submitted by fifty of them show that their average earnings on stock were 31.4 per cent, against 10 per cent in 1914. In some instances there were deficits in that year, which have been succeeded in 1915 by considerable profits. Among those companies whose reports are not yet available there are several—oil corporations and manufacturers of arms or explosives—whose very large earnings would increase the average.

In the first two months of the present year 72 American mines and similar undertakings paid \$14,539,000 in dividends, against \$6,701,000 in the corresponding months of 1915, and the dividends of fifteen copper companies rose from \$1,833,000 to \$8,879,000.

The following dividends are announced: Westinghouse Electric and Manufacturing Company, common, 1½ per cent, payable April 29. Pacific Gas and Electric Company, full paid first preferred and original preferred, quarterly, \$1.50 per share, payable May 15.

An Ounce of NUJOL is Worth a Pound of "Cure"

Use NUJOL to PREVENT constipation

A LITTLE care about eating, a moderate amount of exercise, and the use of Nujol as an internal lubricant to counteract any tendency to costiveness will keep most people from constipation.

Nujol relieves constipation without upsetting the digestive processes or forming a habit. It acts in effect as a mechanical lubricant, softening the contents of the intestines and so encouraging normal, healthy bowel movements.

Most druggists carry Nujol, which is sold only in pint bottles packed in cartons bearing the Nujol trademark. If your druggist does not carry Nujol, we will send you a pint bottle prepaid to any point in the United States on receipt of 75 cents—money order or stamps.

Write for booklet, "The Rational Treatment of Constipation." Address Dept. 12.

Here Is the Camp for Your Boy

where he can spend his summer in real boy fashion; where he has every facility and the right men to teach him how to manage a canoe, play ball, swing a tennis racket and make things with tools. When your boy returns from a summer or part of a summer at **CAMP YUKON**, you will be astonished and pleased to see how he has improved in health, physique, stamina, and all-round manhood. No more beautiful location for a camp could be imagined than on Lake Cobbosseecontee in the magnificent hard wood grove, sixty miles from Portland, Maine. A readable booklet, full of pictures, will tell you all about **CAMP YUKON**. Write personally to Frank D. Smith, Director, 200 West 96th Street, New York, and you will receive by return mail something that will be to your advantage and that of your boy.

Insurance

Conducted by

W. E. UNDERWOOD

RECKLESS RAPACITY

For forty-one years, from 1867 to 1908, the Union Central Life Insurance Company of Cincinnati, Ohio, did business on a capital of \$100,000. At the end of that period its assets aggregated \$62,242,454; it had a clear surplus of \$2,410,620 and its total insurance in force amounted to \$256,082,462. Keeping in mind the amount of assets and net surplus, a practical business man will readily conclude how utterly insignificant as a security to policyholders was the paltry \$100,000 owned by the stockholders. The only effect its retirement could have had on their interests would have been the saving of \$10,000 a year which the company was paying stockholders on their original investment.

In 1904, John M. Pattison, then president of the company, interrogated on the subject by the actuary of the Ohio Insurance Department, asserted that with the exception of this stockholders' dividend, all the earnings of the company belonged to the participating policyholders. The company had written some non-participating business, the profits from which under the articles of incorporation belonged to the stockholders; but Mr. Pattison said that no separate account had been kept of the two kinds of policies and he intimated that they had yielded no profit. Whether or not there had been, no one in the company knew, and, as Mr. Pattison stated, it was understood by all the stockholders that their interests were limited to the semi-annual dividend of five per cent on the invested capital. That is all they had ever received, such surplus as was earned over that being credited every year to the policyholders.

Mr. Pattison died in 1906 and was succeeded in the presidency by Jesse R. Clark. In 1908 the claim was set up by the new management that \$779,000 of the accumulated surplus had been earned by non-participating policies, and they thereupon declared a stock dividend of \$400,000, raising the capital from \$100,000 to \$500,000, thus quintupling the value of the stock holdings and increasing their annual dividends by \$40,000. This action was taken in the face of the fact that the company did not need even a dollar's worth of capital.

And now the management come forward with a plan again increasing the capital to \$2,500,000, paying it up out of an alleged non-participating surplus of more than that amount, of which they propose to distribute to the stockholders at once the sum of \$1,500,000 in stock, leaving \$500,000 in the

company's treasury, presumably for future distribution. But they have, magnanimously, reduced the annual dividend rate to stockholders from ten per cent to six per cent. Under this arrangement the stockholders will now receive \$120,000 a year on an original investment of \$100,000, in addition to which the latter is multiplied twenty-fold.

We shall now have to wait and see what the courts of Ohio will do in connection with this attempt to saddle this tax on the policyholders of a company for the use of money earned by the company itself and which, up to 1908 and for more than forty years prior thereto, was regarded as surplus belonging to and distributable among the policyholders.

E. S., Wenatchee, Wash.—The New Amsterdam Casualty Company is thoroly reliable and the policy it is offering is a good one. As you have no one dependent on you, such a policy would be advisable.

D. D. D., Weiser, Idaho.—If you will consult The Independent of March 13, 1916, you will find an article devoted to the Continental Life of Salt Lake City. Write to the Insurance Commissioner of Utah, Salt Lake City, for a copy of the report of an examination made by his department in conjunction with those of Colorado and Wyoming.

S. P., Aurora, Ill.—As the Guarantee Fund Life Association does not make provision in calculating its rates for a proper mathematical reserve, I am compelled to conclude that it cannot furnish insurance at a level rate during the term of life. The best managed old line life insurance companies are providing life insurance at the lowest cost consistent with security and no assessment scheme claiming to do it lower can deliver the goods.

M. C. P., Cleveland, Ohio.—The Royal Union Mutual of Des Moines and the Home Life of New York are both good companies. Life insurance work offers substantial rewards to women who have the ability and the desire to do it. It requires courage, steadfastness of purpose and a quality of persistence that defies failure. If you are made of that sort of stuff and will study life insurance when you are not seeking applications and will seek applications when you are not studying, you will win.

W. W. H., Sewickley, Pa.—If you have no dependents to protect against the results of your death, I would advise you to take a twenty-year endowment in one of the thoroly established companies which has a good dividend record. If you have dependents, take as much ordinary life insurance in such a company as you can afford to keep up. Without discussing the merits or demerits of any particular company, that is the sum of my advice. It would be difficult for me to advise you as between life insurance and accident and health insurance; your circumstances should decide the question.

J. G., Bucyrus, O.—On January 1, the assets of the Bankers' Life of Lincoln, Nebraska, were \$9,439,832; its gross surplus, \$2,753,328. Of this gross surplus, however, the sum of \$2,664,139 is carried as a liability, being the accumulated dividends due under its deferred dividend policies. The net surplus, therefore, is \$89,189. The bulk of this company's business is written on deferred dividend plans, a scheme which involves the forfeiture of valuable equities by policyholders who die or lapse. So opposed to good public policy is that plan of insurance that, after thoroly investigating it in 1905, a committee of the New York Legislature reported against it, and a law was enacted in 1906 forbidding traffic in such policies by companies transacting business in the State of New York.

Handle Orders, Billing, Shipping $\frac{1}{3}$ Faster

The "Commercial" duplicates anything, but there is no duplicate of the "Commercial."

Hundreds of manufacturers and jobbers have saved more than 1-3 of the time on such work—yes, and saved delays, reduced errors, simplified details—through our easier methods and the

Commercial

DUPLICATOR

In 163 different lines of business careful men have proved the time-and-labor-saving efficiency of the Commercial Duplicator. We can probably show you how several concerns in your own line are filing orders with 1-3 the clerical labor you use—how they handle duplicate copies for billing, shipping, bookkeeping, shop and stock records without rewriting. Ask us for these facts from the experiences of others in your line. We can help you reduce your office work, speed up work that now drags, simplify details, cut expense, improve your service to customers. Write now for the facts.

DUPLICATOR MFG. CO., 743 Commercial Duplicator Bldg., Chicago—1593 Hudson Term. Bldg., New York

Most people think of automobile insurance as an old form of protection adapted to a modern invention. As a matter of fact, the self-propelled vehicle is older than most forms of insurance. A Frenchman drove a steam carriage in the days of Marie Antoinette. An Englishman was arrested for joy-riding in 1802. In 1815 the directors of the Hartford Fire Insurance Company were amazed to see a steam locomotive snorting through the streets. We are not told whether they ever considered this strange contraption from an insurance standpoint. But we do know that almost before the motor car had ceased to be an experiment the Hartford Fire Insurance Company was offering automobile policies. Today you can insure yourself from every risk of a motor car through the complete

INSURANCE SERVICE

OF THE

TWO HARTFORDS

Any agent of the Hartford Fire Insurance Company, acting in conjunction with the Hartford Accident & Indemnity Company, can sell you complete protection from loss to yourself or car through fire, collision, theft and personal liability.

Representatives of the Hartford Accident & Indemnity Company, acting in conjunction with the Hartford Fire Insurance Company, sell the same complete automobile protection, as well as all other modern forms of bonding and casualty insurance.

The two companies, between them, write practically every form of insurance but life insurance

THE SAGE OF POTATO HILL

Ed. Howe's Thoughts on Men, Women & the World

EDWARD EARLE PURINTON, a writer in *The Independent*, says he has never known a half dozen efficient housekeepers. Where has the man lived? I have known thousands of them. The most wonderful thing in the world to me is the patience and efficiency of good women; and first of all a very large majority of these are good housekeepers. Another writer in *The Independent* (Martha Bensley Bruère, a graduate of Vassar, an active worker for women suffrage and socialism) says "it is a mistaken notion that we need more and better housekeepers"; and she proceeds to tell us why girls should not be taught housework. And this in the face of Mr. Purinton's declaration that he "has not met a dozen housewives who really knew their business." I am old-fashioned; please consider me as screaming in protest because of these startling examples of New Thought and Progress.

A notable and worthy class of men are country bankers. I have lately visited several big towns, and met many bankers. "Where did he come from?" I have often asked, on being introduced to a banker. And in nine cases out of ten I learned that the big banker came from a country bank. The big cities are full of prominent bankers who came from the country. Governor Bailey, my neighbor, lately called on me in the evening; his wife was giving a party, and he ran away from it. Governor Bailey was a country banker and farmer before he became a governor, and manager of the largest bank in my town. He is now, also, a member of the Federal Reserve Board, and knows many noted bankers. He talked about them, and I inquired into their history. All of the men began as country bankers. . . . I was once a passenger on a ship which stopped at Mombassa, on the east coast of Africa. A quiet man came aboard there who attracted little attention at first; but one evening, when I was taking a constitutional around the decks after dinner, he fell in with my step, and asked: "Which way are you going home?" Then I knew he was a Yankee. I spent many hours with him, and discovered a remarkable man: A. Barton Hepburn, Comptroller of the Currency under Harrison; now of the Chase National Bank, of New York. His titles in *Who's Who in America* fill nearly a page. But he began as a country banker. . . . The same thing is true of other callings: our big men began in the country; in villages and on farms, far away from the Bright Lights. And these men are as steady now as they were as country bankers; they are rarely the men who make champagne-drinking records or supply the big city social scandals. Frequently you hear of them in

connection with Organized Robbery—not the small, disreputable kind, such as porch climbing or pocket picking—but in connection with developing steel mills, railroad and steamship lines, and other forms of what we know as Commercialized Greed.

A girl friend of mine, who had been notoriously spoilt by her parents, lately married. Her husband came of an old-fashioned family, and refused to have a spoilt wife. So he insisted upon certain things, and his wife carried them out; but she did nothing that a wife should not have done—indeed, she became an object lesson to shiftless young married women in my town, since she was useful, sensible, and a good wife and home maker. But I wish you could have heard the fuss the neighbors made! They said the husband was a "slave driver" and a brute, altho he did nothing he should not have done; and his wife confest to me only lately that she loves her husband, and is happy. The bride's own mother says her daughter was spoilt, and that her husband has made a woman of her. But the neighbors are not satisfied, altho most of them are losing some of their resentment. . . . I know a little girl of fourteen who is useful to her mother; who is brought up as a child should be, and she has gained something because of her years at school. But the neighbors talk about the sensible mother as they talk about the sensible husband: real family efficiency is becoming almost discreditable among us shiftless Americans.

A popular dog lately is the Airedale. These dogs are actually nothing except idealized curs. Everyone knows that cur dogs are wonderfully smart, so some man mixt a number of particularly smart and ugly cur dogs, and called the result the Airedale. . . . We Americans have in our veins the blood of all the best nations, and we are as famous the world over as the Airedales. I saw a statement the other day that of 4000 of our wealthy men taken at random, all except seventeen began as poor boys. The author of the statement is Dr. Russell H. Conwell, and he adds that all of the 4000, except a pitiful forty, have been of the greatest use to their several communities. . . . So it seems that our great prizes are in the air, free to poor boys willing to be industrious, polite, fair, and to accumulate such common sense as they can beg or borrow.

I do not hope to print in *The Independent* a story that is new, since its readers see the almanacs as soon as I do. I relate this one to illustrate a point: In Germany there is a section known as Schwabland, and those living there are said to be particularly dull. A

Schwab mayor was once presented with a gold-headed cane by his admiring constituency, and, finding it too long, cut off the gold head. "Why didn't you cut it off at the bottom?" he was asked. "Well, it was all right down there," the mayor replied. . . . We Americans are guilty of many Schwab tricks. When anything goes wrong, we say the trouble is at the top; never at the bottom. When there is an accident, we say the trouble was at the head; that everything was all right down below. At East Youngstown, Ohio, 4000 strikers engaged in rioting, and burned and looted ten blocks of buildings. What did we do? We indicted the employers, who had nothing whatever to do with the rioting.

The Proletariat are usually mean, lazy and unreliable; yet in all public references to them, have you ever heard these facts stated except in the dictionary? On the contrary, are they not always referred to as the opprest? Are not industrious and successful people being abused forever because of their failure to do more for the Proletariat? Did you ever before see in print a declaration that the Proletarians might help themselves, as others are compelled to do?

Every day or two I meet a man who is mad at everybody because of his own faults.

The world is finally considering the problem of over-education. In the West we hear it frequently said of a certain noted place of learning that it never turned out a graduate who was not a cad; its pupils are over-educated, and finally become social politicians.

Liberty is the one thing we Americans want to give everyone plenty of. The average voter is an amiable chump who can't quite decide about anything, except that he is always willing to listen to those who say they have been deprived of Liberty or Justice.

The man who has only Belief should not be classed with those who have Knowledge.

Much goes on in public life that causes me regret; not as a crank or critic, but as a citizen.

One of the tragic and amusing things of life is a love affair between a couple who go together a long time, and finally the woman becomes afraid to marry the man, and the man becomes afraid to marry the woman; so they drift apart.

When you see a woman running, there is something doing. She may not be able to do it, but she is hurrying to try.

THE MENTAL INVENTORY

In our issue of March 27 we published a list of a hundred questions used in the Friends' Schools of Baltimore and Germantown to test the range of general information possessed by the pupils. The percentage of correct answers usually ranges from about fifteen per cent for pupils twelve years old to about sixty per cent for those eighteen years old; the boys almost always averaging better than the girls. Not many grown people can score 100 per cent.

For the benefit of those who have tried this information test on themselves or others we give below the answers. Of course, in some cases an alternative answer or different wording is allowable. The answers are often amusing. Mardi Gras was defined by one person as "the gas which the Germans are using in the war" and by another as "a goose liver pie." The Sublime Porte was variously defined as "a good wine" and as "heaven." W. J. Bryan was given as "the Great Commoner" and also as "Old Scratch." Adam's Ale is, according to one boy, "a drink given early in human history" and by another as "the lump in a man's neck." White Wings were thought to be "members of the Anti-Saloon League" and "lovers of peace." A hyphenated American is, we are surprised to learn, "an American who talks in short sentences." There seems to be a very general impression that Alaska is southwest of the North Pole.

REMARKABLE REMARKS

GEN. EMILIO ZAPATA We will drive the Americans clear beyond Texas.

BILLY SUNDAY—I'll fight hell and the devil till I go so fast they can't see my dust.

PROF. ASHLEY V. THORNDIKE—In Shakespeare's time the regular drama had a popularity like that of the movies today.

LUKE MCLUKE When we used to take them out in buggies, you could let the girl drive while you hugged her. But an automobile isn't a buggy.

THE PRINCE OF MONACO The only chance for the survival and future civilization of Europe is the infusion of American blood into European peoples.

PORK PACKER EDWARD MORRIS, JR.—Hardly a day passes that some prominent man does not break into print with a "set of rules for success."

THOMAS A. EDISON My rule is when you build something the first time you ought to run it to destruction in order to discover any possible defect.

SOLID SILVERWARE

FOR THE JUNE BRIDE

For Solid Silverware—

Gorham!

A gift to the bride should preferably combine utility with beauty, rather than subordinate service to ornament,—for tastes may differ sharply over the merely beautiful, where your choice of silver tableware, a silver tea service, or a silver coffee pot will meet with instant approval.

The sentiment which serves is the sentiment which survives, and no gift is more welcome to the bride than Gorham Silverware for the home, which first has use to commend it, and next the beauty and distinction of design for which Gorham productions enjoy almost a century of fame.

The bride will look for this, the Gorham trade mark, on any silverware you may give her. We therefore suggest that you look for it too.

NOW LET GERMANY CHOOSE

THE final turn which the relations between the United States and Germany shall take is to be determined solely by the Imperial German Government. If Berlin prefers its lawless methods of submarine warfare to the friendship of the United States, it will cause the breaking off of diplomatic relations. There is nothing the United States can now do to prevent such a rupture.

The latest note of President Wilson to Germany is not technically an ultimatum. But in its essence there is no difference. The United States has now said to Germany in unmistakable language, "Unless the Imperial Government should now immediately declare and effect an abandonment of its present methods of submarine warfare against passenger and freight-carrying vessels, the Government of the United States can have no choice but to sever diplomatic relations with the German Empire altogether."

The United States has been long-suffering. It has given Germany the benefit of every possible doubt. It has taken every assurance of the Imperial Government at its face value. But the acts of the German navy have repeatedly given the lie to the declarations of the German Government. The torpedoing of the "Sussex"—of which Washington has given Berlin complete proof—is the last straw. We can parley no longer.

The President in the note to Germany sets forth in vigorous phrase the case against the German methods of warfare on merchant shipping:

Great liners like the "Lusitania" and "Arabic" and mere passenger boats like the "Sussex" have been attacked without a moment's warning, often before they have even become aware that they were in the presence of an armed ship of the enemy, and the lives of non-combatants, passengers and crew have been destroyed wholesale and in a manner which the Government of the United States cannot but regard as wanton and without the slightest color of justification. No limit of any kind has in fact been set to their indiscriminate pursuit and destruction of merchantmen of all kinds and nationalities within the waters which the Imperial Government has chosen to designate as lying within the seat of war. The roll of Americans who have lost their lives upon ships thus attacked and destroyed has grown month by month, until the ominous toll has mounted into the hundreds.

For fourteen months German submarines have carried on warfare in plain violation of indisputable rules of international law. They have attacked merchantmen without warning—and international law forbids it.

They have sunk merchant ships without affording opportunity for the non-combatants on them to seek safety—and international law forbids it. They have killed unresisting men, women and children—and international law, to say nothing of every dictate of civilization and humanity, forbids it. They have wantonly refused to follow the immemorial rule of visit and search, the only procedure recognized by the law of nations for the lawful apprehension by belligerent ships of merchant vessels.

They have done these things for just two reasons: because the British navy has kept the German navy bottled up in harbor, so that only its submarines dared take the open sea; and because the submarine, being an especially vulnerable type of vessel, does not dare to approach openly near enough to its intended victim to carry out the stipulated program of visit and search. Neither of these reasons is one that the rest of the world can admit as valid. The United States has never recognized their validity. It cannot do so now.

It is now for Germany to choose. Its choice will be made known not by its words, but by its deeds. In the words of President Wilson, it must not only "declare," it must "effect," an abandonment of its present methods of submarine warfare against passenger and freight-carrying vessels. Not only must the Imperial Government promise; the Imperial navy's submarines must perform.

If a German submarine should now sink or attack illegally a merchant ship with an American citizen on board, the severance of diplomatic relations will follow inevitably, Count von Bernstorff will go home, and Mr. Gerard will be recalled. Then once more the next step will be for Germany to take. There will be no war between Germany and the United States unless and until Germany wills it.

If Germany should will it, our national conscience will be clear. We shall enter upon the fateful undertaking serene in the conviction that no honorable word or act has been omitted by which we might have striven to avert it. We shall know that we are fighting for the cause not only of our own national sovereignty and honor, but of humanity and the sacred rights of neutral nations.

TWO MISUSED CONCEPTIONS

IN the current discussions of preparedness the terms "police" and "insurance" have been frequently handled in incomplete and misleading ways. Altho these words have come to symbolize in common parlance fairly well defined modern conceptions, they are often used in total disregard of all their accumulated social significance when applied to the state as a unit. It is only fair that these symbols of social solidarity and effectiveness should be used in their full meaning when we are demanding the extension of their systems and safeguards to international affairs.

Our police system has been created to protect the rights of the group and its component parts against the encroachments of any of the rebellious or delinquent individuals who go to make it up. Policing, in this modern acceptation of the term, is wholly unthinkable without organization. Nor would it be allowed for a moment that one group could rightfully use its police power to intimidate, or coerce, or impose its will upon another group not bound to it by governmental ties. Moreover, all the members of a community supporting the police system must, by virtue of their participation in its benefits, submit to the police regulations. In other words, our whole modern notion of police is out of harmony with individual arming for private defense, and has no application whatever to relationships unsecured by governmental agreement and organization.

Slowly we have come to realize that individual or private police is not only an insufficient protection, but is a menace to society as a whole. Now, it is easy to see that the creation of a great fleet and army for the protection of a single nation is not in line with the present social conception of policing, but rather the application of an ancient outworn method, wherein the police represented not the whole municipality or community, but some specially strong class or individual attempting to secure protection in a disorganized or anarchic condition of society. In spite of the fact that the old idea has been revived again and again in our country in the Pinkertons and other detective agencies, the conscience of society condemns all such methods as undemocratic, inefficient, and an ever ready means of injustice, cruelty and oppression. If we are to have a police system in our international relationships, let us go the whole length of our modern conceptions and moral ideals. Let us enter into an organization with other nations. Let us do our share toward the support of a true international police directed by representatives of the larger grouping, and let us show our willingness to submit to whatever policing may be demanded.

The same reasoning applies to the questions of insurance, a term which still bears a double meaning. There has always been thruout the history of mankind one kind of insurance, the insurance that exists in accumulations made to meet losses of a more or less uncertain character. Individuals have ever sought to prepare against the accidents of fortune by holding in reserve enough to insure them against complete downfall in the day of possible calamity. But such insurance the experience of mankind has come to discount in many spheres because of its expensiveness, ineffectiveness and useless risks. In fact, when we speak of insurance today we give the term a social significance and appraise its value in accordance with its socially acquired power to reduce

the necessary reserves, transfer the risk from the individual to the group, and give greater security that possible or accidental loss will not entail utter destruction.

Economic development has long since taught us that "self-insurance," while not a failure, is at the same time not sufficient to meet the needs of modern society. Up-to-date insurance presupposes a number of individuals or units banded together to secure at the minimum cost the maximum of protection and to share as a group those unforeseen and perhaps unavoidable losses that otherwise would light upon the few with crushing weight. There is no good reason why we should not in this modern way insure against national calamity, against accident, against unseen foes; but it ought to be the real insurance of international obligation, agreement, alliance, federation, and it ought to be supported by legal regulations, courts and police power.

It is true, of course, that the conceptions which we have set forth of police and insurance did not come into being until mankind had developed at least some semblance of organized society. Before a community police was possible it was necessary for each man to protect his own rights and those of his own household. Before coöperative insurance was evolved each individual did well to protect his own future by "self-insurance." So in the international community national self-protection must obtain until international organization shall make possible the protection of the rights of the individual nation by the power of the whole group of nations united to maintain justice. National "self-insurance" continues to be a national duty until such time as coöperative insurance can be substituted for it.

But even in our present imperfect stage of international development, we should be looking stedfastly forward to the larger conception of the police function and the broader interpretation of national insurance. To present these ideas, in their narrow and incomplete significance, as final solutions of the problems of national safety and international justice is to ignore the teachings of history and social evolution.

RUSSIA TO THE RESCUE

THIS is "Russia Week" in the history of the Great War. While one body of Russian troops was crossing the Black Sea to occupy the ancient stronghold of Trebizond, another was crossing the Mediterranean Sea to land at Marseilles. In both fields their advent will be heartily welcomed, for the British are hard prest in the Asian field and the French in the European.

The British expedition which started up the Tigris toward Bagdad in November, 1914, is still held back at Kut-el-Amara, a hundred miles down stream. The Russians coming down from the Caspian are probably nearer to Bagdad than the British and may be able to reach the besieged force before the British relief expedition can fight its way thru the Turkish lines. The Turks have not been able, and seem not to have tried, to make a stand against the Russians since the Grand Duke Nicholas took command of the Caucasian army. Let us hope that the Russian occupation of Armenia comes not too late to save the remnant of the race from massacre.

The arrival of the Russians in France is a retarded realization of an early rumor of the war. A myth, according to the latest psychology, is the offspring of a

suppress longing and we may account in this way for the illusion of the French and British soldiers in their retreat from Mons that angels from heaven or Russians from Archangel were coming to their rescue. The latter legend, it is said, arose from a telegram which leaked out in London. "Forty thousand Russians sent via Archangel," was the way it was sent from Petrograd, and it was meant to convey to the commission merchant who received it that the usual shipment of forty thousand Russian eggs had been sent by way of Archangel on account of the closing of the Baltic. Nevertheless there were many who swore to seeing the Russian soldiers as they came down from Scotland by train in the night, and one Englishman said he knew they were Russians because "they wore cossacks." Not long after the dispatches from France told us of the arrival of Japanese on the scene, but these were equally mythical.

This time we cannot doubt that Russian troops have really reached France, tho how many they are and how they came is yet hidden from us. But, however few they may be, their presence will do much to reassure the French and restore confidence in the good faith of their Slavic ally. The transfer of Russian soldiers to the Western front leaves one to surmise that they are not expected to do much in their own country this summer. The German line in Russia is thinly held, yet the Russians have not been able to break it or to push it back perceptibly for more than a year. Of men Russia has no lack. Her population is probably a million more than it was when the war began. But in leaders and munitions she is woefully wanting, while in France the Russian soldiers can be put under able commanders and competently equipt.

THE DIVORCE EVIL

SEVERAL hundred editorials are written every year under this heading. Yet it seems to us that there is still need for a little clear thinking and plain speaking on the subject. In the first place, the divorce evil is not the divorce. Neither is the divorce the remedy for the divorce evil. The divorce evil is the evil, whatever it may be, which leads to divorce. Consequently the divorce never removes the evil. The divorce only alleviates—or aggravates—the unfortunate situation arising in some particular case from a previously existing evil.

A uniform divorce law is therefore no remedy for the divorce evil. A uniform divorce law is simply imposing upon the whole United States the ethical standards of one community. South Carolina permits no divorce for any cause. Oregon permits divorce for "indignities rendering life burdensome." Shall South Carolina be brought under the law of Oregon or Oregon under the law of South Carolina? Or shall both be brought under a law that neither desires? Uniformity of legal phraseology and of court procedure are desirable, so also are restrictions on interstate migration for divorce purposes. To go further than this would do little to lessen the number of divorces and nothing to lessen the divorce evil.

The alleged causes for divorce are rarely the real reasons. Unless the plaintiff is vindictive the grounds brought forward are the least serious and disgraceful that the law allows. On the other hand, those who are determined on divorce will not shrink from the ostensible commission of a statutory crime.

Neither can we infer anything as to which is the

guilty party from the court records as to which brought the proceedings. People get married because they want to. People get divorced because they don't want to. The state refuses to marry a couple unless both express a desire to be married. The state refuses to divorce a couple if both express a desire to be divorced. Yet probably most divorced couples do actually separate by mutual consent and would much prefer not to bring disgraceful charges against one another unless the law obliged them to.

The American rate of one divorce for twelve marriages is deplored and denounced on all sides. Yet when one knows intimately the causes which impel any particular couple to separate he usually comes to the conclusion that it would be a wrong to themselves and to the community for them to continue living together.

Whether one argues for greater or less freedom of divorce or for no divorce at all, these plain facts should be taken into consideration.

BROTHERHOOD OR BIGOTRY

IT is deeply discouraging to find in a paper like *The Sunday School Times*, intensely devoted to the study of the documents on which Christianity is founded, the declaration that "perhaps the worst fact in the fallacy and modern fetish of the brotherhood of man is not merely that it is foolish and futile, but that it has failed—it contains a deadly poison." If ever buffeted and suffering humanity needed the proclamation of this great principle of the gospel, it is now. To regard the assertion of universal brotherhood as a denial of essential Christian doctrine and as "blasphemy," to maintain that "we cannot be brothers to the unsaved," is to seek to drag the church and the faith into obscurity and contempt.

If any spiritual power is able to save civilization from being turned backward at this juncture and inspire men to go forward in the achievements of righteousness and peace, it must be a larger consciousness of the brotherhood of all men and the eternal justice of God. If the church is so bound by bigotry, narrowness and the fetters of medieval dogmatism that it cannot sound this clear note for humanity's guidance in the hour of direst peril, it will miss the greatest opportunity of all the ages for asserting the supremacy and worth of the gospel, and the leadership in moral and spiritual progress will pass into more worthy hands. The church, and even Christianity itself, now stands at the cross roads. Large vision and courageous leadership are essential to future power.

SIMPLIFIED SPELLING IN COLLEGES

IT is natural that the movement for a more rational orthography should be taken up by the colleges and normal schools, for education tends to free one from the popular superstitions in regard to English spelling. The student of literature soon learns that spelling is not a fixity, but that it has changed a great deal in the history of the language. He learns that spelling does not automatically adjust itself to the progress of the language, but that any improvements have to be made by individual initiative and coöperative effort. He learns that the current spelling of English came into use accidentally and has been perpetuated by the conservatism of the

printer and the authority of the schoolmaster. He learns that the spelling in many cases represents neither the sound nor the derivation of the word. He learns that spelling reform is not an impossibility but has actually been achieved to a considerable extent by official action in languages such as German and Spanish, where the need of it was less than in English.

Every teacher knows that the present unscientific and unnatural fashion of spelling can only be imposed upon each succeeding generation by strenuous and continuous exertion, for every pupil has a tendency to adopt forms that are more regular and phonetic. This tendency, altho annoying to those hired to suppress it, is obviously a wholesome sign of intelligence and needs only to be guided into proper channels to effect a reform of the written language. The Simplified Spelling Board of New York was organized for the purpose of guiding it in such a way as to lead to gradual and progressive improvement in so far as this can be done with the existing alphabet. The Board in a recent circular urges college faculties to take action of two kinds: first, to give their students a chance to choose the better of two authorized spellings and, second, to set them a good example. For the first it is sufficient to allow the students in their written work to use any forms found in the vocabulary of such dictionaries as the Standard, Webster's or Century such as *center*, *color*, *rime*, and *surprize* instead of *centre*, *colour*, *rhyme* and *surprise*. For the second it is recommended that the institution adopt in its official publications and correspondence the twelve words adopted by the National Educational Association, *program*, *catalog*, *decalog*, *prolog*, *tho*, *altho*, *thorofare*, *thru*, *thruout*. This very moderate program of reform has been adopted by 138 universities, colleges and normal schools comprizing about 120,000 students. The movement is also making encouraging progress in the press. There are now in the United States 92 dailies and 58 periodicals with a combined circulation of 12,000,000 which have followed the example of *The Independent* in using simplified spellings. A large part of the public is thus becoming used to the new forms and the only real objection to them, that is, their strangeness, is being gradually removed.

JUSTICE ?

JOHN GALSWORTHY'S plays move with the fatalistic force of the ancient Greek drama. Given the characters and the conditions, the action and the end are inevitable. For instance in "Justice," familiar to readers all over the country in book form and now drawing packed houses every night in New York, Galsworthy makes us feel in turn the point of view of each of the participants. We can understand, and therefore we cannot altogether condemn, the weak hero, or rather victim, driven to crime by sympathy and ruined by his imprisonment; his upright but inexorable employer; the mechanical but humane clerk, in which rôle we recognize our old friend Androcles, of Shaw's play; the wronged wife; the advocates of both sides; even the ridiculous judge—all of them are real, none of them is a caricature.

The scene is laid in England, but the lesson is one for America as well. The three evils which Galsworthy attacks, antiquated court procedure, stringent divorce laws and cruel prison methods, are indeed worse there than here, but any newspaper affords proof that the shoe fits

us as well and pinches us at the same points. All Galsworthy's plays end with a question mark, and none more demands an answer than "Justice."

A FUTILE PASSION

THE Presbytery of Cincinnati has taken the extraordinary action, by a vote of 42 to 29, of overturing the General Assembly at its meeting in May to remove the Presbytery of New York from membership in the General Assembly. The reason given is that the Presbytery of New York, in its support of Union Theological Seminary, and in its licensing of heretical students of that seminary, has flouted the instructions of the General Assembly and has proved itself unfaithful to the Standards of the Presbyterian Church.

This looks serious, but is not so serious as it looks. Cincinnati is the most conservative of presbyteries, but it is a century too late for it to rule the General Assembly. In the thirties of the last century the General Assembly had trouble with Auburn Seminary and Dr. Albert Barnes over the question of general and particular atonement. Some held that Christ's sufferings were sufficient to atone for all the sins of the world, while others held that they were only enough to atone for the sins of the elect, and the liberals were driven out to organize the New School Presbyterian Church. They remained apart for forty years and then they came together again on the same old Standards, neither party yielding, but practically putting the Standards on the shelf and adopting an explanatory statement. Since then new theological questions have arisen relating to inspiration of the Bible, but there is no sign that it will split the Church; the only secessions have been the transfer of Professor Briggs to the Episcopalians and that of Professor McGiffert and Professor H. P. Smith to the Congregationalists. The Presbytery of New York is not in danger, nor Union Seminary, although the new wine may burst a few bottles. One is reminded by this outburst of John Milton's discourteous retort to Salmasius: "Si non lubeat rumpatur," and at the futile anger, on a certain occasion, of one who

Wroth to see his kingdom fail
Swindges the scaly horror of his folded tail.

THE PUNISHMENT FITS THE CRIME

FOR the enlightenment of the one-half of one per cent of our readers who do not know the difference between a niblick and a stymie, be it known that Francis Ouimet is the wizard who startled the world not so very long ago by defeating Harry Vardon and Edward Ray for the National Open Golf Championship of the United States.

But alas and alack! He can never again play with these admirable gentlemen of the leisure class known as "pure amateurs." For the executive committee of the United States Golf Association has handed down the golden decision that hereafter he is ineligible for any amateur match.

And why, pray, must he thus be hurled into this irrevocable gloom of outer darkness? Because, forsooth, he has gone into the sporting goods business. This is his offense in all its abandoned heinousness and depravity!

Poor Ouimet—and, likewise, poor *United States Golf Association!*

THE STORY OF THE WEEK

THE AMERICAN ULTIMATUM TO GERMANY

THE Government of the United States has been very patient. . . . It has accepted the successive explanations and assurances of the Imperial Government as of course given in entire sincerity and good faith, and has hoped, even against hope, that it would prove to be possible for the Imperial Government so to order and control the acts of its naval commanders as to square its policy with the recognized principles of humanity as embodied in the law of nations. It has made every allowance for unprecedented conditions and has been willing to wait until the facts became unmistakable and were susceptible of only one interpretation.

It now owes it to a just regard for its own rights to say to the Imperial Government that that time has come. It has become painfully evident to it that the position which it took at the very outset is inevitable, namely, the use of submarines for the destruction of an enemy's commerce is of necessity, because of the very character of the vessels employed and the very methods of attack which their employment of course involves, utterly incompatible

with the principles of humanity, the long-established and incontrovertible rights of neutrals, and the sacred immunities of non-combatants.

If it is still the purpose of the Imperial Government to prosecute relentless and indiscriminate warfare against vessels of commerce by the use of submarines, without regard to what the Government of the United States must consider the sacred and indisputable rules of international law and the universally recognized dictates of humanity, the Government of the United States is at last forced to the conclusion that there is but one course it can pursue.

Unless the Imperial Government should now immediately declare and effect an abandonment of its present methods of submarine warfare against passenger and freight-carrying vessels, the Government of the United States can have no choice but to sever diplomatic relations with the German Empire altogether. This action the Government of the United States contemplates with the greatest reluctance, but feels constrained to take in behalf of humanity and the rights of neutral nations.

The full text of the note will be found on page 192

The Crisis With Germany

A final note on the submarine question was sent to Berlin on Tuesday of last week, by the President; and on Wednesday Mr. Wilson appeared before Congress and address the two houses on the same critical subject. His address was practically a repetition of the note.

It was received by the members of the Congress and the audience that completely filled the galleries in intense silence followed by applause, whose moderateness seemed to suggest the strain under which all the President's hearers were laboring.

In other parts of this issue we print in full the note to Germany, and an article, from one who was present at the joint session of Congress, descriptive of the scene. We also comment editorially upon the crisis in the relations of the United States and Germany.

The note to Berlin was accompanied by a very complete statement of the evidence in the possession of the State Department showing that the explosion on the "Sussex" was actually caused by a German torpedo. This evidence included the testimony of many eye witnesses, and the results of the examination by officers of the United States Army and Navy of the fragments of the instrument whose explosion damaged the "Sussex." These fragments have positively been identified, by their characteristic shape and structure, and by marking upon them, as pieces of a German torpedo. The evidence is overwhelming. It is substantiated, as we pointed out editorially last week, by the statements in the German Government's note on the case.

The American note demanded an immediate reply; but it has been explained by Ambassador von Bernstorff that the interposition of the Easter holidays will make it impossible for an answer to be forthcoming for at least ten days.

German Plot Developments

Further developments occurred last week in the uncovering of German plots in this country. Indictments were handed down by a Federal grand jury in New York against five men, charging them with a conspiracy in the early days of the war to destroy the Welland Canal, the Canadian

© International Film Service

COUNT VON BERNSTORFF

Who will be sent home—if relations are broken—after a long-continued endeavor to reconcile Germany and America

American Press Association

JAMES W. GERARD

American ambassador at Berlin, who has made many friends in the German capital and whose departure would be regretted

waterway connecting Lake Erie and Lake Ontario. The most prominent of the indicted men is Captain Franz von Papen, the recalled Military Attaché of the German Embassy. His indictment is an unusual incident; for diplomatic representatives of a foreign government are privileged characters not subject to the normal legal processes of the country to which they are accredited. Obviously, also, there is no expectation that Captain von Papen will be brought to trial, as he is now in Germany, where he will doubtless remain. The indictment was doubtless secured merely for the sake of the record, and justified on the ground that he is no longer a diplomatic representative accredited to this country.

The other persons indicted are Captain Hans Tauscher, the husband of Mme. Johanna Galski, the opera singer, and agent in Jamaica of the Krupps; Alfred A. Fritzen, and Constantine Covani. None of the men indicted has been arrested. One other name was included in the indictment, but it was kept secret for several days. It then became public, however, thru the arrest by the Federal authorities of Wolf von Igel, secretary of Captain von Papen while he was in this country. Von Igel was arrested at his office in Wall Street after a hand to hand struggle with several Secret Service officials. With him were taken a great quantity of official records and secret correspondence of German officials and agents of the German Government. Von Igel was immediately released upon \$20,000 bail.

Promptly upon the arrest and the seizure of the papers, strenuous protests were made by the German Ambassador on the ground that Captain von Igel is a recognized member of the force of the German Embassy, and his person and the documents in his office therefore inviolable.

The contention of the Federal Government in the case of the man was that the crime for which he was indicted was committed before he was given a place on the Embassy staff and therefore while he was still a private

citizen. The protests against his arrest were accordingly ignored. The Embassy, however, seemed much more concerned over the loss of the papers which had been taken, and rapid fire demands for their return intact were made. Meanwhile the Federal authorities went quietly on collating, cataloging and photographing them, persistently turning a deaf ear to Count von Bernstorff's protests.

The Army Bills

The Chamberlain Army Reorganization bill passed the Senate last week without a roll-call. Scarcely a dozen Senators opposed its passage. In its final form the bill differed largely from the Hay bill, dealing with the same subject, as passed by the House.

It provides for a regular army of 250,000 men; for a federal volunteer army, something like the Continental Army plan of Secretary Garrison, of 261,000 volunteers; for military instruction in schools and colleges; for making the term of enlistment in the five years, two years with the colors and three years in the reserve.

The most significant provisions were added to the bill at the last moment apparently under the spur of the news that the President was to address the Congress on the submarine controversy with Germany. They deal with the increase of the army to a quarter of a million men, and with the training of schoolboys for military service.

The bill as it passed the Senate provided for a possible regular army as large as has been proposed by Colonel Roosevelt—250,000 men. This figure is to be compared with our present army of 100,000; with the proposal of the House of Representatives for an increase to 140,000; and with the number suggested by the Senate Committee on Military Affairs, 180,000. The amendment was adopted by a vote of 43 to 37; an amendment to make the number 150,000 having previously been rejected by a vote of 66 to 17.

The school training amendment was adopted by a vote of 56 to 24. It provided for the assignment for service

as instructor in military tactics of one or more commissioned officers of the army to any college or school having 100 or more boys fifteen years of age or older, provided the school authorities make the request, and enough boys agree to take the training and to become a part, during their school or college course, of the reserve forces of the United States. The Government is to provide equipment, arms and ammunition for such reserve forces. In case of war or threatened war, the President is empowered to call into active service the members of reserve forces so created who have reached the age of eighteen years.

It is significant that practically the whole of the debate upon this amendment was in the affirmative, the only differences of opinion being upon points of detail. Not only in this debate, but in the whole consideration of the Army bill, the division was not at all upon party lines.

The Chamberlain bill and the Hay bill now go to a conference between the two houses. The wide differences between the two measures will doubtless result in sharp disagreement; and out of the inevitable compromise resulting will come a measure whose nature no one can predict.

Paying for Preparedness While the Army Reorganization bills are being considered in Congress, the House of Representatives is proceeding to consider the Navy bill, and to work out plans for raising the additional revenue needed to pay for the enlarged preparedness program.

The Navy bill, as it comes from the House Committee on Naval Affairs, will probably provide for two battle cruisers, to cost \$21,000,000 each, two dreadnoughts, to cost \$18,000,000 or \$19,000,000 each, and fifty submarines. An effort will be made, it is believed, to increase the number of battle cruisers to four. The Navy bill is expected to provide for an expenditure of about \$230,000,000, which is about \$80,000,000 more than was carried by the last Naval Appropriations Act.

"HIS HAND TO THE PLOW—"

Cesare in New York Sun

THIS CARTOON NEEDS NO CAPTION

It is intimated that Chairman Kitchin, of the House Ways and Means Committee, and Chairman Simmons, of the Senate Finance Committee, have agreed that the additional revenue needed for preparedness shall be secured by taxing incomes, inheritances and the manufacture of munitions of war. It is proposed to retain a portion of the taxes levied under the present emergency tax law, furnishing between forty and fifty millions of the needed money; while the income tax will be readjusted to yield seventy-five millions, an inheritance tax will provide fifty-five millions, and the tax on munitions forty-five millions.

These, of course, are merely the tentative proposals, which have yet to run the gauntlet of both Houses of Congress and be subjected to the test of public opinion.

During the past week the In Mexico punitive expedition into Mexico has been at a standstill. The report of Villa's death and burial has apparently been proved false; but where the bandit has gone is a black mystery.

After the unprovoked attack by Carranzista soldiers upon the force of American cavalrymen that entered Parral, the advance guard of the expedition retired several miles to the north and entrenched itself. All along the line of communication, it was reported, trenches were being dug by our troops ostensibly for practise. The problem of the next move in the campaign was complicated by the possibility of further armed interference by Carranza forces; by the fact that the American line of advance had been stretched about to the limit of safety with the forces available; by the reported concentration of Carranza troops in the regions thru which runs the American line of communication; and by the growing signs of hostility on the part of the population in general.

General Scott, chief of the general

staff, went last week to San Antonio for conference with General Funston. Pending his report and recommendations no decision was made as to the next move in the Mexican campaign.

Peace and Prohibition in Nebraska The Nebraska primaries produced some interesting results. In the Republican Presidential primary Henry Ford polled a very large vote, being beaten on the final count by Senator Cummins of Iowa by a narrow margin. Mr. Ford has emphatically declared that he is not a candidate for the Presidency; but this large vote for him in Nebraska following his heading the poll in Minnesota a week before seems significant of the strength of pacifist sentiment in the Middle West. The success of Mr. Cummins looks in the same direction, for his activities in Congress have been decidedly on the side of subordinating the rights of Americans to the endeavor to keep out of war.

On the other hand, the results in the Democratic primaries seem to indicate quite the reverse. For William Jennings Bryan was defeated as delegate-at-large to the National Convention. With him the whole ticket which he had endorsed, including his brother as candidate for the Democratic nomination for Governor, went down to defeat. But the Bryan campaign was really made on the prohibition issue. So that Nebraska may be assumed, on the face of the primary returns, to be for peace and against prohibition.

New York Solves a Hard Problem For years New York City has been struggling with the problem of disposing of the freight tracks of the New York Central Railroad which run down the greater part of the western side of Manhattan Island. The presence of these tracks has been a constant nuisance to many citizens living along the line, a serious blemish upon the city's fine park system along the river, and a dangerous menace to life and limb where the tracks run thru the open streets. The number of casualties, especially to children, has earned for Eleventh Avenue, thru which the tracks run for several miles, the sobriquet of "Death Avenue."

A committee of the city's Board of Estimate and Apportionment has at last worked out in coöperation with officials of the New York Central a plan for removing the tracks entirely from the surface. They will be run either in subways or on an elevated structure, depending on the conditions at the various points along the line.

In the residence and park sections, the tracks will be put beneath the ground; in the commercial districts they will run on an elevated structure, not along the streets, but thru the backyards between the blocks.

The improvements are to cost something like \$50,000,000, of which the city is not asked to provide a penny. The city, however, is to contribute, thru the exchange of real estate rights and easements, values amounting to a little over \$6,000,000. But when the increased safety of life and the great improvements in park facilities and in dock accommodations that will be made possible are considered, the city will be seen to be acquiring a vast benefit at a phenomenally low cost.

Prohibition in Canada Canada is rapidly going dry. Ontario has recently adopted temporary prohibition—to cover the duration of the war—and Alberta, Saskatchewan, Manitoba and Nova Scotia had previously closed their bars.

The Ontario law, the essential clauses of which have been passed, altho details are still to be adjusted, makes the sale of liquor illegal for about three years, probably until June, 1919. There is to be no referendum on this measure, and the date of its termination was fixed with a view to allowing the returned soldiers to vote on the question of prohibition. This is not to be taken at its face value, however, as an official estimate of the length of the war, as it takes several months to get names entered on the voting lists in rural Ontario, and it was thought wise to provide an ample margin to make

HALTED

This, of course, is only a temporary halt, where a wagon train has made camp. The expedition as a whole, however, has reached the end of its rope

sure that all the soldiers might be counted. The bill goes into effect on September 16, 1916.

Since there is no prohibition on the importation of liquor or its possession in any quantity for personal use, the net effect of the law will be to close the bars of the province. The present plan is to allow druggists to dispense small quantities upon prescription. The bill was a Liberal measure, fathered by N. W. Rowell, leader of the opposition, but it was adopted by the Conservative government and passed its second reading without a division.

Manitoba's prohibition act is similar in its terms, tho it remains in force until repealed, and was carried by a two to one vote at a popular election in the middle of March. In Saskatchewan there is a government dispensary system.

This wave of prohibition legislation is to be taken as chiefly a phenomenon of the Great War. The Prince Albert *Herald* said in commenting on the Manitoba vote:

In the western provinces it is very much the outcome of cold business judgment that revolts at the squandering of millions of dollars in a commodity that lessens the efficiency of the people at a time when physical, mental and material resources are called upon to bear an unprecedented strain.

Russians Arrive in France French hopes have been revived and French enthusiasm aroused to the highest pitch by the arrival at Marseilles of a flotilla of transports bearing a contingent of Russian troops for service on the western front. As the huge ships approached the quays at noon on April 20 they passed between the vessels of the French fleet whose yard arms were manned by the sailors and whose bands were playing the Russian national hymn. The Russian commander, General Lochwescy, was greeted by General Menassier, Governor of Marseilles, and General Guerin, representing General Joffre, and the Russian soldiers were cheered by the French troops on the quay and the populace on the streets.

The Russians were seen to be picked men, many of them wearing medals of honor and all equipped with new uniforms and accouterments. Two days later they were sent north, presumably to reinforce the line at Verdun.

Nothing is said about their number

or where they came from. It has been thought possible that Russia could send 40,000 men a month for the next five months, since there are more men in the Russian army than can be armed and equipped.

Dead Man's Hill For another week the terrible conflict has raged about the hill named, in sinister anticipation of its future rôle in history, Le Mort Homme. Both sides have claimed this high for some time, but so far as one can judge from the dispatches the Germans have gained the eastern slope and minor crests on this side while the French hold the summit. The withdrawal of the French from Bethincourt two weeks ago has made Le Mort Homme and Hill 304, just west of it, the main points on the line defending Verdun on this side. Against these hills and the woods between the German troops have been hurled with slight gains. On the whole the Germans gained less than in any week since the battle of Verdun began.

Besides the fighting in the vicinity of Dead Man's Hill on the west of the Meuse, the Germans have renewed their attacks upon the French positions east of that river. In the section about forts Douaumont and Vaux 75,000 troops were employed in the German operations and some ground was gained by them but lost again, it appears, in the French counter attacks. The Germans, however, claim to have captured here 1700 unwounded prisoners.

The French estimate the German losses before Verdun at 200,000. On the other hand, the Germans declare this a gross exaggeration and make the counter claim that the French have lost 150,000. The French having denied the German statements of their captures, the Germans propose to publish in the *Gazette des Ardennes* the names of 711 officers and 38,155 men whom they have taken since the battle of Verdun began, February 21, 1916. In the same journal they are publishing the names of French and Belgian civilians who have suffered from the French, British and Belgian air raids and long range bombardments. Up to February this list of non-combatant victims amounted to 793, including 131 women killed and 208 wounded and 75 children killed and 108 wounded.

The Capture of Trebizond The Russians have won a great victory in the taking of Trebizond, the chief port on this part of the Black Sea coast and the point from which trade routes run into the interior of Armenia. After the fall of Erzerum it was realized that the Turks could hardly hope to save Trebizond, for it was open to attack by land from Erzerum and also by water, since the Russian navy commands the Black Sea. But it was commonly expected that the Turkish garrison of 50,000 or more would hold out for some time, since it had been reported that the ancient defenses of the city had been modernized by German engineers and big guns, brought by sea from Constantinople on the "Sultan Selim," formerly the German "Goeben," had been installed. In the old days of its glory Trebizond stood many a famous siege against Turks and Tatars and Greeks and Genoese, for its citadel stood upon a precipitous rock, the "trapezium" from which the city got its name, and was protected in the rear by mountains seven thousand feet high.

After taking Erzerum the Russians attempted to send a force from this point over the mountains to reach Trebizond from the rear, but the Turks have been able to hold this force in check at the Choruk River. On the other hand, the Russian force which was sent westward from the Caucasus along the shore of the Black Sea has made continuous progress, for it had the support of the fleet on its right flank. When it had fought its way to within a few miles of Trebizond on the east, the Russians suddenly landed another force about five miles west of the city. This seems to have surprised and so disconcerted the Turks that they gave up all idea of resistance, if such had been their intention, and hastily evacuated the city and retired into the mountains. Whether their retreat was cut off by the Russians on the Choruk or whether the Russians from the coast were able to pursue and overtake them in their flight is not yet known.

Ever since the fall of Erzerum the Russians from the Caucasus have been in pursuit of the Turkish army which evacuated that city. They have almost reached Erzingan, a hundred miles beyond Erzerum on the road to Sivas, when the Turks turned upon them and took the offensive. New forces have evi-

THE GREAT WAR

April 17—Germans attack north of Verdun. British defeated by Turks on right bank of Tigris.

April 18—Russians take Trebizond. Germans attack at Les Esparges, southeast of Verdun.

April 19—Germans take British trenches near Ypres. President Wilson protests against German submarine warfare.

April 20—Russian troops arrive at Marseilles. Field Marshal von der Goltz dies at Bagdad.

April 21—Responsible cabinet installed in China. British gaining in German East Africa.

April 22—Germans attack Le Mort Homme. Italians take trenches on the Carso.

April 23—German attacks in Dvinsk region. Russians checked south of Bitlis.

dently been brought from Constantinople by way of the German Bagdad railroad and have made their presence felt both by the British in Mesopotamia and the Russians in Armenia.

The capture of Trebizond is a great gratification to the Russians, for they have been trying to secure the city for the last hundred years, but hitherto they have been kept out, less by the valor of the Turks than the opposition of the English.

The Commercial War

The Allied Powers are already planning for a united

opposition to Germany after the war is over. An Interparliamentary Economic Conference was opened at the Luxembourg Palace on April 27 to devise methods by which Germany may be prevented from assuming her former commercial dominance. Eight nations are represented by members of parliament, ministers and other statesmen. Great Britain has a delegation of forty-two, France of forty-four, Italy of forty-three, Serbia of twenty-two, and Portugal of ten. Russia, Japan and Belgium also have delegations. The countries represented possess more than half the population of the world and much more than half its wealth and form together a trade combination of unprecedented power.

It is, of course, uncertain what sort of an agreement will be reached. The interests of the various countries will be difficult to reconcile, and besides there is a difference of opinion inside each country as to how far such a movement should be carried. In Great Britain, for instance, some are advocating a boycott of all German-made goods, either perpetually or for a term of years. Australia has already taken action to that effect without waiting upon the mother country. On the other hand other Englishmen argue that it is not desirable or possible to crush German industry permanently and that trade between the two countries will be mutually beneficial. It seems likely that some sort of a customs union will be formed among the Allied Powers with preferential rates among themselves

and a tariff wall against Germany and the rest of the world.

Great Britain has adopted a more friendly policy toward the United States of late and has somewhat relaxed her restrictions upon American commerce. She has granted permission for the importation of a single shipment of anilin dyes from Germany amounting to 15,000 tons. Germany has also consented to allow the exportation of the dyestuffs on guarantee that none of them are resold to her enemies. This supply will be enough for American consumption for about six months and greatly relieve the distress of our textile industries.

The British Government has agreed to pay a sum of \$15,000,000 to \$17,000,000 for the thirty-four shiploads of meat products which had been seized by British cruisers on their way to neutral ports in vessels of the neutral powers. In consideration of this settlement the American packers agree to allow the British Government to supervise and regulate their future shipments even to neutral countries.

On the other hand the American Red Cross has been unable to secure from the British Government permission to send its hospital supplies to Germany by any route even by American ships. The Red Cross warehouses in Brooklyn are overcrowded with medicines, surgical appliances and foods for the sick, but since these cannot be shipped a request has been issued that no further contributions for Germany and Austria can be received.

A thousand bags of parcel mail were taken off the Scandinavian-American liner "United States" by the British authorities at Kirkwall. Fifty thousand boxes of California fruit, bound for Copenhagen, were also seized.

On April 15 the British Government abolished completely the distinction made by international law between

conditional and absolute contraband. Henceforth merchandise, whether absolute or conditional contraband, will be subject to capture by the mere fact of its enemy destination, whether it is sent by direct or indirect manifest or is concealed. Further, no ship or cargo will be exempt from capture for violation of the blockade simply because that at the time it was examined it was apparently on its way to an unblockaded port.

China's New Cabinet

Yuan Shih-kai, alarmed at the rapid progress of the insurrection, is trying to make such concessions as may win back the six provinces which have turned against him. He has now announced that a responsible cabinet will be established with the same powers over the administration and the army as is possessed in European governments. At the head of it is placed Tuan Chijui, a staunch republican, and since he will, as Minister of War, have the army in his control, he may be able to prevent any further efforts to overthrow the republic even on the part of the President. The Ministry of the Interior has been given to Wang Shih-lang, who was educated in the United States and is the general secretary of the Y. M. C. A. of China. Most of the new ministers were in the first cabinet of the republic, which Yuan dismissed when he assumed autocratic powers.

It remains to be seen whether these concessions will satisfy the insurgents. The republicans of the south distrust Yuan on account of his repeated changes of party and part of them at least will insist upon his entire elimination. Yet it is questionable if they have a man of equal ability to put into his place. Dr. Sun Yat-sen, tho a devoted republican, is not supposed to be the equal of President Yuan in statesmanship.

THE RUSSIAN INVASION OF TURKEY AND PERSIA

The Russian armies from the Caucasus are now in possession of northwestern Persia and north-eastern Turkey. The chief Ottoman strongholds in this region, Erzurum and Trebizond, were evacuated as soon as attacked and the Turks have retreated beyond Bitlis and Erzingan. On the other hand the British expedition which went up the Tigris to take Bagdad was defeated last December and driven back to Kut-el-Amara where it has ever since been besieged. The relief expedition is held up some twenty miles below. The shaded area shows territory held by the Russians and British.

FROM STATE TO STATE

ARIZONA: Statewide controversy, rather more spirited than the subject seems to warrant, has been stirred up by the action of the State Board of Trade in adopting a copper emblem for the new battleship "Arizona" instead of the conventional silver service. The claim of the protesters is that the naval people do not want the copper emblem because it is something new and would prove a "jinx" to the superstitious sailors. They say it would also expose the state to ridicule for flying in the face of established custom. The more earnestly the protestants protest, the more earnestly the defenders of the new departure defend, while still a third party stands between, declaring that the controversy itself is the thing most likely to bring ridicule upon the state.

ARKANSAS: Work is soon to begin on the large irrigation ditch to the rice fields in the Grand Prairie section of this state. This improvement, which will be of great benefit to the many farmers in the region, has been contemplated for several years. It is not probable that the work will be completed in time for the 1916 crop, but it is hoped that a considerable portion of the vast prairie will be watered this season.

CALIFORNIA: The decision of the United States District Court enjoining the order of the Interstate Commerce Commission which made the cities of Sacramento, San José, Stockton and Santa Clara non-terminal rate points is cited by Californians as a striking illustration of the superiority of their own state railroad regulation law over the Federal interstate commerce law. The court, without denying the justice of the commission's order, simply held that under the Federal law the commission had no power to consider anything but the specific complaint before it. On the contrary, the California law empowers the state commission to consider all phases of every case before it.

GEORGIA: Because the new prohibition laws go into effect May 1, after which no beverage containing as much as one-half of one per cent of alcohol can be lawfully sold in Georgia, many saloons, locker clubs and "near-beer" resorts are already going out of business, while breweries are being converted into ice factories and other manufacturing establishments.

IOWA: First steps are being taken in a statewide movement for the naming and marking of all roads and the numbering of all houses in the rural sections as well as in the cities. The start has been made at Iowa Falls and other points on the Hawkeye Highway, which runs from Dubuque across the state to Sioux City. Permanent metal signs are to mark every turn of the road and numbers will be assigned to all houses along the way. Organizations for similar work are forming in other parts of the state, the ultimate purpose being to make

it as easy for a farmer as for a city man to give his address and for travellers on the country roads to know just where they are.

MAINE: In common with other New England states whose governors recently met in Boston for the purpose of considering methods of making this section the summer playground of the nation, Maine is preparing for a vigorous campaign of publicity and for a general cleaning up and beautifying of its natural vacation spots. In addition this state has started an independent "See New England First" movement, to be carried out by a post card campaign. As a part of the plan for bringing summer visitors to the state the Maine Historical Society has begun work on a celebration in June of the two hundredth anniversary of the founding of Portland.

MASSACHUSETTS: So many amendments to the state constitution were proposed to the Legislature this year that this body finally decided not to submit any of them to the people, but to refer instead a proposition for a constitutional convention. Prominent among the problems which it is hoped such a convention may work out on more equitable and permanent lines are those of taxation and assessment, which long have been subject to the fluctuating devices of successive legislatures. No constitutional convention has been held in Massachusetts since 1853.

MINNESOTA: More than one hundred residents on the 65,000 acres of land within the Minnetonka game refuge are to raise mallard ducks, pheasants and quail this season. Eggs in large numbers are to be distributed, and if the usual ratio of young birds holds true the refuge will be heavily stocked this fall, while outside of it by 1917 there should be more of these birds as marks for hunters than there are now under protection. Frank D. Blair, field superintendent of the Minnesota Game and Fish Protective League, says that by fall next year wild ducks, pheasants and quail should be as numerous and as cheap in the markets as chickens, turkeys and geese are now.
